the miniature out of its case, she sat with it in her hand wondering how she had had the heart to cause a shadow of pain to dim the lustre of that good-tempered face. But she had a habit which is not uncommon, of being averse to own herself in the wrong; yet, after a time, softer thoughts came, and when she considered how necessary to her happiness it was that Reginald should love her, she felt ready to throw herself at his feet and own her error. She had no opportunity of doing this—she had sent him away. Oh if he had stayed for a few minutes longer than he did. She fluctuated between pride and penitence till the evening, and appeared then with a heated cheek and a throbbing heart, ill concealed or eclipsed by the gorgeous dress she wore, and in which she was escorted by her brother to a dinner party. She felt that inability to bear inactivity, which is often the concomitant of strong mental excitement. When was her laugh so clear, though there was something of an unusual wildness in it now? When had she looked so inspired as when she conversed with the young poet next her, just watching the dawning of his fame? She advanced the most extravagant opinions, and supported them with an aptness of quotation which delighted, while it surprised her companion. The brilliant lights, the fascination of being the cynosure of all eyes, the excitement of her mind, all prompted her to an unnatural exertion of strength. Among other subjects of conversation, that of the morning was brought on the tapis, and with a severity of contempt hitherto concealed even from herself, she condemned the efforts which were being made. Her brother was astonished; he knew there were depths in his sister's character he had never fathomed, but he was not prepared for this. What had excited her? what gave the piquant to her conversation in such abundance?

Poor Adelaide! she was trying to forget herself; as if the most brilliant sallies of wit could make her forget that fluttering heart! When she reached home, and sat in her bed-room, by one lamp, alone, and worn out by her excitement, she felt how unavailing had been all her efforts to be happy. Taking from her person the glittering gems she wore, as she proceeded to replace them by the rest of her jewels, the portrait-case caught her eye; again was it opened, she threw the chain round her neck, as though that really brought her lover nearer; and merely removing her heavy velvet dress, lay down exhausted, and, with the portrait in her hand, fell into an uneasy slumber.

It is time to turn our attention again to the Grahams. The next morning, after Anne's out-burst of grief, a letter was written congratulating John on his prospects, poor as they were, and asking him to get an engagement for his sister with some dress-maker, as she much wished to be earning more than she was getting in the country. "It will be a heavy grief," concluded the poor widow's letter, "to be alone here, and to have my two children separate from me, and from each other. But it is all arranged for the best, and we have hitherto been mercifully supported, and must not murmur at whatever Providence may lay upon us." John looked out for an advertisement next day, and found one which he thought would suit. He answered it, and Anne was directed to come to London with all speed.

She answered joyfully, (for to her untutored imagination, the future of her life in London was an *El Dorado* of riches), and told her brother she would come up by the stage the next Thursday. Her brother stole out after business hours, and engaged a small, but neat lodging for her; though it may be conjectured that at that time of night he had a difficulty in meeting with a respectable one; but he succeeded at last, and with a generosity which almost exhausted his funds, he paid a month's rent in advance, and directed the mistress of the house to furnish the little cup-board by the fire-place with tea, sugar, &c.

(To be continued.)

THE LAKES OF KILLARNEY.

PERHAPS there never was a time in which public interest and attention were more strongly attracted towards Ireland than the present. To provide for the wants of the necessitous peasantry, and to make amends for the failure of their most important crop, is the difficult task imposed upon our rulers; while the education of the ignorant, and the employment of large masses of the people on public works of utility, are likewise receiving that share of attention which their importance demands.

There is also, in this country, a wide-spread feeling of kindness and sympathy towards the warm-hearted inhabitants of our sister island, and many a heart is moved with compassion at their present sufferings, and at the bondage (though a willing one) in which they are held. Does it ever occur to such that there lies within their own power an extensive means of usefulness to the Irish, and a far more effectual one than the mere giving of alms could supply? The means we allude to are simply the cultivation of a more friendly intercourse with the people, and the turning towards their beautiful isle, a portion of that stream of eager tourists which annually sets in towards the shores of the Rhine and the Seine.

"Impossible!" we seem to hear our reader say; "absolutely impossible, while Ireland is in its present unsettled state, and while the public prints are teeming with accounts of Irish massacres." These certainly would appear, at first sight, good reasons for declining a tour in Ireland; but when we inquire fully into the matter, it becomes evident that the deep-rooted hatred and revenge which prompt the Irish murders, can have no place towards the summer tourist, and are never found to be exercised without a keen sense of wrong. Let any one who doubts the fidelity of the Irish, or fears to trust his person in their power, read Mr. and Mrs. Hall's works, illustrative of the Irish character; and if, moreover, he entertain a doubt as to the interest and desirableness of exchanging a foreign trip for one to the Emerald Isle, let him peruse "A Week at Killarney," by the same pleasing writers, or let him, at any rate, contemplate the sketch we here offer him from that source.

As there can be no pleasure in travelling without a sense of security, let us, before we set out, endeavour to still the fears of those who, "in utter ignorance of the country and the people, have formed unaccountably erroneous opinions on the subject."

"For ourselves," say the authors, "we never hesitated to make journeys at all hours of the day or night, upon ordinary jaunting-cars, under the full conviction that we were as safe as we should have been between Kensington and Hyde Park. It is not enough to say that we never encountered insult or injury; we never met with the smallest interruption, incivility, or even discourtesy, that could induce a suspicion that wrong or rudeness was intended. During our various wanderings we have been located at all sorts of 'houses of entertainment,' from the stately hotel of the city, to the poor 'cabaret' of a mountain village; we never lost the value of a shilling by misconduct on the part of those to whom our property was entrusted. We should, indeed, ill discharge our duty if we did not testify, as strongly as language enables us to do, to the generosity and honesty of the Irish character."

With this ample praise of the people, let us follow the steps of the tourists through the country, until we arrive at the charming scenes presented by the Lakes of Killarney. So great have been the achievements

(1) A Week at Killarney, by Mr. and Mrs. S. C. Hall. London: Jeremiah How. 1843.

of steam within the last few years, that those scenes are now within thirty-six hours' journey of London; so that in that short period "a denizen of the British metropolis may have exchanged the close atmosphere of a great city for the pure air of lake and mountain, and the endless pile of brick for scenery unsurpassed in natural loveliness."

By the usual route the journey is performed by railway to Bristol in four hours, thence by steamboat to Cork in about twenty-four, and afterwards by the usual conveyances to Killarney in eight hours. Instead of the miserable accommodation of the old sailing packets, and the weariness, danger, and expense, of a long voyage, the visitor to Ireland can now make it a delightful pleasure trip, promising advantages and enjoyments fully equal to those of many a more extended tour.

The first object of interest is Cork harbour, gloomy and forbidding at a distance, with its bold and fortified headlands; but spreading out, as you approach, into a noble expanse of sea, whose glittering billows wash the shores of several small islands, which give variety to the scene. This harbour is one of the safest and most beautiful in the kingdom, and is said to be large enough to contain the whole British navy. The town of Cove, fronting the mouth of the harbour, rises from the water's edge, terrace above terrace, and the shore is on all sides covered with villas, surrounded by majestic and graceful trees.

Passing the islands, and proceeding up the beautiful river Lee, various objects of interest are pointed out, and the banks are pleasingly diversified the whole distance, which, reckoning from the mouth of the harbour to the quay at Cork, is about twelve miles. "As we proceed along, the land seems always around us; the river, in its perpetual changes, appears a series of lakes, from which there is no passage, except over one of the encompassing hills. These hills are clad from the summit to the water's edge with every variety of foliage; graceful villas and ornamental cottages are scattered among them in profusion, and here and there some ancient ruin recalls a story of the past."

This delightful voyage ends in a disembarkation at the busy and prosperous city of Cork. Here we must not detain our reader except to notice one of the neighbouring localities, the village of Blarney, situated about four miles to the north-west of Cork. The romantic ruins of Blarney Castle, beautiful as they are, have contributed far less to the fame of this spot, than one particular stone, lying among them, and said to possess most remarkable qualities. "When, or how the stone obtained its singular reputation it is difficult to determine: the exact position, among the ruins of the castle, is also a matter of doubt. The peasant-guides humour the visitor according to his capacity for climbing, and direct either to the summit or the base, the attention of him who desires to 'greet it with a holy kiss.' He who has been dipped in the Shannon is presumed to have obtained in abundance the gift of that cool courage which makes an Irishman at ease, and unconstrained in all places and under all circumstances, and he who has kissed the Blarney stone is assumed to be endowed with a fluent and persuasive tongue, although it may be associated with insincerity, the term 'blarney' being generally used to characterise words that are meant neither to be honest nor true."

There are several routes from Cork to Killarney, the shortest not being the most picturesque. The modes of travelling are in some cases peculiar to the country. Post-chaises and stage-coaches are, indeed, to be met with, but these have been nearly displaced by public cars. The Irish cars are of three kinds—"the covered car," "the inside jaunting car," and "the outside jaunting car;" the last being the most common. It is a light and convenient carriage, from which it is easy to alight without stopping. It is driven with a single horse, the driver occupying a small seat in front, and the pas-

sengers sitting back to back along the sides. The foot boards are of iron, and are made with hinges, so that they may be turned up to protect the cushions during rain. Private cars of this description are neatly and even elegantly made, but those which are hired are often badly built and uncomfortable. Since 1815 public cars of a very convenient kind have been established in Ireland. These are calculated to hold twelve, fourteen, or sixteen persons, and are generally driven with three horses, at the rate of seven Irish miles an hour. They are the successful result of an experiment made by Mr. Bianconi, a native of Milan. When he started his first car, from Clonmel to Cahir, he was frequently for whole weeks without a passenger; while at the present time his cars are to be seen in every district of the south of Ireland. His stud consists of thirteen hundred horses; and his cars travel daily nearly four thousand miles, visiting one hundred and twenty-eight cities and towns. The fare for each person averages about two-pence per mile. "It would be difficult for a stranger to conceive the immense influence which this establishment has had upon the character and condition of the country; its introduction, indeed, has been only second to that of steam in promoting the improvement of Ireland, by facilitating intercourse between remote districts, and enabling the farmer to transact his own business at a small expense, and with little sacrifice of time." These vehicles are open, but large leather aprons in some degree protect the traveller; while the steadiness of the drivers and excellence of the horses further promote his comfort.

The most picturesque road from Cork to Killarney is that along which we now invite the reader. For some miles the tourist keeps on elevated ground south of the Lee, and in his way toward the town and castle of Macroom sees many beautiful villas and venerable time-worn castles. After passing Macroom, and a village called Inchageela, or the Island of the Hostage, the road becomes wild and rugged, huge rocks overhang it, and above these tower hills and mountains covered with heath and furze, and other plants that love an arid soil. Here the Lee widens into a sheet of water, forming the picturesque Lough Allua, and along its northern margin the road winds for about three miles, becoming more and more solitary as it leads towards the source of the river, which takes its rise in a singularly romantic lake called Gougane Barra. The car stops at two miles distance from this lake, in order that the travellers may proceed on foot over a road that is scarcely passable for ordinary vehicles. "A sudden turning in the road brings him within view, and almost over the lake of Gougane Barra. A scene of more utter loneliness, stern grandeur, or savage magnificence, it is difficult to conceive; redeemed, however, as all things savage are, by one passage of gentle and inviting beauty, upon which the eye turns as to a spring-well in the desert—the little island, with its group of graceful ash-trees and ruined chapel. Down from the surrounding mountains rush numerous streams, tributaries to the lake, that collects and sends them forth in a bountiful river—for here the Lee has its source—until they form the noble harbour of Cork, and lose themselves in the broad Atlantic. In summer these streams are gentle rills, but in winter foaming cataracts; rushing over ridges of projecting rocks, and baring them even of the lichen that strives to cling to their sides."

The little island above-named is classed among the "holiest" places in Ireland, for on it stands the hermitage of St. Fin Bar, who is said to have lived there previous to his founding the Cathedral of Cork. The numerous superstitions connected with this saint are in a great measure dying away, but still there are annual arrivals of pilgrims who confidently expect to be healed of all their diseases by visiting this spot, and bathing in the consecrated waters of the holy well. The romantic grandeur of the whole scene inspired the following lines, written by a native of Cork, and forming part of a longer composition on the same subject:—

"There is a green island in lone Gougane Barra,
Where All of songs rushes forth like an arrow ;
In deep-valley'd Desmond a thousand wild fountains
Come down to that lake, from their home in the mountains.
There grows the wild-ash ; and a time-stricken willow
Looks chidingly down on the mirth of the billow,
As like some gay child that sud monitor scorning,
It lightly laughs back to the laugh of the morning.

"And its zone of dark hills—oh ! to see them all brightening
When the tempest flings out his red banner of lightning,
And the waters come down 'mid the thunder's deep rattle,
Like clans from their hills at the voice of the battle ;
And brightly the fire-crested billows are gleaming,
And wildly from Mullac the eagles are screaming ;
Oh where is the dwelling, in valley or highland,
So meet for a bard as that lone little island ?"

On resuming the journey, the traveller enters the pass of Keim-an eigh, where the mountain, divided by some convulsion of nature, leaves a narrow path, nearly two miles in length, overhung on either side by perpendicular masses clothed in wild ivy and underwood. This wild scene was a place of rendezvous for the Rockites in the disturbances of 1822. Several hundreds of the peasantry were sworn to obey a mysterious Captain Rock, and in this place they formed their plans, and sent out detachments demanding money and arms of the neighbouring gentry. From this pass to Bantry the road is still wild, and the land little cultivated. The bay of Bantry, "unsurpassed by any harbour in the kingdom for natural beauties, combined with natural advantages," is the next great object of interest. Near it the road is one continued line of beauty, of which the fine expanse of water dotted with green islands, the well-wooded plantations of the Earl of Bantry, and the Killarney mountains, form the principal features.

The lover of the picturesque takes his road hence by way of Glengarriff, the beauties of which spot appear greatly to have delighted Mr. and Mrs. Hall. They say, "Language utterly fails to convey even a limited idea of the exceeding beauty of Glengarriff—the rough glen"—which merits to the full the enthusiastic praise that has been lavished upon it by every traveller by whom it has been visited. It is a deep Alpine valley, enclosed by precipitous hills, about three miles in length, and seldom exceeding a quarter of a mile in breadth. Black and savage rocks embosom, as it were, a scene of surpassing loveliness—endowed by nature with the richest gifts of wood and water ; for the trees are graceful in form, luxuriant in foliage, and varied in character ; and the rippling stream, the strong river, and the foaming cataract, are supplied from a thousand rills collected in the mountains. Beyond all is the magnificent bay, with its numerous islands,—by one of which it is so guarded and sheltered as to receive the aspect of a serene lake. The artist cannot do it justice ; and the pen must be laid aside in despair ! Our memories, indeed, recall every portion of the magic spot, but only to convince us how weak and inefficient must be our efforts to describe it."

The best view of the scenery is obtained from the top of the Sugar-loaf mountain, which, after some hard climbing, our tourists reached, and where they met with an interesting incident. A lad, whose appearance scarcely differed from that of other young goatherds, was shouting and clapping his hands, as if in delight at the scene. "His sun-burnt limbs were bare below the knees ; but his long brown hair had been cared for, and flowed beneath a wide leafed hat, that was garnished not ungracefully by a couple of wreaths of spreading fern. His garments were in sufficient disorder to satisfy the most enthusiastic admirer of the picturesque ; and although we called to him repeatedly, it was not until a sudden diffusion of cloud had interfered between him and the sunset, that he noticed us in the least. Indeed, it was evident he would not have done so at all, but for the unexpected appearance of another child of the mist, in the person of a little bright-eyed girl, literally one

mass of tatters, who sprang to where the boy stood, and seizing his hand, pointed silently to us. He descended immediately, followed by the girl, and after removing his hat stood by the side of our carriage, into which he peered with genuine Irish curiosity." On inquiry, it proved that the poor lad was deaf and dumb ; but he soon manifested intense interest in one of the objects contained in the carriage. This was a small black portfolio, at sight of which "he leaped, and clapped his hands, making us understand he wanted to inspect it. His little companion had evidently some idea that this was an intrusion, and intimated so to the boy ; but he pushed her from him, determined to have his own way. Nothing could exceed his delight when turning over a few sketches and some engravings. He gave us clearly to understand that he comprehended their intent—looking from our puny outlines to the magnificent mountains by which we were surrounded, and smiling thereat in a way that our self-love could not construe into a compliment.

"While he was thus occupied, his little companion, struck by some sudden thought, bounded up the almost perpendicular mountain with the grace and agility of a true-born Kerry maiden, until she disappeared ; but she soon returned, springing from rock to rock, and holding the remnants of her tattered apron together with evident care. When she descended, she displayed its contents, which interested us greatly ; for they were her brother's sketches, five or six in number, made on the torn leaves of an old copy-book in pale ink, or with a still paler pencil. Two were tinged with colour extracted from plants which grew upon the mountain ; and though rude, they bore evidence of talent. The lad could have had no instruction ; the copy-book was the property of his eldest brother, and he had abducted the leaves to record upon them his silent observations of the magnificence of nature, whose power had elevated and instructed his mind."

The poor boy at length turned from the portfolio with a sigh, and on looking at his own sketches, a momentary appearance of triumph was soon exchanged for that of disappointment. He burst into tears, being evidently struck with the inferiority of his own performances, when compared with the contents of the travellers' portfolio. They did what they could to console him, by presenting him with pencils, paper, and a few engravings : and no doubt this gift has been a source of happiness to him ever since.

The remainder of the route to Killarney is through Kenmare, where guides may be obtained to the Lakes. There is nothing in this part of the journey which need detain us, until we arrive at the grand scene of attraction, and this we shall reserve for a second notice.

ELLISE.¹

MR. NEIGHBOUR now took a piece of tinder in his mouth, and stepped on before the ladies, that he might lighten the way for them, and as he came to the place where the dead bird lay, he struck with his snout on the ground, so that the earth rolled away, and a large opening appeared, through which the daylight shone in. And now, Ellise could see the dead bird quite well,—it was a swallow. The pretty wings were pressed against the body, and the feet and head covered over by the feathers. "The poor bird has died of cold," said Ellise, and it grieved her very much for the dear little animal, for she was very fond of birds, for they sang to her all through the summer. But the mole kicked him with his foot and said, "The fine fellow has done with his twittering now ! It must indeed be dreadful to be born a bird ! Heaven be praised

(1) Concluded from page 159.

that none of my children have turned out birds! Stupid things! they have nothing in the wide world but their quivit, and when the winter comes, die they must!"

"Yes," returned the field-mouse, "you, a thoughtful and reflecting man, may well say that! What indeed has a bird beyond its twitter when the winter comes? he must perforce hunger and freeze!"

Ellise was silent; but, when the others had turned their backs upon the bird, she raised up its feathers gently, and kissed its closed eyes.

"Perhaps it was you," she said softly, "who sang me such beautiful songs! How often you have made me happy and merry, you dear bird!"

And now the mole stopped up the opening again, through which the daylight fell, and then accompanied the young ladies home. But Ellise could not sleep the whole night long. She got up therefore, wove a covering of hay, carried it away to the dead bird, and covered him with it on all sides, in order that he might rest warmer upon the cold ground. "Farewell, you sweet pretty little bird!" said she. "Farewell! and let me thank you a thousand times for your friendly song this summer, when the trees were all green, and the sun shone down so warm upon us all!" And therewith she laid her little head on the bird's breast, but started back, for it seemed to her as if something moved within. It was the bird's heart; he was not dead, but benumbed, and now he came again to life as the warmth penetrated to him.

In the autumn, the swallows fly away to warmer countries; and when a weak one is among them, and the cold freezes him, he falls upon the ground, and lies there as if dead, until the cold snow covers him.

Ellise was frightened at first, when the bird raised itself, for to her he was a great big giant, but she soon collected herself again, pressed the hay covering close round the exhausted little animal, and then went to fetch the curled mint leaves which served for her own covering, that she might lay it over his head.

The following night she slipped away to the bird again, whom she found now quite revived, but yet so very weak, that he could only open his eyes now and then, to look at Ellise, who lighted up his face with a little piece of tinder.

"I thank you a thousand times, you lovely little child," said the sick swallow, "I am now so thoroughly warmed through, that I shall soon gain my strength again, and shall be able to fly out in the warm sunshine."

"Oh! it is a great deal too cold out there," returned Ellise, "it snows and freezes so hard! only just stay now in your warm bed, and I will take such care of you!"

She brought the bird some water to drink out of a leaf, and then he related to her, how he had so hurt his wing against a thorny bush that he could not fly away to the warm countries with his comrades, and at last had fallen exhausted to the ground, where all consciousness left him.

The little swallow remained here the whole winter, and Ellise attended to him, and became every day more and more fond of him; yet she said nothing at all about it to the mole or the field-mouse, for she knew well enough already that neither of them could bear the poor bird.

As soon, however, as the summer came, and the

warm sunbeams penetrated the earth, the swallow said good-bye to Ellise, who had now opened the hole in the ground, through which the mole let the light fall in. The sun shone so kindly, that the swallow turned and asked Ellise, his dear little nurse, whether she would not fly away with him. She could sit very nicely upon the swallow's back, and then they would go away together to the green forest. But Ellise thought it would grieve the good field-mouse if she went away secretly, and therefore she was obliged to refuse the bird's kind offer.

"Then, once more farewell, you kind, good maiden," said the swallow, and therewith he flew out into the sunshine. Ellise looked sorrowfully after him, and the tears rushed into her eyes, for she was very fond of the good bird.

"Quivit! quivit!" sang the swallow, and away he flew to the forest.

And now Ellise was very mournful, for she hardly ever left her dark hole. The corn grew up far above her head, and formed quite a thick wood round the house of the field-mouse.

"Now you can spend the summer in working at your wedding-clothes," said the field-mouse, for the neighbour; the wearisome mole, had at last really proposed for Ellise. "I will give you everything you want, that you may have all things comfortable about you, when you are the mole's wife."

And now Ellise was obliged to sit all day long busy at her clothes, and the field-mouse took four clever spiders into her service, and kept them weaving day and night. Every evening came the mole to pay his visit, and every evening he expressed his wish that the summer would come to an end, and the heat cease, for then, when the winter was here, his wedding should take place. But Ellise was not at all happy to hear this, for she could hardly bear even to look upon the ugly mole, for all his expensive velvet coat. Every evening and every morning she went out at the door, and when the wind blew the ears of corn apart, and she could look upon the blue heaven, she saw it was so beautiful out in the open air, that she wished she could only see the dear swallow once more; but the swallow never came; he preferred rejoicing himself in the warm sunbeams in the green woods.

By the time autumn came, Ellise had prepared all her wedding-garments.

"In four weeks your wedding will take place," said the field-mouse to her; but Ellise wept, and said she did not want to have the stupid mole for a husband.

"Fiddle-de-dee," answered the field-mouse—"Come, don't be obstinate, or I shall be obliged to bite you with my sharp teeth. Isn't he a good husband that you're going to have? Why, even the queen has n't such a fine velvet coat to show as he has! His kitchen and his cellar are well stocked, and you ought rather to thank Providence for providing so well for you!"

So the wedding was to be! Already was the mole come to fetch away Ellise, who, from henceforth, was to live always with him. Deep under the earth, where no sunbeam could ever come! The little maiden was very unhappy, that she must take her farewell of the friendly sun, which at all events she saw at the door of the field-mouse's house.

"Farewell thou beloved sun!" said she, and raised her hands towards heaven, while she ad-

vanced a few steps from the door; for already was the corn again reaped, and she stood once more among the stubble in the field, "Adieu! adieu!" she repeated, and threw her arms round a flower that stood near her, "Greet the little swallow for me, when you see him again," added she.

"Quivit! quivit!" echoed near her in the same moment, and, as Ellise raised her eyes, she saw her well-known little swallow fly past. As soon as the swallow perceived Ellise, he too became quite joyful, and hastened at once to his kind nurse; and she told him how unwilling she was to have the ugly mole for her husband, and that she must go down deep into the earth, where neither sun nor moon could ever look upon her, and with these words she burst into tears.

"See now," said the swallow, "the cold winter is coming again, and I am flying away to the warm countries, will you come and travel with me? I will carry you gladly on my back. You need only to bind yourself fast with your girdle, so we can fly away far from the disagreeable mole, and his dark house, far over mountains and valleys, to the beautiful countries, where the sun shines much warmer than it does here; where there is summer always, and always beautiful flowers blooming. Come, be comforted, and fly away with me, you dear, kind, Ellise, who saved my life when I lay frozen in the earth."

"Yes, I will go with you!" cried Ellise joyfully. She mounted on the back of the swallow, set her feet upon his out-spread wings, bound herself with her girdle to a strong feather, and flew off with the swallow through the air, over woods and lakes, valleys and mountains. Very often Ellise suffered from the cold when they went over icy glaciers and snowy rocks; but then she concealed herself under the wings and among the feathers of the bird, and merely put out her head to gaze and wonder at all the glorious things around her.

At last too, they came into the warm countries. The sun shines there clearer than with us; the heavens were a great deal higher, and on the walls and in the hedges grew the most beautiful blue and green grapes. In the woods hung ripe citrons and oranges, and the air was full of the scent of thyme and myrtle, while beautiful children ran in the roads playing with the gayest-coloured butterflies. But further and further flew the swallow, and below them it became more and more beautiful. By the side of a lake, beneath graceful acacias, there rose an ancient marble palace, the vines clung around the pillars, while above them, on their summits, hung many a swallow's nest. Into one of these nests the bird carried Ellise.

"Here is my house," said he, "but look you for one of the loveliest flowers, which grow down there, for your home, and I will carry you there, and you shall have everything you can possibly want."

"That would be glorious indeed!" said Ellise, and she clapped her hands together for very joy.

Upon the earth there lay a large white marble pillar, which had been thrown down, and was broken into three pieces, but between its ruins there grew the very fairest flowers, all white, the loveliest you would ever wish to see.

The swallow flew with Ellise to one of these flowers, and set her down upon a broad leaf; but how astonished was Ellise when she saw that a wee little man sat in this flower, who was as fine and transparent as glass. He wore a graceful little

crown upon his head, and had beautiful wings on his shoulders; and withal he was not a bit bigger than Ellise herself. He was the angel of this flower. In every flower dwell a pair of such like little men and women, but this was the king of all the flower angels.

"Heavens! how handsome this king is," whispered Ellise into the ear of the swallow. The little prince was somewhat startled by the arrival of the large bird; but when he saw Ellise, he became instantly in love with her; for she was the most charming little maiden that he had ever seen. So he took off his golden crown, set it upon Ellise, and asked what was her name, and whether she would be his wife; if so, she should be queen over all the other flowers—ah! this was a very different husband to the son of the hideous toad, and the heavy, stupid mole, with his velvet coat! So Ellise said yes, to the beautiful prince; and now, from all the other flowers, appeared either a gentleman or a lady, all wonderfully elegant and beautiful, to bring presents to Ellise. The best presents offered to her was a pair of exquisite white wings, which were immediately fastened on her; and now she could fly from flower to flower.

And now the joy was universal. The little swallow sat above in his nest, and sang as well as he possibly could, though at the same time he was sorely grieved, for he was so fond of Ellise, that he wanted never to part from her again.

"You shall not be called *Ellise* any more," said the flower-angel, "for it is not at all a pretty name, and you are so pretty! But from this moment, you shall be called *Maja*."

"Farewell! Farewell!" cried the little swallow, and away he flew again, out of the warm land, far, far away, to the little Denmark, where he had his summer nest over the window of the good man, who knows how to tell stories, that he might sing his Quivit! Quivit! before him. And it is from him, the little swallow, that we have learnt all this wonderful history.

POPULAR YEAR-BOOK.

July 20.—St. Margaret's Day.

ST. MARGARET was the daughter of a heathen priest, and born at Antioch. Olybius, President of the East under the Romans, loved and wished to marry her; but finding that she was a Christian, resolved to defer the nuptials till he could persuade her to renounce her religion. When he found himself unable to accomplish his design by persuasion he had recourse to threats; and, at length, despairing of success, and burning with rage and disappointment, he first put St. Margaret to the most cruel torments, and then caused her to be beheaded, A. D. 278. "She has," says Wheatly, "the same office among the papists as Lucina has among the heathens; viz: to assist women in labour."

The cause why the above power was attributed to this saint appears to have been the following miracle, which is ascribed to her by her monkish biographers:—When neither Olybius nor her father could force her to apostatize, they obtained, it is related, the assistance of Satan himself, who, in the shape of a dragon, swallowed her alive. No sooner, however, had the saint entered the inside of the monster, than she made the sign of the cross, and "yssued out all hole and sounde." So marvellous a circumstance "naturally," says Brady, "pointed out the province of St. Margaret; for who

could so well be capable" of aiding females in childbirth, "as one who had extricated herself even from the body of the arch-enemy!"

The "Golden Legend," that treasury of hagiological fiction, relates that a devil appeared to St. Margaret, in the likeness of a man, but she caught him by the head, threw him down, and set her right foot on his neck, and said, "Lie still, thou fiend, under the foot of a woman." In that situation the demon admitted he was vanquished, and affirmed that he would not have cared if a young man had conquered him, but he was very vexed at having been overcome by one of the weaker sex. St. Margaret asked him who he was. He replied that his name was Veltis, that he was one of the multitude of devils who had been enclosed in a brass vessel by Solomon, and that after that wise king's death this vessel was broken at Babylon, by persons who supposed it contained a treasure, when all the demons flew out, and took to the air, where they were incessantly spying how to "assayle ryghtfull men." Then she took her foot from his neck, and said to him, "Flee hence, thou wretched fiend," and lo! "the earth opened, and the fiend sank in."

St. Margaret's festival is very ancient, not only in the Western, but also in the Eastern Church, in which she is commemorated under the appellation of Marina. Her name has a place in the calendar of the Church of England.

July 21.—The memory of St. Victor of Marseilles is celebrated on this day by the Latins. He was a martyr under the Emperor Maximian. The abbey of St. Victor at Marseilles was one of the most celebrated religious foundations in Europe, and claimed to be the first monastery established in France. On St. Victor's day were formerly held at the above city a festival and procession, in his honour, called "La Triomphale." The relics of the saint were carried round the town by the prior of the monastery, attended by the whole community. At the head of the procession marched a cavalier in complete armour, highly ornamented, carrying a lance in one hand, and in the other the standard of the abbey, on which were the arms, richly embroidered. He wore a rich scarf, and his horse had a housing of white damask, ornamented with blue crosses. This cavalier was intended to represent St. Victor. He was preceded by twelve horsemen, carrying lighted tapers, and accompanied by a band of music, with drums and trumpets. Six pages followed him. As soon as the people heard the music, and saw the standard, they flocked in crowds to join the procession. As it passed along the quay of the port, all the vessels hoisted their colours, and saluted it with a discharge of cannon and musketry, and the consuls, with the rest of the magistrates, met it at an appointed place, to pay their homage to the saint, and attend him back to the abbey. This ceremony had been observed every year from time immemorial, till Monsieur de Belsunce, the bishop of Marseilles, who distinguished himself so much in the great plague of 1720, prevailed upon the magistrates to consent to its abolition, for the following reason:—He was about to publish a biography of the bishops, his predecessors, from the first conversion of the town to the Christian faith, among whom it was necessary to include St. Victor; and not wishing him to appear otherwise than a Christian bishop and martyr, he thought he would not be considered in these lights only, while the people were accustomed to see him every year in a character directly opposite, so that no way appeared of making the impression he desired, except by the measure above alluded to.

A pedestrian tourist, who visited Grassmere, Westmoreland, on July 21, 1827, relates, "The church door was open, and I discovered that the villagers were strewing the floors with fresh rushes. I learnt from the old clerk that, according to annual custom, the rush-bearing procession would be in the evening. During the whole of this day I observed the children busily

employed in preparing garlands of such wild flowers as the beautiful valley produces for the evening procession, which commenced at nine, in the following order:—"The children (chiefly girls), holding these garlands, paraded through the village, preceded by the union band. They then entered the church, where the three largest garlands were placed on the altar, and the remaining ones in various other parts of the place. Wordsworth is the chief supporter of these rustic ceremonies. The procession over, the party adjourned to the ball-room, a hay-loft, where the country lads and lasses tripped it merrily and heartily." It appears, says Brand, that in ancient times the parishioners brought rushes at the Feast of Dedication, wherewith to strew the church; and from that circumstance the festivity itself has obtained the name of rush-bearing, which occurs for a country-wake in a glossary to the Lancashire dialect. Rush-bearing is now almost entirely confined to Westmoreland. It was once customary in Craven, as we learn from the following extract from Dr. Whitaker:—"Among the seasons of periodical festivity was the rush-bearing, or the ceremony of conveying fresh rushes to strew the floor of the parish church. This method of covering floors was universal in houses while floors were of earth, but is now confined to places of worship. The bundles of the girls were adorned with wreaths of flowers, and the evening concluded with a dance. In Craven the usage has wholly ceased." In Westmoreland the custom has undergone a change. Formerly, the maidens bore the rushes in the evening procession, and strewed the church floor at the same time that they decorated the church with garlands; now, the rushes are laid in the morning, by the ringer and clerk, and none are introduced in the evening procession.

The great living poet above mentioned has deemed the rural ceremony of rush-bearing worthy of celebration in "immortal verse." He sings:—

"Content with calmer scenes around us spread,
And humbler objects, give we to a day
Of annual joy one tributary lay;
This day, when, forth by rustic music led,
The village children, while the sky is red
With evening lights, advance in long array
Through the still churchyard, each with garland gay,
That, carried sceptre-like, o'ertops the head
Of the proud bearer. To the wide church-door,
Charged with these offerings which their fathers bore
For decoration in the Papal time,
The innocent procession softly moves:
The spirit of Laud is pleased in Heaven's pure clime,
And Hooker's voice the spectacle approves!"

July 24 is the feast of St. Declan, first bishop of Ardmore, in the county of Waterford, and, according to tradition, the friend and companion of St. Patrick. A stone, a holy well, and a dormitory in Ardmore churchyard, still bear his name. "St. Declan's stone" is on the beach. It is a large rock, resting on two others, which elevate it a little above the ground, and is said to be endued with miraculous powers. On the 24th of July numbers of the lowest class of Irish (the men clad in trousers and shirts, or in shirts alone; the women in petticoats, pinned above the knees) kneel around the stone, and some (in expectation thereby of curing or preventing rheumatic affections of the back) creep under it. This is not effected without considerable pain and difficulty, owing to the narrowness of the passage and the sharpness of the rocks. Stretched at full length on the ground on the face and stomach, the devotees move forward, one by one, as if in the act of swimming, and thus squeeze or drag themselves through.

On one not very remote occasion upwards of eleven hundred persons were observed to undergo this ceremony in the course of the day. At a short distance from "St. Declan's stone," on a cliff overhanging the sea, is the well of the saint. Thither the crowds repair after the devotions at the rock are ended. Having

drank plentifully of its water, they wash their legs and feet in the stream which issues from it, and, telling their beads, sprinkle themselves and their neighbours with the fluid. These performances over, the "dormitory of St. Decian," a small low building, is then resorted to. Hundreds at a time are said to crowd around it, and crush each other in their eagerness to obtain a handful of the earth which is believed to cover the mortal remains of the saint. This visit completes the "pious exercises" of the "devotionalists." Tents, for the sale of whiskey, &c., are placed in parallel lines along the shore, and thronged throughout the day with thirsty customers.

CANTERBURY CATHEDRAL.¹

THE Cathedral of Canterbury is remarkable not only for having been one of the earliest in England, but also, as at present, one of the largest of our cathedral churches. Its history is highly interesting from the eminence of some of its archbishops and others who occupy prominent places in history. A former cathedral, supposed to occupy the site of the present one, was sufficiently old to have had some claims to antiquity when the Venerable Bede wrote his Ecclesiastical History.

Bede tells us, that when St. Augustine (the first archbishop) came to reside here, he recovered, by the king's assistance, a church, which was said to have been constructed by Roman Christians; and that he consecrated it in the name of the Saviour, our God and Lord Jesus Christ. In this city he established a residence for himself and his successors in the See. Cuthbert, the eleventh archbishop, made some additions to the buildings, and obtained permission from Pope Gregory, that all future archbishops might be buried in their own church. In the days of Archbishop Odo, the roof was in such a dangerous state, that he resolved upon its immediate repair. "But because it was absolutely necessary that the Divine Service should not be interrupted, and no temple could be found sufficiently capacious to receive the multitude of the people, the archbishop prayed to Heaven, that, until the work should be completed, neither rain nor wind might be suffered to intrude within the walls of the church, so as to prevent the performance of the service. And so it came to pass: for during three years in which the walls of the church were being carried upwards, the whole building remained open to the sky; yet did no rain fall either within the walls of the church, or even within the walls of the city, that could impede the clergy standing in the church in the performance of their duty, or restrain the people from coming even to the beginning of it. And truly it was a sight worth seeing, to behold the space beyond the walls of the city drenched with water, while the walls themselves remained perfectly dry." ²—Pp. 3, 4.

A.D. 1070, when Lanfranc came to the See, the church and some of the conventual buildings were in a most ruinous state. The former he restored from the foundations in a more noble style, and he also rebuilt the monastery. Having been enlarged by Anselm, it was dedicated with great splendour by Archbishop William, in the presence of Henry I., David, king of Scotland, "and all the bishops of England." Professor Willis says:—

"It is scarcely necessary to remark, that this building was plainly not of wood; Odo is distinctly said to have raised the walls, but whether of stone or brick does not appear. However, the expression and details which have survived to us concerning the operation

of Lanfranc, are so decided with respect to the hopeless condition and total destruction of the church when he came to the See, that I have no doubt whatever of its entire eradication at that time. Consequently, it is vain to look to the present building for the slightest remains of the Saxon cathedral. . . ."—P. 20.

The third chapter of the volume before us contains a literal translation of Gervase his History of the Burning and Repair of the Church of Canterbury. This is given entire, with the exception of a quotation from the Opuscula of Edmer, which is contained in another part of the volume, and of a long digression upon the merits of Thomas à Becket. The value of Gervase's tract is thus explained by the author:—

"The most remarkable mediæval writer of architectural history is undoubtedly Gervase. Himself a monk of Christ Church at Becket's death, and an eye-witness of the fire in 1174, and of the rebuilding of the church, he has left us a most valuable and minute account of the latter event, in his tract 'On the Burning and Repair of the Church of Canterbury.' The information thus conveyed is not confined to the church in question, but gives us a general insight into the modes of proceeding in the carrying on of buildings at that period, the manner of providing architects, the time consumed in erecting these structures, the way in which old portions were adapted and worked up, the temporary expedients for carrying on the daily service, the care which was taken of the venerated remains unavoidably disturbed by the progress of the work, and many other most instructive particulars, which occur in every page of this circumstantial writer."—P. xiv.

In the year of grace³ 1174, nearly four years after the murder of Thomas à Becket, considerable portions of the Cathedral were again destroyed by fire; and again were the citizens called upon to lament that their holy and their beautiful house was left unto them desolate. Gervase says, "The afflictions of Canterbury were no less than those of Jerusalem of old, and their wallings were as the lamentations of Jeremiah." The restoration of the church was confided to a French architect, William of Sens. In the fourth year of his labours here, he fell from a height of fifty feet; and, being obliged by the injuries he received to return home, was succeeded by an Englishman—a namesake. In the year 1180, at Easter-Eve, the convent were again permitted to celebrate the divine offices in their new choir; but the works were not entirely finished until 1184. Professor Willis says, "the expenses of this magnificent work seem to have been partly supplied from the oblations at the tomb of St. Thomas."

"Gervase has given us," says Professor Willis, "a complete and detailed account of the parts of Lanfranc's church that remained in his time, (chap. iii. art. 3.) that is, the nave, central tower, western towers, transepts, and their eastern chapels; the choir or eastern arm of its cruciform plan only being deficient. . . . In the existing building it happens that the nave and transepts have been transformed into the perpendicular style of the fourteenth century, and the central tower carried up to about its original altitude in the same style. Nevertheless several indications may be detected, which show that these changed parts stand upon the old foundations of Lanfranc."—Pp. 63, 64.

Professor Willis's sixth chapter contains the history of the choir from the twelfth century, from which we make the following extracts:—

"Stow has preserved a description of the shrine of Becket, which was demolished in the year 1538. It was built about a man's height, all of stone, then upwards of timber plain, within which was a chest of iron containing the bones of Thomas à Becket. The timber-work of this shrine was covered with plates of gold, damasked and embossed with wires of gold, garnished with

(1) The Architectural History of Canterbury Cathedral. By the Rev. R. Willis, M.A. F.R.S. &c., Jacksonian Professor of the University of Cambridge, 8vo. 1845. London: Longman, & Co., Pickering, and Bell.

(2) Edmer, Vit. Odonis: quoted by Mr. Willis.

(3) This chronological term, Professor Willis says, was invented by Gervase himself.

brooches, images, chains, precious stones, and great orient pearls; the spoils of which shrine filled two great chests, one of which six or eight strong men could do no more than convey out of the church; all which was taken to the king's use, and the bones of St. Thomas, by the commandment of the Lord Cromwell, then and there burned to ashes; which was in September, in the year 1538, (30 H. VIII.) Erasmus supplies the additional information, that the golden shrine had a wooden cover suspended by ropes, so that it could be raised easily when the shrine was exhibited. The bones of the saint were not visible, they were deposited in the upper part of the structure."—P. 100.

"The Puritan troopers hewed the altar rails in pieces in 1642, and threw the altar over and over down the three altar steps, and left it lying with the heels upwards. The church suffered exceedingly in the disorders that followed."—P. 105.

"These dilapidations are more particularly described in a manuscript drawn up in 1662, and preserved in the cathedral library. The windows were generally battered and broken down; the whole roof, with that of the steeples, the chapter-house and cloisters, extremely impaired and ruined, both in timber-work and lead; water-tables, pipes, and much other lead cut off. The choir stripped and robbed of her fair and goodly hangings; the organ and organ-loft, communion-table, and the best and chiefest of her furniture, with the rail before it, and the screen of tabernacle-work richly overlaid with gold behind it; goodly monuments shamefully abused, defaced, and rifled of brasses, iron grates, and bars, &c."

"After the Restoration, a screen of the style then in use was erected, in the same position as the old one, and the communion-table placed in front. The choir in this state is represented in Dart's view. But, in 1729, the 'altar-piece,' as it was called, had become old-fashioned, and a bequest of 500*l.* from one of the prebendaries was expended upon a Corinthian screen. . . ." Pp. 105, 106.

The curious arrangement of the organ and organist must not be passed over.—The organ

"... has been ingeniously deposited out of sight, in the triforium of the south side of the choir; a low pedestal with its keys stands in the choir itself, so as to place the organist close to the singers, as he ought to be; and the communication between the keys and the organ is effected by trackers passing under the pavement of the side aisle, and conducted up to the triforium, through a trunk let into the south wall."—P. 107.

"The visit of Erasmus to Canterbury Cathedral is alluded to by all its historians, and is, unfortunately, too long and digressive to be given at length. I have already quoted it upon several occasions, and will conclude this section by endeavouring to abstract from it the order in which strangers were conducted over the cathedral at that time. He entered by the south porch, over which he observed the statues of the three knights who slew Thomas à Becket. In the nave he noted certain books fixed to the pillars, and amongst them the Gospel of Nicodemus. Iron railings separated the nave from the space which was between that and the choir. Many steps ascended to this space, and under them a vaulted passage led to the north part (or transept), where he was shown the small ancient wooden altar of the virgin. —(P. 41). From this place he was conducted down to the crypt, and shewn the skull of St. Thomas, and his ordinary garments. Then he returned, and went to the choir, where, on the north side, he was shown a multitude of relics, and examined the 'Tabula' and ornaments of the altar, and the riches beneath the altar, in the presence of which Midas and Croesus would have seemed beggars. . . ."—P. 112.

In the volume before us, Professor Willis has presented us with the most continuous and complete history we possess of any of our cathedrals. And, perhaps, no other furnishes materials for its equal in

that respect. This he has been enabled to do, in the earlier part of its history, from the writings of Edmer, the singer, or precentor of the cathedral, who lived under the rule of Anselm and Radulph; and in the twelfth century from the tract of Gervase. The Professor's present volume, as its title implies, is strictly an *architectural* history of the cathedral. Another is promised which will be devoted to the monastic building. He thus speaks of the advantages to be derived from investigations such as have been now devoted to the cathedral of Canterbury:—

"The cathedral which is the subject of the following pages is remarkable for its extent, beauty, and importance, for the variety of its architectural styles, for the changes of plan and structure which it has undergone, and especially for the numerous historical particulars relating to these changes which have been preserved to us.

"By a careful investigation of the architectural history of Canterbury Cathedral, we may therefore expect to obtain great insight into the motives that dictated such changes of plan and structure in all similar buildings, as well as a knowledge of the mode of their erection, and of the causes that led to those well-known varieties of style that form so interesting, and, at the same time, so perplexing a subject for investigation."—P. xi.

Professor Willis has avoided mixing up the history of the See, important as it is, with his historical account of the building; and in this respect the work is unlike those of most other writers on this cathedral. He has thus made his volume more acceptable to the architectural student and to the antiquarian. He says his plan has been, "first to collect all the written evidence, and then, by a close comparison of it with the building itself, to make the best identification of the one with the other that I have been able." The numerous illustrations are executed in a beautiful style: they are chiefly details of particular parts of the church. There are also plans of the Saxon cathedral of Canterbury, of the cathedral in 1174, and an historical plan of the present cathedral, with a block section of it. No general view of the building is given, either exterior or interior; but he has referred throughout to the admirable plates of Mr. Britton.

Palm Leaves.

THE VISION OF THE EAGLE AND THE FOX.

THE great king, Abbas Karaskan, appointed his servant, Mirza, governor of Tauris. Mirza held the scales of justice in his hands; he protected the weak, he honoured the wise, and rewarded the industrious. His subjects regarded him with love and respect, and every mouth blessed his government. He alone derived no satisfaction from his charitable actions. A deep sadness rested on his countenance; he sought for solitude; oft-times sat in deep abstraction; and, when he went abroad, his eyes were bent upon the earth, and his steps were heavy; in short, the occupations of his government had lost their interest, and he determined to rid himself of a task which he had long felt to be burdensome.

With this determination he approached the throne of his king and master, who asked him his desire. "Governor of the realm," said Mirza, "pardon the temerity of thy slave, whom thou hast invested with honours, and yet who presumes to lay thy gracious gifts down again at thy feet. Thou hast given me the government of a noble city, and of a fruitful country, whose meadows equal the gardens of Damascus. But the space of human life is small;

scarcely does it suffice any of us to prepare for death. Much of our toil is vain and useless, even as the labour of the ant, which is crushed beneath the foot of the wanderer; and our pleasures fade away like the colours of the rainbow in the stormy cloud. Therefore, sire, I seek to prepare myself for the eternity which approaches; I would fain give my mind to reflection, and in retirement seek to dedicate my life to holy meditation. The world may forget me, even as I also will banish all thoughts thereof from my mind, till the last moment lets fall the veil, and places me before the judgment-seat of the Almighty."

Here Mirza bowed himself to the earth, and was silent. King Abbas was so surprised at his speech that he trembled upon his throne; he looked around upon his nobles, but their faces were pale, and their eyes bent upon the ground; no one opened his mouth, until the King, after long consideration, thus broke the silence:—

"O Mirza! fear and horror have seized me; I am like a man cast by an irresistible power from the edge of a precipice, but yet I know not if my danger be real or imaginary. Like thee, I am but a worm upon the earth; my life is a moment; and eternity, in comparison with which years and ages are as nothing, also warns me, by its dread approach, to be prepared. But shall we give up the government of the faithful into the hands of wicked men, who live like the beasts which perish, and fear neither death nor the judgment of their Maker? Is the cell of the hermit the only door of Paradise? And are all the occupations of the countless inhabitants of this city to be accounted sins? All men cannot be hermits, therefore a life in the wilderness cannot be the only one worthy of recompense. Retire for a while; I will consider thy request; and may He who enlightens the souls of those that seek his aid, guide me to decide in the spirit of wisdom!"

Mirza departed; but on the third day, without waiting the command of the King, he requested a second audience. It was granted him, and he entered the presence-chamber with a joyful countenance. Drawing a letter from his bosom, he kissed it, and then, with his right hand, presented it to the King. "Sire," said he, "in this letter, written to me by the Iman Kosru, who stands before thee, I have learnt what is the best life for me. He has enabled me to look with satisfaction upon the past, and with hope to the future. I shall henceforth deem myself happy to dwell under the shadow of thy power, and to bear the weight of honour which I was so lately desirous of relinquishing."

The King listened to Mirza with curiosity and astonishment, and as soon as he ceased, gave the letter to the Iman, and commanded him to read it aloud. The whole assembly turned their eyes upon the aged sage, whose face glowed with modesty; after some hesitation, he read the following words:—

"Everlasting happiness be granted to Mirza, whom the wisdom of our monarch has rewarded with the government of a province. When I heard thy decision to withdraw thy supporting hands from the inhabitants of Tauris, my heart was pierced by the arrow of grief, and my eyes darkened by affliction; but who dare speak when the King is angry? or who can set forth his own wisdom when the King's mind is disturbed by doubt? But to thee, O Mirza! will I relate the events of my

youth, the remembrance of which thou hast revived in my mind; and may the Prophet of Truth, who taught me by them, make the relation thereof a blessing unto thee!

"I was instructed by Alnazer the Wise in the secrets of medicine, and very early became initiated therein. I knew the virtues of those herbs into which the sun breathes the power of yielding a health-bestowing balsam; but the various forms of misery, of slow decay, and, at last, of death itself, which were daily before my eyes, filled my heart with sorrow and fear. I saw the grave, whose prey I must sooner or later become, ever open before me; and this, at last, made me resolve to devote my few remaining days to holy meditation. All earthly possessions appeared despicable to me, since I knew they could be held but for a short time; nay more, I deemed them hindrances to piety. Therefore, I buried my money in the earth, withdrew from society, and departed into the desert. I took up my abode in a cave on the side of a mountain; I drank water from the stream which flowed beside it, and fed upon the wild fruit and herbs which grew in this wilderness. I often placed myself at the mouth of the cave, turned my face towards the east, and thus watched the night through, that by self-denial I might prepare my mind to receive the heavenly teaching of the Prophet. One morning, when I had thus watched during the whole night, and just as the eastern sky was becoming faintly tinged by the first rays of the early dawn, sleep overtook me. I slept, and beheld a vision:—Methought I was in front of my cave. The dawning day became brighter, and when I looked towards the glimmering sunrise, I observed a dark speck in the sky. It moved, and as it approached, it increased in size, until at last the form of an eagle became apparent. I bent my eyes upon his flight, and saw him descend to the earth at some little distance, where there lay a fox, whose fore-legs appeared to be broken. The eagle bore in his talons a piece of a young fawn, which he laid before the fox, and then flew away. I awoke, and was wondering what this dream betokened, when I heard a voice in the air, saying: 'Kosru, I saw the Angel, who, at the command of the All-powerful, had watched the thoughts of thy heart, and I have brought thee this vision to guide thy erring footsteps into the right way. Up, and imitate the eagle. Thou hast his power, and many sufferers await thy support. Visit the weak and afflicted in their trouble, and convey to them health and comfort. Virtue is not found in idle rest, but in well-directed activity and labour; and when thou doest good to a suffering fellow-creature, then dost thou fulfil the most beautiful of the commandments which religion sets before thee. Doing good exalts human nature, and gives to man a foretaste of the bliss which awaits him in that Paradise where is perfect charity.'

"At these words I felt as though a mountain were removed from beneath my feet. I knelt down in the dust, and lamented my error; then I returned to the city, and dug up my treasure; I gave much away, but still I was rich; and through my gift of healing the body I often obtained opportunities of benefiting the soul. I took holy orders, and gained respect on account of my profession, until, by a gracious command, I was admitted into the presence of the King. But let me not deceive thee; I cannot boast of any wisdom that has not been given to

me. Even as the sand of the desert imbibes the rain and the morning dew, so also do I, who am but dust, receive the heavenly instructions of the Prophet. All wisdom is vain which we bury in ourselves, without in some way benefiting others by it; and a life of *inactive* solitude is useless. We, by our unassisted efforts, can find only error; but when the gates of heaven unclothe before our eyes, and its light discloses wisdom to us, then we see truth without a veil. Hope ever for this glorious manifestation, and in the meantime imitate the example of the beneficent eagle. A prince, such as thou art, has great power intrusted to him, and therefore will much be required at his hands. He can mould his subjects by his own example, and even teach generosity to the covetous. Thus mayest thou refresh thy country with thy virtue, as with a heavenly stream; and hope, in firm faith, for happiness in eternity. Farewell. May He, whose dwelling is in heaven, smile upon thee, and in the book of His will may he write present and eternal bliss to thy name!"

The King, by this letter, was, even as Mirza had been, set free from all scruples, and he looked around with a calm cheerfulness, in which his subjects participated. He sent the Governor back to his province, and commanded this history to be written, to teach succeeding generations that Heaven delights not in any manner of life which does not, in some way, benefit mankind.

Poetry.

[In Original Poetry, the Name, real or assumed, of the Author is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

LIFE'S COMPANIONS.¹

I.

WHEN I set sail on Life's young voyage,
'Twas upon a stormy sea:
But to cheer me night and day,
Through the perils of the way,
With me went companions three—
Three companions kind and faithful,
Dearer far than friend or bride;
Heedless of the stormy weather,
Hand in hand they came together,
Ever smiling at my side.

II.

One was Health, my lusty comrade,
Cherry-cheek'd, and stout of limb;
Though my board was scant of cheer,
And my drink but water clear,
I was thankful, bless'd with him.
One was mild-eyed Peace of Spirit,
Who, though storms the welkin swept,
Waking, gave me calm reliance;
And, though tempests howl'd defiance,
Smoothed my pillow when I slept.

III.

One was Hope, my dearest comrade,
Never absent from my breast;
Brightest in the darkest days,
Kindest in the roughest ways,
Dearer far than all the rest.
And though Wealth, nor Fame, nor Station
Journey'd with me o'er the sea;
Stout of heart, all danger scorning,
Nought cared I in Life's young morning
For their lordly company.

(1) We have much pleasure in enriching our pages with a specimen of Mr. C. Mackay's poetry, extracted from his last published volume, "Legends of the Isles," one of the most attractive volumes of poetry which has appeared within the last few years.

IV.

But, alas! ere night has darken'd,
I have lost companions twain;
And the third, with tearful eyes,
Worn and wasted, often fies,
But as oft returns again.
And instead of those departed,
Spectres twin around me flit;
Pointing each, with shadowy finger,
Nightly at my couch they linger,
Daily at my board they sit.

V.

Oh, that I so blindly follow'd
In the hot pursuit of Wealth!
Though I've gain'd the prize of gold,
Eyes are dim and blood is cold—
I have lost my comrade Health.
Care instead the wither'd beldam,
Steals the enjoyment from my cup;
Hugs me, that I cannot quit her;
Makes my choicest morsels bitter;
Sculds the founts of pleasure up.

VI.

Woe is me that Fame allured me—
She so false and I so blind!
Sweet her smiles, but in the chase
I have lost the happy face
Of my comrade Peace of Mind;
And instead, Remorse, pale phantom,
Tracks my feet where'er I go;
All the day I see her scowling,
In my sleep I hear her howling,
Wildly flitting to and fro.

VII.

Last of all my dearest companions,
Hope! sweet Hope! befriend me yet.
Do not from my side depart,
Do not leave my lonely heart
All to darkness and regret.
Short and sad is now my voyage
O'er this gloom-encompass'd sea;
But not cheerless altogether,
Whatsoe'er the wind and weather,
Will it seem, if bless'd with thee.

VIII.

Dim thine eyes are, turning earthwards,
Shadowy pale, and thin thy form:—
Turn'd to heaven thine eyes grow bright,
All thy form expands in light,
Soft, and beautiful, and warm.
Look then upwards! lead me heavenwards!
Guide me o'er this darkening sea!
Pale Remorse shall fade before me,
And the gloom shall brighten o'er me,
If I have a friend in *Thee*.

FROM THE GERMAN.

BY THE REV. HENRY THOMPSON, M.A. CANTAB.

LONELY—nay, that am I not!
Loving spirits and confiding,
By my distant hearth abiding,
Hover round me here.

Happy—nay, that am I not!
For these silent tears and burning
Witness well a secret yearning
For the far and dear.

Mournful—nay, that am I not!
For the friends of my affections
Wreath me in their recollections,
And are ever near.

Hopeful—Yes, that mood is mine!
Once again in home's sweet union
With the loved to join communion
Fills my heart with cheer.

Rectory, Winton, Nov. 28, 1845.

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne*.

THE PLOUGHBOY.

LET us take a boy, a child of ten, let us suppose him regularly engaged from old Michaelmas to new Michaelmas as ploughboy; and let our gentle readers fancy to themselves their little sons or brothers, Fred, or Willy, leading a life such as this. Richard is naturally a very delicate, timid boy, thin and pale; complains of weak knees or ankles, so that his mother has not let him wear heavy shoes, and, only a month since, begged him off a walking errand of only five miles and back, which he was wanted for. However, he has two entirely new suits of clothes on the strength of his engagement, and an uncommonly heavy pair of laced boots, into which the blacksmith has just hammered fifteen pennyworth of tips and nails. So he is in high spirits, very pleased, and proud of his promotion from a nonentity to a ploughboy. Before it is light, he is in the stable bringing out two or three immense horses, who tower above his diminutive form like elephants. Even in the dusk, when the furrows can hardly be distinguished, they are at work. The urchin, with his ponderous shoes increased to twice their weight with mud, is toiling through the heavy field, slipping and sinking, falling and rising, at every step, with a cumbrous whip in his hand, and his clumsy charges continually planting their tremendous hoofs deep into the yielding soil within six inches of his own frail toes. The boy has to watch the horses, look to his own footing, and ply his whip all at once. Every time they come to the end of the field, there ensues a regular *mêlée* of plough, horses, man and boy, who seem to an unpractised eye all mingled in the wildest and most fearful disorder. But a merciful providence extricates them, and they soon start all fair again. If the soil is heavy, the walking is heavy in proportion. If it is light the walking is all the more speedy. However, before night, this little boy, who a month since was not trusted to walk at his own pace ten miles on a good road and springing turf, has toiled fifteen or even twenty miles with all these hindrances and impediments. The daily journey of a plough, therefore, even measured only by the distance traversed, is no trifle. Sometimes the ploughboy's daily journey is considerably more than we have stated. Following the harrows is of course quick work, under ordinary circumstances; but the harrow is often used to detach entirely from the ground a surface of weeds, after it has been two thirds separated by the plough, with a view to collecting the weeds and burning them. This is usually done in the driest and warmest weather that can be got, and is a very dusty employment. We have been told that the ploughboy, enveloped as he is in a cloud of dust, and going over a broken surface, will sometimes walk or run thirty or even thirty-five miles a day at this work.

The ordeal of the first two or three months is terrible. Nothing but a knowledge of the general law, that boys do get over it, would reconcile the mother to the accumulation of misery she sees her tender little child exposed to. He is often ready to sink. Often he does fall almost under the horses; sometimes towards the close of his day's work he is so stupified with fatigue, as to be quite reckless and insensible of danger, hardly knowing where he is. He falls asleep while his mother is putting before him his five o'clock meal—nay, even while he is eating it. His heavy shoes, made large enough to allow for a twelvemonth's growth, fret and gall his ankles and heels till sores are formed, and every footstep is agony. His feet have also been several times severely crushed by the horses. Yet he must not intermit for a day, for an hour, as long as he can put

one foot before the other. By and bye, either from his sores breaking his sleep, or from heat, or cold, or rain, his health sinks; three days' rest, and at it again. A stranger would say, judging from his looks, that he could not possibly stand it long. Though browned by sun and toil, he seems thinner and wanner than ever; and going to or returning from his work, he is scarcely able to drag his iron-shod feet along the village pavement. But, behold a miracle! After three or four months it becomes evident that he is gaining health and strength and spirits—bone and sinew, flesh and blood. His present life, hard as it is, shocking as it might be deemed by some humane persons, suits him better than his former inactivity. Exercise of body, mental concentration, feelings of responsibility, fresh air, a rather more generous diet, sleep—and such sleep—all tell in the end, and in a very few years the sickly child expands and hardens into the sturdy labourer.

Let not such a result, however ordinary it may be, wipe away that debt of compassion and kindness, which we are labouring to establish. It is true, the most delicate child does often become a stout and healthy labourer, under a discipline which might seem at first sight more likely to break his spirit and crush the vital energies. But it is not the less true, that he does go through a vast amount of suffering in the meanwhile. He endures toils and pains whose very recital would almost break the heart of many a more fortune-favoured mother than his own. His toils and pains, whether we think of them or not, are noted in a Book of Remembrance, in which, if in any degree they have been needlessly aggravated or unduly requited by his fellow men, that sin is also recorded. There is something sacred in necessary labour, and inevitable distresses, coming in the course alike of nature and of duty. We do but hide ourselves in our littleness from the gaze of Infinity, if we suppose such labour and pains, the benefits they have purchased for us, and the obligations they have laid us under, shall ever be forgotten.—*From an article on Agricultural Labour in a recent periodical.*

Nothing has such a tendency to weaken, not only the powers of invention, but the intellectual powers in general, as a habit of extensive and various reading, without reflection. The activity and force of the mind are gradually impaired in consequence of disuse; and not unfrequently all our principles and opinions come to be lost, in the infinite multiplicity and discordancy of our acquired ideas. By confining our ambition to pursue the truth with modesty and candour, and learning to value our acquisitions only in so far as they contribute to make us wiser and happier, we may, perhaps, be obliged to sacrifice the temporary admiration of the common dispensers of literary fame; but we may rest assured, that it is in this way only we can hope to make real progress in knowledge, or to enrich the world with useful invention. "It requires courage indeed," as Helvetius has remarked, "to remain ignorant of those useless subjects which are generally valued," but it is a courage necessary to men who either love the truth, or who aspire to establish a permanent reputation.—*Stewart.*

ANCIENT HOUSES, CHESTER.

THE CITY OF CHESTER.

THE names of many considerable places in England still remain as the durable mementos of our Roman conquerors. Wherever the Romans formed a settlement they erected a stronghold, or *castrum*, the name of which was generally associated with that of the neighbouring river, or of some local peculiarity. Thus Alcaster is the camp on the Alne; Doncaster, the camp on the Don; Lancaster, the camp on the Lan, or Lune; Colchester, on the Colne, and so on. Manchester is the camp on or near the *stone*-quarries (from the British *maen*, a stone). Rochester, the camp on a rock, called, in Saxon, *Rothe-ceaster*; Winchester, or Wintan-ceaster, is the camp near the *white* city; Gloucester, or *Gleau-cestre*, is the camp near the *fair* city. Many other examples might be cited in which the *castrum* of the Romans plainly occurs; and there are others in which it is not so palpable, as in Exeter, or Excester, the camp on the river Exe. To the same source may be referred Casterton, Castleton, Chesterton, and many others.

In some cases, the word *castrum*, or one of its deriva-

tives, Chester, Caster, &c., has been retained, while the prefix or affix has been lost. Such appears to have been the case with Chester, a city which still bears marks of its Roman origin. The laying out of its streets is Roman, the two principal thoroughfares crossing at right angles in the centre of the city. Its fortifications are reasonably supposed to be on a Roman basis. Remains of Roman masonry have been discovered; and the usual vestiges of the Romans have at different times been turned up, such as coins, fibulæ, inscribed tiles, inscribed stones and altars. In 1653 a votive altar to Jupiter Tanarus was dug up, which had been raised by an officer of the twentieth Legion, called the Victorious. In fact, this city was named in honour of this Legion, *Legecestrin*; and after the Romans ceased to occupy it, the Britons called it *Caer Lleon* *vaur ar ddyfr Dwy*, or "the camp of the great Legion on the Dee." It was also called *Dwa*, from the river which runs by its walls. In the time of the Romans Chester was the termination of the celebrated Watling Street, or great military road, which extended from Dover across the island.

Attempts have been made to prove that Chester is of British origin, and was founded long before the arrival of the Romans. Drayton, in his "Polyolbion," (Song XI.), speaks of

"Fair Chester, call'd of old
Caerlegion, whilst proud Rome her conquests there did hold;
Of those her legions known, the faithful station then,
So stoutly held to tack by those near North-Wales men.
Yet by her own right name had rather called be,
As her the Briton's termed, the fortress upon Dee,
Than vainly she would seem a miracle to stand,
Th' imaginary work of some huge giant's hand."

The claim of this city to be of British foundation is not supported by trustworthy evidence, and, therefore, may be passed lightly over. When the Romans abandoned Britain in the fifth century, Chester was alternately possessed by the Britons and the Saxons, and it seems to have held out longest against the Saxon power. It is related in the Saxon Chronicle that Ethelfrid, King of Northumbria, took it from the Britons, A.D. 607. After that date it was, certainly, in the hands of the Britons, their councils having been held in it. Finally, in 830, it was re-taken by the Saxons under Egbert; from which period to the conquest, in 1066, it continued under Saxon sway. In the ninth century Chester suffered greatly from the Danes, who, being pursued by Alfred, fortified it, and endured a two days' siege. Alfred laid waste the country in the vicinity, so that the Danes were compelled to evacuate the city for want of provisions. They left it, however, in a ruined condition, in which it continued, until Ethelfleda, "the undegenerate daughter of the great Alfred," restored it, about the year 908; and from this time it long continued to be used as a stronghold for restraining the incursions of the Danes. During these contests with the Northmen an event occurred which was of great importance to the city in the times to which we now refer. On one occasion, when a descent from the Danes was apprehended, the body of St. Werburgh, a Saxon saint, daughter of Walphere, King of Mercia, was removed for security to Chester. The sacred relics remained in the city, and henceforth St. Werburgh became the tutelary Saint of Chester; a religious community was founded, and a church was built, in which the relics were sumptuously enshrined; and during more than six centuries and a half this religious establishment continued to be one of the wealthiest in England.

In the reign of Edgar, Chester became a station for a Saxon navy. An anecdote, discredited by some historians, is related in the annals of that period, that Edgar sailed with a great fleet to Chester, and that eight kings repaired thither at his command to do him homage. These were Kenneth, King of Scotland, Malcolm of Cumbria, Macchus of Anglesey and the Isles, three Kings of Wales, and two others. Edgar was not satisfied with this confession of his power; "his puerile vanity demanded a more painful sacrifice: he ascended a large vessel with his nobles and officers, and he stationed himself at the helm, while the eight kings, who had come to do him honour, were compelled to take the seats of the watermen, and to row him down the Dee, a most arrogant insult on the feelings of others whose titular dignity was equal to his own. Edgar crowned the scene and consummated his disgrace by declaring to his courtiers that his successors might then call themselves Kings of England when they could compel so many kings to give them such honours."

It appears from Domesday Book that, under the

Saxons, Chester had its own local government and municipal customs. In the reign of Edward the Confessor, it had 431 rateable houses, besides 56 houses belonging to the bishop. It had a *guild mercatory* (an institution similar to the corporations of later times), none but members being allowed to exercise any trade, or carry on any commerce, within its precincts; two overseers were appointed to maintain the rights of the guild, and to receive all the customs paid by strangers. The city yielded ten marks and a half of silver, of which two thirds went to the king, and the remainder to the earl (who will be further noticed presently). Whenever the king visited the city in person, he claimed for every plough-land two hundred capons, one vat of ale, and a portion of butter. There were twelve judges in the city, and seven mint-masters. Among the laws of the city was one which shows at how low a rate human life was held in these times: the penalty to be paid for killing a man upon certain holidays was four pounds, but on any other day only forty shillings. In Saxon times Chester had a large portion of land called a *shire* attached to it, the form of which has been compared to an eagle's wing, its tip touching on Yorkshire. This was called *Cestre-scyre*, since contracted into Cheshire.

At the Conquest, the whole of Cheshire (with the exception of the Bishop's property) was granted to a near relation of the Conqueror, Hugh of Avranches, commonly called Hugh Lupus, on account of his favourite device of a wolf's head. Cheshire then became a county palatine, with courts peculiar to itself; so that any offence against "the sword of Chester" was visited with as severe penalties as a similar offence against the crown at Westminster. Hugh resided in the castle at Chester, where he held his courts and parliaments, in which sat the superiors of the religious houses of the country, together with his eight great sub-infeudatories. The succeeding earls maintained the same state down to the reign of Henry III., when the earldom of Chester was seized and united to the crown; the large tenures created by the Conqueror having, for the most part, reverted to the crown by forfeiture or marriage. The ancient earls of Chester had the power of granting privilege or sanctuary to criminals, a power which is generally supposed to have been exercised by the church alone.

Our space will not allow us to do more than select a few historical events, of which Chester has been the scene. It was in this city that the Welsh, in 1300, acknowledged the sovereignty of the English, the homage of the freeholders being received by the infant Prince of Wales, Edward of Carnarvon. In the year 1506 Chester was afflicted with that remarkable disease, the sweating sickness, which carried off ninety-one householders in three days; and a few years afterwards a pestilence made such ravages, that the streets of the city were overgrown with grass. In 1558 occurred in Chester an event trifling in itself, but of the greatest importance to the Protestants of those days. Dr. Henry Cole, Dean of St. Paul's, is said to have been entrusted with the commission issued by Mary to empower the Lord Deputy of Ireland to prosecute those who refused to observe the ceremonies of the Roman Catholic religion. The doctor, on his way to Ireland, stopped at Chester, and having put up at the Blue Posts inn, in Bridge Street, was visited by the mayor, to whom he communicated the business in which he was engaged; opening his cloak bag, he took out a leathern box, observing, with exultation, "he had that within which would lash the heretics of Ireland." The hostess, Mrs. Elizabeth Mottershed, overheard this by accident, and having a brother in Ireland, who was a Protestant, she became alarmed for his safety, and took the opportunity, while the doctor was attending the mayor down stairs, to open the box, take out the commission, and leave in its place a pack of cards with the knave of clubs uppermost. The dean arrived in Ireland on the 7th December, 1558. Being introduced to the Lord Deputy Fitzwalter

(1) An elaborate poem on the History, Topography, and Antiquities of England and Wales.

(2) Sharon Turner.

and the Privy Council, he explained the nature of his embassy at more length, and then presented the box, containing, as he thought, the commission; his lordship took it, and having opened it, beheld, with considerable surprise, the pack of cards with the knave on the top. The doctor was thunderstruck; and in much confusion affirmed that he certainly had a commission, and that some artful person must have made the exchange. "Then," said his lordship, "you have nothing to do but to return to London, and get it renewed; meanwhile, we'll shuffle the cards." The doctor was obliged to follow this unwelcome advice, although in such a disagreeable season of the year; but before he could reach Ireland a second time, the queen died, and her sanguinary commission became useless. The woman, whose presence of mind and dexterity had thus providentially interposed, was rewarded by Elizabeth with a pension of forty pounds a-year.

During the civil war in the reign of Charles I. Chester stood several sieges, which lasted about three years. The inhabitants who had sided with the king endured great privations; but at last, when the siege was converted into a blockade, they surrendered on honourable terms to the parliamentary army, on the 3d February, 1645-6. A century afterwards, (1745,) Chester was fortified against the Pretender. In the reign of William III. Chester was one of the six cities permitted to issue a coinage of silver.

It is now time to speak of the city itself, which is situated on a dry rock, above the stream of the Dee, which flows round it on two sides. The neighbouring district is a rich, but level plain, presenting, however, some interesting views, to the ancient walls of the town, which form one among many of the remarkable features of Chester. These walls, which are now used as a healthful and favourite promenade, are especially interesting as being the only perfect military work of the kind remaining in the kingdom. The following description of them is abridged from Ormerod's elaborate County History:

"The walls enclose an oblong parallelogram, and stand to a considerable extent on Roman foundations, as is proved by the remains of the ancient East-gate, discovered in erecting the present arch, and some relics of Roman masonry near it still existing, but concealed from public view by the houses adjoining. The Ship-gate is also supposed to be of similar antiquity, but cannot have been any part of the original walls, if the story of the extension of the original fortifications in the direction of this gate, by Ethelfleda, be correct. The present circuit of the walls is somewhat more than a mile-and-three-quarters.¹ The materials are a red stone; the exterior elevation is tolerably equal, but the interior is in some places nearly level with the ground, and in others with the tops of the houses. The entire line is guarded by a wooden rail within, and a stone parapet without; and the general line, which is kept in repair as a public walk, commands interesting prospects; among which may be specified the views towards the forest hills from the eastern point, towards North Wales and the Dee from the opposite one, and a fine view of the bridge and river, with the surrounding country, from the south-east angle. A very large proportion, however, of the eastern point, and a part under the castle, are completely blocked up by contiguous buildings. At the sides of the walls are the remains of several ancient towers, which have either been made level with the walls, been completely dismantled, or been fitted up as alcoves by the citizens. At the north-east angle is a lofty circular tower, erected in 1613, and called the Phoenix Tower,² remarkable from the circumstance of Charles I. having witnessed a part of the battle of Rowton Heath from its leads in 1645. Another tower of higher antiquity, and the most picturesque of the military remains of Chester, projects out at the north-west angle, and is approached by a small turret called Bonwaldesthorpe's Tower, which forms the entrance to a flight of steps leading to an open gallery embattled on each side. Below this is a circular arch, under which the tide flowed before the embankment of the Dee.

(1) The exact circuit is, we believe, 2670 yards. The walk is six feet wide.

(2) The tower is so named from the Phoenix, the crest of the Painters' Company, affixed with other armorial coats to the part.

At the end of the gallery is the principal tower, a massy circular building of red stone, embattled; the principal room is an octagonal vaulted chamber, in the sides of which were pointed arches for windows. This tower, now called the Water Tower, and formerly the New Tower, was erected in 1322 for 100*l.* at the city expense, by John Helpstone. The principal gates of the city are four, facing the cardinal points, and severally named the Bridge-gate on the south side, the East-gate, the North-gate, and the Water-gate. The ancient gates have been removed, and replaced by modern arches."

The care of the walls was formerly entrusted to two citizens called "Muragers," annually chosen, who were paid by a small duty, called the "Murage Duty," upon Irish lincens imported into the city by the Dee. The corporation now defrays the expenses of keeping the walls in repair.

The four principal gates are the terminations of the four principal streets of Chester, named respectively East-gate-street, North-gate-street, Bridge-gate-street, and Water-gate-street; the first two are continued beyond the walls under different names. These four streets which cross at right angles, as already noticed, retain many old timber buildings, which give them an ancient and impressive effect. These streets, as described by Pennant, are "excavated and sunk many feet beneath the surface. The carriages are driven far below the level of the kitchens, on a line with ranges of shops; over which, on each side of the streets, passengers walk from end to end, secure from wet or heat, in galleries, (or rows as they are called,) purloined from the first floor of each house, open in front and balustraded. The back courts of all these houses are level with the rows; but to go into any of these four streets it is necessary to descend a flight of several steps."

These rows certainly form the most remarkable peculiarity of Chester. They have been curtailed of late years, but still exist on both sides of East-gate-street, throughout the greatest part of its length, also on both sides of the upper portion of Water-gate and Bridge-gate streets, as well as in part of North-gate-street. It is not easy to convey a clear idea of these Chester rows by description.³ They are, as Pennant described them, galleries occupying the front rooms of the first floors, forming a continuous passage through a long line of houses. On one side they are open to the street, and fenced with a railing, massive pillars occurring at intervals, serving as supports for the upper floors. On the other side are a number of shops, which may be said to occupy the back room of the first floors. These shops are much frequented on account of the shelter afforded to passengers from the rain and heat, by these covered rows. A flight of steps descending into the street, occurs at every thirty or forty yards. Immediately under the rows are shops, storehouses, or vaults.

The origin of these rows has been a source of dispute among antiquarian writers. Pennant supposed them to have been identical with the ancient vestibules, and to have been a form of building preserved from the time when the city was possessed by the Romans. The opinion of Mr. Ormerod is more generally adopted, that these rows were first erected as galleries from which the citizens might defend themselves against those sudden inroads of armed cavalry to which they were so much exposed in ancient times, in consequence of their position on the frontier of the English and Welsh.

The next remarkable feature of Chester is its Cathedral, which was founded within the site of the Benedictine Abbey of St. Werburgh, already noticed. It is a spacious irregular building, composed of the red stone of the country, and was built, or rather re-built, during the reigns of Henry VI. VII. and VIII. In the cloisters and buildings adjacent occur some interesting specimens of Norman architecture, and the early decorations of the

(3) The Londoner may be reminded of an exact imitation of them in the "Colonnade," as it is called, which runs behind, and is parallel to, Great Guildford-street, Russell-square.

pointed style. "The western front, and some other detached parts, exhibit equally beautiful specimens of the enriched Gothic, near the time of the Dissolution; and the space occupied by the entire range of the conventual buildings, furnishes a magnificent idea of the grandeur of the establishment. This effect is, however, injured by the want of vaulting in the nave, choir, and south transept, (which was probably interrupted by the Dissolution) and by the nature of the stone, which, partly from its friability, and partly from its exposure to the sea breezes, has long lost the greater part of its external ornaments. The progress of ruin is aided by the great inequalities which progressive decay has made in the surface. Every exertion has of late years been made by the Chapter, under the auspices of the late Dean, in perfecting substantial and even ornamental repairs: but it is to be feared that the general decay is far beyond any restoration which the slender funds of the Cathedral can supply; and the lapse of another century will probably level a considerable portion of the venerable fabric with the ground."

About the year 785 the bishopric of Chester was incorporated with Lichfield. In 1075 the Bishop of Lichfield removed his episcopal seat to Chester. His successor returned back to Lichfield; and Chester remained without a bishop until after the Dissolution of the monasteries. In the thirty-third of Henry VIII. the present bishopric of Chester was erected, of which the first bishop was John Bird, who had been a Carmelite friar.

Contiguous to the Cathedral are the remains of St. Werburgh's Abbey, already noticed. The bishop's palace, rebuilt in 1752, the prebendal, and other good modern houses, forming what is called the Abbey-square, occupy the rest of the precinct.

Previous to the Dissolution there also existed in Chester a religious community of women established within the walls; the black, the white, and the gray friars, had each an establishment here. There was also a college of the Holy Cross; the Hospital of St. Anne, and of St. John the Baptist, of which the latter escaped suppression, and continues to this day: there were also numerous parish churches. On the Dissolution of the house of St. Werburgh, its church became the Cathedral of the new sec. A dean and six prebendaries were placed in it, Thomas Clark, the last abbot of St. Werburgh, being made the first dean. The revenue of the dissolved monastery furnished a provision for the bishop, prebendaries, and dean. At the same period, 1544, a grammar-school was founded for twenty-four boys, which still continues, and from it the cathedral choristers are selected; its annual revenue is 108*l.*, and it has one exhibition to either university. Chester has now nine parish churches, and two others not parochial. St. John's Church is a magnificent specimen of Saxon architecture.

The old Norman castle is said to have been erected by William the Conqueror in 1069. This, with the exception of one tower, was removed in 1790, to make way for the modern castle, a magnificent structure, containing the county courts and gaol, together with government barracks and an armoury. This is the finest structure in Chester, and does credit to the architect, Mr. Harrison, a native of the place. The buildings occupy three sides of a large quadrangle, the entrance to the area being by a splendid Doric portico. The military government of the castle is vested in a governor and lieutenant-governor. The gaoler, who has the custody of both debtors and felons, holds his place by patent, and is called constable of the castle.

Within the ancient fortress an instance occurred of a felon, who stood mute on his trial, suffering "*peine forte et dure*," till he died. "One Adam, son of John, of the Woodhouses, was, in 1810, the fourth of Edward II., committed for burning his own houses, and carrying away the goods. He stood mute; a jury as usual was impannelled, who decided that he could speak if he

pleased. On this he was committed *ad dietam*. And afterwards John le Morgan, constable of the castle, testified that the aforesaid Adam was dead, *ad dietam*." This term was ironical, expressive of the sad sustenance the sufferer was allowed; viz. on the first day three morsels of the worst bread; on the second, three draughts of water out of the next puddle; and this was to be alternately his diet till he died." By a law passed in twelfth George III., a prisoner remaining mute when arraigned, is held to be guilty, and may be condemned and executed.

The sheriffs of Chester formerly held their courts in an ancient building called the "Pentice," or "Appentice,"¹ situated at the junction of the North and East-gate-streets. It was removed in 1805 for the purpose of widening the streets. The sheriffs formerly had to carry into execution the sentence of all criminals capitally convicted, not only within the jurisdiction of the city and county, but also within the county of Chester at large. A writ was directed to them from the court of gaol delivery, requiring them to execute the criminal on a certain specified day. This duty was always regarded by the sheriffs as a great hardship and annoyance; and an attempt was made to get rid of it on the passing of the act 1 William IV. "for the more effectual administration of justice in England and Wales." It was contended that several clauses of this act relieved the sheriffs from this painful duty, and they determined to try the question on the first opportunity. This occurred in 1834, when two men were left for execution at Chester, for one of the worst, if not the very worst, forms of murder—assassination for hire. The sheriffs refused to execute the criminals, and they, therefore, remained in gaol long after the day appointed for the purpose; they were respited from time to time, and at length the Court of King's Bench reassumed a power, which it had formerly possessed, of granting writs for removing both the conviction and the bodies of the criminals, from the inferior to the superior court. The criminals were accordingly removed from Chester to the Court of King's Bench, where their sentence was read, and they were executed at Horsemonger-lane Gaol on the 25th November, 1834. In order to settle the disputed point, an Act was passed in the next session of Parliament, by which the sheriffs of the city of the county of Chester, for the time being, are to execute the sentence of death upon all criminals appointed to die for offences committed within the county of Chester.

Chester was once a place of considerable trade. The port of Chester is thus described by Lucian, a monk of St. Werburgh's, in the twelfth century:—"The beautiful river on the south side serves as an harbour for ships from Gascoigne, Spain, Ireland, and Germany, who, by the guidance of Christ, and the industry and prudence of the merchants, supply and refresh the heart of the city with abundance of goods; so that, through the various consolations of the Divine favour, we have wine in profusion from the plentiful vintages of those countries." The chief articles of commerce in ancient Chester are thus enumerated by Hakluyt:—

"Hides and fish, salmon, lake, herringe,
Irish wool and linen cloth, faldinge,
And martens good, be her marchandie,
Hertes hides, and other of venerie,
Skins of other, squirrel; and Irish hose,
Of sheep, lamb, and foxe, is her chaffare,
Fellies of kids, and conies great plenty."

The superior advantages of Liverpool as a port have removed most of the commerce from Chester to that place. The formation of the great Holyhead Road also materially injured Chester, which is now no longer one of the chief points of communication with Ireland. The Irish Linen Trade, once so flourishing in Chester, has wholly ceased. The hall built by the Irish Linen Company in 1780, is now used for the cheese fairs, which

(1) From *Appentitum*, a small building attached to a larger one.

occur eight times in the year, and are of considerable importance, from the circumstance of this city being situated in the principal cheesemaking district of the empire.¹ Fairs for horses and cattle are also held on the last Thursday in February, and on the 10th July and 10th October for general merchandize. These last are of great antiquity, and continue several days. Chester also supplies North Wales with London, Manchester,² and Birmingham goods. The manufactures of the town are trifling, consisting principally of lead, shot, and tobacco-pipes; there are some large flour-mills near the old bridge, and a shot-tower beside the canal, on the north side of the city, where also are several wharfs and warehouses, chiefly for the convenience of the traffic between the city and Liverpool, which supplies articles of general consumption.

The Exchange is a brick edifice, completed in 1698. The city courts of justice are held in it, and corporation business transacted in it. It is situated in North-gate-street, and serves the purposes of the ancient Common Hall, which stood in a place still called Common-Hall-lane. The Exchange is enriched with stone ornaments, among which is a fine statue of Queen Anne in her coronation robes, and two tablets, one containing

the royal arms, and the other a variety of armorial bearings illustrative of the several titles of the earls of Chester. The original fabric rested on arches and pillars of stone; but a number of shops have been introduced between the pillars for the purpose of strengthening the building.

The city has of late years been much modernized and improved. A handsome new street has been formed from near the centre of the town to Grosvenor Bridge, a noble structure of Stone, of a single arch, 200 feet in span, with a roadway 33 feet wide. Previous to this erection the Dee was crossed by an old narrow inconvenient bridge of seven arches.

One of the writers in that celebrated work, "The Vale Royal of England," as Cheshire was called two centuries ago, thus notices the Dee:—

"The Dee, called in Latin Dea, in British Pifrdwy, is not only the chiefest river of this county, but also of all North Wales. I may well call it of this county, because it hath in some places Cheshire on both sides thereof. And of it was the city of Chester, in times past called Dwa, and the people of the country Dwani. It springeth in Merionethshire in North Wales, two miles from the great lake called Tegill, which lake is engendered, or rather fed, by divers rills and rivulets, which

CITY OF CHESTER.

descend from the mountains. It leaveth Denbighshire on the west side, and hath Flintshire on the same side, but not very far; for at Pooton (which is but a mile from thence) it hath Cheshire on both sides thereof; and lastly, toucheth on the south side of the famous city of Chester, capital city of the whole shire, where, having passed the bridge, it fetcheth a round compass, making a fair plain called the Rood-Eye;² and after toucheth on the west side of the city at the Watergate. Afterwards the Dee becometh very broad, so that, at Shotwick Castle, over into Flintshire, it is a mile broad; at the New Key, which is six miles from Chester, it is above two miles broad. The whole course thereof, from the head unto the sea, is about fifty-five miles. Which river of Dee aboundeth in all manner of fish, especially salmon and trout. The number of quick-sands in this river, and the rage of winds, causeth changing of the channel. A south or north moon maketh a full sea at Chester."

The quicksands here mentioned are among the causes of the commercial decline of Chester. In a charter granted by Henry VI. mention is made of the "lament-

able decay of the port, by reason of the abundance of the sand which hath been allowed to choke up the creek." In this reign a quay was formed near Shotwick Castle, where troops were usually embarked for Ireland. In the reign of Elizabeth a new quay was built lower down, and was the origin of the town of Parkgate. In 1754 the navigation of the river up to Chester was restored by a new channel, and the embankments of the sands were carried down to Shotwick, by which upwards of 2400 feet of land were rescued from the sea.

Our space will not allow us to notice in this place the various encomiums which the poets Drayton, Browne, Spenser, and Milton, have bestowed on the "holy," the "divine," and the "wizard" Dee. Much of the superstition connected with this river arose from the circumstance of its being the boundary between England and Wales.

The citizens of Chester were formerly as celebrated as those of Coventry for their dramatic performances, founded chiefly on scriptural history. They are attributed to one Randle, a monk of Chester Abbey, and are said to have been first performed between 1268 and 1278. They were performed by the different trades of

(1) A hall was built in 1809 by the Manchester manufacturers for their business.

(2) Now called the Roo or Rood-Dee: it is a level pasture tract of about eighty acres. The races are held here in the first clear week of May.

the city, and, judging from the specimens which are still preserved, they appear to have been rude compilations, containing much that is curious and ludicrous, as well as offensive to modern taste.

Chester is liberally provided with the means of education. In addition to the King's School, already noticed, it has a Blue-Coat School, founded in 1700; two Charity Schools, founded in 1717, on the site of the ancient hospital of Saint John, one for 38 boys, of whom 28 are also maintained, and the other for a like number of girls. The Marquis of Westminster, (whose magnificent seat, Eaton Hall, is situated about three miles south of Chester) established a school in 1811 for the education of between 400 and 500 children. It is entirely supported by that nobleman. There is also a diocesan school on Dr. Bell's plan for 150 boys; there are three infant schools, and several large dissenting and Sunday schools.

The charitable institutions of Chester are equally liberal. There is a county infirmary and a county lunatic asylum, each having accommodation for 100 patients; a lying-in hospital, a house of industry, several sets of almshouses, and various charitable bequests, the chief of which (Jones's) produces about 400*l.* a-year, which is shared by the members of the ancient city guilds.

Chester also contains a good public library, news-room, commercial rooms, &c., a small theatre, and a good market-place. The city and its suburbs (which of late years have been considerably extended) are paved, lighted by gas, and supplied with water, which is raised by a steam-engine from the Dee, and conducted by pipes to a large reservoir.

The population of Chester in 1821 amounted to 19,949; in 1831 to 21,863; and in 1841 to 24,657.

THE MAIDEN AUNT.

DUNCOMBE PARK.

CHAP. III. (Conclusion.)

Dec. 16th.—The Colonel has chosen his line of action, and I have discovered it in a manner which precludes the possibility of mistake. As I descended to breakfast this morning, I heard him talking to his daughters, and paused for a moment on the threshold of the room. "Your Aunt Margaret, my dears," said he, in a sustained and complacent tone of voice, "is a very good, but a very weak woman. I should wish you to show her every possible kindness during the time of her stay with us, but at the same time I would have you very careful not to suffer her thoughts or sentiments to have any influence over your own." "That is exactly what I thought of her, papa," responded Anna, with alacrity. In I walked, as demure as possible, and quite contented to be forgiven, because I was counted for a fool. Here is the end of all my secret self-congratulations on the high place which I held in my brother-in-law's good opinion! I am properly punished for my vanity. And now we all go on very peacefully, though in a strange manner enough. The Colonel tacitly avoids me as much as possible, but is very civil to me when we come in contact; there is an air of good-humoured condescension about him, and an evident endeavour to let himself down to my level when he does speak to me; nevertheless he seems half conscious that his superiority is not genuine, and never meets my eye if he can help it. He no longer treats me to orations of laboured ease, on his ways, thoughts, and principles; but this is manifestly a great restraint to him, and more than once he has begun involuntarily, and got as far as "My position as father of a family—" but here *ought* to come the affable little bow to me, so here he stops, clears his throat with an air of vexed recollection indescribably comic,

glances towards me with a half alarmed expression, to see whether I am laughing, and suffers the premature speech to die a natural death, one scarcely knows how. Anna follows his lead very closely, and is as cool and as civil as she can be. The only difference between them is, that she sometimes brings me a difficult passage in her German studies, and looks a good deal provoked when she finds that I am able to explain it. Sweet little Janet continues faithful and fond, and wins every day on my affections. I told her simply that I had made the effort to soften her father, but had completely failed; and though she cried bitterly, she was so grateful to me for my zeal in her brother's cause, that she seems to love me all the better for it. If it were not for her, and for my great anxiety to see Adèle, who is to arrive the day after to-morrow, and to discover what the Colonel's intentions are with regard to her, I think I should bring my visit to a very speedy conclusion. As it is, I shall stay to the end of the month for which I was originally invited; but I cannot help thinking that I shall not soon receive a second summons to Duncombe Park.

Dec. 18th.—Adèle is here. She arrived from Exeter at about 12 o'clock to-day. I scarcely know whether I like her or not, and at present I certainly do not understand her. I must begin at the beginning, however, and write down all that has taken place, and perhaps, in so doing, I may attain a clearer comprehension of my own thoughts concerning her. Anna and I were at work in the drawing-room when she arrived; a little confusion in the hall, and the pleasant sound of a young child's voice, announced her, some five minutes before she actually made her appearance. I longed to run out and bid her welcome; indeed I was in the very act of doing so, but Anna sat perfectly still, and I felt as if I had no right to be more *empressée* than she was. Janet was in the school-room taking her French lesson; so altogether there was an awkward chilly pause, during which I looked wistfully at the door, and pitied with all my heart the young stranger whose entrance I expected every minute, and whose feelings I could well imagine. I consoled myself by remembering that she was a Frenchwoman, and therefore was not likely to lose either grace or presence of mind, even under these most trying circumstances. I was not mistaken. She entered and received Anna's cold embrace without the slightest appearance of embarrassment, lifting her large dark brilliant eyes to her face with so fixed and penetrating a gaze, that the hostess was abashed rather than the guest. She held by the hand her little boy, a lovely child of three years old, and the nurse followed with the baby. I was touched, and even overcome, but so repelled by the mother's manner, that I was glad to hide my emotion by stooping to caress the little ones. Adèle is not regularly handsome, but her eyes are magnificent, and when she lifts her full, wan eyelids, the radiance absolutely astonishes you. She is small, and very fragile in figure, and her pale olive complexion gives the idea of delicate health. Her dress, and her whole aspect, had the painful air of poor gentility—telling clearly of an effort to make the smallest possible expenditure produce the best effect. Thus her gown, a common print, such as maid-servants wear, fitted her with the most scrupulous precision, and was made in the last style of fashion, her snowy cuffs and collar were embroidered by her own hands, and her coarse straw bonnet was put on with the grace of a true Frenchwoman. The fairy proportions of her feet and hands, and the quiet elegance of her whole deportment, might have become a duke's daughter. She said very few words, and her foreign accent was markedly perceptible. I could not make out at the time, neither can I tell now, whether she felt the meeting as she might be expected to feel it; one thing is certain, she is either very callous, or very accomplished in the art of controlling the emotions. Had I been in her place, I am sure that I could not have restrained my tears for a moment.

After the first greetings were exchanged, Adèle stooped to untie her little boy's straw hat, and she was thus engaged when the Colonel entered the room. Now, thought I, comes the great trial; and, fully expecting her composure to give way, I advanced sympathizingly to her side, and said in a low voice, "Here is Colonel Harwood." I wanted to give her a moment's preparation for the encounter. Her face did flush a little, and she kept her eyes resolutely fixed on the ground; but, to my surprise, she very quietly finished releasing her boy from the confinement of his hat and large fur tippet, and then led him forward to his grandfather, whose salutation she received quite calmly, but in silence, and without raising her eyes for a moment. The child looked splendidly handsome; his cheeks glowing with the keen frosty air, and an abundance of rich brown curls falling around his bright innocent face, and resting on his plump white shoulders. Even the Colonel seemed to be somewhat moved at the sight of his grandchildren; he twice cleared his throat, and his usual fluency forsook him. Nothing could be more painful than the silence and awkwardness of the whole party, and everybody appeared to feel it, except this inexplicable Adèle, who was quite placid and composed, though more silent than all the rest.

"What is your name, my fine fellow?" said the Colonel, drawing his grandson towards him, and making a desperate effort to shake off the influence of the embarrassed faces around him. The child turned with an impulse of timidity to his mother, who put her hands upon his shoulders, and slightly urged him towards the questioner, without herself speaking. Then the little fellow lifted his cloudless blue eyes to Colonel Harwood's face, and replied in that grave, doubtful manner in which a young child strives to repeat anything that has been taught to it,—"Everard, grandpapa—your own name;" then clinging to Adèle, with a fresh access of shyness, he added, in a loud whisper, "Is that right, mamma, is that right?"

Colonel Harwood walked abruptly to the window, and at this moment Janet entered; Anna introduced her to Adèle almost as if she had been an ordinary morning visitor, and it was a relief to the poor girl's overcharged feelings to turn to the baby, a sweet fair creature of eleven months old, which in five minutes she was nursing as though she understood the business scientifically, and had practised it all her life. Indeed, had it not been for the children, I do not know how we should have got through that interminable morning: the five hours which elapsed before we went to dress for dinner seemed longer than any hours that I ever passed in my life. Knowing, as I did, all the feelings which ought to have been, which *must* have been burning with different degrees of intensity into the very heart of every member of the party, never did the ordinary etiquette and decorum of society appear so misplaced, so utterly senseless, so indescribably burdensome. But I certainly was not the person whose business it was to throw them aside, and, much as I longed to clasp my arms around Adèle, and tell her how completely she possessed my sympathy, and how ready I was to love her, a single glance at her cold inanimate countenance effectually deterred me from any exhibition of the kind, and I was as quiet and well-behaved as the rest. Janet had all the natural shyness of a very young girl, who, not having sounded the depths of her own or of any other heart, scarcely comprehends what she finds there, and fears to express any feeling without a certain degree of encouragement. So we first walked a little in the grounds, and looked at the improvements, and admired the prospects; and then we talked of the weather, which certainly one would have thought was quite a safe theme; however, it naturally led to a comparison of the climates of France and England, and then we dropped it with one accord as leading us dangerously near the subject of Adèle's former life. Indeed, the one thought which must have been uppermost in each mind seemed to

start up at every turn of the conversation, like a ghost, to scare us into silence. Scarcely a word was said that my busy fancy did not interpret into some possible innuendo, or allusion to things forbidden. It really was wretched, and my relief was boundless when the first dressing-bell sounded, and the restrained and uncongenial party who had been so long keeping up the mockery of politeness, had leave to separate.

As soon as my toilette was completed I went to Adèle's room to offer my assistance to her, thinking that her one maid must be sufficiently employed in unpacking the wardrobe and attending to the children. I tapped at the door, and receiving no answer, opened it to ascertain if the lady had already descended. Adèle was lying on the bed, her head thrown back, and her eyes closed. She was still in her morning dress, and I advanced in some alarm, inquiring if she was ill. At the first sound of my voice she started up, and her naturally pale cheeks were flushed with the deepest crimson as she hurriedly answered that she was a little tired with her journey, but quite well, and would dress immediately. In another moment she had recovered her calmness, and the manner in which she thanked me for my offered services, showed so clearly that she would rather be left alone, that I had nothing to do but to withdraw, which I did immediately, feeling that my intended kindness had been repulsed. Yet her manner was too gentle to give offence, and I could not divest myself of the idea that she was very unhappy. Even now I see her face before me, as it appeared when I entered the room unawares—the expression was that of exhaustion and acute suffering. Why does she thus withdraw from my sympathy? Surely she must see that, among these cold hearts, mine, at least, is ready to open to her with affection, if she would only let it. But there is that about her which effectually checks every demonstration on my part, and the more I warm towards her, the more resolutely and effectually chilling does she become.

The evening was as comfortless as the morning. Conversation was chiefly kept up by the Colonel and his eldest daughter; I joined occasionally, rather because I felt the awkwardness of being silent than because I had anything to say. Janet was quiet and timid, and Adèle maintained the composure and reserve of her manner unaltered, scarcely lifting her eyes for a moment, and acquiescing in everything that was said, in as few words as possible. Sometimes I think she is excessively afraid of the Colonel, which is not wonderful considering their relative positions. Sometimes I think she is really and truly very dull, and has no opinion of her own about anything. Indeed, this latter supposition appears highly probable, from her total absence of interest in every subject that was discussed. Whether Anna spoke to her about the shortness of the days at this season of the year, or about the beauty and intelligence of little Everard, there was the same unmoved unbrightening countenance, and the same unmeaning and polite affirmative. She has none of the volubility said to be so characteristic of her countrywomen, and I do not think she could bring herself to utter more than ten words in succession. Yet this is not from any difficulty of expressing herself in English, which she speaks with perfect ease, though, as I before observed, with the accent of a foreigner. The Colonel is evidently observing her closely, and forming his estimate of her character. I wonder whether he finds, or fancies that he finds, the problem easier to solve than I do. After tea, music was proposed by way of varying the entertainment of the evening; Anna and Janet played some duets very nicely, and Adèle performed a Fantasia by Doehler with wonderful precision and brilliancy. The Colonel, who has some taste for music, kindled into admiration, and pressed her to sing, which at first she very decidedly declined. When he reiterated the entreaty, however, appearing to imagine her refusal a piece of conventional young-ladyism, she hesitated, coloured, and finally moved to the piano, with the air of a victim,

struck a few chords, and began Beethoven's exquisite "Kannst du das Land;" but her voice was hoarse and feeble, and scarcely carried her through the first page; when she attempted the accelerated time of the second, it failed her completely, she broke down in trying to reach the higher notes, and rose in some perturbation ere she had finished the verse, professing her total incapacity to continue. We were of course very civil in our regrets, but her want of power was so manifest, and her vexation at it so irrepressible, that the matter was immediately dropped.

Dec. 22nd.—The same state of affairs continues. I do not think that a single member of our party is more intimate with Adèle now, than when she arrived on the 18th; yet I have done my utmost to penetrate her reserve, and so has Janet, in her own innocent manner. Every morning directly after breakfast Adèle retires to her apartment for two hours, "in order," she says, "to carry on the education of her little boy." Of this the Colonel highly approves, though, if the urchin, who is only three years old, were really pursuing his studies at the rate of two hours a day, I should consider it one of the most shocking evidences of the march of intellect that has ever come under my notice. I do not believe a word of it, however, and think it is only a pretext to obtain a short time of freedom during the day. At about twelve o'clock the lady appears, and stitches diligently at her worsted-work till luncheon; I have watched her, and I do not think she once lifts her eyes from the canvass. Such excessive industry is in itself a bar to conversation, and ours accordingly flags; five minutes being the average interval that elapses between the remarks that we respectively contrive to originate. After luncheon the carriage is ordered for a drive; Adèle and Anna invariably form two of the party, and I am sometimes a third, but more frequently the Colonel drives out with them, and I take a long country ramble with Janet, which I thoroughly enjoy. I pity Adèle for these drives; if she has any feeling beneath that frigid exterior, how intolerable must they be! And so passes the day; the evening being generally occupied by music or cards, for the Colonel has descended to vingt-un and speculation, now that we are too numerous for his rubber. And all the day through Adèle is quiet, cold, silent, and complying, as at first. The only symptom which she gives of having "that within that passeth show," is an occasional low, long sigh, so suppressed indeed, that you would not notice it unless you were close to her, but indescribably painful to hear, because it seems to come from an over-charged and worn-out heart.

Later on the same day.—The Colonel has done me the honour to impart to me his opinion of his daughter-in-law. He thinks her a very sensible well-behaved young person, fully conscious of her own position, and very grateful for, what he is pleased to denominate, the kindness which she has received. He thinks, too, that she appears to possess a most docile and gentle disposition, and he added that he had no doubt that the purpose for which he had invited her here would be completely answered. I looked as I felt—curious; but he did not deign to enlighten me, and left me with a slight bow and a benignant smile. There is profound peace between the Colonel and me at present. I think, however, that we owe it rather to the deep interest which we have both been taking in our new inmate, and which has absorbed all minor feelings, than to any more congenial dispositions in ourselves. Whatever the cause be, the result is that the Colonel is himself again, and to-day at dinner he treated us to one of his best-turned periods on the subject of domestic life, illustrating his theory of perfection by a modest appeal to the practice of himself and his daughters. Warming with the theme as he went on, and thinking only of his daughters, he said; "I have always reflected that, in the intercourse between parents and children, the utmost possible independence should be allowed on the one hand, the utmost possible deference maintained on the other. I have endeavoured, to the extent of my

ability, to carry out this principle, and I flatter myself, Miss Forde, (he was in full swing now,) that it would be difficult to find three persons more thoroughly happy in each other's affection than myself and my girls." Self-deceived as he was, and strange as it seemed, that he should really be able to reconcile to his own practice a theory such as that which he had just enunciated, he was positively amiable at this moment. There was such genuine affection in the glance with which he regarded Anna and Janet, that one felt disposed to overlook the little strain of triumph in which he was indulging, and to forget that, in applying his principle, his mental vision was affected with an unconquerable squint, so that while he thought he was looking at the "utmost possible independence allowed by himself," he was in reality only seeing the "utmost possible deference," which no one could deny that he exacted from his daughters. But I had scarcely time to observe him, for my attention was riveted to Adèle's face of irrepressible wonder. When he commenced his allusions to domestic felicity, she had stooped a little more forward than usual, and appeared intensely interested in dissecting the chicken-wing which lay on her plate. As he proceeded, she lifted up her splendid dark eyes—I declare it is the only time I have fairly seen them since she entered the house—and literally stared at him, with an expression of enquiring amazement, as though she thought he were a singular sort of phenomenon which it was really worth while to investigate. Then she coloured violently, cast down her eyes again, struggled to resume her usual manner, but as he concluded, answered him, as if she could not help it, in a low and bitter voice, "you are very sarcastic."

The Colonel turned towards her in unfeigned surprise, but she stopped the inquiry which was on his lips, by saying hurriedly, "I beg your pardon for my bad English, I meant very successful."

"Yes," replied he, with an air half puzzled, half uneasy, I believe I may flatter myself that I have had some success."

There was an awkward kind of pause, during which the blush which had overspread Adèle's features seemed rather to deepen than to diminish, and it was a relief to us all when Anna gave the signal for withdrawal. Adèle, as we passed through the hall, said something confusedly about having a bad headache, and ran up stairs to her own room, from which she did not emerge till we were assembled at tea. It had seemed to me that she ran away because she was unable to restrain her tears, and my opinion was now confirmed by the sight of her flushed cheeks and red eyes. I do not understand her, though it is plain that she feels a great deal more than she chooses to exhibit. If she would but let me comfort her!

Dec. 27th.—It is long since I have opened my journal, for the events of the last few days have absorbed me so completely, that I have found neither time nor inclination for writing them down. I must now, however, attempt to narrate them in due order.

During the first four days of Adèle's sojourn amongst us, it was evident to all that little Everard was making rapid progress in his grandfather's affections. There are few hearts that can resist the fascinations of a child at that most charming of all ages, (just three years,) and the mixture of perfect unconsciousness with perfect confidence is as amusing as it is irresistible. Whether from previous instruction or from natural inclination, the little fellow took a decided fancy to his grandpapa, and used to climb the Colonel's knee and pull away his newspaper with an audacity which made his aunt Anna's hair stand on end, but which generally obtained a caress rather than a reproof. Adèle watched the progress of affairs quietly, but with manifest satisfaction; I too had begun to grow sanguine, though an idea which sometimes crossed my mind, that the Colonel intended to disinherit his son in favour of his grandson, prevented me from indulging hope with any degree of confidence. Thus did matters stand, when, on the fifth day, Colonel

Harwood stopped us as we were leaving the dining-room. (this seems to be his chosen time for family scenes,) and expressed a wish to speak with Adèle. All the poor young lady's assumed calmness forsook her in an instant. She became as white as the dress she wore, trembled, and grasped my arm for support, with a most appealing glance that seemed to express her confidence in my sympathy, and to implore me not to leave her. The Colonel perceived her trepidation, and, apparently not sorry to have a female auxiliary at hand in case of hysterics, for which he entertains a peculiar horror, (at least, thus I interpret his conduct,) requested me also to remain, with his blandest smile. The door closed behind Anna and Janet, and we were left alone. Adèle sat down, breathing quickly, and struggling for composure. The Colonel stood before her, cleared his throat slightly, and after a moment's pause, thus addressed her.

"You can hardly have supposed, Mrs Harwood, that I had not some ulterior motive in inviting you to my house. Pray do not be distressed. I entreat you not to agitate yourself" (how coolly, when your very heart is bursting, do friends entreat you "not to be agitated," as if it were a matter of choice, and you were doing it on purpose because you liked it!) "I wish now," proceeded the speaker, "to explain to you as briefly and as kindly as possible, what are my present intentions, and I shall then hope for your answer, though I would by no means hurry you to a decision."

He paused, and Adèle bowed her head in reply. Her cheeks were glowing, her eyes sparkling, her whole countenance joyful with the radiance of hope, but she really did not seem capable of articulating. I thought her absolutely lovely at that moment.

Colonel Harwood continued; "I intend to make Everard my heir; the boy has every promise of talent, and an excellent disposition. It is natural that, entertaining these intentions towards him, I should wish to have him under my own eye, as much to afford him those advantages which are suitable to his prospects, as to remove him from those influences which I should consider injurious to his character while it is in process of formation. I therefore propose to receive him as a member of my family, to be treated in all respects as if he were my own son. But I have more to say to you. During the last four days, I have had some opportunities of becoming acquainted with you, and I can assure you that they have afforded me unmixed gratification. The deference of your manner towards myself, proves abundantly that you feel and regret the offence committed against me by another. I wish, as I said to you in my note, to distinguish—I should be sorry to involve innocent and guilty in the same condemnation—in short, while there are offences which I feel that I can never pardon, there are errors towards which I would fain be indulgent. I feel that a permanent separation between yourself and your child would be a great drawback to my present scheme, and I consider you in all respects a fit companion of my daughters. I should therefore wish yourself, and both your children, to become inmates of my household, and I need scarcely say that I am ready to take upon myself the whole expense of your maintenance, and of the education of the little ones. And although I stipulate that all intercourse with my—that is, with their father should cease, I am quite ready to allow of an interchange of letters at stated periods. It may be as well, perhaps, to point out to you, in conclusion, the advantage which will accrue to that person, by the proposed arrangement; he will be relieved from much expense and great anxiety—moreover, I would pledge myself, under such circumstances, that his interest should be properly cared for."

He ceased. Adèle had listened to him in speechless and wondering attention, as though she scarcely trusted her ears, or comprehended what she heard. Twice or thrice she passed her hands over her eyes and forehead with an impatient movement, as though she would fain

get rid of some oppressive weight or film which impeded her perceptions. As he concluded, however, she started from her seat, clasped her hands together, and exclaimed, with a vehemence of agitation which defied all restraint, "Good God, is it possible? What have I been listening to? My own Charles—my beloved, injured, suffering husband—is there, can there be, such a cold, hard heart in the world as to ask me to leave him? I could not have believed it. And you are a father! Oh, you unhappy man, you who have never known, who have never felt, who cannot even understand, what a true, deep, fond affection is, how it brings happiness in misery, and strength in weakness, learn that I would rather live in the extremity of want, that I would work, starve, die, sooner than deprive myself and my children of the delight of their father's presence, or take from him the comfort of our society. Learn that no temptation should induce me—no none—to give my little ones such an example as yours, instead of such an example as his. Learn, that I hold the poorest beggar who loves his children, and who does his duty by them, for a better and a happier man than you are. And is it possible to have such a cold heart! Separate wife and husband, father and children—I would sooner send my son to a charity-school, I would sooner take him to a workhouse, than give him to be chilled and hardened by you. And all these four years that we have been so miserable, that we have lived in actual want; that our days have been days of labour, and our evenings evenings of weariness, and our nights have too often passed in the sleepless woe of those who knew not how to provide for the morrow; when each has lain through the long sad hours scarcely daring to breathe for fear of disturbing the other, and day-light has come and shown that both were still waking; even that very anxiety has been our happiness, while it has deepened our misery, because it rose out of the depth of our love. My own dear Charles! and through all these long melancholy years he has endured in patience, and not once, never once has breathed one syllable of complaint against his father. His reverence and his affection have never failed him for a moment—if he grieved it was for your displeasure, not for his own suffering; he has hoped, longed, lived upon the idea of your forgiveness, he has taught his boy to love your name, and tried to teach the same lesson to his wife; he has condemned himself but never you, and forgotten all your harshness to think of your old kindness, which must have been fancy, and your former affection, which could be nothing but a dream. And he sent me here in hope, and urged and entreated that I would suppress my indignation and forget his wrongs, and wait patiently; and for his sake I have borne it, for the love of him was able to subdue the feelings which had arisen out of itself; but I have scarcely been able to bear it—and he is hoping still—waiting for the happy news—and *this* is what I have to tell him. *This!* God forgive you, and God comfort him!"

She had poured forth these burning words with an impetuosity which precluded the possibility of interruption, and she now stopped because utterance failed her, and burying her face in her hands, gave way to an agony of tears. Colonel Harwood stood absolutely silent; the voice of truth and nature was too strong for the man of conventional principles, who had built up in himself a fabric of imaginary virtues, and gazed upon it and exhibited it, till both he and others had forgotten that these very foundations were rotten, and that a breath would blow it away. It seemed as though the lie of his whole life stared him in the face for the first time, and he was struck dumb by the vision.

Adèle now struggled to compose herself, and grasping my hand, continued to speak, though in an interrupted and faltering voice, "Dear, dear aunt Peggy, forgive me—how I have repulsed your kindness, and put away your sympathy! Indeed, indeed, I could not help it. And my sweet Janet too, what must she think of me? But I had been schooled into calmness and moulded

into submission; I had promised him that nothing should induce me to show what I really felt, and the only means of doing this was never to give way for a moment. I dared not even meet the kind eyes that I knew were looking upon me, or it would have been all over with my self-command. Four wretched, wretched days! and how have they ended! But I will go—this very night—I will not sleep under the roof again—I will go back to him, to my deceived, hoping, desolate husband, and bring him, at least, the comfort of one loving heart that could never turn from him. But ah! how shall I tell him—how can I crush his hopes? It will kill him, I know it will! And it is his own father!

She turned away as she pronounced the last agitated words, and was hurrying from the room. So excited was she, that I believe she would have been out of the house in another half-hour, children, trunks, and all, on the road back to her darling husband. Her hand was on the lock of the door, but Colonel Harwood called her back. "Adèle," said he, in a low, strange, disturbed tone of voice, "do not go. Come here—I did not know that Charles, that my son—" He stopped speaking. Adèle was so absorbed in her indignation that she scarcely listened or comprehended, but I seized her hand, and yielding to the impulse of the moment, exclaimed, "Go back, go back—he is going to forgive him." She gazed first in my face, then in the Colonel's with a wild look of amazement, then forgetting her anger in an instant, in the return of hope for Charles, she darted back, threw herself on her knees, and covered Colonel Harwood's hands with tears and kisses. I was not mistaken. In the bottom of every man's heart there is, there must be, a stream of true natural feeling; the difficulty is to penetrate deep enough to find it. Often, as in the present case, the rock must be stricken ere the waters will flow; and, certainly, it must be confessed that the stroke had been no light one. The idea of his son, suffering, repentant, but still loving and revering the father from whose displeasure his misfortunes proceeded, had unclosed the gates of the old man's heart. It had taken him by surprise. All this time he had looked upon Charles as a disobedient and rebellious child; upon himself as a justly severe and injured parent. The tables were turned, and he found himself the hardhearted oppressor of one who had never ceased to deplore a fault for which he had already been bitterly punished. A thousand softening recollections had been called up by Adèle's vehement words—in short, he had been taken by storm, and was compelled to surrender at discretion. But the revulsion of feeling was too much for the young wife; she fainted, and was carried to her room, but not before she had mustered self-command enough to tell me to write to Charles, and to give me his address, which, somewhat to my surprise, was in Exeter. He had accompanied her to England, and was holding himself in readiness for the summons which he could not help hoping to receive, and which, I write it with joy, he received that very evening.

He arrived by daybreak the following morning. His father received him alone, and what passed between them, I know not; but the reconciliation was evidently complete. The young man's joy was absolutely rapturous,—he could not contain himself. He folded his sisters in the closest embrace, kissed his aunt Peggy a dozen times in a minute, tossed up his boy, and flew at his baby, till even the pale Adèle lifted herself from the sofa where she lay, exhausted both in mind and body, to implore him to "take care of the children." And then, sobered in a moment, he stole to her side, and wound his arm around her, looking at her with an expression in which the love of years was concentrated, and calling her "his own sweet wife, to whom he owed it all." I was surprised to see how completely all Colonel Harwood's absurdities vanished beneath the refining and elevating touch of nature. He now was what he had before professed himself, a father in the

highest sense of the word, and the deep and affectionate respect with which Charles evidently regarded him, did not seem misplaced or exaggerated. When we separated on that happy Christmas night, the expressive manner in which he uttered the few simple words "God bless you, my son," went to the hearts of all; and Charles himself involuntarily dropped on his knees, and kissed his father's hand, while his eyes overflowed with tears.

I felt that the sincere repentance, and open acknowledgment of error, visible in my nephew's whole deportment, effectually connected the view of the case which Adèle's excited feelings and passionate love for her husband had given, and made the moral of the story as true as the end of it was beautiful. No one who saw or heard Charles could forget that he felt that he had offended deeply, and suffered justly, and the gratitude with which he received his father's forgiveness, showed clearly that he did not think that four years of poverty and unhappiness had been too hard a punishment for his disobedience. What a joyful fortnight was that which followed! Even Anna warmed into amiability—and, as to the Colonel, I actually learned to love him, and to consider those foibles, which I had before found so annoying, as the most innocent peculiarities in the world.

And how did I feel as I drove away from Duncombe Park, when my visit was concluded, and I recalled that sentiment which I had inscribed in my journal, namely, that I never liked to leave a house without being able to reflect that I had done some good in it? What good had I done here? Little enough—but I had received much. The reconciliation of father and son had indeed been effected, but not by any of my judicious contrivances and ingenious manoeuvres—it had been the straightforward work of genuine feeling, without any contrivance at all. And though I cannot but feel a little humbled when I recollect my anticipations of success, I have received a useful lesson, and one which in no wise diminishes my exceeding happiness in the result. Colonel Harwood and I parted excellent friends, and I am engaged to spend another month with them in the autumn of next year, to celebrate my favourite Janet's seventeenth birthday. To this visit I look forward with great interest. I am very curious to see how those various characters will assimilate, after the tension of feeling consequent upon the reconciliation has subsided sufficiently to allow their respective peculiarities to resume their usual prominence. I want to study Anna, who is still a mystery to me, to prosecute my intimacy with the interesting Adèle, to become as great a favourite with the baby as I already am with little Everard, to enjoy the society of Charles and Janet, who both love me, and towards both of whom I feel more as a mother than as an aunt, and to do my best to regain the ground which I have lost in my brother-in-law's estimation. I must close my description of my first visit to Duncombe Park, by heartily wishing a happy new year to all its inmates—and I shall be at least as much disappointed as grieved, if the wish does not attain fulfilment.

S. M.

SHOPPING.

(Concluded from page 182.)

On Thursday afternoon John solicited leave of absence, and went with a huge cloak of his own to the coach-office; but the weather was very wet, and he was afraid his sister might take cold, so eighteen-pence of his last three shillings went to hire her a cab. Many were the affectionate greetings between the brother and sister. Anne was delighted with the appearances of John's competence, in the well-furnished cup-board, and first month's rent. She wondered how it was she and her mother had seemed so very poor. John did not tell her that the price of his necessary new coat had bought these comforts; he indulged her joy, and laughed heartily with her. Having told her to be up betimes, and punc-

tual to a minute in going to the work-room, they forgot business.

Anne made tea, and never was it more enjoyed. Never had these four dark little walls echoed with such mirth before. The coffee Adelaide was just then sipping out of delicate Dresden china was not half so pleasant as this humble meal; for her costlier state was burdened with a heavy heart, and these loving creatures were happy in their innocence. The next morning Anne got up early and looked out. The confined prospect excited no sorrow, there was no longing for green fields, opening buds, and shadowy trees; why should there? She had come to work, and grow rich; to make enough for her mother to live without work—this was prospect enough! She braided her dark hair, and, neatly dressed, went out in early morning, being careful to take the turning John had shown her the night before as they rode along. She was scarcely two minutes before she was with her employer, a lady of middle age, of a kind expression of countenance.

"O you are the young person who was to come to me from the country, are you not?" said Mrs. Bond.

"Yes, ma'am," replied Anne.

"How very pale you are, child; have you had your breakfast?"

"Yes, I thank you," said Anne.

"Well, the place is strange to you, I dare say!" continued Mrs. Bond.

"I was never in London till yesterday, ma'am," answered the girl.

"Well, come and have a cup of warm coffee with me before you begin work then. I do not like to see you looking so pale; you must not be afraid, the young ladies will be very kind to you."

"I do not doubt that, ma'am, and I am much obliged for your kindness; yet I do not think either cold or fright has made me pale now: I am always so."

"Always as white—poor child! I am afraid our work won't suit you then, for we are obliged to be up early and late, though we are not nearly so badly off as some of the houses at the west end of the town; our business lies principally among the families of merchants and such people, who live in the suburbs, for you see this house stands in a good thoroughfare, as they come into the city; and the ladies find it convenient. At best, they are very hard to please, and require a great deal of managing to make them wait even only the necessary time to get the dresses made."

Anne's *début* in the work-room was attended with a murmur of admiration from the young ladies there; she speedily became a favourite with the mistress of the house, who was a widow, and had lately lost her only daughter, a delicate girl about Anne's age.

Her place at the work-table was assigned to her, and she was soon busily engaged. She worked on and on till the dinner-bell rang. They had a table provided in the house for all who chose to pay a certain sum rather than bring cold meat; no time could be spared for going home; most of the young women joined this party, all, indeed, but one desolate girl, whose drunken father wrung her wages from her almost before they were earned, and she sat alone with her crust of dry bread and cheese. Dinner over, the whole party adjourned to the work-room again, and begun with fresh industry. Wearily the tired fingers moved as it grew later into the afternoon; and more wearily still, when the dazzling gas was lighted, and confused the sleepy eyes with its brilliance. Still no signal was given to leave off. The mistress herself was as tired as any of her work-people, still her fingers moved with a monotony of motion tiring to look at for a minute; how much worse to move so incessantly! They were at work on a wedding order which must be finished by night, for the lady was to be married on Monday, and this was Friday. At last the finishing stitches were put in the rich dresses of the bride and bride's maids; the tired girls woke up for a moment to admire their work; and folding up the things put

them in the basket, in which they were to be sent home to-morrow. To-morrow! to-day—St. Paul's strikes one! New speed is put into the exhausted frames of the girls as they hurry home; once there, hastily undressing they lay down,—not to sleep yet,—their eyelids ached too much—but to lie and dream dreams of days which were once, when they played all day, or of the future, when they might have no occasion to toil so excessively. But all at last were wrapped in sleep excepting Anne. She, fatigued as she was, lighted her fire, and began writing to her mother. Thrilling words of John's love and kindness came into her mind, and could paper feel, that sheet would have glowed with pleasure at being made the bearer of such gratitude. Joyful was the widow when that first fond letter came; beamings of happier times shed their sunshine on her troubled spirit, and she knelt beside the bed with her letter in her hand, shedding tears of joy, and thanking God that His promise to be the "Father of the fatherless and husband of the widow" had not been unfulfilled.

Anne rose again in good time, though she had sat up working and writing late into the morning; but her sleep had been excited and feverish, and her head felt giddy. She prepared her humble and solitary meal, and sat down to it with little appetite. Still, though a momentary longing for fresh air and a sight of her mother's face prompted a sigh, she banished discontent when she felt that she was trying to earn happiness and peace for that dear parent. This Saturday was a busy day for Anne. She had to take home a great many dresses,—an employment allotted to her by the kindness of Mrs. Bond, who thought it might be better for her than sitting at home at work. So, with a light heart she set out with a load that was by no means a trifling one. A repining disposition would have murmured at such changes as Anne's life had known, had she been apt to be discontented; she possessed reason enough. Her father had been a merchant of high standing, and in the days of wealth, no rough breath of wind was allowed to visit the cheek of his only daughter. She had been reared with tenderness. As she walked along in the sunshine of a frosty winter's day, in London, she called up the memory of her childhood's home: that stately old country house, with the dark, sad evergreens all around it, now to her thoughts emblems of the dark sad fortunes of those who had walked beneath their foliage. She thought of the old wide oaken staircase, with its landing-places as large as a modern room, where John and she had shouted to each other in the gaiety of childish play. How they had made the old walls ring with the laugh and song! One by one the circumstances of her life came up before her; particularly she recalled a birthday of her mother's. The great parlour, with its old-fashioned windows and bright red draperies, had been adorned with wreaths of flowers; it was autumn, and at night the room was brilliantly lighted. Many guests were there—high and noble some of them. She saw her father stand conversing, with his handsome but wretchedly careworn face. She heard him exchange the civilities of life, as if his thoughts were elsewhere; but presently he left the room, and returned looking joyful, for on his arm hung that young and beautiful wife. How gracefully her long dress fell to the ground; how smooth and thick was her splendid black hair, which was bound with myrtle. Her usually passionless, pale features, were lighted up with excitement. How well the poor girl remembered how she had been caressed by her mother's friends, how they pressed her little hands and called her beautiful, had said how like her mother she grew. She remembered, as she glanced at her coarse clothes, the rich lace dress she then wore, and the one string of pearls, not easily to be matched, on her neck. O, those happy days! Then the hurry and grief that filled the house when her poor father died suddenly, in consequence of strong mental excitement, and his affairs were found to be terribly deranged.

The cold bleak day, when she and her mother turned their backs on the old house, and, following her father's remains to their last rest, lived together in a strange place. How that mother had eked out the money she possessed, to continue to the child the little luxuries which had become necessities to her. How they got poorer and poorer, till the mother was obliged to help to earn her livelihood by the work of her fingers, and the child grew up to help her. Her mother's trials seemed to her greater than ever, when she reflected that that mother had been a woman, with passions and sensibility struggling with so much evil, while she herself was a helpless child, scarcely understanding the desolation that surrounded her. Poor Anne might have thought a very long time yet, but she was just near the bride's residence, where the dresses were to be left. She knocked hesitatingly at the door, which was opened by a neat and rosy maid-servant, who, having announced her arrival, sent her, by her mistress's desire, into the pleasant room where the ladies were sitting at work. Her eyes lighted up as she looked on the birds, which were singing merrily, looking in the sunshine like molten gold; the geraniums, with their fine green leaves, looked cheerful, though they were void of blossoms: the fire burned brightly, and the scarlet table-cover was spread with work, now almost completed.

The bride elect was there, and her sisters: she serenely happy, and they rather boisterously so. But I forget I am keeping Anne standing at the door all this time.

"The dresses—the dresses, Jane; we must try them on. O, how beautiful, dear Jane; you will look quite charmingly!" said a fair girl, the youngest of the trio.

Having gone upstairs, and fitted on the dresses, they were pronounced faultless; and then the young ladies for the first time took notice of Anne, who had been enjoying the appearances of happiness the room contained.

"What a beautiful girl, Mary," whispered the bride: "how very pale she is."

The younger ladies having left the room, the bride asked Anne a few questions, about her business and life, in such a tone of genuine sympathy, that she burst into tears.

"You are not well, my poor girl, I am sure," said Jane; "let me give you a glass of wine."

Anne took the proffered refreshment with a trembling hand, and tearful eyes; then, at the lady's request, she told her when and why she took up this mode of earning her living. She had been thinking so much about her sad changes of fortune, that she told a touching story from a full heart; and, as is natural in such a case, the heart of her auditor became touched and full too. She said, "I shall not be in town for the next three months, but, perhaps, when I come home I may want more work. Can you wait while I write a note for Mrs. Bond, and then she will send you to me, for I should like to see you again. I will give you a card with my new address," continued she, taking one from a box on the table, which contained the wedding cards. She hoped Anne would not be hurt, she said, by what she was going to do; but she felt sure she could not be too rich; and the bride wanted to do all the good she could now, she felt so grateful for her own happiness. She slipped half-a-sovereign into the hand of the astonished girl, and hurried her out to prevent a refusal. Anne found herself in the street, with the empty basket in her hands, almost before she was aware, and the door was shut. She thought it would indeed be false pride to refuse a gift offered in so sisterly a spirit. Anne put the little piece of gold into her pocket with pleasure. None but they who have known what it is to be poor can sympathize with her now. She seemed to have an inexhaustible store of money in this accession to her funds. She walked quickly home, to delight Mrs. Bond with the favourable opinion respecting the dresses. In the afternoon she had another pleasure: she was

sent to the very shop where her brother was employed; happily, he was not busy when she entered, so he served her with what she wanted. She told him of Mrs. Bond's kindness in giving her a long walk, and of the amiability of the beautiful young bride. She was sorry to see John looking very pale and tired out, but consoled herself and him with the thought that the next day would be Sunday, and then they could have a long day together, after walking somewhere a little into the country to church. What importance there was in Anne's face when she asked John to dine with her the next day! What a charming expression of uncertainty when, having been allowed to leave work a little earlier than usual, she stopped by the flaring gas-light of a butcher's shop, and mentally weighed the respective merits of the different meats before her! How she took beef at last, in deference to John's taste, and actually determined to commit for once the extravagance of a plum-pudding, I might tell at length, but such things are pleasanter in realization than imagination; so I say no more about them. The next morning, John came in good time, but was not let into the secret of the Christmas dinner they were to have. They walked out of the dull, black city, leaving care behind them with the smoke, and were happy indeed to sit together again, and hear the beautiful English liturgy, which was familiar to both. Happy, too, when they sat by the bright little fire in Anne's small, but scrupulously neat room, to the dinner which she had had so much pride in arranging. Few such days were in store for them, so it was well they enjoyed this so much. John was really almost worn out with the constant standing and late hours; his walk in the morning had left him weak, but his disposition was so generous, that he studiously concealed this from his sister, whose high spirits and ardent hopes (for the dark mood of yesterday had passed away) breathed new life into his own soul. He was thankful that the first days of hope were not over yet for her, but he saddened when he looked forward to their departure; he remembered that he had had such visions of competence and bliss as were her's now; his experience soon showed him how chimerical they were. Yet he would not deceive her, for it is not wise to anticipate evil; and so they parted pleasantly, with the hope of meeting next Sunday.

The gentleman who had been fascinated at the dinner party by Adelaide's beauty and talents, was an acquaintance of Captain Mortlake's, and meeting him a few days after, the two young men walked together. Edward Fielding did not know that the person to whom he was speaking, had given his best love to Adelaide. He described her conversation, the talent she had of weaving a web of sophistical argument, until the poor fly she caught wondered where or how he became entrapped. The open-hearted Reginald felt no admiration for this talent, but he did not say so: his heart was too full. Yet, here he was in danger of doing Adelaide injustice, for he was ignorant of the fact that on that evening she felt guilty of having wounded feelings she should have respected, and that at last the evil spirit of pride overcame penitence, and drove her from truth, from womanliness, from herself.

He thought, "Well, I have less cause for regret in losing her; if this be her disposition, it is most unlovely." The young man by his side was evidently dazzled, and as it was painful to Reginald to hear him speak flippantly of her to whom he had, a few weeks back, looked with respect and dawning love, they parted.

The morning dawned brightly, and Adelaide stood, half dressed and pale, at her chamber window. She felt half afraid to meet Captain Mortlake, who was sure to be present, being the bridegroom's only brother. A month had now elapsed since the day of the long-to-be-remembered dinner-party. Adelaide had fallen far since the first slight deviation from duty, insensibly

enough, till she contrasted her first unhappy day with this. Edward Fielding had formed an acquaintance with her brother, and by that means gained access to her society. He had visited her almost daily; at first with some slight excuse, at last without any; and Adelaide had foolishly taken pleasure in his company, hoping that Mortlake might hear of their intimacy, be afraid, and return to her side to acknowledge that he had been wrong in offending her at first; but she was mistaken in his character. Every fresh report of Fielding's success filled him with increased contempt for the foolishness of a woman who had tacitly acknowledged she loved him, and then, in spite of her own heart, coquetted with another. He had met her once, having just heard her name and Edward Fielding's in connexion with each other; the meeting occasioned the haughtiest bow he had ever made, and a look from Adelaide which mutely solicited his pardon. He took no notice of it, and passed on. This roused her pride, and her conduct in consequence was such, that Fielding resolved to propose very shortly. So, on this morning, she felt afraid to see that face, the sight of which had once given her such joy. She trembled when she saw the reflection of her bloodless cheeks, and thought how they would testify to him of her agony. In her pride she wished that she could only appear healthy and happy; but she could not; and when she was dressed, she went down stairs, where her father and brother were waiting to set off. Her father sought in vain for the cause of her too apparent illness; but, as she declared herself quite well, he could say nothing. The bride felt hurt to see her friend so sad on such a day, and tried every means in her power to dissipate the cloud. To do that was beyond her art, and she was obliged to submit.

Adelaide's fears of meeting Captain Mortlake need not have disturbed her: he was as distant as if they had never met before, and sat far enough from her. She dared not look to see if his countenance bore any reproof for her, and she maintained an obstinate silence, much to the surprise of some of the company, who had seen her at the dinner-party. She was relieved when it was all over, and she was at home again; yet, on reflection, she felt more hurt with Reginald's indifference than she would have been by the severest reproof he could have administered.

John Graham had never been very strong, but he had been stronger than he found himself when sitting by his sister's fire-side on the evening of Good Friday. A presentiment sprung up within him which prompted him to look on himself and his sister as doomed creatures. Anne had now been three months in London, and the late hours which, in spite of the kindness of her employer, she was compelled to keep had begun to injure her health. Her cheek was not so pale as it used to be, but the flush was not of health. One stray tress of her beautiful hair fell down accidentally as she bent over her brother, and echoed in her heart the unavowed fears of his. He was so very thin now, so evidently declining, that Anne's yet bright hopes grew dim beside his care-worn face. At last the one subject they had mutually tried to avoid came up—the late hours. Was it to be expected that these two victims of a system hugged their chains? By no means; yet neither spoke one harsh word of the employers. They felt that the greater part of them were too, in another way, victims of a system. Yet *they* could crush it if they would.

"Do you think, love," said Anne, at length, "that anything will be done?"

"I have no doubt of it," said he; "in time—not yet, I fear; it is hard bondage, Annie, and my soul is sick of it, when I see your weary step and fading lips; yet if you had been ever merrier or less delicate, the change would be greater and harder still to bear. Really, love, if a young sculptor wanted a subject, you would make a splendid Spirit of Night; a coronet of stars and the rising moon on your brow, a black robe—it would be

beautiful, for you look so calm and passionless, unless when anything unusual happens."

"I am sure, John, I saw a lady yesterday who would do for the Spirit of Summer Day. Yesterday, you remember, was the day I went to see the newly-married lady who was so kind to me. She is beautiful, but O, not so lovely as a young sister who sat with her—she was so fairy-like, and her hair a soft bright brown—but you look paler, John."

Anne started up, and supported him, for he had fainted—she used the simple restoratives she possessed. She laid him on her own bed, and sent for a doctor, for she saw that her brother's illness was no trifle. Dr. Leeson was soon by the bedside of the invalid, and desired that he might be kept where he was for the present. He was a kind man, and inquired into the young people's circumstances in a way which avoided wounding Anne's delicate feelings. She related, at his request, their simple story, and something of the progress of the fatal process of over-exertion, which had apparently ruined her brother's health. He pitied them, and did more—he relieved them, for Anne's last money had been spent a week ago in medicine for her brother. Dr. Leeson left them a guinea, and promised to call again the next day. Wearily Anne sighed as she sat all night beside her brother's bed; in the morning she told Mrs. Bond she was unable to leave her sick brother, as she could not afford to pay a nurse; and her landlady could not neglect other and wealthier lodgers to take care of a poor invalid. He was very still and patient, and this, in a measure, augmented Anne's distress; he seemed so exhausted by his illness, that he was like a little child in simplicity and weakness. His calm, quiet face, half sleeping all day, and devoid of expression, now was sad to see; but through all he knew and loved his sister. When he was tolerably well he told her much of the progress of his malady; how he felt his strength—God's gift—oozing away day by day through a channel kept open—by what?—the mismanagement, cruelty, or thoughtlessness of English women.

He told her how such late hours were the occasions and opportunities of temptation and sin to the weak and the guilty, how they were a perpetual stumbling-block in the way of the studious and the prayerful. John had thought and felt very deeply on this subject, and gave Anne clearer ideas about it than ever she had before. But his energy was short-lived; he sunk again into a lethargic sleep, from which he awoke no more in this world. Just a week had John's illness lasted, and the mother and child stood together beside his corpse. Poor John!

When the delirium of grief was over, the mother's business was to find another situation for Anne; as Mrs. Bond had been compelled, by press of work, to fill up hers, and she positively refused to go back with her mother; for lately she had spared good part of her earnings to assist her beloved parent, and she could not forego the delight of ministering to her necessities.

It did not follow that because Adelaide had insulted Captain Mortlake, her father should cease to be friendly with him; on the contrary, being ignorant of the misunderstanding between the young people, the physician still treated him with frank cordiality. He had imputed the cold behaviour at James's wedding to a shyness which would be natural to both; and he had not been enough at home to know much of what had happened since that day in connexion with the affair;—a fever had been very prevalent in the City this season, and had kept him almost unceasingly employed.

The third morning after John's funeral he met Captain Mortlake, and invited him to walk with him, to see the friends of a late patient of his, they lived only about a furlong from his surgery. The young man acceded, and Dr. Leeson conducted him to Anne's residence. Knowing that Reginald was one of the most eloquent advocates for a relaxation of the stringent

system at present used, he told John's story, and added, just as they reached the house, "The girl will go too, if she resumes her old hard work; but I mean to ask her to be Adelaide's maid; she has been but poorly of late, and a cheerful intelligent companion may be of use to her."

Death sheds a solemnity over the commonest place, and the visitors drew their breath softly as they entered the poor room occupied by Anne and her mother.

Dr. Leeson spoke kindly, and made Anne the offer of which he had spoken. She had no false pride, yet a thought of the majestic old home of her childhood came before her mind; she, however, expressed deep gratitude, and accepted the situation.

After these arrangements had been made, they left, and Dr. Leeson invited the Captain to dine with him on the next Friday.

When he went home at night, he told Adelaide he had hired a maid for her; she was surprised at this news, till her father had related to her faithfully the story he had told Captain Mortlake in the morning. Well might Dr. Leeson wonder why his lately pale Adelaide hung her beautiful head on her bosom and blushed so guiltily. She inwardly resolved to respect Reginald Mortlake's efforts for the future, though she feared he did not care about her now, if indeed he ever did. Her father did not tell her that night who was to be her guest on Friday, but the next morning he startled her with the intelligence. Poor Adelaide! it was fortunate her father was just leaving the room, or her tears would have been discovered.

Anne was to go on Wednesday, and Reginald thought her tale of sorrow must melt Adelaide's heart; he was enough of a tyrant to determine that she should be heartily sorry for what she had done before he told his love; of failure he did not dream, for his sister-in-law, who was Miss Leeson's confidante, had told him of her penitence, and Edward Fielding's peremptory dismissal. He arrived quite punctually on Friday, for he determined not to be alone with Adelaide before dinner; it happened that Charles had had a long-standing engagement for that day. As they sat over their dessert, Dr. Leeson was sent for to an old patient, who was dangerously ill; he apologized, but was obliged to leave. The young people sat silent for some little time, when Reginald, in the most frigid way imaginable, inquired after the health of the poor girl who had just entered Adelaide's service. She replied as coldly, but she had been humbled, and her heart was full—she burst into tears. She rose to leave the room, Reginald gently detained her, persuaded her to confess her sorrow, to wipe away her tears, and to listen to his suit. Did she need much persuasion? I leave my readers to guess. But I implore them earnestly to reflect on the purpose of this sketch, and to resolve to combat as much as they can, the monster social nuisance of our young men and women of the middle classes.

RACHEL L.

POPULAR YEAR BOOK.

Feast of St. James.

July 25.—St. James the Great, the "Proto-Martyr of the Apostles," was beheaded in the year 44. His festival was first instituted in 1089, and is retained in the English Church. He is the tutelar Saint of Spain, and his relics are reverently preserved at Compostella, the capital of Galicia.

Apples were formerly blessed on this day by the priests. There is a special form for their benediction in the manual of the Church of Sarum. "On St. James's day, old style," says Brand, "oysters come in, in London: and there is a popular superstition still in force, like that relating to goose on Michaelmas day, that whoever eats oysters on that day will never want money for the rest of the year."

The rector of the parish of Cliff, in Shamel Hundred, Kent, by old custom, annually distributes at his parsonage-house on this festival a mutton pie and a loaf, to as many persons as choose to demand them. The expense of which amounts to about 15*l.* per annum.

July 26.—St. Anne, the mother of the Blessed Virgin, is celebrated on this day in the Latin and English, and on the 9th of December in the Greek Church. By an ancient tract, written by Hippolytus the Martyr, it appears that St. Anne was third daughter of Matthan, a priest, by Mary his wife, and that she was married to Joachim, in Galilee; that Mary, the eldest sister of St. Anne, was married in Bethlehem, and became the mother of Mary, surnamed Salome; and that Sobe, the other sister, was also married in Bethlehem, and had for daughter, Elizabeth, the mother of St. John the Baptist.

The estimation in which St. Anne was held in England before the change of Religion, may be well imagined from there being in London four churches dedicated under her invocation, besides upwards of thirty thoroughfares in the metropolis called by her name. The wedding-ring of Joachim and Anne has also had its due share of veneration. It was kept by the nuns of St. Anne at Rome, and is said to have worked miracles. It was stolen during the sacking of that city under the pontificate of Clement VII., but was wonderfully brought back and laid upon a stone by a crow.

July 27—Happens this year to be the first Monday after St. Anne's day, on which there is annually a mock election of the "Mayor of Bartlemass," at Newbury, in Berkshire. The election is held at the Bull and Dog public-house, where a dinner is provided; the principal dishes being bacon and beans, have obtained for it the name of the "bacon and bean feast." In the course of the day a procession takes place. A cabbage is stuck on a pole, and carried instead of a mace, accompanied by similar substitutes for the other emblems of civic dignity, and there is plenty of "rough music." A "justice" is chosen at the same time, some other offices are filled up, and the day ends by all concerned getting completely hilarious.

Most persons have heard of the SEVEN SLEEPERS. The fact of their being commemorated on this day by the Western Church affords us an opportunity of relating their history as recorded in the veritable pages of the *Golden Legend*. In A. D. 250, the Emperor Decius came to Ephesus on one of his persecuting errands, and commanded the people to "edefye" temples in the midst of the city, that all the inhabitants might come with him "to doo sacrefyse" to idols; and so cruelly did he persecute the Christians, that friends forsook their friends, parents their children, and children their parents. "And thenne in thys cite were founden seven crysten men, that is to wete," Maximen, Malchus, Marcianus, Denys, John, Sempion, and Constantine: these were the first who refused to do sacrifice, and grieving for the calamities which assailed the faithful, they concealed themselves in their own houses. They were soon after accused before Dacien, who gave them space to repent until the coming again of the emperor; and during this interval they sold their possessions, "despended thayr patrimonye in almesse to the poure peple," retreated to Mount Celion, and hid themselves in a dark cave; and Malchus, who served the rest, when he had occasion to go to the city for provisions, disguised himself as a pauper. On one of these expeditions, he heard that Decius was returned and vehemently desired to seize them. Sorrowful in spirit, the holy man came back in haste, and related the sad intelligence to his fellows, "and thenne were they sore aferde, and when they had taken theyr reflection and satte in wepyng and waylinges, sodenly as God wold, they slepte." And when the morning came, and they could nowhere be found, Dacien was very angry, because he had lost "suche yong men," and sending for their relatives threatened them with death, "and they accused them and complayned that they had despended all theyr riches, and stated where they were concealed. Then

the emperor choked up the cavern's mouth with stones, and Theodore and Ruffine "wrote their martirdom, and leyde it subtly among the stones."

Now about three hundred and seventy-two years after, in the thirtieth year of the reign of Theodosius, the heresy of those who denied the resurrection of the body so greatly prevailed, that that prince wept bitterly, clad himself in hair-cloth, and led a holy and religious life, "whiche God merciful, and piteous, seeing, wold comforte them that were sorrowful and wepying, and gyue to them esperance and hope of the resurexyon of deed men, and opened the preevous tresour of His pyte and reysed the forsayde martirs."

A certain citizen of Ephesus had resolved to erect, on Mount Celion, a dwelling for his herdsmen, and it so chanced that the masons opened the cave, and the seven saints immediately awoke; and, supposing that they had only slept one night, began to prepare their minds for coming torment, but feeling themselves ravenously hungry, they despatched Malchus, with five pieces of silver in his purse, to buy some food, who, when he saw that the masons "began to blysse him, was moche admerueyllyd." And when he reached the city his wonder increased ten-fold, for he beheld the sign of the cross thereon! and on every gate appeared the same sign; so he "adyseed and comforted hymself, and covered his vysage, and entred into the cite;" and when he reached the market-place he heard all the people talking about their SAVIOUR CHRIST. Then quoth the saint, "I trow this is not the city of Ephesus, for it is all otherwise builded; it is some other city, I wot not what." This the bystanders presently informed him was not the fact; so he went to a baker's, but when he took out his money, the shopkeepers began to wonder in their turn at the antique impress on the coin, and agreed among themselves that the youth had discovered some old treasure. Naturally supposing that he was known, and that the bread-sellers were plotting to betray him, Malchus entreated them to let him go, and "kepe both money and breede." "Nay," said they, "you have found some treasures of the old emperors, share them with us, and we will keep your secret." Malchus was too alarmed to reply, so they put a cord about his neck and dragged him into the midst of Ephesus, bawling the while that their prisoner had "found great riches," which Malchus, who had now recovered his self-possession, stoutly denied.

At length St. Martin the bishop, and Antipater the consul, heard the report, and sent for the prisoner and his money; and Malchus went trembling to the church, expecting to meet his foe, the emperor. He was there interrogated how he had obtained the silver. He answered, "by inheritance." The judge then inquired of what city he was: he replied, "of Ephesus." "Then let thy kindred bear witness to thee," returned the consul. Then Malchus mentioned the names of several, but no one had ever heard of them, so all the people concluded that the prisoner was endeavouring to cheat them. "This money," observed the judge, "was coined three hundred and seventy-two years ago, in the first year of Decius, 'how may it come fro thy lygnage so long sythe,' and thou art young, and wouldest deceive these wise and ancient citizens, thou shalt be punished as the law directs, until you confess where you found this treasure."

Then Malchus knelt down, and asked for Decius: to this inquiry the bishop made answer, that he had been long dead. "That cannot be," replied the saint, "for it was but yesterday that I beheld him: follow me, and I will show you my fellows, who have hid themselves in Mount Celion to escape his fury." Concluding that the youth had seen a vision, the good prelate, and a great multitude of the citizens, repaired to the holy mountain, and saw the Christians seated in the cavern, and "theyr vysages like unto roses fowering:" so they glorified God.

Then the bishop sent immediately to the emperor, who, rising from the dust, and doffing his mourning garments, hurried from Constantinople to Ephesus, where he was met by the rulers of the city, who conducted him

to the cave of the miracle. And when the Saints perceived him coming, their faces blazed like the noon-day sun, and Theodosius embraced them all reverently, and glorified the LORD CHRIST, who had raised them from the dead to testify to the truth of the resurrection. And when they had been seen by all the people, they bowed their faces earthward and gave up the ghost. Then the emperor commanded that gold and silver sepulchres should be made to contain their most precious bodies; but on the night following they appeared unto him in a dream, and craved him to permit them to lie in the cave, as they lay before his arrival. So Theodosius adorned that place "nobly and richly" with precious jewels, and commanded that "all the bysshops that wold confesse the resurrection shold be assoyled."

Such is the legend of the "seven sleepers" as believed in the middle ages. These saints, according to Alban Butler, were walled up together in a cave, wherein they had hid themselves, till they were found in 479; and hence, he says, some moderns have imagined that they only lay asleep till they were discovered.

July 29.—The Spanish Armada was destroyed on this day, 1588.

In Sykes's "Local Records" it is related that on the 29th July, 1822, the cordwainers of Newcastle celebrated the feast of St. Crispin, by holding a coronation of their patron saint, and afterwards walking in procession. The coronation took place in the court of the Freeman's Hospital, at the Westgate, at eleven o'clock, and soon after twelve the procession moved forward through the principal streets of that town and Gateshead, and finally halted at the sign of the Chancellor's Head, in Newgate-street, where the members of the trade partook of a dinner. There had not been a similar exhibition at Newcastle since 1789.

Poetry.

In Original Poetry, the Name, real or assumed, of the Author, is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

A SKETCH FROM LIFE.

A. H. T.

AN! lingering flower, thou art fading fast,
With lovely things thou must lie,
The yellow leaves, as they rustle past,
Are whispering,—thou must die.

Thou didst tell me blithely of summer skies,
Of the long sweet summer hours;
Aye, many a blessing hidden lies,
Within the eloquent flowers.

Many a tale of the far-off past,
Shining in hues of gold,
Relieving the shadows around us cast
By all which was bright of old.

I remember well the pale features of one,
In the light of whose earnest eye
Lay the nameless expression of something gone,
Of much which had shone to die.

How oft he would gaze, with that mournful look,
Which speaks of some grief within,
On a flower, as some richly illumined book,
Whose love it were treasure to win;

On the crimson bloom of an op'ning rose,
As tho' in its depths lay coiled,
Far hid in its roseate depths, that repose
For which he had vainly toiled!

Full deeply he read of a distant hour,
When he look'd on a form most fair;
When the gift, aye, of even a little flower,
First taught him sweet love nestled there!

For the hand, as it offer'd that simple flower,
Trembled with hidden feeling,
And the voice, as it faltered, revealed a power
Which mocks our feeble concealing.

Her voice, though it was but a careless word,
In its tone, so low and broken,
Betrayed how the spirit within her stirred—
We needed no farther token;

And the quiet garden, which slept around,
And the broad moon glancing over,
Listened and caught the half-whispered sound,
The first low words of the lover.

Yes, it was love—as the dawning day,
In its purple beauty it shone,
He lived to behold it fade sadly away,
To seek, when, alas! it was gone!

Till dull o'er its loveliness, darkness crept,
Like the deep desolation of yore;
Even darkness that well might be felt—and he wept
In his grief, for the anguish was sore.

Thus he wandered forlorn the wide heavens beneath,
Before him a broad desert lay,
The world's mighty desert—from manhood till death,
Alone he must pass on his way.

The melodious depths of his eloquent mind
Found a language and spake—did he feel
When the pomp of the laurel his temples enshrined,
There was aught in its splendour to heal?

He felt not the glow of its deathless green,
He turned from the glorious dower,
To remember, how meekly, a distant scene—
To gaze on what once was a flower.

Poor colourless dust—in that hour of light,
He felt not that thou wouldst be,
In thy loveliest promise—thine after blight,
A type of his destiny.

Thus he went on his way; till his course became
As a star's, through the midnight sky;
Girt ever by darkness; his radiant name
Shone with cold immortality.

None knew, when like music, exultingly
His voice through the broad earth ran,
That even to bow down his head, and to die,
Had been bliss to that lonely man.

They looked on the features, so quiet and cold,
The dark eye, with its earnest gleam,
They knew not, how deep in his heart untold,
Lay the wreck of his morning dream.

They heard the sweet tide of his minstrelsy roll
As the voice of the rushing wave,
They knew not how hid in his inmost soul
Lay that dream in its restless grave.

Yes! thus did he live—and e'en thus did he die,
Yet of love, and its charmed hours,
He clung to one ling'ring reality
In the beautiful presence of flowers.

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne*.

No man has a right to say he can do nothing for the benefit of mankind, who are less benefited by ambitious projects than by the sober fulfilment of each man's proper duties. By doing the proper duty in the proper place, a man may make the world his debtor. The results of "patient continuance in well doing," are never to be measured by the weakness of the instrument, but by the omnipotence of Him who blesseth the sincere efforts of obedient faith alike in the prince and in the cottager.—*Rev. H. Thompson's Life of Hannah More*.

It is a fair ornament of a man, and a grand convenience both to himself and others with whom he converseth or dealeth, to act regularly, uniformly, and consistently; freeing a man's self from distraction and irresolution in his mind, from change and confusion in his proceedings; securing others from delusion and disappointment in their transactions with him. Even a bad rule constantly observed is, therefore, better than none; order and perseverance in any way, seemeth more convenient than roving and tossing about in uncertainties. But, secluding a regard to the precepts of religion, there can hardly be any sure or settled rule which firmly can engage a man to, or effectually restrain a man from anything.—*Barrow*.

The innocent are naturally unsuspecting; the guilty, as naturally suspicious. For it is according to nature that we should judge others by ourselves, until experience of the world awakens the man from the dreams of the youth. Then, indeed, he becomes cautious of committing himself to the treachery which he knows to exist in the world; but if he has preserved, in any degree, the spirit of early years, he never believes any man deliberately evil whom he has not found such by experiment.—*Anon*.

YEARS may pass over our heads without affording any opportunity for acts of high beneficence or extensive utility; whereas not a day passes, but, in the common transactions of life, and especially in the intercourse of domestic society, gentleness finds place for promoting the happiness of others, and strengthening in ourselves the habit of virtue: nay, by seasonable discoveries of a humane spirit, we sometimes contribute more materially to the advancement of happiness, than by actions which are, seemingly, more important.—*Blair*.

It has been wisely said, "there be as many miseries beyond riches as on this side of them." I have a rich neighbour who is so busy that he has no leisure to laugh. God knows that the cares, that are the keys that keep those riches, hang often so heavily at the rich man's girdle, that they clog him with weary days and restless nights, when others sleep quietly.—*Izaak Walton*.

THE man, whom I call deserving the name, is one whose thoughts and exertions are for others rather than himself, whose high purpose is adopted on just principles, and never abandoned while heaven or earth afford means of accomplishing it. He is one who will neither seek an indirect advantage by a specious road, nor take an evil path to secure a real good purpose.—*Sir Walter Scott*.

In conversation, humour is more than wit, easiness more than knowledge: few desire to *learn*, or think they need it; all desire to be *pleased*, or, if not, to be *easy*.—*Extract from Caldwell's "Results of Reading"*.

MEN should know, that the noble power of suffering bravely, is as far above that of *enterprising greatly*, as an unblemished conscience, and inflexible resolution, are above an accidental flow of spirits, or a sudden tide of blood. Whosoever is *really* brave, has always this comfort when he is oppressed, that he knows himself to be superior to those who injure him; for the greatest power on earth can no sooner do him that injury, but the brave man can make himself *greater, by forgiving it*.—*Pope*.

Alnwick Castle.

Few districts in England are more worthy of visiting than the Borders. They formed the great arena for the conflicts between two gallant nations; there is hardly a castle, or hill, or valley, which does not teem with historic or romantic traditions. Alnwick, perhaps, holds the most pre-eminent claim upon the tourist for a first visit, not only from its historic importance, and princely castle—the great Border fortress and residence of the Percys, who were themselves the very centre and source of Border story,—but also from its favourable position as a central point from whence to visit some of the most remarkable places in the country. The great trunk railroad from London to Edinburgh, will convey, in a few months, by means of a short branch, the distant traveller, for a few shillings, almost to the very walls of Alnwick Castle. There are three main entrances into the town, all of an imposing character; but as we suppose the visitor to enter at the south end, we will briefly forewarn him of the objects that cannot fail to attract his attention. The first is one of a very pleasing character, not so much on account of its great architectural and scenic beauty, which however it possesses in a high degree, as from the gratifying evidence it affords of the kind relationship that exists between one of the greatest landed proprietors of the

kingdom and his numerous tenantry. We allude to the noble column which was erected at the south entrance of the town, by the Percy tenantry, to commemorate the liberality of the Duke of Northumberland at a period of great agricultural distress, when it is said more were found to blame than to imitate. The column, which is built on an eminence rising somewhat suddenly from the great south turnpike, beautifully laid out with shrubbery, is about one hundred feet high, surmounted by a lion passant—the Percy crest, and at the base are four splendidly sculptured lions couchant. Beyond this, the traveller immediately enters into a spacious street; but his length of view is suddenly obstructed by an old and gloomy gateway, which has stood sentinel there since the time when the gallant Hotspur, with his powers, went forth to do battle with his sovereign on the field of Shrewsbury; for tradition ascribes its erection to that hero. The town was anciently fortified by four strong towers, of which Bond-gate, as the one we are speaking of is called—probably because the houses in this street consisted of those of the *bondagers*, or persons bound to perform certain menial offices for the Lord of the Castle—is the only surviving one. The name of Hotspur has preserved it from the destruction that has swept away the others. The other entrances are very

striking, and afford extensive views of the town and castle. The castle is the pride and glory of Alnwick. It is believed to have been founded during the domination of the Romans. This belief is strengthened by the great probability that the Aln is the *Alauna* of the Roman Itineraries; and by the fact, that, when a part of the keep was taken down a few years ago to be repaired, the foundations of other buildings, which lay in a different direction from the present, were discovered, and some of the stones appeared to have Roman mouldings. The present keep seems to belong to the Saxon times, for the zig-zag fret-work round the arch that immediately leads into the inner court is evidently of Saxon architecture; and yet there is reason to believe, from the appearances of a gateway under the flag-tower, fronting the main gateway from the town, that an earlier one than the present formerly existed.

The Castle, with its numerous dependencies, before the Norman Conquest belonged to a powerful Baron named Gilbert Tyson, who stood by his country's cause at the great battle of Hastings, and fell with Harold and the flower of the Saxon nobility. An impression is generally entertained, that, after the battle of Hastings, little or no resistance was made to the Norman; but this is contrary to historical facts, and unjustly derogatory to the hardy bravery and nobly attested patriotism of our forefathers—the men from whom nine-tenths of the present race of Englishmen are descended. Seven long years at least the Normans were engaged in continual conflicts for the land, and in no part of England was a more heroic and obstinate resistance made than by the Northumbrians; and fearfully did the stranger king repay it. William of Malmesbury, who wrote about eighty years after, says, "From York to Durham not an inhabited village remained. Fire, slaughter, and desolation made a vast wilderness there, which continues to this day." Although William himself did not proceed farther than Hexham, some of his chieftains continued the conquest of the country both towards the north and the west, and seized upon the domains their valour had won. It was at this period that Ivo de Vesey took possession of the town and castle of Alnwick. Tyson's son, William, had an only child, named Ada, "sole daughter of his house and heart," whom the Conqueror gave in marriage to De Vesey, who, in consequence, succeeded to the vast possessions of the Saxon chief. It was by this family that the principal endowments to Alnwick and Hulne Abbeys were made; and the right of pasture on Alnwick Moor—a common consisting of more than two thousand acres—and various other privileges, granted to the burgesses of Alnwick, which they still enjoy.

From this period Alnwick Castle became a place of great strength. It underwent a memorable siege in the reign of Malcolm Caenmore, King of Scotland. This Malcolm married Margaret, the sister of the unfortunate Edgar Atheling, who fled to Scotland in 1068; and when the Norman duke overran England and assumed the crown, Malcolm espoused the cause of Edgar, and refused to do homage for his English lands. At the accession of Rufus, however, peace appears to have prevailed between the two kingdoms; but, on Rufus's return from Scotland, having observed the favourable position of Carlisle, he expelled the lord of the district, founded a strong fortress, and established an English colony in the town and neighbourhood. This renewed the rupture: for Cumbria had long been an appanage of the eldest son of the King of Scotland.

After various negotiations and schemes, Malcolm at last made an inroad into Northumberland, and laid siege to Alnwick Castle, where he lost his life. The ancient Chartulary of Alnwick Abbey seems to give the most authentic account of this event.

The Castle was too strong to be taken, but, being cut off from all hopes of succour, it was on the point of surrendering, when one of the garrison, named Hammond, undertook its rescue by the following stratagem:—

He rode forth completely armed, with the keys of the Castle tied to the end of his spear, and presented himself in a suppliant manner before the king's pavilion, as being come to surrender up the possession of the Castle. Malcolm too hastily came up to receive them, and was suddenly pierced to the heart by the spear. The wound was mortal, but the assailant escaped by the fleetness of his horse across the river, which was then swollen with rains. The place was long after named Hammond's Ford, probably where the bridge is now built. Prince Edward, Malcolm's eldest son, incautiously advanced to revenge his father's death, and received a wound of which he died three days after. Eustace de Vesey founded a chapel and hospital, dedicated to St. Leonard, for the soul of Malcolm, "there," as the chronicle states, "mortally wounded near a certain spring, leaving his name to the same spring for ever, whence that spring is called in the English tongue, Malcolm's Well." The site of this hospital, which had become utterly unknown, was discovered last summer by a few workmen, who were draining a boggy part of a field lying upon the west side of the north turnpike-road, about three-quarters of a mile from Alnwick. Among other things, a well was discovered, about five feet deep, and lined with circular stones. There is a cross erected to the memory of Malcolm, about two or three hundred yards to the north of the chapel recently discovered, which has always been considered to be erected on the spot where Malcolm was killed; but from the statement above, it would appear that the chapel was built upon the spot, and the discovery of the well confirms it. The place has evidently been a swamp, and covered to a considerable depth by vegetable matter. The well is now dry, but there are traces of a small stream having traversed this part of the field before joining Clennel's Burn, which runs about two hundred yards below the site of the chapel.

Malcolm and his son were not the only Scottish monarchs who suffered disasters before Alnwick Castle. William, surnamed the Lion, tired of his fruitless solicitations for the attainment of his favourite object, the earldom of Northumberland, from Henry II., at last joined the party of the king's rebellious son, from whom he had obtained a grant of the earldom, and invaded Northumberland. His troops spread devastation wherever they appeared, till their progress was stopped before the walls of Alnwick Castle. William was tilting in a meadow with only sixty Scottish lords near him, on the 12th July, 1174, when he was suddenly fallen upon by Ranulf de Glanville, and made prisoner with all his knights, but not without a brave resistance. As soon as the king perceived who the enemy were, (for at first he had mistaken them for a returning party of his own stragglers,) he cried out, "Now it will be seen who are true knights," and immediately advanced to the charge. But he was quickly overpowered, (Glanville had four hundred horsemen,) and carried the same night to Newcastle. He was afterwards liberated, on delivering up several castles, and his brother David and many of the chief nobility as hostages. A monument is erected on the spot to commemorate the event.

The castle and barony continued in the possession of the Lords de Vesey till the year 1297, when the last baron of the family died without issue. The fairdomains passed into the hands of Anthony Bee, Bishop of Durham, in whose possession they continued twelve years, when they were by him granted to Lord Henry Percy, who was at that time one of the most powerful barons of the north, the lineal descendant of William De Percy, who was a favourite chieftain of the Conqueror, whose name is enrolled in the scroll of Battel Abbey, and who, at the time when Ivo de Vesey won the lands and daughter of the Saxon Lord of Alnwick, had more than eighty manors in Yorkshire appropriated to him, as his share of the conquered north.

The family of Percy is derived from Manfred, a Danish chieftain, who made eruptions into France in

the ninth century. His descendants settled in Normandy, and assumed the name of Percy, from the domain so called, which Geoffrey, the son of Manfred, obtained from the famous Rollo, whose fortunes he had followed. The early history of this illustrious race is beautifully told by their poetical descendant, Bishop Percy, in his well-known Tale of the Hermit of Warkworth:—

"They sung, how in the Conqueror's fleet
Lord William shipp'd his powers,
And gained a fair young Saxon bride,
With all her lands and towers.

Then journeying to the Holy Land,
There bravely fought and died:
But first the silver Crescent won,
Some Paynim Soldan's pride.

They sung how Agnes, beauteous heir,
The queen's own brother wed;
Lord Josceline, sprung from Charlemagne,
In princely Brabant bred.

How he the Percy name reviv'd,
And how his noble line,
Still foremost in their country's cause,
With god-like ardour shine."

The eldest son of Josceline and Agnes succeeded his father, and was one of the chief barons who levied arms against King John, and took the oath to compel the king to observe faithfully the Great Charter. He died without issue, and his brother, the first Henry, Lord Percy, succeeded him. It was the grandson of this Henry who purchased the barony of Alnwick, as before mentioned. From this period Alnwick Castle became the great baronial residence of the Percys. To narrate their achievements in detail would be to write almost the entire history of the Borders, and no inconsiderable portion of the annals of England; for there are few important passages in them in which they did not take a conspicuous part. We shall glance at only a few of the more salient points, so to speak, of their history.

The fourth Henry, Lord Percy, (who was the first of his family that possessed the castle of Warkworth,) bore a distinguished part in the memorable battle of Halidon Hill, signalized himself at the siege of Nantz, and had the chief command in the famous battle of Nevill's Cross, where David of Scotland was captured, and his splendid army annihilated. The sixth Henry was a supporter of Wickliffe. It was this nobleman who took such a notorious part in the deposition of Richard II. When the Scots invaded England in the third year of Henry IV., the Earl gave them a most fearful discomfiture at Humbledon Hill, where the Earl of Douglas was taken prisoner. Dissensions about the prisoners taken in this fight originated the feud between Percy and the King. The former could not brook insult from a sovereign whom he had mainly raised to the throne. He accordingly levied a powerful army, and put it under the command of his son, the famous Hotspur:—

"A son who was the theme of honour's tongue;
Amongst a grove the very straightest plant;
Who was sweet fortune's minion and her pride."

Owen Glendower, too, had raised the standard of insurrection; but he failed to join the rebellious Borders; and

"Lingering from sad Salopia's field,
Reft of his aid, the Percy fell."

But what, perhaps, most contributed to the loss of Shrewsbury, was the failure of Northumberland himself, who lay "crafty-sick" at York, to come up with his forces. His cold and selfish policy destroyed his fiery and noble-hearted son. Shakspeare makes Lady Percy thus reproach him:—

"The time was, father, that you broke your word,
When you were more endeared to it than now;
When your own Percy, when my heart's dear Harry,
Threw many a northward look, to see his father
Bring up his powers: but did long in vain."

The Earl fled into Scotland, carrying with him the infant son of Hotspur. His estates were confiscated, and after a time, restored; but the death of his great son, and the neglect of his sovereign, continued to prey upon his haughty spirit, which led him to join the northern malcontents, and again to take up arms against the King. He fell at the decisive battle of Bramham Moor, and his head, grey with years and sorrows, was stuck to a pole on London Bridge. The House of Percy was now in its deepest humiliation; the powerful Earl, who had deposed one king and set up another, had ignominiously fallen; his renowned son, whose fame in deeds of arms had dimmed even the glory of his own heroic race, had preceded him to the grave, and the infant heir was a dependent on the bounty of others.

But the hour of exaltation came again. The noble tree, though felled, robbed of its branches, and stripped of its foliage, was not uprooted; and the rude hands that made the gnarled oak bow to the earth, tended the fair shoot, till it again emulated the greatness of the parent tree. When this infant had grown to youth's estate, he accompanied the King of Scotland's son, who was leaving his native land, in order to escape from the intrigues and apprehended violence of his uncle, the Duke of Albany; they were driven on Flamborough Head, where they were discovered, taken prisoners, and carried to Windsor. Young Percy won the favour of Henry V., who restored him to the honours and possessions of his ancestors. This Earl made considerable additions to the Castle, and was a great patron of learning and the liberal arts. He stood firmly by Henry VI., and was among the slain at the great carnage at St. Albans; two of his sons also fell in battle—one at Northampton, and the other at Hedgeley Moor. The next Earl, with six northern barons, fell fighting at the mighty slaughter at Towton. In after years, Bosworth Field, Blackheath, the battle of the Spurs, the famous "rising of the North," the civil wars of the first Charles, by whose cause they firmly stood—to the last Duke, who was also a soldier, and served in the great Seven Years' War, and distinguished himself in America—all attest the Percys' high deeds in arms. Times have changed, and swords have been turned into pruning-hooks; and it is a pleasant reflection to know that the present representative of this illustrious line of nobles is as pre-eminent in all the charities of life in an opulent and tranquil age, as his ancestors were in the pomp and pride of war.

Their Castle of Alnwick, the unconscious sharer of their disasters and their glories, repaired and improved by successive Earls and Dukes, is now the very perfection of a baronial residence. It is situated on the south bank of the river Aln, about five miles from its mouth, upon a commanding eminence, which gradually rises from the river edge. It is not shrouded in sylvan gloom, like so many other lordly castles; but it stands forth in its pride of place, conspicuous to every eye, glittering in every sunbeam, and open to every storm. The rise from the river to the castle is tastefully decorated with shrubbery; and the grounds on the other side of the Aln, which consist of spacious pasture land (through which is a common foot-path), dotted with clumps of trees and encompassed with thick plantations, and, in summer, enriched with droves of cattle, afford a picture of quiet rural beauty, which pleasantly contrast with the magnificent pile that looks down upon them. The Castle itself occupies about five acres of ground. It is encompassed by an extensive wall, flanked with sixteen towers and turrets, most of which still retain both their ancient name and use. A complete set of offices is skilfully concealed among them, chiefly on the south side, looking towards the town. The Castle is entered from a broad and quiet aristocratic-looking street, called Bailliffgate, by a stern and gloomy barbican, over which is a stone figure of a guard in the attitude of throwing down a huge stone on the head

of assailants. The barbican is protected by a high embattled tower, which was anciently furnished with a portcullis and drawbridge. After passing these into the outer ward, the scene is truly magnificent. The great body of the castle, built upon a finely swelling eminence, bursts on the view, with its semicircular towers and lofty battlements, which, in the Norman fashion, are crowded with stone effigies of warriors, disposed with singular propriety, of wonderful animation, and arrayed in the costume and arms of ancient times. Many of them betray great antiquity, and the utmost care is taken to preserve them from decay. The entrance into the second court is similar to the first, and defended in the same way. A broad walk runs along the northern walls of this second court, and within the battlements, which would enable the guards and troops with safety to view the dispositions of the enemy without. A semicircular bastion in this wall, where it is said that Hotspur used to sit and see his troops exercise in the castle-yard, is called Hotspur's Chair. Between this and the records' tower is a place, to be plainly distinguished from the rest of the wall, where a breach was made by a body of Scots when besieging the Castle, and traditionally called the "bloody gap." There is no existing record of the event, but the tradition seems to be confirmed by the fact of arrows having been found in the adjoining parts of the wall with their points directed inwards, as if they had been showered upon the assaulters from the opposite battlements and windows. Very noble views of the main citadel and of the surrounding scenery are obtained from this walk. The entrance into the inner court is through lofty octagonal towers; beneath is an ancient dungeon in all its horrors; it is eleven feet deep, and ten feet square at the bottom, and covered by an iron grate. The inner court, the very heart of the great citadel itself, is in the form of a square with the corners cut off. The other courts are covered with a beautiful verdant turf; but this, which is much smaller, and the principal entry into the interior of the Castle, is paved with wood. The interior of the Castle is fitted up with a splendour suitable to the wealth and dignity of the illustrious owner. A recent visitor has described it in the following terms:—

"The rooms are fitted up with light Gothic tracery on the walls, very chaste and elegant, and the colours are so delicate and subdued, that you are not offended with that feeling of over-fineness which is felt at Raby. You ascend by a noble staircase, surrounded with armorial escutcheons instead of a cornice, to a suite of very spacious and handsome rooms, of which the principal are the saloon, dining-room, breakfast room, library, and chapel. The ceilings are finely walled into compartments, with escutcheons and pendants. The walls of the saloon are covered with crimson silk, sprigged with yellow flowers; those of the dining-room, with pale buff, and white mouldings, with pendant spandrels; those of the library with grey and buff mouldings, rich tracery, and elegant compartmented ceiling. In the centre of some of the arches you see the crescent, the crest of the Percys."

The library leads to the chapel, which has been designed after the most perfect models of Gothic excellence. The windows are beautifully painted with the family escutcheons. The walls are divided into drab panels, with gilt, purple, and scarlet mouldings, after the great church at Milan; the east window is in the style of the finest in York Minster, and the ceiling is borrowed from that of King's College, Cambridge.

But chaste and beautiful as the internal decorations are, it is not these that affect the mind. It is the outer antiquity, the external bravery, that throws the charm of the old heroic times around one, and crowds upon us the memories of Chevy Chase and Humbledon, of Shrewsbury, and other great fields. Every tower suggests images of greatness; and every wind that sweeps around them whispers heroic thoughts.

And the surrounding landscape seems emulous to add

its charms to the brave old Castle. The silver Aln winds its way through rocks, and hanging woods, and holy ruins, and quiet pastures, up to the very walls; wild moorlands, and the lofty Cheviots fill the background. As mentioned before, the slope in front of the Castle is tastefully decorated with shrubbery. Adjoining this are the dairy-grounds, lying along both sides of the river. During the summer months they are open to the public, who are admitted by the dairy, at the foot of Canongate. They are threaded with beautiful walks on all sides, richly adorned with flowering shrubs of exquisite fragrance, clumps of roses, rare and varied heaths, trees festooned with woodbine, and almost every favourite of the garden and shrubbery, laid out with the most correct taste, and affording a fine example of what art, legitimately applied, can effect in softening nature's harshnesses, and copying her graceful touch. The river is here crossed by an elegant chain bridge. On the opposite side, a broad gravel walk is continued along the margin of the river, entirely overarched with old and venerable trees, which are covered with moss, and encircled with woodbine and the "ivy green," even to the topmost branches. On one side the Aln gently flows, and on its bosom the stately swan mantles its snowy plumage; on the other rises a lofty and precipitous hill, clad with the earliest primroses, and fragrant hyacinths, and others of a thousand hues, that

"Purple all the ground with vernal flowers."

Here also the woodbine, the hawthorn, and wild-rose grow in brave neglect among the loftier and more majestic natives of the woodland; while from every spray amidst this region of fairy-land, this paradise of nature, bursts forth the constant summer song of birds,

"Warbling their native wood-notes wild."

A little up the river, the beauty of the scenery is much heightened by a dashing waterfall, several feet high, which is seen beneath the arches of the Abbey Bridge, and seems to toss its white foam beneath them. Commodious seats are placed on those spots from whence the best views are to be obtained. Lovely and commanding views of the Castle, town, church, moor, park, sheets of water, and exquisite wood-scenery, are disclosed at every point. The dairy, through which the visitor enters and returns, is a rustic colonnaded cottage, over which the Ayrshire rose, and a deeply tinted woodbine, clamber and blossom—no unfit entrance into these delicious shades, which other times would have feigned the pleasure abodes of the River Divinities: and where the quaint moralist, too, may please his fancy by remarking that, as in the moral world, the gardens of pleasure are entered through the portals of industry. From the grounds, the park is entered through the dry arches of the Abbey Bridge, so called from the ancient abbey, whose sole remaining gateway tells of the hand of the destroyer. The Abbot of this house was summoned to several parliaments. A little above the abbey, the Aln is crossed by a neat foot-bridge. From the seat in front of it a most charming view presents itself. The Aln, in delightful murmurs, plays at the foot of it: the ruin of Alnwick Abbey, standing in the midst of a beautiful lawn, overhung with woods, bursts upon the view,

"Where oft the soldier, weary of the round
Of war and tumult, sought the humble cell."

And just where the Aln seems to lose itself, above a slight opening in the trees that everywhere hang around this delightful retreat, rise the lofty battlements of Alnwick Castle full upon the view; and the venerable parish church, that lends such a pleasing grace to every landscape, from this point seems almost to form a part of the Castle itself. New beauties spring up at every step. About a mile higher up the stream, is a fountain of most pure water, called the Lady's Well; and almost immediately beyond this, two roads lead to the ruins of Hulne Abbey. This was the first monastery of Carmelite Friars in these kingdoms. The domains attached to it

were very extensive. The abbey is now a most beautiful ruin, with the exception of a fine tower, which was built by the fourth Earl of Northumberland, as a place of refuge for the monks in times of danger; for the rude Borderers, in their sudden incursions, frequently spared neither places nor persons, however sacred. This tower having been preserved more entire than any other part of the abbey, was repaired by the late Duke in the old Gothic style. Summer parties from the town, which almost daily take place, generally indulge themselves with tea and cake here. The ground on the opposite side of the river rises to a great height. Heather and gorse clothe the lower sides of the mountain, which is well wooded, however, all around from the middle. The summit of the hill is surmounted by an admirable column, ninety feet high, of the most elegant design, and in the most finished style of masonry. The prospect from it is of a most imposing character.

It is indeed a model landscape, where almost every element that enters into a perfect picture may be found—lofty mountains and barren moors—holy ruins inspiring religious awe, and towers grey with the mist of years—battle-fields of old renown, and scenes of modern heroism—cultivated valleys, and sweeping woods—and, to crown the whole, the “eternal ocean,” with its clustered islands. To the south extends a wild rude moor—to the west stands the lofty Cheviot, with its retinue of hills stretching several miles, green to their summits—and between occasional openings, are glimpses of the still more distant hills of

“pleasant Teviotdale,
Fast by the river Tweed.”

In a clear day may be distinguished the memorable hill of Flodden,

“Where shivered was fair Scotland’s spear,
And broken was her shield!”

And the scarcely less famous hill of Homildon, where the fiery Hotspur routed the Scots under the Earl of Douglas; at a less distance, in the same direction, lies Hedgeley Moor, where Sir Ralph Percy fell during the wars of the Roses. Between the high moorland and the hills, in lovely contrast, lies the fertile vale of Whittingham, studded with country seats, and farm houses, and cottages, affording to the imagination and affections those visible signs of human happiness, in which (as Gilpin remarks) the true beauty of a landscape consists, more than in the mere mixture of colours and forms. Through this valley glides the Aln, till it is seen circling Hulne Abbey. To the east are fine green vales and woody slopes, in the midst of which the town of Alnwick, overlooked by the Castle, has a most picturesque appearance. Below it, the Aln winds its glittering stream, and then, like a silver cord, it threads its mazy way ‘to the ocean,’ which terminates this splendid prospect to the east and south. Upon the margin of the sea, on a bold rock, Bamborough Castle uprears its mighty mass—a place of great strength, and a royal residence under the Saxon kings; a little to the eastward, the Fern Islands inlay the bosom of the deep,

“Like precious stones set in the silver sea!”

One of them—the Longstone—has become “familiar in our mouths as household words,” as being the scene of Grace Darling’s heroic adventure. To the southward, the ruins of Dunstanborough Castle, the port of Alnmouth, the towering remains of Warkworth Castle, and Coquet Island with its Light House, are among the most striking objects. The high land in the county of Durham terminates this truly magnificent prospect.

We have thus run over the more prominent beauties and matters of interest in and around Alnwick; it is full of romantic scenery and interesting associations; but enough has been said, we hope, to induce the reader to believe, that time and money may be worse spent than in visiting the halls of the Percy, and roaming for a season among the ruined towers and famous localities of the Northumbrian Borders.

F.

THE SEA-SIDE VISITOR.

“The sea,” says Euripides,¹ “washes away all human ills.” We cannot wonder, then, at the high esteem in which watering-places have been held both in ancient and modern times; or that the Roman patrician should have had his villa at Baiae, just as the English peer has his mansion at Brighton. The facility of communication in recent days has, of course, greatly enlarged and varied the motley throng who, at certain seasons, are found on our coast in search of health or pleasure. A large part of the inhabitants of London, whether rich or poor, are now generally found there every year for a time. The clerk may be seen entering a bathing-machine which a marquis has just quitted; the draper’s assistant from Regent Street stops to observe the statesman who, telescope in hand, is gazing from his spacious drawing-room over the blue expanse; and the cook, having gained a holiday from her master, whose indulgence she may have bribed by a dish of uncommon flavour, is carried in a crowded packet to Margate, whence she returns the next day to excite envious longings in the kitchen-maid by her tales of the charms or perils of the deep.

But from whatever part of London the individual may come, on entering a watering-place he becomes a new character. *There* he may have been a peer, a lawyer, or a grocer; but *here* he is a visitor: his private peculiarities are merged in those of a class of which he has now become a member, and whose characteristics are known, and may be described.

The visitor is distinguishable by several marks. First, he may be often known by a penetrating look, which gives him the appearance of being in search of something. While at his usual home, and engaged in his daily occupations, his mind is generally too absorbed in some besetting idea to be able to give to surrounding objects a very close attention: he walks or rides from his dwelling to his counting-house, scarcely knowing through what streets he has passed, or what faces he has seen. But at the sea-side the case is quite different; he has come down expressly to see; and, accordingly, wherever you find him, he is evidently occupied in seeing. As he walks along the Parade, he passes a board, fixed at the roadside; it has been there from time immemorial, and contains a warning against removing stones from the beach: an ordinary person would not notice it at all, but the visitor does; he sees it, and reads it. Over an old-fashioned house in the middle of a street, there is the date of a year: the inhabitant is scarcely aware of its existence; but it catches the visitor’s eye: he stops before it, is certain it has some significant meaning, and, perhaps, knocks at the door to get it explained. Among the pebbles on the beach, there lies something of a red colour: to vulgar eyes it seems a piece of brick; but the visitor picks it up, in order to convince himself, by careful examination, that it is neither a fossil nor a shell, and when he is quite satisfied of its worthlessness, he throws it into the sea. Of this trait we can give an illustration. A friend of ours was being shown over some interesting ruins, now used for farming purposes, when in one of the rooms he saw a square piece of some unknown substance, having on it indented marks. Being in that excited state of mind which discovers a wonder in everything, he imagined it to be a piece of antique tiling. “What is this?” said he, eagerly, to the woman who acted as *cicerone*. “That, sir,” said she, “is a piece of oil-cake, used to feed cattle with.”

Another peculiarity of the visitor (should he be a pedestrian) is, that he is continually asking his way,

(1) *Iphig. in Tauris.* 1193.

and with difficulty finds it. He hears that there is a fine view, or some ruins at ———. He accordingly summons his landlady, and desires to be told the way thither, solemnly adjuring her to direct him to that alone which is the most agreeable. A long explanation ensues; as the description of his informant increases in copiousness his conceptions become more and more confused, so that at last he leaves the house in impatience, saying that he will inquire as he goes along. Directed by the extended finger of the landlady, who has come down with him to the door, he gets safely to the end of the street, and even then, through looking back to get the advantage of her monitory gestures, takes the right turning; but soon he is completely lost. Advancing into the open country, he finds four roads; which is he to take? He espies a cottage near at hand; he hastens to it, narrowly escaping the bite of a dog; he endeavours to speak, but his voice is drowned in the animal's bark, till, at length, the mistress herself, with sleeves tucked up, recent from the wash-tub, steps out to his assistance, and he is enabled to ask the way to ———. His manner of pronouncing the word, however, is so opposite from hers, that she thinks he means a totally different place, and declares that it lies in the direction whence he has just come. This he stoutly denies, and is leaving her, half in anger, when a little girl, the pride of the National School, comes up, who, being better skilled in varieties of speech, elicits his meaning, and, having set him on the right way, is made supremely happy by the gift of a penny.

He now proceeds, gazing on either hand, gleaned information as to his course from the noble peasants at work in the fields, who greet him with a hearty "Good morning, sir!" or from boys, watching straggling cattle, all of whom he gravely interrogates, as though the matter were of the last importance, till, at length, he gets to the place of his destination. Having reached it, he is rather astonished to find that it really contains nothing extraordinary, though he has not any very defined idea of what he expected to see; he walks in disappointment through the village, till, stopping, according to custom, to read a board by the road-side, he discovers that it announces that, "*vagrants* will be taken into custody," and, being somewhat inclined to interpret it as a reflection on himself, he returns rapidly home, going, of course, some round-about way.

The visitor, also, is sometimes known by his extraordinary attire. In London, his dress is of a very sober and unromantic description:—a black coat, probably, with a black hat. But with new scenes have come new manners. His hat is now of straw, and to guard against its abduction by the amorous wind, he fastens it to his coat by a ribbon, which flies streamer-like in the air. His coat is of a material difficult to name, and of a colour impossible to describe; and the roughness of the stones on the beach induce him to defend his feet with shoes which seem exactly fitted for an elephant's wear.

The face of the visitor too is occasionally distinguished by an expression of important self-complacence. One of the first things that meet his eye on coming down to the breakfast-table on the morning after his arrival, is a pack of cards, containing the names and callings of various tradesmen who solicit his custom. He feels himself called upon to act the patron; a large town is suing for his smiles, and he cannot be insensible to the elevation of his position. Whatever shop he may enter he is usually received with marked civility; for the proprietor will often leave a resident customer to attend upon him, knowing that the golden favours of the stranger must be won immediately, or not at all.

The last peculiarity we shall mention, is, that the visitor is for a time (in that very limited sense, at least, in which a mortal can be said to be so), a *happy* man. He has left behind him the harassing cares of business; he rises in the morning with the consciousness that no importunate labours are awaiting him; and, when he

looks on the faces of his family, he sees them radiant with the expectation of pleasures to come. For him roll the glorious waves, whispering many a delightful tale of the shores they have kissed; for him the wild flowers spring up in sequestered nooks, made doubly beautiful by their unobtrusiveness, or cover the cliffs with all the colours of the rainbow; and the grass, rising in glittering spires hung with globes of dew, spreads for him a carpet more grateful to the feet than those which cover the floors of gilded saloons. But let us contemplate in imagination the family group gathered yonder on the beach. One of the children is washing its face in a natural basin formed in the hollow of a fallen piece of rock. Three other little ones are launching a tiny ship into the mighty sea, a meet emblem of themselves, graceful and delicate creatures, not long ago launched on the rough surface of this stormy world. Several times have they already placed their toy on the water, and then returned to see it float out into the expanse; but no—the wave is too shallow, and the little vessel rolls this way and that, in a most mortifying manner, and then lies on its side, motionless. At last one of them rushes out more boldly into the water, bearing the ship; he commits it to a friendly billow; it is lifted up by it, and (oh, the triumph!) it sails forth majestically into the deep. And now, what a ringing shout of rapture bursts from the young spectators, as they clap their hands as though to urge it on its way! If the sound finds no echo in your heart, dear reader! we pity you. The grave father, meanwhile, is seen by the side of his eldest boy, to whom he is expatiating on the wondrous things connected with the sea. He, perhaps, refers to that primeval period when the vast flood, like a drop of a bucket, ran out of the Almighty's hand,—or taking up a shell, he discourses on its exquisite formation, shows how the shelly envelope is secreted, and what were the nature and habits of its minute inhabitant—or finding some geological specimens, he talks to him of the eloquent inscriptions which learned men have deciphered on these "medals of creation"—or turning into the wide field of commercial discovery, he converses of celebrated voyagers, from Jason, Vasco de Gama, and Columbus, down to Cook, Parry, and Ross,—or referring to the historical associations of the deep, he mentions some of the most remarkable sea-fights in ancient and modern days; and the lad listens with kindling eyes (though he hears it for about the hundredth time,) to an account of the death of the heroic Nelson,—or lastly, plunging into the depths of German philosophy, he shows his wondering hearer how his very existence may have depended on the position of the grains of sand lying at his feet. The mother, in the mean time, stands near, listening, and occasionally, with gentle voice, introduces some illustrative remark, though her attention is somewhat distracted, first, by her endeavours to pacify the youngest girl, who has clung to her dress, terrified by the frolicsome shrieks issuing from a neighbouring bathing-machine, and then by the extreme difficulty she finds in settling in her own mind *which* of her sons it is that will be the Nelson of the next generation. Such are some of the pleasures reserved for the sea-side visitor for whom nature and the domestic affections possess a charm; and he will have spent his season of recreation to little purpose if he do not return to his home filled with gratitude to Providence for the comforts bestowed upon him.

M. N.

PRESERVATION OF EIGHT SAILORS,

Who wintered on the Coast of Spitzbergen in 1680-1.

Most readers are interested by those narratives which bring before them man struggling against calamity; and this interest is wonderfully increased when the sufferer is placed far from human aid or human sym-

pathy. We contemplate with intense emotion, man abandoned on the sandy desert, the sea, the lone island, or amidst the gloom and wild desolation of a polar winter. We delight, it may be from self-love, to see our nature victorious over accumulated ills; and acquire from the patience and courage displayed by others, a contempt for effeminacy, whether of mind or body. Such is one source of the pleasure felt by the boy in reading Robinson Crusoe; he sees energy in Crusoe, he loves it, he would rejoice to do the like, and the hardihood he admires becomes in some degree his own. Thus all who triumph under difficulties become the teachers of a noble daring to their fellow-men. Hence, from the most fearful evils are drawn lessons which form high and exalted spirits. The following account does not exhibit the qualities which mankind have agreed to call *splendid*, but rather those which form the basis of all that is great in human nature—viz. unflinching courage and fore-thought combined with dependence on God.

In the year 1630, an English whale ship, named the "*Salutation*," was busily engaged in the fishery of *Spitzbergen*,¹ at which place our whale fisheries commenced towards the close of Queen Elizabeth's reign. On a calm and beautiful day in August, the captain of the ship sent eight men on shore to kill deer. They hunted from place to place, meeting with abundance of game, and, evening coming on, they prepared a plentiful venison supper, resolving to pass the night on shore. This resolution, though perfectly natural in their circumstances, led to those sufferings which have given to these men a place in maritime annals. In the morning a dense fog prevented any attempt to reach the ship, and before the mist dispersed a gale arose, which forced the "*Salutation*" to stand out for sea. This happened the 13th of August.

The sudden departure of the ship caused no great alarm, as the men knew she must touch at a place called Green-harbour; where twenty of the crew had been left. They therefore resolved to pursue their hunting along the coast to Green-harbour, and thus increase the store of provision for the voyage homewards.

On the 16th Green-harbour was reached, but no ship could be seen; their comrades had left the place, a plain proof that the ship had visited the bay and departed. This excited some surprise, but still the seamen felt little alarm, as there was yet a hope that their ship with others would be found at a harbour named Bell Sound; a place where the whale ships usually collected previously to their final departure homewards. There were but three days remaining ere all the whale vessels would sail. The party therefore immediately set out in their boat to Bell Sound, about forty-eight miles distant. The men were now getting anxious; the dread of abandonment on this lone spot to the terrors of the Arctic winter, was beginning to harass them. Under this fear they threw all the venison which they had procured overboard, in order to lighten their boat. The fogs again caused them disappointment, as the boat passed Bell Sound without perceiving it, and went thirty miles beyond. Suspecting their mistake, the crew turned back, but, again misled by appearances, sailed in their former track. At last they regained the right course, and on August the 20th entered Bell Sound. Their eager eyes wandered round the bay; but no ship appeared in view. Hope was now becoming faint, yet each man clung to the expectation of still finding the ship. Every point round the bay was searched, and at last they reached an inlet, called Bottle Cove, where alone the ship could be now expected. The inlet was

desolate; no sounds nor sight of human presence save their own disturbed the monotony of its loneliness. The last ray of hope, which had up to this moment lightened their hearts, now departed. They had often heard strange reports of the terrors of a polar winter; they knew that no rewards had hitherto tempted even criminals to pass a winter in this region. They also remembered that on the very shore where they now stood, a boat's crew had once been left by their own captain, as they were, and that every man had perished. Added to this, they were without provisions, adequate clothing, or any of those resources which enable hardy modern seamen to guard against the rigours of a polar winter. The reader of this narrative must remember the vast difference between a crew at the present time, furnished with all the aids which science and long experience can suggest, when compared with the eight sailors of the "*Salutation*" in the year 1630. The latter had none of the helps just mentioned, and were under the additional disadvantage of being taken unawares by the calamity. Two plans were before the deserted crew—one that of attempting to reach England in their open boat, a desperate expedient, but this seemed preferable to a contest with the unknown horrors of the long northern winter. The ice, however, was now blocking up the sea, and thus prevented the adoption of this plan. The other was to sail at once to Green-harbour, and attempt to kill deer for a store of food through the approaching winter. This scheme the men resolutely carried out, and having procured a large number of deer, departed for Bell Sound, where they intended to make preparations for passing the winter. The food procured was of three kinds—venison, bear's flesh, and a quantity of the refuse of whale's flesh, left by some of the ships on the shore. These stores they determined to take to Bell Sound. Before they were prepared to leave Green-harbour, Sunday came; it was resolved to honour the day by refraining from labour, and engaging in such prayers as they were able to command, for neither Bible nor Prayer-book was in their possession. Thus at the beginning of their trials those religious principles were nourished, by the aid of which their natural courage and good sense were rightly directed.

It was the 3d of September when they reached Bell Sound, their intended wintering-place. Here they found a large tent, covered with tiles, in which the coopers belonging to the whale ships were accustomed to work. In this they stowed away the provisions. No sooner was this done, than the lengthening nights and increasing frosts warned them of the approach of the dreaded winter. They now exerted every energy of body and mind, in devising and preparing expedients against the dangers feared from intense frost. Another building belonging to the whale ships stood near the large shed; this was pulled down, and the materials employed in raising a small shed inside the large one. This was a judicious plan for resisting the action of cold, as it might be likened to one house built within another. There were some bricks amongst the materials left upon the beach, and a quantity of lime, which was required by the whale ships in making the oil. Thelime, mixed with sand from the shore, furnished mortar; the bricks supplied the matter for the walls of their inner house. The remaining walls were formed of boards nailed upon each side of thick timbers placed upright; the hollows left between the double line of boarding were filled up with sand; and thus strong and warm walls were constructed. The plan pursued by these sailors to secure warmth was similar to that employed by Captain Back for a like purpose in his arctic wintering, 1833—4. The top of the inner house was made of five or six layers of boards, each exterior layer covering the joinings in the planking beneath; thus they hoped to exclude the freezing air. An old bed, left in the large shed, served to line the door of their apartment. At last these sensible men finished the house in which the siege

(1) The place is called Greenland by the narrator, but that name was given to Spitzbergen by Sir Hugh Willoughby, who discovered the island in 1533. About sixty years later, the Dutch navigators named the place Spitzbergen, a term signifying sharp or peaked-mountains, and therefore fitted to express the appearance of the coast.

of winter was to be resisted. But their prudent labours were not yet over. Another expedient to lessen the intensity of the frost was now carried out.

The hut just finished was about twenty feet long, seventy wide, and ten high; in this four small rooms, or sleeping berths, were formed, and beds of deer-skin placed in each enclosure. Their apartment had no window, as they feared the frost would overpower them if such openings were made, especially as a chimney opening and one door-way were necessarily left. A small hole was made in the roof of the outer shed, through which some light would reach the indwellers as long as the sun remained visible. All was now ready except fuel, and fire was essential. This was soon procured from the timbers of old boats left by the departed ships on the shore; but no serviceable boat was broken up, so rigidly did this devoted crew respect the rights of men they might never again behold. In order to economize fuel, and yet keep up a fire during the hours of sleep, a block of elm was buried each night in a heap of hot ashes, and thus covered up, and there being little draught, it would smoulder for more than twelve hours. By this plan the fire was kept burning without cessation for eight months. In September, when the winter was fast closing round them in storm and darkness, the dread of a failure in provisions seems to have alarmed them. They made a survey of all their stores, and finding the stock rather low resolved to keep to one meal a day, and on Wednesdays and Fridays to observe fasting, or at least to eat nothing except whale-flesh.

In the early part of October the sea was frozen over, presenting to their view a boundless icy desert, over which no sounds broke except the wailing of the storm. This singular isolation from the world, and the dread of perishing amid the wintry desolation, affected at times their spirits; but the energy of their natures soon recovered from these melancholy forebodings.

They often betook themselves to praying, as if to compensate by intercourse with the unseen world for their separation from the society of men; and imaginative minds will believe that over that ice-girt land the guardian spirits of a higher state kept watch.

On the 14th of October the sun sank for the winter below the horizon, leaving them to the glimmer of the long twilight, and the illumination of the moon. In this state two things gave the deserted crew some concern. First, it was feared that all reckoning of time would be lost, as the moon often became invisible; and the long continued gloom brought to their minds the most melancholy feelings. But Pelham, the narrator of their adventures, contrived to keep time most accurately by the following method: first, he kept in his mind the number of the epoch, then, by carefully observing the variations of the faint light still left, he registered the moon's age, and thus kept time so exactly, that, when the ships returned in the summer, Pelham was able to name the true day of the month. The skill and industry of the party soon devised the means of keeping a light. From some old lead three lamps were made, ropes untwisted supplied matter for wicks, and train oil was collected in different parts of the shed; but no amount of energy or prudence could devise a shield from the intense frost, which at the beginning of the new year raised blisters on their skin, and so affected the iron in the shed that if touched by the hand a wound was made, like that produced by hot iron. One great essential, fresh water, they procured from the frozen snow, by melting it with heated iron bars. The dread of death by famine became strong in January 1631; the stores, notwithstanding their abstinence, were so diminished that without some fresh supply all must die. No animal ever appeared on the wild frozen plains, nor, whilst the winter reigned in its stern severity, were they to be expected. Thus no prospect of a fresh supply appeared. These patient men had thus to contend not only against the polar cold, but also with the physical weakness resulting from their forced abstinence. Under

these depressing feelings, they marked with a trembling delight the constant increase of a whitish light on the horizon, which appeared as the herald of the returning sun. One of the most joyful days in their winter's calendar was the 3d of February, on which they beheld the first rays of the sun illuminate the lofty peaks of some snow-covered mountains, the summits of which, as they flashed in the sparkling light, seemed like gigantic beacons raised upon the waste. This sunshine on the snow was to them a more delightful sight than the most gorgeous scenery which ever greeted the eye. While gazing on these beams, so gladdening to their hearts, a bear and her cub were seen on the ice. Instantly the harpoons were seized, and all rushed upon the fierce animals. The bear enraged dashed forward to meet them, but was killed in a few minutes. With haste they dragged their prey into the shed, for the frost was fast benumbing their limbs. The bear furnished a dinner at once, and a supply of food for twenty days. It may appear strange, that, amidst so many privations, the men should have escaped that pest of the old seamen, the fatal scurvy. But it may probably be traced to the fact that they had no salt with them. Had this been in their possession, it is likely they would have used it to prepare their food, and thus living pent up in their close tent, the animal fluids would have become vitiated and the sea-plague have destroyed them.¹

As it was, the frost alone was sufficient to preserve their food from decay; and thus, though the supply was scanty, it consisted of *fresh* meat. After the return of the sun, the crisis in the affairs of the men had passed, for though still exposed to bitter cold, the bears began to appear, and by killing these a plentiful supply of food was obtained. Foxes also, and wild fowl were caught in sufficient number to give an agreeable variety to the diet. The men now began to ascend the hills, and watch the breaking up of the ice at sea, hoping, ere long, to see some whale ship, and once more join in companionship with their fellow-men.

The 25th of May saw the close of their anxieties; the day had been stormy, which kept them within the hut, and, whilst preparing to go to prayers, a cry was heard outside, like the hail of sailors. All rushed out, and before them stood part of a boat's crew, belonging to a ship from England. To describe the joy is impossible; those only who have had like deliverance can imagine it. The men who had just arrived went into the winter house, and beheld with amazement the place which had shielded their countrymen from the perils of the winter. The rescued crew, as they gazed upon the walls, blackened with the smoke of their perpetual fire, felt that God alone had prevented that weather-beaten hut from becoming their tomb. There was, however, a black spot amidst the gladness of the day. The Captain who had abandoned these men in the preceding year had also returned, and he, to screen himself from blame, began to revile them, as a set of deserters who had escaped from the ship, and stolen his boat. But this brutal man met with no credit; the men were kindly treated in the other ships, and after reaching England, were liberally rewarded by the Russian company.

The whole of this narrative shows what fearful danger human nature is able to combat, when man is true to those principles of reason and religious laws, by the observance of which he alone can become great, or accomplish great results. It may not be uninteresting to state that the narrative of these adventurers was drawn up by one of the crew named Edward Pelham, who filled the office of gunner's mate, and was evidently an intelligent and religious man, by whose directions many of the precautions narrated were adopted.

(1) Seven Dutch sailors were persuaded to remain during the winter of 1634, and were left well provided with food, medicine, and clothing; but on the return of their friends in spring, all were found dead. This mortality has been ascribed to the use of salt in preparing their food.

NATURAL HISTORY OF BIRDS.—No. IV.

THE CORVIDÆ, OR CROW FAMILY.!

BIRDS of the crow kind are amongst the most common in Britain, but there are thousands in our cities, and hundreds in the country, unacquainted with the habits of this widely extended family. See a party in holiday time, gazing with wonder at some strange animal in a Zoological exhibition; how eagerly each listens to the exhibitor's tale of marvels, and what a laudable curiosity is manifested, from the old grandfather, who wonders if "it's all true," down to that little boy in plaid frock and muslin trowsers, who believes all, and would believe ten times more. Yet this same wonder-stricken party would evince little interest in the progress of a rook over the great metropolis; that would be a common event, and the uneducated suspect little of the mass of interesting facts linked to the most familiar of natural appearances.

It thus becomes necessary to call attention to the commonest matters, the flight of a sparrow, or the habits of a crow, that the wonderful may be detected in the common, and valuable knowledge extracted from familiar things.

The last paper concluded the history of Birds of Prey, an order not very familiar to English eyes; the present article contains the account of a family with the appearance of which we are more acquainted, though perhaps few have attended to its habits, uses, and peculiarities.

It is very common to hear people in the country talk of crows. How often is the farmer in a towering passion on account of these said crows, which he perceives from his bed-room window, enjoying their early breakfast off his freshly sown corn,—as he supposes. How often do we hear from a neighbouring field the loud prolonged shout of some boy, placed there to frighten off the crows! Tom has for a moment relaxed his watchfulness, has ventured upon a chat with the post-boy in the lane, when down come the determined birds, and Tom's lungs are made to pay the penalty of some desperate bucolic shoutings before the black gentry are fairly driven off. Thus far the crow is known, but little beyond this. Ask a group of farmers, men who have passed their whole time in the country, what birds are included in the crow family?—the probability is that few will be able to give an answer. Nor must we blame them for this; they

are deep in the mysteries of manure, soils, stock, and grain; and their attention is not often called to the science of Natural History. We here speak of the majority; some make these subjects a part of their daily studies. Amongst the common people the rook and the crow are every day confounded, though the two are quite distinct.

What birds then are included in the crow family? Eight species are comprehended under the general term *Corvidæ*—the Raven, Carrion Crow, Hooded Crow, Red-legged Crow, the Rook, Jackdaw, Magpie, and Jay; all of which are British birds, and the rarest frequently seen. This large family is sometimes divided into three sections; the first containing the *proper crows*, the second includes the *Magpies*, and the third the *Jays*; a division which we shall not pay much attention to, deeming it sufficient to note the existence of such a classification.

The crows are regarded as the most perfect of birds, comprehending in themselves the distinguishing characteristics of all the feathered tribes, being powerful on the wing, adapted also for walking, inhabitants of all climates, and capable of subsisting on all kinds of food. It seems, in fact, as if the crow had received some peculiar property from each order of birds, by which it stands in the centre of the feathered kingdom, reflecting the characteristics of the whole. The crow resembles in part the *Falconidæ* when it attacks and kills birds for food; the *Vulturidæ* when it feeds on carrion; the *Ground-Feeder* when it descends in flocks on the ploughed lands; the aquatic birds when it catches and preys on fish; and thus we might proceed, tracing resemblances between the crow family and all the feathered orders. The *Corvidæ* are therefore to be ranked high in the bird system, though the farmer with his guns and traps has little respect for the race. But we must now proceed to treat of the different members of this family, and first in order comes the *Raven*, (*Corvus Corax*.)

In the last paper the Owl's bad name was a subject for some little thought, and the Raven must be admitted beyond doubt into the class of birds having "a bad name."

One hardly knows which bird is in worse esteem, Raven or Owl; though probably the former has gathered round him most of vulgar hate. Superstition has got up all the charges against the raven, and truly her croak is worse than his. Sometimes the raven has been charged with predicting death to men, who naturally hate such a prophet.

"Ill-omened bird! as legends say,
Thou hast the wondrous power to know,
While health fills high the thrilling veins,
The fated hour when blood must flow."

The dramatist has embodied such sentiments in some of his finest conceptions, and Shakspeare introduces the bird, to give deeper terror to gloomy themes:

"It comes o'er
My memory as doth the raven o'er
The infected house, boding to all."

The rustic dame, in less poetic phraseology, vents her bitter hate towards the poor raven. See the bird perched on the branch of some ancient tree near the stile over which lies the dame's path to market. The black-coated bird is happy, but not being much acquainted with human society, greets the lady's arrival with a croak; at once her fears awake; that croak she deems an omen of evil, whereas it was but the raven's "good day to ye;" and, venting her feelings, we hear her croak in reply, "That raven on the left-hand oak, his ill-boding croak bodes me no good."

The fortune-tellers and wizards of old used this superstition to promote their own ends, and pretended to a special knowledge of the raven's motions and language, asserting that by his aid a deep insight into futurity could be acquired.

The inflections of a Catalani or a Malibran were not more studied by musical amateurs than the tones of the raven by the apothsayers, who are said to have noted seventy-five inflections of his voice. This is a high compliment doubtless to the bird, and speaks much for his ability, though the writer cannot say that he has noticed even half-a-dozen such vocal varieties in the raven.

This bird has been highly honoured in some of the ancient British traditions, which record the transmigration of the mighty prince Arthur into the body of a raven, in which form he shall dwell till the approach of the hour for the restoration of his kingly line. Many of the superstitious notions concerning the raven may have their foundation in the fact that the bird's acute scent enables him to detect the presence of dead bodies, where human senses would fail to impart any information. Murderers have thus been discovered, and ignorance has ascribed to the raven supernatural powers. The following account of one of these events is generally put forth as entitled to credit, and it does not contradict any natural law:—

A gentleman was murdered in his bed at an inn; the body was taken to a river near the house, and, to prevent it from rising, the murderer passed a stake through it, making one end fast in the mud. When this was done a very small part of the stake still appeared above the water. In a few days afterwards some ravens perched near the spot, over which they were constantly flying and croaking. Their numbers increased, and the peasants, alarmed at such an unusual appearance, attempted to drive them away, but the birds persisted in keeping close to a particular part of the river, as if searching for something therein. This induced the people to examine the water, but nothing was seen save the end of the stake. This was drawn up, when to the surprise of the spectators a body rose to the surface. Suspicion became excited; the marks of cart wheels were traced from the river to the inn. The owner was apprehended, and, learning the above particulars, was terror-stricken, and confessed his crime. The ravens were probably at first attracted by the effluvia from the decaying body, and one or two would of course soon attract numbers.

Marvellous tales were, however, long afterwards told in the district of the birds' superhuman intelligence. Some few occurrences of this nature would establish for the bird a peculiar name; the next step would be to invest him with a power of foretelling deaths; an opinion which poets would naturally use in their verses. Thus Macbeth, having determined on the murder of the king, is supposed to hear the raven's croak accompany the entrance of the victim;

“The raven himself is hoarse,
That croaks the fatal entrance of Duncan
Under my battlements.”

The aspect of the raven to those who can get a close view is not at all unpleasing. The plumage has even a beautiful appearance when the sun's rays fall on that rich bluish-black which distinguishes the bird. His manner is bold, though mingled with caution, and every movement shows a bird of which it is justly said that “his armour is solid, his spirit unconquerable, and his strength surprising.”

The best mode of getting near a raven is to lie down on the ground when one is in sight; this will induce the bird to approach in his peculiarly cautious style, that is, by a succession of oblique movements, drawing nearer each hop. The observer may thus obtain a fair view, but let him not allow the raven to approach too near his face, or he may in an instant lose an eye; for it is a custom of this bird to make a sudden dart at the eyes of animals with his long powerful beak, and as, when full-grown, it weighs three pounds, the momentum of the blow produces a deep wound.

The raven inhabits high and desolate cliffs, disliking the confinement and closeness of forests, and taught by ages of persecution to keep at a distance from human habitations.

They are sometimes, however, found in woods, though the adage “every rock has its raven” indicates their favourite haunts. When a tree is once fixed on, it is rarely abandoned by the birds of their own accord: age after age passes on, but still a raven's nest is there; at length the tree receives the name of “raven's tree.” The too near approach of man or the woodman's axe may cause the bird to abandon the home of its ancestors, and in this manner, indeed, many a raven-tree has become tenantless; for the raven being a hardy and enterprising bird, will not submit to inconveniences or insult in his ancient home, but hies him away to another district.

His geographical range is, indeed, most ample, and well does he bear the vicissitudes of climate, from the frosts of the arctic circle to the glowing heats of the equator; no bird except the snipe inhabits so large a portion of the earth. There can be no doubt that birds often differ much in quickness, but amongst the most clever we must place the raven. He may be trained to a variety of purposes—to hawk after birds like the falcon, to speak like the parrot, and even to sing popular songs. When tamed he soon makes himself respected and liked by all in the house, cultivating, especially, a friendship with the cook. The cats and dogs fear him, for by repeated assaults he soon compels these rivals to avoid the unpleasant proximity of his beak. Then for exquisite curiosity he is unequalled. No corner is left unexplored; not the highest room is safe from his visits; boxes are peeped into, drawers ransacked, and work-bags emptied. The raven may be called a good-tempered bird, having much of comic feeling in his nature; he is nevertheless quick in resenting insult. A tame one had long been on familiar terms with some ducks in his owner's grounds, but one unlucky or restive duck offended the raven's dignity, by seizing a coveted morsel of food, upon which he of the black-coat, looking for a moment as if confounded by the unexpected insolence of the duck, darted upon the offender and strangled him in a few minutes. Sometimes the raven's quickness of temper costs him his life when exercised upon those stronger than himself. Such a fate befel a pet bird in the establishment of a gentleman devoted to ornithological pursuits. The coachman chanced to offend the pugnacious bird, which instantly inflicted a severe bite on one of his fingers. This was more than the angry man could bear, so catching the raven he broke its neck on the spot. The habits of the raven cannot be often observed in his wild state, as the bird is so rare in populous and cultivated districts. In the south of England it may be often found in the open and hilly parts, where it is in fact more numerous than the careless observer, or hasty traveller, would imagine.

We must remember that the raven does not thrust himself upon man's notice, rather, indeed, avoiding the observation of his persecutor; yet these birds are sometimes near us when we little suspect their presence. The traveller who is journeying across an open and thinly-peopled district towards evening, sometimes comes all at once upon the bird, and frequently observes the raven following, and, as it were, dogging his steps. This often happens in the northern counties, especially in the wilder parts of Yorkshire; in the south the bird is becoming more rare and wary every year. The tall cliffs along the coasts, and especially the rocky line of Flamborough Head, are favourite raven haunts. There the superstitious fisherman oft hears the melancholy croak from some dark overhanging cliff, or listens timidly to the sound as the dark bird flies over his boat. One cause of the decrease of the raven amongst us is the hostility of gamekeepers, who deem the slaughter of one a most meritorious act, entitling them to rise in the good graces of the squire. The keeper is always

ready to ascribe a scarcity of game to any cause except his own ignorance or errors, and consequently the raven comes in for a due share of charges. He destroys eggs, forsooth, as if he always knew the exact locality of every partridge's and pheasant's nest on the estate; he is also represented as a constant destroyer of young game, as if he were a hawk or an eagle. The raven does at some periods destroy a few birds, but he is not strictly a bird of prey, and has choice of many a good dinner from reptiles of various kinds, insects, seeds, fruits and decaying animal matter. For the last he has a strong liking, and is therefore protected in Egypt like the vulture, in consideration of his services as a cleanser and purifier. The raven has therefore no such desperate liking for game, as the ignorant keepers may suppose; whilst it is capable of destroying vermin which may do much mischief. They are determined foes to rats, which, indeed, some have been trained to hunt. It is recorded that the Bermudas became at one period miserably infested with rats, which were at length reduced without any apparent cause, except that a great number of ravens had appeared in the rat district, and soon after the pest ceased. The inference was that the ravens had destroyed the rats. Certainly a colony of such animals would not flourish long if exposed to the attacks of such voracious and determined birds. The reader will conclude from some of the previous remarks that the raven is as courageous as powerful. He will offer battle to the fiercest bird in defence of his young, and his bravery is often shown in desperate conflicts with rooks, between which birds and ravens endless war is waged. This arises from a liking manifested by the raven for the flesh of young rooks; a taste which the parent birds are not willing to see gratified. He will also attack the puffin, which so few birds will assail, and sometimes succeeds in killing his foe; his prize consisting of the eggs or young. In these fights the great object of the raven is to seize upon the puffin's neck with his powerful bill, in which case he generally gains the battle. Ravens do not flock together, for, though not unsocial when tamed, they dislike much society in their natural state. But under certain circumstances, this habit is somewhat modified, as they have been seen in flocks near some of the great rivers; but this is a clear exception to their usual habits.

This bird is of course best studied in the neighbourhood of its nest, where its movements and habits can be constantly noted. Their attachment to their first nesting-place secures for the naturalist in its vicinity ample time for observation, as year after year he perceives the same pair busied in their various works. The raven is amongst the basket-making birds; that is, the nest is formed on *something* like the plan of a basket, being made from sticks fastened together, not however by interweaving, but by plastering with mud. The basket-maker may smile at the pretensions of the raven to rival him in his trade, and certainly the Corvidæ have not highly advanced the basket-maker's art. Nevertheless the nest is comfortable enough, for both young and old birds, being tolerably lined with wool and dry vegetable matter. If we look into such a nest before hatching, we shall find, in all probability, four or five dark greenish eggs, covered with numerous dark, irregularly shaped marks. The young of all this family are hatched blind, and present at first a most unattractive sight; when they leave their nest, they are not clothed in the glossy black which adorns the elder birds, a dull brown being then the colour of their coat.

The term raven is supposed to come from an old word signifying to tear away, or *snatch*, and is applied to designate a voracious bird, or one addicted to steal and plunder. The peasants in some parts call it *Corby*, a name not very remote from the Latin epithet *Corvus*.

These birds are believed to live to a great age, but the usual period is not easily ascertained, as an inference from the age to which the tame bird arrives is no criterion by which to calculate the longevity of the raven in

his natural freedom. It is, however, thought that many have reached the age of one hundred years, a range of life far beyond that of birds in general. We should look with some interest on a raven which had flown over the field of Waterloo on the evening of the famed 18th, and with still deeper curiosity on one which had flapped his wings over the dead on Culloden's heath; such birds *may* be living, though in the case of Culloden it is rather doubtful, certainly. We in this country are not accustomed to use the raven for domestic purposes; living, he is hated, and when dead, forgotten. The Greenlanders make his body serviceable after death, they eat the flesh, make garments from the skin, form the wings into good brushes, and split the feathers into a material from which fishing lines are manufactured.

II. THE CARRION CROW, (*Corvus Corone*).—This bird might not improperly be called a smaller raven, as its resemblance to that bird is obvious in every particular except size. It is however a little larger than the rook, which it may be said to connect with the raven. This crow has not the fine bluish-black of the raven, being wholly black, which sombre hue is relieved by some greenish colouring in the upper part of the body.

This bird shares with the raven the hatred of mankind, who either resent certain supposed injuries committed by the crow, or dislike the bird from his carrion-feeding habit, a disposition which he has received from the Author of Nature. This hatred has actually gone so far as to provoke the whole legislature of England to take the field against the carrion crow. Such a solemn spectacle was exhibited in the 24th year of Henry VIII., when an act was passed to promote the destruction of the crow. How the unhappy bird managed to survive the storm is a mystery, but weather it he did, as there are now more crows in Britain than in any other European country: a singular triumph of the persecuted over the persecutor. Much of this hostility arises from the notion that the crow eats up the farmer's seed and damages his grass lands. No doubt the crow has a judicious liking for a bit of choice grain when other food fails, but as to his injuring meadows, it is a mistake. What is sometimes seen in these said meadows? Great quantities of grass pulled up and scattered about. "Ah! those thievish, plundering crows," cries the farmer; and away he posts for his best double-barrelled gun, looking daggers at the bold crows as they fly about with incessant caw, caw, caw. Now the fact is, that the crows did pull up the grass—that must be admitted—but every such blade had been previously injured by a grub eating up the roots. The crow knows from experience the localities of these grubs, and detects their presence by pulling at those blades of grass which have a sickly colour; if these are loose, he knows there is a grub at the root, and down goes the beak in search; if the blades are firm, the bird *does not pull up such*, but proceeds to others. In all this there is positive good to the farmer; the blades which the crows pull up would have died from the operation of the grub:—so far the crow does no harm;—but that same grub would go on to destroy more grass,—this the crow prevents by destroying the lurking pest. For this service he is reviled and shot at! The gamekeeper has also his charge, and here the carrion crow is, we fear, in a bad case. He certainly does linger about preserves, with a most suspicious poacher-like air, in search of young birds and eggs. The latter he carries off in so ingenious a manner that it proves him an adept at the trade. Inserting the tip of his bill into the shell, away he goes, poisoning the egg as he flies, in a manner most satisfactory to himself and his young. He does also sometimes make sad havoc with unprotected poultry. Waterton resolved to test this propensity, and placed ten ducklings in a pond near to a carrion crow's nest. One by one did the voracious bird swoop them off, till nine had been borne away, when the naturalist, thinking the experiment conclusive, interposed to save the last. No marvel then that the dames of the farmyard give this bird an ugly name. Sometimes quad-

rupeds are attacked, especially young rabbits. On one occasion, "A person walking near a plantation heard a shrill cry, and on running to see whence it arose, discovered a crow fastening itself on a young rabbit, weighing nearly three quarters of a pound, which was making great efforts to release itself, but in vain; for the crow succeeded in bearing it over two or three fields."

On the sea-shore the crow varies his diet by feeding on the fish cast upon the beach by the waves, and also upon muscles and crabs, which it is said he tries to break by dropping them from great heights. These birds are surprisingly fond of ripe cherries, on which they will feed most voraciously, risking all the dangers of the gun to secure such food. As for carrion, this is not often met with by the crow in these times, when the lambs are so carefully tended in the fold, and few parts of a dead animal are left to decay in the open fields. In ruder times, the bird was doubtless fitly named, and then fed much on carrion.

This bird is called a voracious feeder, which is true; but then he works hard for his daily fare, being the earliest of our birds on the wing in the morning, and the last at night, excepting the owl. The rook is not a bad riser, but the crow is at work before him. Often is his hollow croak heard when the first faint dawn is on the East, and that sound reaches the cotter when all besides is hushed in the quiet hour of eve.

The following lines from a recent publication allude to these late evening journeyings of the crow:—

"Say, weary bird, whose level flight,
Thus, at the dusky hour of night,
Sends through the midway air,
Why yet beyond the verge of day
Is lengthened out thy dark delay,
Adding another to the hours of care?"

Haste, bird, and nurse thy callow brood,
They call on Heaven and thee for food,
Blask,—on some cliff's neglected tree:
Haste, weary bird, thy lagging flight—
It is the chilling hour of night,
Fit hour of rest for thee!"

The crows are shy during winter, but become bold at the approach of spring, often venturing within a few yards of human habitations. This change is caused by the desire of procuring food for the young, which are voracious enough to tax the unremitting industry of the parents. The nests are generally built on the old branches of the oak or fir, which trees are preferred by the bird for nesting purposes.

The crow has little home-love in it, as the nest once used is never visited again; a remarkable contrast to the local habits of the raven and rook.

Though the carrion crows usually keep in pairs through the year, they have a tendency to become gregarious in autumn and winter, when forty or fifty are sometimes seen in a flock.

Some speak of this crow as unfit to be eaten, on account of his carrion habits. Now it is not pretended that the flesh is food for epicures, but it is quite as good, when young, as that of the rook. Let a pie be made of young crows, the probability is, that most who partake of it will suppose they have eaten pigeon-pie. This has been tried as an experiment.

The name, "carrion crow," is sufficiently clear, and tolerably correct as expressive of the bird's natural habit; in some parts it is called flesh crow, and also the gore crow, which is shortened to gor-crow, as in Ben Jonson,—

"Vulture, kite,
Raven and gor-crow, all my birds of prey."

Other names are applied by the peasantry, such as black-neb, corby-crow, and midden-crow.

The geographical range of the carrion crow, though less than that of the raven, is wide; extending through

England, France, Spain, Italy, and Germany, and along the south of Europe to the Black Sea. It has also a home in the western hemisphere, if the American carrion crow is included in our calculation; but this bird is not of the same species with our member of the Corvidæ family.

III. THE HOODED CROW, (*Corvus Cornix*).—This species is not a constant resident with us, but arrives in the autumn and departs in spring: we might thus call it the winter crow. These birds are supposed to come from Norway or Sweden to the south of England, but abound in the northern and western isles of Scotland throughout the year, and were formerly so numerous in those parts that regulations were established and money paid for their destruction. Four or five hundred may sometimes be seen together on these islands, and many are also found in the Scotch Lowlands.

The term *hooded* is applied to this crow from the grey plumage which covers the upper part of the body like a mantle or hood, from which it is called *hoody* in the Orkneys, and in some parts the grey-backed crow, or dun crow. The old name was Royston crow, as it was supposed to be peculiar to the district round that place.

Some have erroneously ascribed the grey coating of the bird to age, and supposed it to be an old carrion crow; this guess has now departed, with a host of kindred fancies which formerly flitted to and fro over the field of natural history. The ignorant amongst the peasantry may still persist in giving the coat of grey to the ancient carrion crow.

But though a distinct species, the hooded crow much resembles the carrion in its habits, feeding upon eggs and young poultry, to which it not unfrequently adds fish, especially muscles and limpets. These last sometimes destroy the crow instead of being themselves destroyed, as when the bird seizes the fish the latter drags the crow under water; a result not in the least surprising when the great tugging force of some limpets is remembered; which often amounts to more than a weight of twenty pounds.

Some naturalists have observed a peculiar note uttered by the hooded crow in the quiet of the early morning, a plaintive sound in an ascending minor third, which may be called the bird's morning song.

IV. THE RED-LEGGED CROW, (*Corvus Graculus*).—This bird is not considered a *true* crow, but a link between such and the starling family; it is, however, classed with the corvidæ, which it resembles in most of its habits. It is often called the Cornish *chough*, from a supposition that it was peculiar to that country; this is not the case, as the bird is found on many parts of the Irish coast, in the Scottish western islands, and in the hilly parts of France, Switzerland, and Spain. It does not in general depart from the sea-shore, though a few have been seen on Mitcham-common, Surrey, and in some other inland districts.

Some appear to have frequented Dover cliffs in the time of Shakspeare, whose allusion favours such a supposition.

"The crows and *choughs* that wing the midway air,
Show scarce so gross as beetles."

This bird is of some note in Cornish history, as it was borne in the arms of ancient families in that part of England.

Its appearance is singular and striking, for whilst the general colour of the body resembles the raven's bluish-black, the beak, legs, and toes, are a vermillion red; presenting a beautiful relief to the dark tints of the other parts. The beak is more slender than in the other corvidæ, indicating more peaceful habits than the bill of the raven or rook; hence it is less addicted to attack other birds, preferring to feed on insects, berries, and grain.

Its inquisitive habits are equal to those of any crow. Colonel Montague gives an account of a tame red-legged crow kept by one who had abundant opportunities of

marking its inquisitive disposition. The bird's curiosity is described as beyond bounds, never failing to examine anything new in house or garden. No gardener could prune the trees in peace with the crow near, as the nails disappeared from the nail-box with a most unpleasant rapidity. Was a ladder left against the wall, up went the bird and took a survey of the country from every part of the garden wall. No window could be left open within his reach, for then no room was safe from a general scrutiny. If hungry, he soon forced the inmates of the kitchen to admit him, or quickly the windows were broken by the rapid and smart taps of his bill. The endless meddling of this crow with every moveable object is thought to have sometimes occasioned the destruction of houses by fire, in consequence of lighted sticks being plucked from the stoves and carried about the dwelling by the bird. This, however, may be a fancy; it is not likely to have happened often.

This crow has several names, being called, in some parts, the Cornish daw, and Cornwall kae, in others the killigrew, chauk-daw, and market jew-crow.

We have now described some of the most characteristic habits of four species of crow; endeavouring to set before the reader the true bird-life of each variety, without encumbering the page with useless technicalities, or with those anatomical descriptions which, though beautiful to the scientific man, are not found to interest readers unacquainted with the complicated mechanism of animal bodies.

If one just view of nature has been gained, or one erroneous sentiment removed by contemplating the facts here presented, then has the true education of our hearts and understandings been so far promoted, and our minds prepared for a juster appreciation of all things beautiful and true.

Our next article will conclude the history of the crow family, and illustrate the habits of the rooks, jackdaws, magpies and jays.

THE POPULAR YEAR-BOOK.

August.

This is the eighth month of the year. In the Alban Kalendar it was the sixth, and thence named *Sextilis*. Numa gave to it the place which it now occupies. It was denominated August by the Roman Senate, in honour of Octavius Cæsar, better known as Augustus. The Saxons termed it *Ern* or *Barn-monat*, "intending thereby the then filling of their barns with grain;" also *Wood-monat*, to express the beauteous clothing of the ground in harvest. August is pictured in their Kalendars as a carter standing near a wagon laden with corn. "In later times," says Brady, "men mowing grass was the emblem of the month; and still nearer our own period, but of old date, August was delineated as a young man with a fierce countenance, dressed in a flame-coloured garment, bearing a victim, and crowned with a garland of wheat; having on his arm a basket of summer-fruits, and a sickle stuck through his belt." Spenser says:—

"The eighth was August, being rich array'd
In garment all of gold down to the ground:
Yet rode he not, but led a lovely maid
Forth by the lily hand, the which was crown'd
With ears of corn, and full her hand was found.
That was the righteous Virgin, which of old
Liv'd here on earth, and plenty made abound;
But after wrong was lov'd, and justice sold,
She left th' unrighteous world, and was to heav'n extoll'd."

On the 23d of this month the sun enters the sign *Virgo*, the Virgin, to whom the poet alludes in the above stanza, and honours by converting her into Astrea, the goddess of justice, "who," observes a modern writer, "seems to return to earth awhile, when the exuberance of the season presents enough for all."

The beginning of August is hot, and usually fair and calm. The rich glow of summer is seldom in perfection till now. There is abundance of dew. The moon is particularly beautiful in this month, and is called "the harvest moon," because in the harvest season she rises for a week, when she is full, sooner after sunset than at any other time of the year.

August has been described as that debateable ground which is situated exactly upon the confines of summer and autumn; and it is difficult to say which has the better claim to it. It is dressed in half the flowers of the one, and half the fruits of the other; and it has a sky and a temperature of its own, and which vie in beauty with those of spring. "This," says an author before cited, "is the month of harvest. The crops usually begin with rye and oats, proceed with wheat, and finish with peas and beans. Harvest-home is still the greatest rural holiday in England, because it concludes at once the most laborious and most lucrative of the farmer's employments, and unites repose and profit. Thank Heaven there are, and must be, seasons of some repose in agricultural employments, or the countryman would work with as unceasing a madness, and contrive to be almost as diseased and unhealthy as the citizen. But here again our holiday-making is not what it once was. Our ancestors used to burst into an enthusiasm of joy at the end of harvest, and appear even to have mingled their previous labour with considerable merry-making, in which they imitated the equality of the earlier ages. They crowned the wheat-sheaves with flowers, they sung, they shouted, they danced, they invited each other, or met to feast, as at Christmas, in the halls of rich houses; and, what was a very amiable custom, and wise beyond the commoner wisdom that may seem to lie on the top of it, every one that had been concerned, man, woman, and child, received a little present—ribands, laces, or sweetmeats."

August is also, in some parts of England, the season of *hop-picking*. The hop is a climbing plant, sometimes growing wild in hedges, and cultivated on account of its use in making malt-liquors. Hops are planted in regular rows, and poles set for them to twine upon. When the poles are covered, nothing can make a more elegant appearance than a "hop-garden." At the time of gathering, the poles are taken up with the plants clinging on them, and the scaly flowering heads are carefully picked off. Kent, Sussex, and Worcestershire, are the counties most famous for the growth of hops.

About the middle of August, the young goldfinch broods appear, lapwings and linnets congregate, birds resume their spring song, and rooks begin to roost in their nest-trees. At this time also the puffin, swift, cuckoo, turtle-dove, and wry-neck, leave our shores, and the mountain-finch, sanderling, siskin, gull, godwit, cross-beak, and plover arrive. At the end of the month the red-breast is heard; and bulls make their "shrill autumnal bellowing." Insects still abound during August. Moths, flies, crickets, beetles, and glow-worms, are numerous; and the swallow-tailed, the red admiral, Camberwell beauty, painted lady, clouded sulphur, and peacock butterflies are to be seen. The number of flowers is now greatly diminished. Those which bloomed in June and July are running to seed, and have but few successors. Among these are *nigella*, *zinnias*, *polyanthuses*, *Michaelmas daisies*, &c. The additional trees and shrubs in flower, are *tamerisk*, *althæa*, *Venetian sumach*, *pomegranates*, the *passion-flower*, the *trumpet-flower*, and the *virgin's-bower*, or *clematis*. *Heaths*, *fern*, and *saffron*, are also in bloom; and the commons are in their chief beauty, and glow with green, purple, and gold. Some of the choicest fruits are now ripe.

"The sunny wall
Presents the downy peach, the shining plum,
The ruddy, fragrant nectarine, and dark
Beneath his ample leaf, the luscious fig."

Grapes and apricots are also in season.

In the Alban Kalendar August consisted of twenty-eight days; in Romulus's, of thirty, of one of which Numa deprived it; Julius Cæsar restored to it the thirtieth day; and Augustus Cæsar (desirous that the month which bore his name should not consist of less days than that to which the name of Julius had been given) appropriated to it another, which it has retained ever since.

August 1.—Lammas Day.

Antiquaries differ concerning the origin of the above epithet. "In the Roman Kalendar," remarks Brady, "the first of August is known by the name of the Feast of St. Peter ad Vincula, or St. Peter in Bonds, being the day of the commemoration of the imprisonment of that holy Apostle. [Instituted A.D. 317.] Hence some antiquaries consider, that the day obtained its appellation of *Lam*, or *Lamb-mas*, from a conceit entertained of St. Peter having been the patron of lambs, owing to the metaphorical expression of our SAVIOUR, 'Feed My Lambs,' and that, therefore, a mass was instituted in order to procure the Apostle's benediction, that their lambs might escape the danger of cold after being shorn at this season." Other writers suppose that the first of August is so called because on that day the tenants who held lands of the Cathedral Church of York (which is dedicated to St. Peter ad Vincula,) were bound by their tenure to bring a live lamb into the church at high-mass. Others, again, imagine the name *Lammas* to have been derived from the Saxon *Hlaf-Mass*, i.e. Loaf-Mass, or Bread-Mass, which signifies a feast of Thanksgiving for the first fruits of the corn. "It seems," says Brand, "to have been observed with bread of new wheat; and, accordingly, it is a usage in some places for tenants to be bound to bring in wheat of that year to their lord, on or before the first of August. New wheat is called *Lammas* wheat. Vallency observes that this day was anciently dedicated in Ireland to the sacrifice of the fruits of the soil; that *La-ith-mas*, the day of the oblation of grain, is pronounced *La-ce-mas*, a word readily corrupted to *Lammas*; that *ith* signifies all kinds of grain, particularly wheat, and that *mas* signifies fruits of all sorts, especially the acorn. Skinner thinks the day was called *Lamb-mas* "because lambs then grew out of season." Dr. Barnard imagines "that it is a corrupt mode of expressing *Lat-mas*, a summer festival;" and Johnson supposes it merely a corruption of *Lattermath*, "whereas," writes Brady, "it would rather appear that it was a corruption of *Latter Lammas*, or in other words, of that period which was allowed to tenants to bring their wheat to their lords in backward seasons: an indulgence which, however requisite at times, was often abused, and at length occasioned it to be stigmatized in the old proverb, 'He will pay, or he will perform his promise, &c. at *Latter Lammas*,' that is, *never*."

OLD AND POPULAR CUSTOMS.

From very early times till about 1762, a singular festival was annually celebrated on *Lammas* Day in all the country within the distance of six miles west of Edinburgh, by the young persons employed during summer in tending the herds at pasture. The herdsmen, within a certain district, towards the beginning of summer, formed themselves into bands, sometimes to the number of a hundred or more. Each of these companies agreed to build a tower in some conspicuous place, near the centre of their district, which was to be their place of rendezvous on *Lammas* Day. This tower was usually formed of sods, generally square, about four feet in diameter at the bottom, and tapering to a point at the top, which was seldom above seven or eight feet from the ground. A hole was left in the centre for the insertion of a flag-staff and colours. The tower was commenced about a month before *Lammas*, and was reared slowly by successive additions from time to time, being seldom

entirely completed before the first of August, though the party who finished theirs soonest, and kept it standing the longest time before the above day, were always considered to have behaved in the most gallant manner, and acquired most honour by their behaviour.

From the moment the foundation of the tower was laid, it became an object of care to the whole community to whom it belonged. Disgrace was thought to attach to those who suffered it to be defaced; so that they resisted with all their power any attempts that were made to demolish it, either by fraud or force; and as the honour that was acquired by the destruction of a tower, if effected by those belonging to another, was in proportion to the disgrace of suffering it to be demolished, each party endeavoured to circumvent the other as much as possible, and laid plans to steal upon the tower unperceived, in the night time, and level it with the ground. Great was the honour that such a successful exploit conveyed to the undertakers; and though the tower was easily rebuilt, and soon put into its former state, yet the news of its overthrow was quickly spread by the successful adventurers through the whole district. To ward off this disgrace, a constant nightly guard was kept at each tower, which was made stronger and stronger as the tower advanced, and frequent skirmishes ensued, but were seldom of much consequence, as the assailants rarely came in force to make an attack, but merely to "succeed by surprise;" as soon, therefore, as they saw they were discovered, they retreated with all speed. Every person was armed with a "tooting-horn," with which he gave the alarm on these and other occasions. This instrument is a horn perforated at the small end, through which wind can be forcibly blown from the mouth, so as to occasion a loud sound; and, as every one wished to acquire as great dexterity as possible in the use of it, they practised upon it during the summer, while tending their herds; and towards *Lammas* they were so incessantly occupied in this manner, answering to, and vying with each other, that the whole country rang continually with the sounds. As *Lammas* Day approached, each community chose one from among themselves for their captain, and they prepared a stand of colours to be ready to be then displayed. For this purpose, they usually borrowed from some of the farmers' wives within the district, a fine table napkin of the largest size, and to ornament it, they also borrowed ribands, which they tacked upon the napkin in fanciful devices. Early in the morning of the first of August, they marched forth, dressed in their best clothes, and each armed with a stout cudgel, and, repairing to their tower, there displayed their colours in triumph; blowing horns, and making merry. About nine o'clock they sat down upon the green, and each taking from his pocket bread and cheese, or other provisions, made a hearty breakfast, drinking pure water from a well, which they always took care should be near the scene of banquet. In the meantime, scouts were sent out towards every quarter, to bring them notice if any hostile party approached; for it frequently happened, that on that day the herdsmen of one district went to attack those of another district, and to bring them under subjection to them by main force. If news arrived that a hostile band approached, the horns sounded to arms, and their owners immediately arranged themselves in the best order they could devise; the stoutest and boldest in front, and those of inferior prowess behind. They seldom waited the approach of the enemy, but went out to meet them, the captain of each company carrying the colours and leading the van. When they met, they mutually desired each other to lower their colours in sign of subjection. If there appeared to be a great disproportion in the strength of the parties, the weaker usually submitted to this ceremony without much difficulty, thinking their honour was saved by the evident disproportion of the match; but if they were nearly equal in strength, neither would yield, and the parley ended in blows, and sometimes bloodshed. It is related

that, in a battle of this kind, four were actually killed, and many disabled from work for weeks. If no opponent appeared, or if they themselves had no intention of making an attack, at about mid-day they took down their colours, and marched with horns sounding towards the most considerable village in their district; where the girls, and all the people, came out to meet them, and share in their diversions. Boundaries were immediately appointed, and a proclamation made that all who intended to compete in the race should appear. A bonnet, ornamented with ribands, was displayed upon a pole as a prize to the victor; and sometimes five or six started for it, and ran with as great eagerness as if the guerdon was a crown; the prize of the second race was a pair of garters, and the third a knife. They then amused themselves for some time with such rural sports as suited their taste, and dispersed quietly to their respective homes before sunset. When two parties met, and one of them yielded to the other, they marched together for some time in two separate bodies, the subjected body behind the other; and then they parted good friends, each performing their races, &c. at their own appointed place. Next day, the ribands and napkin that formed the colours were carefully returned to their respective owners, the tower was left to take care of itself, and the country returned to its usual state of tranquillity.

Lammas Day is celebrated in London by a rowing match on the river Thames, instituted by Thomas Dogget, an old actor of celebrity, who, in the year after George I. came to the throne (1714) gave a waterman's coat and a silver badge, to be rowed for by six watermen on the first of August, being the anniversary of that king's accession. This he continued till his decease, and also bequeathed a certain sum of money, the interest of which was to be appropriated annually for ever to the purchase of a similar coat and badge, to be rowed for by six young watermen whose apprenticeship had expired the year before. The claimants set out at a given signal when the current is strongest against them, and row from the Old Swan, near London Bridge, to the White Swan, at Chelsea. At Exeter, the day is signalized by a fair, the charter of which is perpetuated by a glove of immense size, stuffed, and carried through the city on a very long pole, decorated with flowers and ribands, and attended with music, parish beadles, and "the mobility." It is afterwards placed on the top of the Guildhall, and then the fair begins; on the removal of the glove the fair terminates.

August 6.—Our Blessed Lord's glorified appearance on Mount Tabor, is commemorated on this day in the Anglican Kalendar. The Greek Church instituted the festival of the Transfiguration so early as the year 700; but the Latins did not celebrate it until 1456, when Pope Calixtus III. passed a decree for its general observance to perpetuate the remembrance of the raising of the siege of Belgrade by Mahomet the Second. It is alleged, however, that this feast was observed at Rome in the fifth century.

August 8, in the current year, is the Saturday after Lammas Day, on which the inhabitants of Ripon, Yorkshire, commence their annual festival in honour of their patron St. Wilfrid, by going out to meet his effigy, which is brought into the town with great ceremony, and preceded by a band of music. The following day is dedicated to St. Wilfrid.

"A few summers ago," says Mr. Hope, in his admirable "Essays." "I was journeying through Yorkshire, and spent a Sunday at Ripon. A beautiful day it was, and the sun shone bright on the grey minster of that quiet city; and this day was the anniversary of the dedication of that famous church by St. Wilfrid, nigh twelve centuries ago, still called Wilfrid Sunday, still observed as a season of universal rejoicing; and in the walls of that late-made Cathedral Church I first heard the praises of that great Saxon Saint proclaimed by him who then and still occupies the decanal stall." On

the Monday and Tuesday there are horse-races, for small sums only; though formerly there were plates of twenty, thirty, forty, and fifty pounds. Women were formerly the riders at one of the races, as appears from an advertisement in the "*Newcastle Courant*" of August 28, 1725.

POETRY.

[In Original Poetry, the Name, real or assumed, of the Author, is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

LITTLE JANE.

By Mrs. TOOGOOD.

AN orphan girl was little Jane
When scarcely her sixth year went by;
And like a flower upon the plain,
And like a star upon the sky,
And as a joyous bird is seen,
That flits upon the lonely green,
To smile and sing from shrub or tree,
Such Jane was in her infancy.

Her mother was of meekest mind,
And careful was she day by day
The narrow path of truth to find;
And early Jane had learnt to pray,
And honour'd was the Sabbath's rest,
As though 't had been a princely guest,
And honoured was the Church's chime,
As Nature's self had fixed the time.

Up o'er the hill and down the lane,
In summer as in winter bare,
The mother walked, and little Jane,
Toward their ancient house of prayer;
She busy-minded in such wise
To frame her words and her replies,
With all instruction strict and mild,
That well might guard her little child.

And when that gentle mother died,
Her kindred offered Jane a home,
And thus were solaced, side by side,
To tend the orphan with their own.
But faces strange the maiden found,
On strangest things she gazed around,
And all her words were checked by fear,
For no sweet mother now gazed near.

And once upon the Sunday morn,
Their Church's bells again came ringing,
Up upon the breezes borne,
Gaily through the country singing:
Upon that little ear they came,
And Jane went forth—for 'twas the same
As ever she had done before,
And quietly she left the door.

She did not think that she should find
Her mother in that Church again;
But something was there in her mind
About her mother, nought of pain.
The hill and lane she travelled o'er,
From bee and butterfly a store
Of kindness and comfort she
Was drinking in, all silently.

Across the churchyard now she went,
Above the tombstones scarcely seen,
The little maiden, all intent
Upon her pilgrimage had been.
The Church-door open wide and high
Now stood before the maiden's eye;
Most wide and high, but all serene
Was little Jane on entering in.

The congregation with surprise
The orphan see—and all alone;
And many were the wondering eyes
The little one now looked upon;
Her calmness turned to dread and awe
At all she heard and all she saw:
Straight to her mother's place she led,
And showers of tears the maiden shed.

MUIR-SHOOTING.

M. H.

He's awa', awa' ow'r the heathery hill,
Exulting i' freedom o' power an' will;
He roams the wild muir wi' a joyous tread,
An' the muir-fowl spring fra' their purple bed;
At the whirr o' their wing glints his marku' e'e,
An' the puir wild bird for his sport maun d'e.

O! blithe is the sportsman's heart i' the morn
An' lightly's the gun ow'r his shoulther borne;
He recks not o' death to the puir wild bird
When the airie hymn o' the wind is heard,
When the hum o' the wild bee, the low o' the kye,
Wi' the whimplin' burn join their melody.

He recks not o' death when the noontide glare
Mak's the bield o' the shielin' sac welcome there,
As, stretched i' the silent an' lazy noon,
He counts the bankies his head aboon,
When the kye, an' the wind, an' the wild bee are still,
An' a' thing is hushed save the flow o' the rill.

He recks not o' death when a fuery dream
Keeps time to the music o' th' ripplin' stream,
An' partly i' slumber, i' mockery part,
He dallys wi' images dear to his heart,
Till a distant shot the slight glamour breaks,
An' starting afresh fra' that dream he wakes.

He's awa' ance mair ower the heathery brae
To follow his sport till the gloaming gray;
Till shadows come flittin' across the muir,
An' the croonin' wind strives to raise the stoor;
Till drap after drap fra' the black clouds fa'
An' wearied he turns to his Hieland Ha'.

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne*.

FOR the attainment of correctness and purity in the use of words, the rules of grammarians and of critics may be a sufficient guide; but it is not in the works of this class of authors that the higher beauties of style are to be studied. As the air and manner of a gentleman can be acquired only by living habitually in the best society, so grace in composition must be attained by an habitual acquaintance with classical writers. It is, indeed, necessary for our information, that we should peruse occasionally many books which have no merit in point of expression; but I believe it to be extremely useful to all literary men, to counteract the effect of this miscellaneous reading, by maintaining a constant and familiar acquaintance with a few of the most faultless models which the language affords. For want of some standard of this sort, we frequently see an author's taste in writing alter, much to the worse, in the course of his life; and his later productions fall below the level of his early essays. D'Alembert tells us, that Voltaire had always lying on his table the *Petit Carême* of Massillon and the tragedies of Racine; the former to fix his taste in prose composition, and the latter in poetry.—*Stewart*.

WOMEN, in all countries, are civil, obliging, tender, and humane: they are ever inclined to be gay and cheerful, timorous and prudent, and they do not hesitate, like men, to perform a generous action; more liable, perhaps, to err than men, but in general more disinterested, more virtuous, and performing more good actions than men. In my extensive wanderings in foreign climes, if hungry, thirsty, wet, cold, or sick, Woman has ever been friendly to me, most uniformly so.—*Levyard*.

GETTING money is not all a man's business: to cultivate kindness is a great part of the business of life.—*Johnson*.

It is the unhappy chance of many men, finding many inconveniences on the mountains of single life, they descend into the valleys of marriage to refresh their troubles, and there they enter into fetters, and are bound to sorrow by the cords of a man's or woman's peevishness; and the worst of the evil is, they are to thank their own follies; for they fell into the snare by entering an improper way. Christ and the Church were no ingredients in their choice.—*Bishop Jeremy Taylor*.

SUICIDE is not to fear death, but yet to be afraid of life. It is a brave act of valour to contemn death; but, where life is more terrible than death, it is then the truest valour to dare to live; and herein religion hath taught us a noble example, for all the valiant acts of Curtius, Scævola, or Codrus, do not parellel or match that one of Job.—*Sir Thomas Brown*.

NEVER do any thing that can denote an angry mind; for, although every body is born with a certain degree of passion, and, from untoward circumstances, will sometimes feel its operation, and be what they call "out of humour," yet a sensible man or woman will never allow it to be discovered. Check and restrain it; never make any determination until you find it has entirely subsided; and always avoid saying any thing that you may wish unsaid.—*Lord Collingwood*.

HIS wit did not require the foil of deformity to give it splendour; its brilliancy was best displayed in illustrating beauty, for which he had the keenest relish. He possessed one of the most amusing faculties of wit, a lively sense of the ridiculous; but he would laugh at folly, without exciting anger or fear; could be just, without an air of severity; entertaining, without satire, and brilliant, without sarcasm. No man ever lived more in society, or shone more in conversation; yet it would be difficult, I should say, impossible, to ascribe a sentiment, or even an original sentence to him, the least tinctured with envy, malice, or uncharitableness.—*Life of Mackintosh*.

WE may certainly conclude that God would not remove good men out of this world, were this the happiest place.—*Sherlock*.

THE common course of things is in favour of happiness: happiness is the rule, misery the exception. Were the order reversed, our attention would be called to examples of health and competency, instead of disease and want.—*Paley*.

I CONSIDER very testy and quarrelsome people in the same light as I do a loaded gun, which may by accident go off and kill us.—*Goldsmith*.

EVERY one is forward to complain of the prejudices that mislead other men or parties, as if he were free, and had none of his own.—*Locke*.

MANY men take a great deal more pains for this world than Heaven would cost them; and when they have it, do not know how to live to enjoy it.—*Sherlock*.

THE CINQUE PORTS.

INTRODUCTORY.

KENT—the scene of so many high and stirring memories—Kent—

“that doth advance

Her haughty brow against the coasts of France;”

Kent—the arena of many of the bloodiest conflicts in which Britain ever engaged—the scene of many of her noblest victories—the spot of many of her most glorious triumphs—the theatre of her highest renown, of her proudest achievements—“the lock and key of the whole island”—and, more than all, the honoured pathway through which traversed the feet of them “who brought glad tidings”—Kent, as might be predicted from all these circumstances, is peculiarly happy in natural position. She is literally, as well as metaphorically, the “garden of England.”

The general aspect of Kent is very beautiful, from the inequality of surface, the diversity of scenery, the variety of verdure with which the whole country is robed, and the magnificent ocean which foams and dashes around

her shores. Her hills are lofty, healthy, breezy, and yet so happy in climate as to give no idea of the sterility or frowning horror which invests the mountains of the less favoured northern counties. Here, what may be lost to the eye in sublimity, is fully atoned to the heart in fertility and beauty. Her vallies are soft, fertile and luxurious; varied and adorned by flowing sparkling rivers, luxuriant meads, waving corn-fields, productive hop-gardens, (the English vineyard,) and teeming orchards.

“The commodities of Kent,” says Leland, “are fertility, wood, pasture, catel, fish, fowle, rivers, havens with shippes among the V. ports most famous, and royale castelles and townes, and the faith of Christe there firste restorid. Cæsar, in V. libro de Bello Gallico, prayeth the humanite of the Kentisch men. The kyng¹ himself was born in Kent. Kent is the key of all Englande.”

This ever reiterated characteristic of Kent, the “key” of England, is partly, no doubt, caused by a natural peculiarity. Her lofty cliffs, if not terrific, are yet most

(1) Henry VIII.

noble; they breast the ocean, and extend a shield of defence over the mother land; and precisely where the ancient, and heretofore inveterate, enemy of England has, as it were, a pathway to conquest, they raise this natural barricade to prohibit his course.

Yet is this not unbroken. Graceful curves modulate the coast, and some fairy glades wind even to the shore; and, at intervals, rich plains slope to the edge of the ever-heaving waters, and invite, as it were, the approach of alien feet. And here and there, instead of the foaming billows dashing against hoar cliffs, wanton waves gently trill along the sparkling sands, whilst pensive mermaids, rising from their emerald homes, and borne along to the sounding music of the booming waves, or the tuneful clang of the attendant Triton's shells, seem to court the notice of the merry-footed elves and coy fairies of the inland glades, even in the very heart of their green retreats.

Yet, if Nature have thus indulged her fitful fancies to what may seem the prejudice of the soil, deem not that the genius of the Isle has left her work incomplete. Though the means be varied, the end is yet fully attained; and, if the coast be somewhere assailable, a more efficient barrier than chalky cliffs has been maintained in the indomitable valour of the men of Kent. The "Men of Kent" have been a proverb—a proverb handed down from countless generations; ay, even from the time when the dauntless Briton stood on his native cliff, and fearlessly exposed his unsheltered body to the steel-clad host whom Caesar brought to his home.

So dauntless was the valour of the Kentishmen, so unvarying, and so abiding, that at length it was conceded to them by the whole country that they should have the front in battle at all times. "In reward for that illustrious valour which our Kent displayed with vigour and perseverance against the Danes, it has still the honour of the foremost rank and the first charge in all battles." And all historians concur in affirming that this was the enduring habit of ages.

The Kentishmen make it their boast that they were *never conquered*; and that, even when the universal conqueror, the Norman William, came, they alone were not dictated to. It is, indeed, somewhere mentioned, that, on William's advance into the island, an apparition met him, somewhat similar to that which paralysed the doomed Macbeth. For, as Birnam Wood did come to Dunsinane, so, it is said, was the Norman astonished by the sight of a forest moving towards him; but, on his inquiries, was told that it was the "men of Kent," each man bearing a bough before him, who were coming to "treat" with him; a style of arrangement somewhat novel to the haughty Conqueror. But they succeeded in their object, and so it hath since been written, "The county of Kent saith, that in the said county every one shall be free of this grievance; for it saith that this county was never conquered, like the rest of England, but submitted by *treaty* to the Conqueror's dominion, reserving all its liberties and free customs antiently held and used."

But in their wreath of honour the Kentishmen twine likewise the myrtle with the bay. They have been, and this is not a very usual circumstance, they have been ever as remarkable for humanity and civilization as for bravery.

Cæsar so speaks of them: "Ex his omnibus longe sunt humanissimi, qui Cantium incolunt;"¹ and, in confirmation of this, William of Malmesbury: "The rustic, yet civilized people of Kent, more than the rest of the English, still breathe a consciousness of their ancient nobility, being the foremost to exercise acts of respect and hospitality, and the last to resent injuries."

It seems but a reasonable and natural result of these peculiarities of soil, situation, constitution, and government, that Kent should present some features distinct from those which characterize the country at large.

(1) "Of all these, the inhabitants of Kent are by far the most civilized."

Such features are the Cinque Ports, which, from their vast national importance, are frequently called in old writers, "locks and keys of England," as the county itself, Kent, is often termed, *par excellence*, the Key. This honourable appellation is also sometimes applied to Dover. Four of these ports are in Kent, and amongst these the one from which the Lord Warden assumes his title of honour. And connected with, or branching from, or influenced by these Cinque Ports, are many features and circumstances of general interest, which it is our "pleasaunte travail" now to describe.

The great historian of the county, Hasted, thus characterizes Kent. "It has four of the ancient Cinque Ports; the Court of Shipway; the castle of Dover. (the lock and key of Britain;) four of the docks of the Royal Navy; the archiepiscopal see, the metropolitical city of all England; and another diocese still, within its bounds. Also, it had ancient London, when it was at the south side of the Thames. It has great freedom of tenures and customs."

These Cinque Ports, now little more than a name, have been not merely the "locks and keys," but the heart and soul of our England. It is true that their high and palmy days are sped, their glory is departed; but shall all memory of them therefore be lost? Shall we forget that to these now dim and desolated and choked up havens we owe it that our native queen now sits on the throne of her ancestors; that the noble sons of our soil yet preside in the lofty castles, or repose beneath the aged oaks, which were erected and reared by their sires of generations long gone by; that the fair-haired daughters of our island have yet the unchanged and unblemished lineaments of the beautiful race from which they sprang? If from the changing processes of never-sleeping nature these havens have lost the natural characteristics they once possessed; if from the meliorating influences of civilization, and the ever progressive changes of society, they are, for the most part, become unavailable or unnecessary; and if Time, with stealthy and silent footstep, but swift and certain pace, is fast effacing every lingering remnant of their by-gone history, is it—can it be—an unprofitable, an unholy task, to endeavour to beguile some trifles from his leaden grasp? to endeavour, however feebly, to record not only that the Cinque Ports *were*, but that they were the fountain from whence sprang, or the channel through which passed, the chivalry and nobility, the grandeur, the glory, the wealth,—and that which alone could sanctify these privileges,—the religion of the days of old?

"There is a sanctity in the Past." Such is the spell of memory, such is the influence of historical association, such is the dream-like but most potent power of imagination in a land where every hill and every valley has its recorded history—where every mouldering ruin is hallowed by some tradition, and every stream is haunted by some legendary tale—that, in the new world, as we are told by travellers, the magnificent prairies, the gigantic mountains, the majestic rivers, the mighty forests, the novel association of everything great and beautiful in nature, the magnificent creation which floods the earth with glory and beauty, and the striking picture of her many-hued sons,—all these—a combination of nature's marvels—all these do not impress the mind, or win on the affections, as one of those ivy-grown abbey or shattered castles which, in the old world, are rich in the memories or hallowed by the associations of bye-gone days.

Reader! how shall I woo you to travel with me? Shall I lead you among the "Saxon swine," who drowned the land with wassailry, or among the "Danish wolves," who deluged it with blood? Shall I display to you the iron walls with which the once mighty Roman guarded the land; or, "bloody with spurring, fiery-red with haste," shall we ride to the gory battle-field, where the Norman arm prevailed? Or, like you not the red field of fight, shall we lead you where

"The beautiful forms of ancient faith
Were lingering round?"

aye! even round this very blood-polluted spot, when, purified and assuaged by penitence and prayer, it became the sanctuary of charity and love.

Noble are the companions to whom we would introduce you:

"Kings, warriors, high-soul'd poets, saint-like sages,
England's illustrious sons of long long ages."

Such, and so lofty, are the associates to whose intimacy we invite you while listening to "a tale of the times of old."

THE CINQUE PORTS.

The origin of the Cinque Ports is plainly referable to an institution of the Romans for the protection of the south-eastern shore, always the most exposed and most assailable coast of Britain. For though, on their departure from the country, the Britons sank into apathy and sloth, though castles and fortifications were suffered to decay, though civilization declined, and the rising arts were lost, and barbarism returned—still that principle of order and military arrangement which Rome had introduced in the island, though it often lay dormant, was never entirely eradicated. And one of the most advantageous and most enduring fruits of this revivifying germ was the institution and subsequent incorporation of the Cinque Ports.

The Roman governor in Britain assigned the military jurisdiction of the province to three great officers: the "Comes Britanniarum," who superintended the interior of the island, and probably the western coast; the "Dux Britanniarum," who defended the north against the Picts and Scots; and the "Comes Littoris Saxonici," the Count of the Saxon shore, whose jurisdiction extended along that south-eastern coast, which, even in the fourth century, was so infested by piratical Saxons as to be called from its dangerous proximity to them, "the Saxon shore," and to require an officer with the appropriation of a specific portion of troops to maintain its independency.

The jurisdiction of this officer was very extensive, stretching over Norfolk, Suffolk, Essex, Sussex, and Hampshire. He presided over nine ports, some of which even now present ruins of Roman fortresses, and are situated in the immediate neighbourhood of the now Cinque Ports.

On the departure of the Romans the fortresses and castles which they had erected sank to decay; their military regulations (to an active participation in which the Britons were but very charily admitted) were discontinued, the "Comes Spectabilis Littoris Saxonici" was no more heard of, and the Saxons "insulted" the degenerate British shore at will.

When, at length, under their entire domination, South Britain was divided into seven kingdoms, each prince protected his own division of the coast, which, indeed, till a later period of the Saxon rule, would probably be tranquil. But scarcely were the kingdoms of the Heptarchy united under one head (or before this time) than the Danes began to retaliate on the Saxons the annoyance the latter had heretofore caused the Britons, and for two centuries and upwards the bleeding island suffered every extremity of cruelty and insult which these ruthless barbarians could inflict. Of course, during this period, the scourged, but unconquered English, took all available means of defence, and they often fitted out large fleets of ships to meet and encounter their fearful enemy. It seems natural to suppose that such ports, or the immediate neighbourhood of such ports (then in recent memory, as the Romans, masters in the art of defence, had selected for a precisely similar purpose, should now be chosen by the English as the principal depôts of their naval armaments.

Whether this were the case or not, we are distinctly

told that some particular ports, on the south-eastern shore, had so often, during these weary times, contributed nobly to the defence of their country, had been so indefatigable in their services, and so unwearied in their exertions, that in Edward the Confessor's days they were signalized and rewarded with great privileges and immunities. These distinguished and favoured ports were Hastings, Sandwich, Dover, Romney, and Hythe—the five or Cinque Ports. But they are not mentioned collectively even in Domesday Book; and the names of Sandwich, Romney, and Hythe only occur there as privileged ports; though King John, in his charter to them, says that he has seen charters extending as far back as the time of the Confessor. Hastings, though not mentioned in Domesday, has always taken precedence of the other ports, but it is possible that the favour of the Conqueror may have effected this; or the port might, in fact, be both existent and notable, and yet chance to be omitted in the specification.

A high authority, Lord Coke, says, that Dover, Sandwich, and Romney were the ports of especial note before the Conquest, and that William the Conqueror added to them Hastings and Hythe, and afterwards annexed thereto the two ancient towns of Rye and Winchelsea.

At an early period the armaments equipped at these ports were subject to the command of the various admirals from time to time appointed; but the Conqueror appointed a governor of Dover Castle, (which he looked upon as the key of the kingdom,) and he likewise first gave the title of warden or guardian to the supreme officer of the Cinque Ports, whose jurisdiction, in the nature of admiral as well as chancellor, extended over the five ports, with the two ancient towns (Rye and Winchelsea), and those inferior limbs or members which, coveting the immunities of the Cinque Ports, were, from time to time, admitted to a share of their privileges, on paying a premium to the head port, and bearing their quota of the general expenses. These limbs are first mentioned in the Red Book of the Exchequer, and the Domesday of the Ports; but they are not named in the Charters till the time of Edward the Fourth.

In the charter of William the First, the ancient rights of the Cinque Ports are distinctly recognised, various additional privileges are conferred, and their own duties are more distinctly specified. This charter has been renewed with various additions and alterations by most of our succeeding monarchs. The last charter was granted by Charles II. and confirmed by his successor.

The important service the due performance of which invested the Cinque Ports with the high privileges they enjoyed, (and which will be briefly noticed,) was to provide yearly for the king's use fifty-seven ships, each containing twenty-one able-bodied men, properly equipped for service, and a *bag* called a *gromet*.¹ They were to be ready on a summons of forty days, and were to remain in the king's service on their own costs and charges for fifteen days from the time they first hoisted sail for their appointed destination, wherever it might be. The fifteen days expired, they were still bound to the king's service, but their expenses were defrayed by the Government. Dover and its members usually furnished twenty-one ships, and the remaining quota was divided proportionably between the other ports, the number assigned to each varying with circumstances; and when they were intended for fighting, a certain number of soldiers was provided by the king for each ship, with suitable arms and accoutrements.

But, after the Royal Navy was called into existence, (for originally the Cinque Port ships were the Navy of the kingdom,) and there was a great and rapid improvement in the style, and build, and size of ships of war, these Cinque Port vessels became, in time, small, out of date, and comparatively useless. But the spirit and

(1) Extr. "5th of Henry VIII.—Every person that goeth into the Navie of the Portis, shall have a cote of white cotyn, with a red crosse, and the armes of the portis underneathe, that is to say, the halfe lyon and the halfe shippe."

patriotism of the Portsmen did not flinch. They built fewer vessels, but of a larger size, and of at least equal expense, and they unflinchingly performed their duty of "guarding the narrow seas," and assisting their Sovereign in all emergencies; such, for instance, as occurred at the period of the dreaded Spanish Armada. On this occasion the Ports fitted out six ships of 160 tons each, each one attended by a pinnacle of thirty tons; an equipment which cost them 43,000*l*.

Many and great were the privileges conferred on the Ports in requital of the services performed by them. An extract from the charters themselves, or even from the authorized translation of them, would hardly be intelligible to the modern reader. In familiar phrase, however, we shall refer to a few of these privileges.

The Barons¹ of the Cinque Ports were exempted from the payment of all duties on wares and merchandise, whether imports or exports; and their own vessels had liberty to harbour in any other ports in the kingdom, without payment of customs.

They were also exempted from tolls for repair of roads; from tolls on horses and carriages; from duties paid on rivers; and from those paid on bridges.

They were exempted from any attendance at the shire or county courts, nor were the Portsmen compelled to serve at assizes, or on juries out of the Ports, against their will; nor as constable, bailiff, &c.

They had the power of trying all actions, civil or criminal, treason alone excepted; and all thieves and felons belonging to the Ports or their precincts, wherever captured, were brought back to the Ports to be tried.

They had the right of marrying their heiresses without the king's consent. This in the feudal times, was a great privilege.

By the charter of Richard II., all fines and penalties for trespasses, misprisions, extortions, conspiracies, and all other offences whatsoever, which, in other parts of the kingdom, appertained to the king, were granted to the Ports.

They were discharged from military duties in the fields.

They had all *warfs, strays, and treasure-trove*, or treasure found hidden, which by the law of England belongs to the king.

They had many liberties and privileges in the Yarmouth fishery, &c.

The office of Warden of the Cinque Ports, was one anciently of great power and importance. He was intrusted with the keeping of all the authentic copies of the ancient laws and customs of the Five Ports and their ancient towns, and the conservation of their privileges from any encroachment was his peculiar care. To him lay an appeal to judgment, passed in any of the mayors' courts within his jurisdiction; and this judgment he had the power to reverse. The Barons of the Cinque Ports were amenable to him for any abuse or misapplication of their privileges, and for every act of lese majesty. When on his appointment to his high office, the form of the oath was read to him, he, holding up his hand to his breast answered—"YEA;" for, being a knight, and of the king's council, this attestation was considered sufficient, and he was not required to place his hand upon the Evangelists, the usual mode of taking an oath.

The Lord Warden, as chancellor and admiral of the coast, holds his various courts where he thinks proper, but now usually at Dover, in St. James's church. The Court of Admiralty has frequently, however, been held at Sandwich, and also at other Ports. But the Supreme Court of the Cinque Ports is that held at Shipway, a place near Hythe, supposed to have obtained that name from lying in the way to the haven where ships were wont to ride. Here all the most important business of the Ports in past days has been transacted; and it was

here that Prince Edward, (afterwards Edward I.) in his office of Lord Warden, in the year 1265, exacted from the Barons of the Ports their oaths of fidelity to his father Henry III., against the maintainers of the Barons' wars.

The records of the Cinque Ports were formerly placed in a room appropriated to the purpose in Dover Castle, but a great proportion of them is lost or destroyed.

A highly valued privilege which the Cinque Ports have possessed from time immemorial, is that of transporting the person of the Sovereign, whenever his affairs called him from England.

Another privilege of a very attractive nature, known by the term of their "honours at court," is mentioned in the charter of Edward I., not as then newly granted, but as confirmed to the Ports. These "honours," consist in the privilege of bearing a canopy over the head of the king and queen at a coronation, and of having allotted to them at the coronation banquet a table on the king's right hand. The gold cloth of which the canopy was composed, was formerly usually offered by the barons, (whose perquisite it was,) to the shrines at Chichester and Canterbury. The pulpit-cloth now in the church at Hastings is composed of part of the canopy borne over Queen Anne at her coronation.

There are records extant relative to the "honours at court" of the Cinque Port freemen, from the time of Richard II. to our own day; but at the coronation of William IV., and of her present Majesty, many of the ancient customary ceremonies at this august inauguration were abandoned, and the canopy of the Cinque Ports was not required.

The present Warden of the Cinque Ports is the Duke of Wellington. We shall refer to his appointment hereafter, in the more detailed sketch of each port which will succeed this brief general introduction.

JACQUARD, THE SILK WEAVER OF LYONS.

The stranger who visits Lyons and becomes acquainted with the manufactories of that great mercantile city of France, is struck by the contrast that he sees there, between the luxurious furniture prepared for the dwellings of the great, and the poverty of those employed in its production.

The silk weaver may generally be known by his pallid complexion, his narrow chest, and his emaciated limbs, which are the natural results of excessive labour and insufficient nourishment; but, thirty years ago, these, his melancholy characteristics, were far more remarkable than they are now. Lyons and its suburbs contain at least ninety thousand artisans, who work from four in the morning till nine at night, crowded into large factories that resemble bee-hives with their tiers of cells. They are full of windows, each of which lights a machine, and, till within the period we have mentioned, these machines, used for brocaded silks, were complicated and difficult to manage, loaded as they were with numberless cords and pedals, by which the body was forced into the most distorted and unnatural attitudes. The weaver was mounted on a high stool, and directed the thread of the chain, and formed the pattern, by striking out his legs from right to left; but, besides his part of the work, one or two others were necessary to guide the cords and pedals; and these were usually young women or children, who were obliged to preserve the same painful attitudes through the whole day, and they frequently became deformed for life, and more often still they were hurried to the grave. Many, who witnessed so much misery, longed earnestly for such a revolution in the state of mechanical science, as should free the children from work to which their own health and the moral feeling of their parents were alike yearly sacrificed; but amongst all who pitied their sufferings, who had the power to relieve them? The honour of accomplishing

(1) Or Freemen. Every freeman of the Cinque Ports has the title of Baron.

this task was reserved for Jacquard, an unpretending artisan, the Genius of the loom, the Child of the people. Florence and Venice, with all their boasted improvements, acknowledged the superior skill of the poor working man, and bowed down their industrial banners at his feet.

Joseph Marie Jacquard was born at Lyons on the 7th of July, 1752; his father was a master weaver of gold and silken tissues, his mother was a pattern-reader, another branch of the same trade; as for himself he was apprenticed to a bookbinder, and proved a clever and tasteful workman. At the end of some years he married, and, having inherited a small house from his parents, he established himself as a straw bonnet manufacturer, and was succeeding very well, when the French revolution broke out, and brought his prosperity to a close. In 1793, during the memorable siege which Lyons so nobly sustained against the republican armies, his house was burned to the ground, and, when the savage proconsuls came with orders from the Convention to decimate the inhabitants whom the brutal soldiery had spared, Jacquard's name was on the proscribed list, and he found himself obliged to leave his native country. He owed his safety to a son he had in the ranks of the Republican army. This young man, listening only to the dictates of filial piety, dressed his father in uniform, inscribed his name on the list of the battalion of volunteers to which he himself belonged, and, placing a musket in his hand, marched with him to the French frontier. They reached the borders of the Rhine together, but there Jacquard had the great misfortune to lose his beloved son, who fell by his side, struck by a cannon ball, and soon afterwards expired in his arms. When France was restored to some degree of order and tranquillity, Jacquard, wearied with his military profession, for which his advancing age began to unfit him, was desirous to return to his former quiet life; he had found protectors amongst the very men by whom he had been proscribed; and he now established himself once more at Lyons, and gave up his time to the study of mechanics: a strong inclination led him forward in the pursuit of knowledge, and circumstances developed still further his natural genius.

The peace of Amiens had re-established communications for a short time between England and France, and during this season an English newspaper happened to fall into the hands of Jacquard; he read there the announcement of a prize that was to be bestowed by the Royal Society in London for the construction of a machine for making fishing nets, and also for the nettings used on board ship. From that moment he became conscious of his vocation, and thought of nothing but how to fulfil the required conditions. After groping long in the dark, he discovered the secret of the machine; but the satisfaction he derived from his success was the only reward he chose to receive; the difficulty once overcome, he thought no more about it, and contented himself with giving a piece of the net he had woven, to one of his friends. This friend, however, showed it as a curiosity to several persons, and it passed from hand to hand, until it was sent at last to Paris by the Lyonnese authorities.

Jacquard had long forgotten his invention, when, one day, to his great surprise, he was summoned before the prefect of Lyons, who asked him whether he had not turned his attention to the manufacture of nets on mechanical principles. Jacquard did not remember the circumstance to which the magistrate alluded, till the identical piece of net was produced that he had given to his friend. The prefect then desired to see the machine on which it had been made. Jacquard asked for three weeks wherein to repair and complete his apparatus, which then lay neglected in a corner of his dwelling; at the end of that time he carried it to the prefect, who was able himself to count the number of meshes, to strike the bar with his foot, and to continue the web that was already begun.

When he had recovered from his astonishment, he dismissed Jacquard, assuring him that his name would soon become known. The machine was sent off to Paris, and presently an order arrived that Jacquard himself should be sent after it. This order was so peremptory that the authorities of the town, mistaking its real import, laid hold of the honest artisan as a conspirator, and treated him accordingly; without allowing him time to go home and make preparations for his journey, he was hurried into a post-chaise and conveyed rapidly to Paris, under the escort of a gendarme. Jacquard had never seen the great capital. On his arrival, he was taken to the *Conservatoire des Arts et Metiers*, and the first persons he saw there were Bonaparte, and his minister, Carnot; the latter, addressing him with the blunt severity which was natural to him exclaimed, "Is it you, then, who pretend to do what with Heaven is impossible, make a slip knot upon a tight thread?"¹

Jacquard, abashed by the presence of the master of half Europe, and still more so by the manner of his minister, only answered by setting his machine to work, and soon showed the possibility of what they had thought incredible. In this strange way was Jacquard's first essay made known. Napoleon, who knew how to appreciate genius wherever he found it, encouraged him, and promised him his protection; and in a few days after this interview, he was regularly installed at the *Conservatoire des Arts et Metiers*.

Jacquard's joy may well be imagined when he found himself in the midst of the wonders of art, and enabled to pierce through the arcana of mechanical science, which, hitherto, for want of books and of education he had had no means of doing; he had now the experience of others to stand upon, and the keys of knowledge were in his hands for fresh experiments. He soon set to work, by order of government, upon machinery which was to produce brocaded silk, at less cost, and more easily, than any then known; he combined two principles which were due, the one to the celebrated Vaucanson, and the other to Talson, the engineer, and succeeded beyond all expectation.

This famous machine which was destined to immortalize the name of its inventor, appeared at the Exposition at Paris, in 1801. The First Consul, perceiving at once the advantageous change which it was about to produce in the state of French industry, rewarded this admirable discovery by a pension of 6,000 francs. The jury, however, whose province it was to judge of the utility of all such inventions, showed themselves less clear-sighted, and awarded only a bronze medal to Jacquard, "the inventor" (said the report) "of a machine by means of which one workman the less would be required in the fabrication of brocaded tissues."

Less wonder will be excited by this verdict of the Parisian jury, when we further relate, that at Lyons, the whole face of whose commerce was to be entirely altered by Jacquard's discovery, no gratitude and no admiration were called forth by it. He returned there with his machine, and found himself, like Galileo of old, overwhelmed with suspicion and obloquy. He, the man of the people, the child of the loom, was portrayed in the darkest colours to the ignorant and passionate multitude as their inveterate foe; one who, for his own ambitious and selfish purposes, was about to ruin their craft, and to increase the distress of their families.

From all parts of the district furious mobs assembled against him, and his life was three times in imminent danger; this blind hatred rose at last to such a height that the Lyonnese authorities gave way before the storm: and the new machine was broken to pieces by their orders, in the great square of the town, while the people loudly applauded the ridiculous scene enacted before

(1) "Un nœud avec un fil tendu." This machinery has of late years been applied to lace, and Nottingham owes to it the chief successes of its trade.

them.—“The iron” (to use Jacquard's own words) “was sold as old iron,—the wood, for fuel.”

It was not till France began to feel the fatal effects of foreign rivalry, that the silk-weavers of Lyons regretted the narrow prejudices which had prevented their reaping the benefit themselves of Jacquard's discovery; they then perceived that they had destroyed the machine which would have spared their labour, and infinitely multiplied their resources. In the meantime a few more enlightened manufacturers, among whom were Dépouilly and Schirmer, having adopted the machinery of Jacquard, had so abundantly profited by it, that its fame spread rapidly through Switzerland, Germany, Italy, and America, where a new opening to industry, and a fresh means of increasing wealth, were joyfully hailed.

Manchester, essentially a manufacturing city, received the Jacquard machinery in 1813, with popular enthusiasm; and the name once denounced in every factory is now honoured throughout Europe. By slow degrees did this reward reach Jacquard; he had it, after a twenty years' struggle against ignorance, envy, and selfishness; and all that time he knew that he had succeeded, that he had created a mighty agent for the prosperity of his native country, and that a day would surely come in which he should see it at work. He was gifted with perseverance and rectitude of purpose in proportion to his genius; his disinterestedness was such, that he would take out no patent to appropriate the benefits of his discoveries, and he constantly refused the magnificent offers made to him by foreigners; simply but firmly he refused to devote to them the services he believed were due to France, and waited patiently till she should be ready to receive them at his hands. We have seen the humble mention made of him with the bronze medal he obtained in 1801; it was not till 1819 that a better informed jury proclaimed the superiority of his machinery over the costly and unhealthy processes which it was intended to replace, and awarded to him the silver medal: the cross of the Legion of Honour completed this national recompense.

Towards the close of his life, Jacquard, having lost his wife, who had been a sharer in all his anxieties, and for whom he had the strongest affection, retired to the pretty village of Oullins, about three miles from Lyons, and took up his abode in a small house, the use of which had been left to him by will, for his life. There he received the visits of many illustrious travellers; statesmen, and men of letters came to converse with him, and to wonder that a man, whose reputation was European, should be found spending his old age in solitude, and dividing his time between religious duties and the cultivation of a small garden. He died on the 7th of August, 1834; he never saw his great invention appreciated in his native city, and yet he had lived long in hope, and in his latter days in perfect peace; his work was done, and at eighty-four

“The weary springs of life stood still at last.”

The morning after Jacquard's death, a few friends, and a very small number of admirers, accompanied his remains to the Cemetery of Oullins, and buried him by the side of Thomas, the Academician: the inhabitants of the village consecrated a marble slab in their church to his memory, which mentions simply and modestly his pure life and his industry.

In his lifetime, like most other great men, Jacquard found little but persecution, neglect, and indifference, in his own country; it was only after his death that he was really known, and his memory duly honoured. The municipal authorities at Lyons opened a subscription for the purpose of raising a statue of the celebrated mechanic, and, while the City owed chiefly to him its yearly increasing wealth, it was long before many thousand francs were collected. The statue of Jacquard, from the chisel of Foyatier, was raised at last on the 16th of August, 1840, in “la place Sathonny,” where had

been placed already the bust of the Abbé Rozier, another benefactor to the city of Lyons.

It is refreshing, in the midst of the feverish strife of mere opinion, to turn to the example of Jacquard. Humble and prosaic as his life may at first sight appear, he stood alone with his genius, surrounded by ignorance and tumult, waiting patiently until his discovery should be permitted to produce the great results in commerce which it could not fail of effecting when once it was fairly tried. While doubtless a thousand voices were raised to procure a hearing for fresh schemes and new doctrines in science, he expected silently the hour in which his knowledge should be most usefully employed for the benefit of his country. Jacquard and his machine were alike realities, and the world has now acknowledged them as such. E. O.

THE SPINSTER'S HEIR.

BY MRS. ABDY.

MISS PAULET was the possessor of an income of two thousand a year, and an only nephew; the first she managed very well, the latter very indifferently, or, more properly speaking, not at all. I must not be understood to intend any reflection on Miss Paulet by this declaration, inasmuch as she only failed where all the rest of her sex must fail.

Women are in high consideration at the present day, and scores of beautiful little hot-pressed silken-bound volumes have been published on the exhaustless subject of their intellect, sweetness, social and domestic qualities, all tending to prove that the super-excellence of the fair sex has been a branch of natural history hitherto most unaccountably and blameably neglected. It is certain that the intellect of the present race of women far surpasses that of the notable dames of old, when the still-room constituted their study, the cookery book their album, and they cared for no autograph save their own on a sampler. The women of the nineteenth century can do many things which would have astonished their great-grandmothers, such for instance as writing a tragedy, driving four-in-hand, or legislating (on paper) for the nation, but there are points at which a woman's intellect stops short, even in the present day; she cannot navigate a ship, manage a steam-engine, or keep in order an unruly boy. Miss Paulet was the kind friend of many people, and the pleasant acquaintance of many more; in her dealings with servants and tradespeople she preserved the golden mean between lavishness and niggardliness, she returned visits punctually, gave parties admirably, all the human race seemed pliant as reeds in her hand, except Robert Vernon, and he was the source of constant trouble and annoyance to her, his watch-word was opposition, he was “wild as colt untamed,” he smiled at persuasions, and laughed at threats. Miss Paulet gave up the contest in despair; like a fairy deprived of her wand, she could only sit and weep over her lost power, without making any endeavour to regain it.

Perhaps my readers will think that I have bestowed more than necessary praise on Miss Paulet's accurate management of her income and establishment, but she really deserved praise for it; she was not born to fortune, but it was “thrust upon her;” and ladies, who are suddenly visited by a shower of gold, are very apt to bestow it on a fortune hunter, buy it into the Spanish funds, lay it out in the purchase of land in New Zealand, invest it in railroad shares, lend it to a particular friend, or pursue some other easy way of getting rid of it as soon as possible. Miss Paulet and her sister Mary had been cast on the mercies of the world by the death of their parents; they had then reached the mature ages of eight-and-twenty, and thirty; their education had not qualified them to be governesses; their fingers were not suffi-

ently young and pliant to acquire the flying celerity of sempstresses; accustomed to a small house and a solitary servant, they had neither experience nor dignity enough to be housekeepers;—they had nothing to hope for but to be engaged as humble companions. This object was not easily attained; humble companionships are about as difficult to be met with as writerships to India. Most people in either case have poor relations of their own, whom it is eligible and convenient to promote to the situation. At last, however, the posts of honour were procured, and every body said that the orphans had been extremely fortunate. Miss Paulet shared the handsome house, and had a seat in the well hung chariot, of a rich old maid, who had sufficient shrewdness to detect the mercenary motives of the many pretenders to her hand, and whose whims, taunts, and fits of ill-temper, were not at all more than every humble companion who knows the world should hold herself prepared to endure. Mary was the companion of a sickly fretful dowager of rank; she received a handsome stipend, slept on down, and trod on velvet carpets; the winds of heaven were never permitted to visit her too roughly, because the sashes, firmly closed even in summer, did not permit a breath of air to enter the apartments which she inhabited. She inhaled a perpetual atmosphere of ether and rosewater, and, had she been a sentimental young lady, might have banqueted solely on the chocolate drops, lavender lozenges, dried fruits, and candied lemon-peel, which were as plentiful as articles of household food in the abode of her patroness.

Five years passed: the sisters retained their situations, not because they liked them, but because they were wise enough to know that there was such a thing as changing from bad to worse. At the end of that time Mary's prospects began to brighten; she received an offer of marriage from Mr. Vernon, a rising young lawyer of exceedingly good character and amiable disposition; the dowager honoured her with her approbation, a lace veil, and a silver tea-pot; and the young couple were married. They set out prudently with a small house, and a proportionally limited expenditure, but there is an old saying "where there is room in the heart there is room in the house," and Mrs. Vernon, with the approbation of her husband, offered a home to her sister. Miss Paulet declined; she could not bear to be a burden on the slender means of another; she occasionally obtained permission to visit her sister, and felt all a maiden aunt's pride and delight in the beautiful little nephew, who in the course of a twelvemonth was presented to her. Sometimes a sigh escaped her when she contrasted her own lot with that of the beloved wife, giving and receiving happiness in her cheerful home; but she soon suppressed every feeling of discontent, rejoiced in the good of Mary's situation, and endeavoured as far as possible to overlook the evils of her own.

A change was at hand, which once more reversed the comparative destinies of the sisters; several years had elapsed since Mary's marriage, unmarked by any event more striking than the birth of her child, and his progressive accomplishments of walking, speaking, and spelling, when two events most important to the sisters took place in the course of the same week. Mr. Vernon was carried off in the prime of life and usefulness, and Miss Byfield, the wealthy old maid, who had refused so many offers, and disappointed so many expectations, expired in the arms of her humble companion, after an existence of idleness and selfishness. Two wills were to be read. Mr. Vernon bequeathed his all to his wife; this "all" consisted of three hundred pounds in the funds, and a very moderate collection of plain needful furniture. Miss Byfield was found to have bequeathed her all to her humble companion; handsome furniture, rich plate, valuable paintings, several cases of jewellery, and two thousand a year. Miss Paulet received this legacy with heartfelt gratitude to Providence, and with sincere thankfulness to her benefactress; she blamed herself for not having been more patient, more gentle, more

conciliating; but she blamed herself without cause; she had been all that she ought to have been, and her good conduct had made an impression even on the stony heart of her patroness. Miss Byfield had not a relation in the world, and she judged well and wisely in bequeathing her riches to the tried and firm good judgment of her faithful and self-denying companion.

Miss Paulet immediately took to her home the widow and her son, and Mrs. Vernon passed a year of peace and tranquillity, although her health and spirits had been thoroughly and irreparably shaken by the loss of her husband. During the illness which preceded her death, she repeatedly commended her son to the kindness and care of her sister, who promised to show him the fondest affection, and performed her promise only too well; she was too kind, too indulgent, too deeply attached to her nephew. He knew his power, and abused it. Two preparatory schools sent polite notes to Miss Paulet at the beginning of vacation-time, signifying that the high spirit of Master Vernon required a more rigid system of discipline than was exercised in their respective establishments. Two private tutors gave him up in despair, and a subsequent "academy" would have followed their example, had not the young gentleman fortunately bethought himself, that, as he had a quick study, and a retentive memory, the consequences of endeavouring to acquire knowledge would not be so unpleasant to him as the consequences of remaining in ignorance for the term of his natural life; he was also strongly imbued with the spirit of contradiction; and, as several of his aunt's friends, especially a severe old bachelor of the name of Carleton, had predicted that he would be a dunce, he resolved to show them their mistake.

There was no difficulty about choosing a profession for young Vernon. There are some families who consider it a matter of course, that the first-born son should inherit the calling and the Christian name of his father; and, however objectionable the former, or discordant the latter, the good old rule is to be made absolute, and all endeavours to negative it end in a defeat. Mrs. Vernon would no more have thought of bringing up her son to any profession but the law, than she would have thought of giving him any other name than Robert. Miss Paulet thought and acted as her sister would have done, and young Vernon offered no opposition to the arrangement. He gave his companions a piece of information quite needless for them to receive: that "he should read just as much or as little as he pleased. Mr. Dornford, the solicitor to whom he was to be articulated, was so excessively active and energetic, that he could never require his assistance; and doubtless at a proper time his aunt would come forward with a handsome sum; he should be taken into partnership, share half the profits, and get on amazingly well with Mr. Dornford, with whom he should make it a point never to interfere." Thus tinting with *couleur de rose* the frowning aspect of the law, Vernon dutifully told his aunt that he meant to accede to her wishes; at the same time reminding her how peculiarly thankful she ought to be, that she had not a nephew who was bent upon going into the army or navy.

Miss Paulet was as thankful as she was expected to be, and quoted this speech soon afterwards to her friend and privy-counsellor Mr. Carleton, whom she wished to think well of her nephew, but who persisted in thinking very ill of him.

"It would have been a good thing," replied the impracticable old bachelor, "if Robert Vernon had gone into the navy, or had been compelled to go there. All sensible people send good-for-nothing graceless lads to sea: in fact, the navy is made up of very little else."

"How, then, is it," asked Miss Paulet, quietly, "that the British tars are so celebrated in song and story for generous, kind, and noble qualities? If they are mostly good-for-nothing and graceless before they go to sea, would not the association of so many evil characters with each other be more likely to increase the bad pro-

penalties of every individual, than to convert them into excellences?"

Mr. Carleton was seldom unprovided with an answer, but he had not one ready on the present occasion; and therefore contented himself with taking refuge in the general and conclusive assertion, that "ladies could not understand anything about such matters," and whistling a few bars of "The Lass that loves a Sailor."

Mr. Carleton was wealthy, maintained a handsome establishment, subscribed to many of the public charities, was lavish in his donations to the poor of his parish of coals and blankets at Christmas, and half-crowns and good advice all the year round; and was known, at stated periods, to purchase his savings into the three per cent. consols. No wonder, then, that Mr. Carleton was popular. A score of blooming damsels had assailed his heart when he first came to settle in the neighbourhood, but without success; to them succeeded a dozen buxom young widows; and when these in their turn were discomfited, a bevy of elderly spinsters took the field, who discreetly surmised, that "Mr. Carleton might wish to settle suitably, but did not like giddy rattling young flirts." Mr. Carleton, however, did not succumb to wrinkles and grey hairs, any more than he had done to roses and ringlets; but he was still welcomed in society: he gave well-ordered entertainments, had seen much of the world, was clever, and had a decided self-possessed manner, which made him appear still more so than he was in reality. He was also kind-hearted. Some people called him "everybody's friend;" others again maintained, that this was a daring figure of speech, and that "everybody's friend" was a character as much out of human nature as the hero of an hundred years old novel could be. Certain it is, however, that Mr. Carleton was everybody's adviser; and, as his advice was in his own opinion very valuable, it is charitable to conclude, that he felt real friendship for the happy numbers to whom he proffered it.

Miss Paulet was one of his great favourites; she had never annoyed him by making advances to him; he liked her conversation, and esteemed her good qualities; but Robert Vernon was the constant object of his censure. The youth, good looks, and vivacity, which atone for half the faults of a headstrong stripling in the eyes of an elderly lady, are only so many aggravations of his offences in those of an elderly gentleman; and Mr. Carleton and Miss Paulet, well as they agreed on politics, literature, the fine arts, village gossip, and things in general, were perpetually at issue on the question of the merits or demerits of the Spinster's Heir.

Vernon literally fulfilled the second part of his declaration to his friends concerning his studies; he "read as little as he pleased." Mr. Dornford, however, made no complaints; he was naturally very easy and good tempered, and the frequent baskets of fruit, game, and poultry, which he received from Miss Paulet, had the effect of wonderfully softening his heart to the failings and indiscretions of his new clerk. Miss Paulet flattered herself, that, because her nephew's progress in the law was slow, it must also be sure; and she was delighted with his duty in coming over so often to see her.

The town where Mr. Dornford resided lay about midway between Miss Paulet's villa and the "Great Metropolis." It is true, that, for one visit Vernon paid to the former, he paid three to the latter place. He gave his aunt, however, so delightful an account of the lectures, oratorios, and *copperations*, that he attended in London, that she was glad to think he was enriching his mind with so much useful knowledge; and turned a deaf ear to Mr. Carleton's insinuations about the attractions of cigar-saloons, and the Olympic theatre!

At length, however, came Christmas, and brought in its train an abundance of bills to Vernon. He begged the several applicants to have patience; and, knowing

that he was to be the spinster's heir, they kindly consented to oblige him, and had patience till Easter, at which period they transferred their accounts to the spinster herself.

Poor Miss Paulet! she seemed to live in a new region. Her villa suddenly became a rallying point for odd-looking strangers; some with sharp eager visages, some with compressed lips and bent brows; some talking of their bad debts, some of their large families, some of the trust they had given, some of their determination to do what all young poets resolve to do (at least in verse), "trust no more;" and one and all having "little accounts" to make up about that time, which rendered the immediate settlement of the little account of the individual in question, not only desirable, but positively necessary. Miss Paulet called in the aid of her prime-minister, Mr. Carleton. He advised severely taxing the exorbitant bills of the tradespeople, defraying them under the positive assurance of never defraying any others, and reducing Vernon's allowance one-half. Miss Paulet said what thousands of people have said before her, that "the advice was very good, but that she had not nerve and spirit to follow it." She paid the tradespeople in full, received the compliment generally given by the lower orders to liberality and profusion in their superiors, that "she was a perfect lady," and then sent for her nephew, lectured him as she thought unmercifully, cautioned him against ever letting such a thing occur again, and, on her next visit to London, purchased for him, at the Soho Bazaar, a beautiful little case, purple morocco without, and white satin within, with "Bills Paid," printed in gold letters on the back of it!

A year passed by, and Miss Paulet persuaded herself that Vernon was quite a reformed character; he paid frequent visits to the village, not altogether however on his aunt's account. Mr. Anson, one of her neighbours, had just received a beautiful daughter from boarding school; the fair Helena was evidently pleased with the attentions of Vernon, and Miss Paulet trusted that he was too busy in making love to find time to run into debt. Alas! the good spinster little knew how much time may be found for various things, by an active-spirited young man, who never devotes any of his hours to his professional calling. Christmas came again, and this time the tradespeople did not take in their accounts to Vernon, but wisely thought it would be a saving of time and trouble to convey them at once to their ultimate head-quarters, the villa of his aunt.

Miss Paulet was shocked and astonished. Mr. Carleton declared that he felt no surprise at all. "They are just twice the amount of those of the former year," he drily said, after looking them over,— "should they increase every year by a similar system of arithmetic, your property will become enviably small and easy to be reckoned about ten years hence." Miss Paulet wept, but declared her resolution to pay the bills; she however suffered Mr. Carleton to tax them, and they were reduced about a third, by the discovery of the many glaring impositions contained in them; in consequence of which scrutiny, Miss Paulet's lady-like character sustained an irreparable shock in the opinion of her nephew's creditors.

Mr. Carleton called on Vernon. "Will you oblige me," he said, "by showing me the morocco case, that was presented to you last year by your aunt for the preservation of paid bills?" Vernon opened his writing-desk, and took it out; it was wrapped in its original silver-paper, the morocco was uncreased, the satin was unrumpled; it had evidently never been profaned by the presence of even a solitary bill! Upon this hint, Mr. Carleton spake, and his speech was long and energetic,—sound and wise. Mr. Carleton, however, was unfortunately among that class of persons who hold Mrs. Malaprop's opinion, that "nothing is so conciliating to young people as severity." Vernon was unaccustomed to be found fault with, and replied in

resentful language to a remonstrance, which, if couched in civil terms, would at least have won from him an answer in kind.

Mr. Carleton left him, to renew his endeavours to harden Miss Paulet's heart against her rebel heir; and Vernon, anxious to soften the heart of the same lady, (who, even *he* acknowledged, had some little reason to complain of him,) sat down to indite a penitential letter to her. He had not proceeded beyond the first line, when it occurred to him that an address to her in poetry would be far more suitable to the exigencies of the case. He had occasionally produced a few molting stanzas, which had given full satisfaction to Helena Anson; and the partiality of the elder lady to him being quite as decided as that of the younger one, he was in hopes of finding in her at least as indulgent a critic.

He was rather puzzled how to entitle his production. An aunt is certainly the most unpoetical of all relationships. Fathers, mothers, sisters, and brothers, all fill up part of a line smoothly and delightfully; grandfathers and grandmothers, with their silvery hair, venerable aspect and wise sayings, may be brought in with great effect; even a cousin does very well for lively poetry, witness the pretty little song, beginning,—

"Pray, had you ever a cousin?
Did your cousin happen to sing?
Sisters we've all by the dozen,
But a cousin's a different thing!"

An aunt, however, can be done nothing with; she is eminently prosaic; she may be a very excellent personage in real life, but she is incapable of figuring in a stanza. Consequently Vernon resolved on entitling his poem, "Lines to a very dear friend," and he praised the benevolence of his aunt so enthusiastically, and poured such an unsparing storm of indignation on his own head, that the poor spinster actually shed tears over it, and declared that nothing so affecting and beautiful had ever been written since the days of Lord Byron's "Fare thee well, and if for ever." Mr. Carleton's complaint of Vernon could not have been offered at a worse time. Miss Paulet was "certain that a young man who had such a fine taste for poetry, and such a very humble opinion of himself, would eventually turn out an admirable character." Mr. Carleton next essayed his eloquence on Mr. Anson, and endeavoured to persuade him that a young man who never paid his bills was a very ineligible suitor for his daughter, but Mr. Anson, "good easy man," was disposed to let things take their course. "No doubt," he said, "Miss Paulet would enable her nephew to make a suitable settlement on any lady he might select; Mr. Vernon had an excellent temper and understanding, and was just the sort of person for whom a judicious wife would be likely to do wonders." Mr. Carleton, baffled in all his efforts, now sat down to investigate, more narrowly than ever, the bills which Miss Paulet had defrayed for her nephew; it struck him that they included not only the superfluities, but the necessities of life; what then could have become of Vernon's liberal allowance? Mr. Carleton determined privately to interrogate an individual in Vernon's service, whom some would denominate a page, some a tiger, and some a footboy, according to their respective modes of phraseology, as to the pursnits and whereabouts of his master. The "little page" indignantly refused half-a-crown, cast a relenting glance upon five shillings, acknowledged that he had some misgivings about his master at the sight of half-a-sovereign, and, when a whole one was put into his hand, made a full, true, and particular confession of every thing in his power to reveal. Vernon was in the habit of frequenting a gaming-house in Regent-street; how he was first led there the little page could not tell, but, as the circumstances of his introduction to that scene of vice may convey a useful warning to some of my readers, I will narrate them.

One evening, Vernon was walking down Regent-street with two young men of good character, and irreproachable habits; the one had recently arrived from the country, and his friend had, with praiseworthy perseverance, been escorting him to all the sights of London;—he had been stunned with music, stupified by lectures, bewildered by architecture, dazzled by paintings; not a talking canary, learned flea, or domino-playing dog had been suffered to escape him! "I have seen everything in London but a gaming-house," was his remark to his friend. "Then you shall be very shortly enlightened," replied the other, "I have once been shown the outside of a place of that description, and I am sure it is not more than twenty doors from us." "Nay," said Vernon, "do not let us expose ourselves to temptation; it is culpable to encourage by our presence that which in itself is so manifestly wrong, and we can neither wish to enrich the worthless frequenters of such a place at our expense, nor to win from them (as perhaps they would allow us at first to do) a portion of their ill gotten gains." "My conscience is quite at ease on that score," replied his companion, "I will deposit a very low stake, and if I win it, will give it in charity to the next 'Case of Real Distress,' that is properly authenticated in the newspapers; as for the encouragement of my presence, if that be deemed very valuable by the ruling powers of the establishment, the mortification will be proportionably great when they find that I never pay them a second visit." The visitor from the country expressed his acquiescence in these opinions, Vernon was restrained by false shame from offering any further opposition, and the trio entered, and received a ready welcome. They remained there for an hour; the country novice had lost a trifle, which he said he should willingly enter in his pocket-book as one of his initiation-fees for seeing the curiosities of London; his friend had won a small sum, of which he declared he should only consider himself the steward for the next "accredited case of real distress" in the Morning Post. Vernon had won more largely; his eye was kindled, and his cheek flushed, by success, and it was with difficulty his companions could persuade him to leave the fatal temple of vice which they had beguiled him into entering. This reckless and unadvised visit produced no evil to two of the party in question; the one regarded it as an evening exhibition, and a very stupid one;—the other had a natural aversion to cards and dice, and when he played a game at piquet with his mother, or a hit at backgammon with his father, considered that he had been making a noble sacrifice of inclination at the shrine of filial duty. Vernon, however, had in him all the elements of a gamester; the excitement of the scene appeared to place him in a new existence; he had also been somewhat annoyed by having exceeded his allowance, and imagined that the *rouge et noir* table was to open to him a mine of inexhaustible wealth; he again visited the house, was again successful, till at length his fortune changed, or more properly the plans changed of those who had from policy allowed him to be fortunate; he was plundered and victimized, and resolved to play till he should recover back his losses, but, instead of lessening the amount of them, he only added to it. How cautious ought we to be, not only to avoid temptation ourselves, but to avoid leading others into it. The snare may not be hurtful to our peculiar tastes and propensities, which may be fatally injurious to those of our friend; we should persist in walking in the narrow way, even although we rely on regaining it after a short deviation from it, for the sanction of our example may induce others to stray, who will never again have firmness to return to the path from whence they have wandered.

Mr. Carleton lost no time in proclaiming the evil deeds of Vernon, and his communication met with all the success which he wished. Mr. Anson forbade Vernon to continue his addresses to Helena, and Miss Paulet was absolutely stunned by the intelligence; she had no

idea that gaming ever existed in middling life, but had thought that its professors were entirely confined to earls and marquises on the one hand, and swindlers and black-legs on the other. Vernon was remonstrated with, admonished,—promised to amend, relapsed, and had too much candour to deny his relapse when questioned on the subject. Mr. Carleton had a long private interview with Miss Paulet, there was a word which he had frequently uttered in the course of it which kept ringing afterwards in her ear, even as though it had been some cabalistic spell constantly repeated by a mysterious voice;—that word was—"Disinheritance!"

POPULAR YEAR-BOOK.

August 16.—St. Roch's Day.

HARVEST HOME.

THE "Golden Legend" relates of St. Roch, or Rock, that he was healed of a pestilence by revelation of an angel; and afterwards, with touching and blessing, cured all the sick in the city of Placentia: that, being imprisoned, and about to depart this life, he prayed that he might live three days longer, in contemplation of the Passion, which was granted him; and that on the third day an angel came to him, saying, "O! Rock, God sendeth me for thy soul; what thou now desirest thou shouldst ask:—that St. Rock implored, that whoever prayed to him, after his decease, might be delivered from pestilence; and then gave up the ghost: that anon, an angel brought from heaven a table, whereon was divinely written, in letters of gold, that it was granted,—"That who that calleth on St. Rock meekly, he shall not be hurt with any hurt of pestilence;"—that the angel laid the table under St. Rock's head; and the people of the city buried him solemnly, and he was canonized by the Pope gloriously. The expression "sound as a roach," may have been derived from familiarity with the above medieval legend of this saint. He was esteemed the patron of all afflicted with the plague, and they believed in his ability to make them as "sound" as himself.

Among the churchwardens' accounts of St. Michael, Spurrier-gate, York, is the following entry:—

"1518.—Paid for writing of S. Royke Masse, 0l. 0s. 9d.," which "writing" was probably a new copy of the music appropriated to St. Roch's Day.

In Sir Thomas Overbury's "Characters," London, 1630, under that of the Franklin, he writes,—“He allows of honest pastime, and thinks not the bones of the dead anything bruised, or the worse for it, though the country lasses dance in the churchyard after even-song. Rock Monday, and the wake in summer, shrotings, the wakeful ketches on Christmas Eve, the hoky, or seed cake, [*i.e.*, that which is distributed to the people at harvest home,] these he yearly keeps, yet holds them no relics of popery.” A few years earlier, a poet sings:—

“I'll duly keep for thy delight, *Rock Monday*, and the wake,
Have shrotings, Christmas gambols, with the hoky and seed cake.”

St. Rock's Day was formerly celebrated in England as a general HARVEST HOME, a rural holiday, to which we have elsewhere briefly adverted, and which has been well styled, “the great August festival of the country.” The phrase “Harvest Home,” from the Saxon, *harfest*, or herb-feast, is defined to be, “the last load of the harvest, the feast at the end of the harvest, a song sung at the end of the harvest; the opportunity of gathering harvest treasure.” This festivity is of the most remote antiquity; probably, indeed, as old as agriculture itself. Among the heathens, the masters of families, when they had got in their harvest, were accustomed to feast with their servants who had laboured for them in tilling the ground. The antiquary, Bourne, is of opinion, that

the Pagans copied this usage from the Hebrews. In Christian countries, the rustics have always feasted and rejoiced at the close of harvest. In France, *temp.* Henry IV., the peasants at this season fixed upon some holiday to meet together, and have a little regale (by them called the *Harvest Gooling*); to which they invited not only each other, but even their masters, who pleased them greatly when they condescended to partake of it. Harvest Home was joyously celebrated by our ancestors, and has continued to be so among us to our own days. A traveller in England, in 1598, speaking of Windsor, relates,—“As we were returning to our inn, we happened to meet some country people celebrating their Harvest Home; their last load of corn they crown with flowers, having besides an image richly dressed, by which, perhaps, they would signify Ceres; this they keep moving about, while men and women, men and maid-servants, riding through the streets in the cart, shout as loud as they can, till they arrive at the barn.” A writer in 1661, observes, “The furmenty pot welcomes home the harvest cart, and the garland of flowers crowns the captain of the reapers; the battle of the field is now stoutly fought. The pipe and the tabor are now busily set at work; and the lad and the lass will have no lead on their heels. O! 'tis the merry time wherein honest neighbours make good cheer, and God is glorified in His blessings on the earth.” In Herrick's *Hesperides* are the following verses on the “Hock cart” [*i.e.*, that which brings home the last load of corn to the barn], or Harvest Home:—

“Come, sons of Summer, by whose toil
We are the lords of wine and oil,
By whose tough labours and rough hands,
We rip up first, then reap our lands.
Crown'd with the ears of corn, now come,
And to the pipe sing Harvest home;
Come forth, my lord, and see the Cart,
Drest up with all the country art.
See here a Mawkin, there a sheet,
As spotless, pure, as it is sweet:
The horses, mares, and frisking fillies
(Clad, all in linen, white as lilies),
The harvest swains and wenches bound
For joy to see the Hock Cart crown'd.
About the Cart, hear how the rout
Of rural younglings raise the shout;
Pressing before, some coming after,
Those with a shout, and these with laughter.
Some bless the Cart; some kiss the sheaves;
Some prank them up with oaken leaves:
Some cross the fill-horse, some, with great
Devotion, strike the home-borne wheat;
While other rustics, less attent
To prayers than to merriment,
Run after with their breeches rent.
Well, on, brave boys, to your lord's hearth,
Glittering with fire, where, for your mirth,
You shall see first the large and chief
Foundation of your feast, fat beef:
With upper stories, mutton, veal,
And bacon, which makes full the meal;
With sev'ral dishes standing by,
As here a custard, there a pie,
And here all tempting frumenty.
And for to make the merry cheer,
If smirking wine be wanting here,
There's that which drowns all care, stout beer.”

Such was an old English Harvest Home, in the “merrie” days of Charles II. The usages now, or, till lately, observed at this festival in various parts of Great Britain, are too numerous to be described at large; we must, therefore, confine ourselves to a brief account of such as seem most deserving of notice. A Scotch writer, in 1797, remarks, that it was the custom, till very recently, at Longforgan, in the county of Perth, to give what was called a *Maiden Feast*, upon the finishing of the Harvest; and to prepare for which, the last handful of corn reaped in the field was called the *Maiden*. It was generally contrived that this should fall into the

On the following day the party (having various

coloured ribands on their hats, and steeple or sugar-loaf formed caps, decked with coloured paper, &c.) go round among the neighbouring farmers to taste their horkey beer, and solicit largess. The money so collected is usually spent at night in the alehouse, where tobacco and ale are consumed by the men, and a tea table set out for their wives and sweethearts. In Kent, at the end of the harvest, a figure is composed of some of the best corn the field produces, and called an *ivy-girl*. This is afterwards curiously dressed by the women, and adorned with paper trimmings cut to resemble a cap, ruffles, handkerchief, &c. of the finest lace. It is brought home upon the wagon containing the last load of corn, and the reapers suppose that it entitles them to a supper at the expense of their employers. In Gloucestershire and Suffolk, when the last load enters the farm-yard, he who has the loudest and the clearest voice, mounts upon a neighbouring shed and shouts:

"We have ploughed, we have sowed,
We have reaped, we have mowed,
We have brought home every load,
Hip, hip, hip, *Harvest-home!*"

A correspondent in Hone's *Every Day Book* gives the following picturesque description of the Hock-cart and its accessories at Hawkesbury, on the top of Cotswold. "As we approached the isolated hamlet, we were 'aware' of a may-pole—that unsophisticated trophy of innocence, gaiety, and plenty; and as we drew near, saw that it was decorated with flowers and ribands fluttering in the evening breeze. Under it stood a wagon with its full complement of men, women, children, flowers, and corn, and a handsome team of horses tranquilly enjoying their share of the finery and revelry of the scene; for scarlet bows and sunflowers had been lavished on their winkers with no niggard hand. On the first horse sat a damsel, no doubt intending to represent Ceres; she had on, of course, a white dress and straw-bonnet—for could Ceres or any other goddess appear in a rural English festival in any other costume? A broad yellow sash encompassed a waist that evinced a glorious and enormous contempt for classical proportion and modern folly in its elaborate dimensions." Dr. E. D. Clarke relates that in Cambridgeshire, at the *Hawke*, as it is called, "a clown dressed in woman's clothes, having his face painted, his head decorated with ears of corn, and bearing about him other symbols of Ceres, is called the Harvest Queen, and carried in a wagon, with great pomp and loud shouts, through the streets, the horses being covered with white sheets." Herrick, as we have seen, in the verses before cited, informs us that the last-named practice was prevalent in his time.

RAMBLING RHYMES.¹

THE author of the volume of poetry bearing the above title, which now lies before us, is one of a class of men whose contributions to our poetical literature we receive, for the most part, with very peculiar feelings—with an interest strongly shaded by anxiety and misgiving. He is a labouring man,—a journeyman printer, we believe, in Edinburgh. In reviewing the works of men belonging to this class, the prevailing inclination with every critic of generous feeling is to praise, to overlook or dwell gently upon imperfections, which in no case are more pardonable, and to award with overflowing liberality commendation upon beauties and excellences, which, when they do appear, are no where more undoubtedly indicative of the existence of real native genius. The only counteracting feeling to this generous inclination is the fear lest injudicious praise, or the withholding of needful censure, should help to divert the

energies of the poetical aspirant from pursuits more conducive to his real welfare, to one in which he may have no ground for hope that he shall attain that high degree of excellence, which alone can compensate for the sacrifice of other and more practicable means of worldly advancement which he must make in entering upon it; or should foster sensibilities which, as unsuited for a social condition from which he has no means of emerging, must be a fruitful source of much discontent and unhappiness.

To men in a humble station in life, who belong to what we commonly call the labouring classes, and whose material enjoyments are therefore restricted to the bare necessities of life,—whose supply of these even is painfully irregular and uncertain, and the subject of many a feeling of distressful anxiety, of which, at least in relation to such matters, those in more favoured circumstances have no experience, the poetical temperament is either a very great blessing, a ray of heavenly light, gilding the homely furniture of their humble dwellings, and lighting up the gloom which surrounds them—a gift of ownership in the world of beauty and joy, whose lords are the nobility of Nature's creation,—or it is a very serious misfortune, causing an unfitness for their proper business in life, and creating feelings and tastes out of harmony with their actual condition; it is the one or other of these, according to the kind of it which they possess, and to the degree in which it is subordinated to the restraints of reason and judgment.

It is no easy matter to be a poet in the present day. The standard of poetical excellence is now placed so high—the faculty of writing very fair verses, chargeable with no striking defects of thought or expression, has become so common, that it is difficult to gain any share of public attention for compositions which in other times would have established an undoubted claim to a very respectable place in the roll of poets. Upon none does this depreciation in the value of secondary poetry press more heavily than upon the verse-stricken sons of toil. They have peculiar difficulties to contend with. Their education has necessarily been imperfect; their command of language is apt on that account to be insufficient to give adequate expression to the thoughts that struggle for utterance within them; their taste can seldom have been chastened and corrected by the habitual contemplation of the best models of ancient and modern times; and they have not the advantage of having their minds filled with those stores of classical allusion, which in many cases go far to conceal the absence of real poetical inspiration. Add to this the consideration that, in all ranks of society, among the educated as well as the uneducated, poetical feeling is far more common than poetical genius; that a keen susceptibility to those impressions of the objects by which we are surrounded, which constitute the materials of which the poet builds, is often possessed to a considerable extent, with a very slender share of ability to make any effective use of them,—with little of that creating and combining power by which the mind of the poet throws back all the impressions it receives in ever new and varied forms of beauty and sublimity,—and we shall not wonder that we so seldom receive from among the uneducated or imperfectly educated aspirants for poetical fame, anything which we should feel earnestly desirous of preserving for its own sake. It is not that poetical genius is more rarely to be found among them, or that the world is less willing to render it due homage when it does appear; but that that inferior gift, which approaches but does not reach to the elevation of genius, must in their case go forth unsupported by the artificial aids, and unclothed with the factitious ornaments, which enable the more favoured mediocrity of other classes to pass muster for a degree of excellence to which it has intrinsically no better claim. The highest praise which can often be bestowed in such cases, is that it is very sweet—very pretty—really wonderful, considering—Poor meed of praise for the young enthusiast, whose

(1) *Rambling Rhymes*. By Alexander Smart. Edinburgh: Menzies. 1845.

dreams by night and day, have been of bursting out into sudden blaze! Sad withering of all the fair blossoms which promised to his ardent hopes so luxuriant a harvest, and which he watched over and tended so fondly to the neglect of more worldly-profitable cares! To the rich or easily circumstanced poet, an unfavourable verdict from the critical tribunal is but a passing disappointment—the shock of a shower-bath—rude and unpleasant enough in its first encounter, but soon over, and leaving no injurious effects behind it. To his less favourably circumstanced brother it is a sentence of death—he has cast his all upon the die which has turned up against him; and desolate indeed is the feeling—sad and unavailing the regrets, with which he is thrown back upon the complaint—

“Alas! what boots it with incessant care
To tend the homely slighted shepherd's trade,
And strictly meditate the thankless Muse?
Were it not better done, as others use
To——”

have done anything else whatever?

The circumstances of the poor man's lot are seldom favourable to the healthy development of poetical feeling. The world, as we have already remarked, with all its sordid cares and anxieties, presses daily and hourly upon him with a closeness of immediate and engrossing interest, of which those in more favourable circumstances can have little conception. The questions “what shall I eat? what shall I drink? and wherewithal shall I be clothed?” are to him of almost daily recurrence, as matters of serious doubt and anxiety, leaving his mind little leisure or inclination for expatiating in the world of imagination. The things, too, with which he is placed in close connexion are in themselves ill fitted to suggest the thoughts and feelings which are most fitly shaped into poetic forms. Often living in a narrow and dirty street—in a dark and unhealthy dwelling—surrounded by rude and noisy, or dissipated and squalid neighbours—with few of the comforts and none of the luxuries of life about him—there is little external to him, from which the poet of humble life can select fit subjects for his muse. In such circumstances we cannot wonder that we should find the poetical temperament most frequently presenting its darker aspect, giving a keen perception of beauties which can never be realized, and a relish for enjoyments which can never be attained, and rendering to its possessor the inevitable circumstances of his condition an object of disgust and discontent. Poetical genius can, indeed, create beauty for itself amid the most unseemly and unlovely scenes—can hold converse with nature through every chink in the walls by which it is hemmed in—can attract towards itself the genuine feelings of human hearts, and clothe them in fitting forms of expression, even in the vilest haunts of misery and vice—will seek out everywhere in human faces for the image of God—if repelled from men and women, will find it in innocent children, in fair and yet uncontaminated young maidens, nay, though obscured and defaced, in some corner of many a heart deep sunk in debasement and sin. It can find a soul of good in all things evil, and throw its own light upon, and give its own colour to, the worst forms of evil by which it may be surrounded. It is “its own place, and of itself,” we might almost say, “can make a heaven of hell.” But such genius is a rare endowment, and, in the absence of it, poetical feeling can merely discern, and that with extraordinary keenness of perception, the deformities by which it may be surrounded—their want of harmony with the ideal of beauty with which itself is filled. Are we wrong in saying that such a gift, without the higher gift of genius, is no enviable possession for a poor man?

It would be doing great injustice to the author of the poems now before us, were it to be supposed that the unfavourable picture which we have drawn of the effects of the possession of poetical sensibilities without poetical

genius, by men in humble station, has been suggested by anything either in his personal history or in the character of his poetry. Of the former we know nothing, but we should infer from the cheerful tone of his writings that his lot has been one of fair average happiness. He writes like a contented man,—like one whose recollections of the scenes of his childhood and youth are associated with no painful remembrances, and who now, in the evening of his days, (for he has a son who is also a poet, and he cannot therefore be a very young man,) looks alike upon the past and the present with “the quiet of a loving eye.” We have no indications of remorse for past errors, or regret for disappointments. Every line bespeaks a healthy, well-balanced mind, understanding clearly its own position, and satisfied with it, and not likely to have suffered itself to be led astray by vivacity of temperament into any very devious paths. We should be much surprised, indeed, if, were we to make inquiry, we should not learn that Mr. Smart is a man of regular and domestic habits, of a gentle and kindly disposition, and of strong Scottish good sense.

But his poetical merits are of no mean order. Most of his poems being written in the Scottish dialect, will, of course, be better appreciated by his countrymen than by Englishmen, although in none of them is the Scotticism so broad as to be either unpleasant or unintelligible to an English ear. They are throughout distinguished by remarkably good taste, pervaded by a gentle and kindly spirit, and a genial sympathy with nature and natural feelings. Nothing more clearly evidences to us the genuineness of Mr. Smart's poetic talent, than the fact that he has not felt it necessary to look for his subjects beyond the range of familiar objects to be met with every day in that walk of life where his lot has been cast; he has not been driven by poverty of internal resources to regions which, having acquired by prescription a poetic character, claim it as of right, for whatever makes them or what pertains to them its theme, there to pick up the cast-off finery of former poets, wherewith to hide the defects of his own halting muse. Knowing that a true poet will find the soul of poetry wherever the face of nature is seen, and the voice of nature heard, he has felt his poetic vocation to be where it has pleased God to cast his worldly lot. But he has himself described the character of his poetry better than we can pretend to do, with a modest confidence, and a just appreciation of his own true place as a poet, which are very pleasing. “The author,” he says, in his preface, “can have no pretensions to the loftier attributes of song; and many of his pieces are of that class that does not admit of much poetical embellishment. But the harp of Apollo has many strings, and the field of poetry is as varied and boundless as universal nature. He must beg, therefore, to dissent from the opinion of those who cannot tolerate, or recognise as poetry, any strains but such as are of the highest order. Surely that wide world of humanity, the hopes and fears, the thoughts and affections, of the industrious poor, who form the great bulk of the human family, may be sung in unpretending strains of natural simplicity, that may find an echo in many a feeling breast; and though neither soaring into sublimity nor sinking into dulness, may still, in their true exposition of life and character, be impregnated with the best elements of song—the poetry of the human heart.”

We must here mention that a very favourable judgment of Mr. Smart's poetry has been pronounced by one of the highest, perhaps the very highest, critical authority now living,—Lord Jeffrey. In a letter written to the author in acknowledgment of a copy of a former edition of this work, his lordship thus expresses himself:—“I had scarcely read any of your little book when I acknowledged the receipt of it. I have now, however, gone through every word of it, and find I have more to thank you for than I was then aware of. I do not allude so much to the very flattering sonnet

you have been pleased to inscribe with my name, as to the many passages of great poetical beauty, and to the still greater number expressive of (and inspired by) those gentle affections and just and elevated sentiments which it is so delightful to find in the works of persons of the middling class, on whose time the calls of a necessary and often laborious industry must press so heavily. I cannot tell you the pride and the pleasure I have in such indications, not of cultivated intellect only, but of moral delicacy and elegant taste in the tradesmen and artisans of our country; and you will readily understand, therefore, both why I feel obliged to you for this new and remarkable proof of them, and disposed to do anything in my power to gratify and serve those in whom you take an interest." With such an attestation to his merits (as creditable to the heart and feelings of the eminent man from whom it emanates, as it is flattering to the humble poet to whom it is addressed,) Mr. Smart may well feel independent of inferior criticism.

The poems in this volume are classed under the following general heads:—Hobby-horses, Opinions, Recollections of Montrose (the author's native town), Rhymes and Songs for the Nursery and Miscellaneous pieces. Of these, decidedly the best in our opinion, are the Rhymes and Songs for the Nursery—a rather inapplicable title by the way; for the Rhymes and Songs, though suggested by the Nursery and circumstances connected with it, are anything but studiously levelled to the capacities of children. They paint, with a very happy vein of mingled humour and pathos, scenes such as the memory of all of us will readily recall, but in a style quite as well fitted to convey pleasure and instruction to parents as to children. But we shall let our readers judge of them for themselves by presenting them with two specimens. The first we have been so pleased with that we shall try whether our publisher cannot find an artist to place the sweet little errand-runner in proper person before us.

THE LITTLE ERRAND RUNNER.¹

I NEVER saw a bairnie yet,
An errand rin mair fleet than Mary,
And O she's proud the praise to get,
When hame she trips as light's a fairy.
In ae wee hand the change she grips,
And what she's sent for in the ither,
Then like a lintie in she skips,
Sae happy aye to please her mither.
She never stops wi' bairns to play,
But a' the road as she gaes trottin',
Croons to hersel what she's to say,
For fear a word should be forgotten;
And then as clear as A B C,
The message tells without a blunder,
And like a little eident bee,
She's hame again—a perfect wonder.
It's no for hire that Mary rins,
For what ye gi'e she'll never tease ye;
The best reward the lassie wins
Is just the pleasure aye to please ye.
If bairns would a' example tak',
And never on their errands tarry,
What happy hames they aye would mak',
Like our wee errand-rinnin' Mary!

The next is in a more solemn strain, but very beautiful.

A BROTHER'S DEATH.

I had a brother dear who died
In childhood's opening bloom,
And many a sad and tender thought
Springs from his early tomb;
And still the sad remembrance comes,
With all its former woe,
Although my little brother died
Full thirty years ago!

(1) See Illustration, p. 225.

It comes with all the tenderness
Of childhood's gentle hours,
When hand in hand we roved along,
To cull gay summer flowers;
Or wandered through the old church-yard,
Beneath the smiling sky,
And played among the lowly graves
Where he was soon to lie!

I see him yet, with locks of gold,
And eyes of heavenly blue,
With pale, pale brow, and ruddy cheeks—
Twin roses bathed in dew;
And when he pined in sore disease,
I thought my heart would break,
I could have laid me down and died
Most gladly for his sake.

And well do I remember still,
Beneath the starry sky,
In childish fancy I have traced
His bright abode on high;
I knew his spirit was in heaven,
And from some lovely star
I thought his gentle eye looked down,
And saw me from afar!

In solitude, at evening hour,
I've found it sad and sweet,
To muse among the dear old scenes
Trodden by his little feet;
And many an old-frequented spot,
Where we were wont to play,
Was hallowed by remembrance still,
In manhood's riper day.

A bank there was with wild flowers gay,
And whins¹ all blooming round,
Where once upon a summer day,
A small bird's nest he found;
I haunted so that sacred spot,
And paced it o'er and o'er,
My well-worn foot-prints on the grass
For many a day it bore.

And I have gazed upon his grave,
While tears have dimmed my eye,
To think that one so young and fair
In that low bed should lie;
Should lie unconscious of our woe,
Of all our love and care;
Unconscious of the summer sun,
That shone so sweetly there.

And I have lingered on the spot,
When years had rolled away,
And seen his little grave upturned
To mix with kindred clay.
Cold dust alone remained of all
Our former joy and pride,
And they who loved and mourned for him,
Now slumber by his side.

One or two of the poems in this volume are by Mr. Smart's son, a young man of high poetical promise. One of these, an ode, "To the Primrose," our readers have already seen in this magazine,² and, we are sure, admired, as indicating powers both of thought and expression of a very high order.

THE USE AND VALUE OF SMALL BIRDS IN A NEWLY CLEARED COUNTRY.

THERE was a large portico in front of the house, with a few steps leading up to it, and floored like a room; it was open at the sides, and had seats all round. Above, was either a slight wooden roof, painted like an awning, or a covering of lattice-work, over which a transplanted wild vine spread its luxuriant leaves and numerous clusters. These, though small, and rather too acid till sweetened by the frost, had a beautiful appearance. What gave an air of liberty and safety to these rustic

(1) Furze, in England.

(2) See No. 1, p. 16.

porticos, which always produced in my mind a sensation of pleasure that I know not how to define, was the number of little birds domesticated there. For their accommodation there was a small shelf built round, where they nestled, sacred from the touch of slaves and children, who were taught to regard them as the good genii of the place, not to be disturbed with impunity.

I do not recollect sparrows there, except the wood sparrow. These little birds were of various kinds peculiar to the country; but the one most frequent and familiar was a pretty little creature of a bright cinnamon colour, called a wren, though little resembling the one to which we give that name, for it is more sprightly and flies higher. Of these, and other small birds, hundreds gave and received protection around this hospitable dwelling. The protection they received consisted merely in the privilege of being let alone. That which they bestowed was of more importance than any inhabitant of Britain can imagine. In these new countries, where man has scarce asserted his dominion, life swarms abundant on every side; the insect population is numerous beyond belief, and the birds that feed on them are in proportion to their abundance. In process of time, when their sheltering woods are cleared, all these recede before their master, but not before his empire is fully established. These minute aerial foes are more harassing than the terrible inhabitants of the forest, and more difficult to expel. It is only by protecting, and in some sort domesticating, these little winged allies, who attack them in their own element, that the conqueror of the lion and tamer of the elephant can hope to sleep in peace, or eat his meals unpolluted. While breakfasting or drinking tea in the airy portico, which was often the scene of these meals, birds were constantly gliding over the table with a butterfly, grasshopper, or cicada in their bills, to feed their young, who were chirping above. These familiar inmates brushed by without ceremony, while the chimney swallow, the martin, and other hirundines in countless numbers darted past in pursuit of this aerial population, while the fields resounded with the ceaseless chirping of many gay insects unknown to our more temperate summers. These were now and then mingled with the animated and not unpleasing cry of the tree frog, a creature of that species, but of a light slender form, almost transparent, and of a lively green; it is dry to the touch, and has not the dank moisture of its aquatic relatives: in short, it is a pretty, lively creature, with a singular and cheerful note. This loud, and not unpleasing insect chorus, with the swarms of gay butterflies in constant motion, enlivened scenes to which the prevalence of woods, rising shade above shade on every side, would otherwise give a still and solemn aspect. . . . Round the house were different enclosures, which were all surrounded by simple deal fences. Now let not the genius that presides over pleasure grounds, nor any of his elegant votaries, scowl with disgust while I mention the unseemly ornaments which were exhibited on the stakes to which the deals of these same fences were bound. Truly, they consisted of the skeleton heads of horses and cattle in as great numbers as could be procured, stuck upon the aforesaid poles. This was not mere ornament either, but a most hospitable arrangement for the accommodation of the small familiar birds before described. The jaws are fixed on the pole, and the skull uppermost. The wren, on seeing a skull thus placed, never fails to enter by the orifice, which is too small to admit the hand of an infant, lines the pericranium with small twigs and horse hair, and there lays her eggs in full security. It is very amusing to see the little creature carelessly go out and in at the aperture, though you should be standing immediately beside it. Not satisfied with providing these singular asylums for their feathered friends, the negroes never fail to make a small round hole in the crown of every old hat they can lay their hands on, and nail it to the end of the kitchen for the same purpose.

You often see on such a one, at once, thirty or forty of these odd little domiciles, with the inhabitants busily going out and in. Besides all these salutary provisions for the domestic comfort of the birds, there was, in clearing the way for their first establishment, a tree always left in the middle of the back yard, for their sole emolument, this tree being purposely pollarded at Midsummer, when all the branches were full of sap. Wherever there had been a branch, the decay of the inside produced a hole; and every hole the habitation of a bird. These were of various kinds, some of which had a pleasing note, but, on the whole, these songsters are far inferior to ours.¹

THE SHEPHERDS OF LES BAS LANDES.

In the south-western portion of France, bounded on the west by the Atlantic, and on the south by the lower Pyrenees, is the barren and sterile tract, that from the number of its heaths has conferred the title of *Les Landes* on the department to which it belongs. Its superficial extent amounts to 3,600 square miles, but its population is so thinly scattered over the surface as not to exceed 240,000.

Being generally a level district, covered with heath, and intermixed with swamps, it may be naturally described as the most desolate and dreary portion of *La Belle France*. A few spots, like the oases of Africa, are to be found at long intervals of space, and near to these only can a little rye be grown, the rest exhibiting a dreary waste, dotted with heath, firs, or cork trees. The climate is very inimical to health; the heat in summer being scorching, and in winter the marshes being enveloped in dense fogs. From the level nature of the land, and from a considerable portion of it being under water, the shepherds have recourse to stilts, as represented in our illustration, and the dexterity which is manifested in their management, has often elicited wonder and admiration from the passing traveller, who may happen to encounter one of these wanderers of the wild in his progress. It however seldom occurs that any one, save the stilted shepherd of the *Landes*, breaks upon the appalling solitude of these melancholy regions. Except in the immediate vicinity of the rye-farms, the traveller would encounter but few traces of life or civilisation; no living forms would brighten the gloominess of the prospect but the slow movements of the herdsmen, and no sounds greet his ear but the subdued lowing of the herd. All around is "flat, stale, and" literally "unprofitable." The Shepherds of *Les Bas Landes* are particularly careful of their flocks, whose docility is remarkable. Not less so is the good understanding subsisting between the sheep and the dogs. The celerity with which the shepherds draw their scattered flocks around them is not more astonishing than the process by which they effect it is simple and beautiful. If they are at no great distance from him, he gives a peculiar whistle, and they leave off feeding, and obey the call; if they are afar off and scattered, he utters a shrill cry, and instantly the flocks are seen leaping over the swamps, and scampering towards him. When they have mustered around him, the shepherd sets off on his return to the cabin, or resting place he has secured, and the flock follow behind, like so many well-trained hounds. Their fine

(1) From Mrs. Grant's Memoirs of an American Lady.

The Shepherds of Les Bas Landes.

looking dogs, a couple of which are generally attached to each flock, have nobler duties to perform, than that of chasing the animals together, and biting the legs of stragglers. To their protection is confided the flock from the predatory expeditions of wolves and bears, against whose approach they are continually on the watch, and to whom they at once offer battle. So well aware are the sheep of the fatherly care of these dogs, and that they themselves have nothing to fear from them, that they crowd around them as if they really sought their protection, and dogs and sheep may be seen resting together in perfect harmony. Thus habituated to scenes of such gentleness and magnanimity, the shepherds themselves are brave, generous, and humane, and though, as may be imagined, for the most part plunged in the deepest ignorance, are highly sensitive among themselves

to the slightest dereliction from the strict paths of true morality.

ON THE MANNERS AND MYTHOLOGY OF THE SCANDINAVIANS.

THE records of mankind in every age show that the gradual progress of religion and civilisation has been from the east, the first seat of the human race; not growing in proportion to its advance, but leaving comparative darkness behind. When the light of the gospel dawned upon earth, Asia was already sunk in sloth and degradation; Greece retained only the reflection of departed glory; and in Rome was established the empire of the west, and the power that ruled all nations. Yet still further, on the extreme boundaries of the known world, amid the barren mountains and stormy seas of Scandinavia, there already existed, in no mean power and civilisation, the race whose posterity were destined, in the course of time, to spread over nearly every part of Europe; and, thence extending their might over the globe, to bring the knowledge of God to all lands.

The English trace their descent from this origin by two distinct branches, the Saxons and Normans, (to which may be added the Danes,) who successively ruled and peopled our island, leaving to the Celtic preoccupied of the soil scarce more than the coast of Wales and Cornwall. But of those ancestors of our greatness there is little commonly known. Their annals are too obscure, and, it might be said, too barbarous, to excite general interest; yet, though we are not indebted to this source for arts or science, classical literature or the records of Divine Revelation, it may be not without advantage to make some inquiry into the character and habits of a race from whom we have derived our very nature, and the energies which have accomplished so high a destiny; to learn how from the rudest fierceness grew up that spirit of invincible freedom, and by what untaught faith, or moral sense was the way prepared for the full comprehension and acceptance of that gospel, whose brightness, like a torch kindled amidst noxious vapours, soon languished and grew dim in the gross and impure atmosphere of the regions wherein its sacred fires first shone.

We cannot here attempt more than to point out a few traits preserved in the history and ancient literature of the Scandinavians, which appear to have distinguished them from remote time by virtues and heroism that were elsewhere unknown among the heathen. As with the Greeks, and most other nations whose early traditions have been preserved, their history and mythology are closely interwoven, and both are indebted chiefly to the fictions of later poets for the form in which they have descended to posterity. The oldest of their sacred books is said to be the *Voluspa*, or prophecy of *Vola*, from which the first *Edda* was compiled in the twelfth century of the Christian era. Of the latter only a small part has been preserved; and the second

Edda is the chief source of what knowledge we possess of their origin, and leaves, as may be supposed, abundant room for antiquarian doubts and conjecture. According to the most generally received tradition, *Odin*, the father and founder of the race, when involved in the defeat of *Mithridates* by the Roman arms, led his warlike tribes from the Asiatic plains, on the borders of *Lake Meotis*, to the wild and scarce-inhabited regions bound by the north seas. He became, after death, the object of their hero-worship, and either was, or is confounded with, their principal deity. He was the type of warrior excellence; his immortal mansion, the *Valhalla*, was open only to those who died in battle; and valour, whether victorious or defeated, was extolled as the highest virtue—the favourite theme of the *Skalds* or bards, whose office it was to incite to and record its exploits.

Friga, the wife of *Odin*, and their sons, together with a host of inferior gods, shared in his divine honours; but, in the midst of this wild idolatry, there arose a far deeper and juster sense of the Eternal. They felt that these deities of their own creation were but shadows, and that, though triumphant for a time over the powers of darkness, *Lok* and his giant brood, yet they also must yield at last to the universal law of destruction and death.

Above even *Odin* in knowledge and power were the three mysterious sisters, the *Nornas* or *Fates*, *Urda*, *Varanda*, and *Skulda*, the Past, the Present, and the Future, to whom alone were confided the destinies of earth and heaven; a more sublime conception than that of the Grecian *Parce*, with whom they have many points of resemblance. Yet supreme over these, and beyond the scrutiny of human thought, they acknowledged One omnipotent Being, the All-Father, alone immutable and omniscient. This faith shines through the darkness of a creed so mournful in the consciousness of its own imperfection, and brightens the futurity to which unassisted reason could discover no surer termination than utter oblivion. Accustomed to nature in her sternest mood, the grandeur of rocky mountains, the gloom of interminable pine forests, tempestuous waves, and dark inclement skies, whose brief summer might recall the cherished traditions of their ancient southern home—the ever sun-bright *Asgaard*; removed from all that can minister to sensual indulgence, and in the habitual pursuit of danger and violent death, the thoughts and imagination of this people appear to have dwelt with peculiar intensity on the life to come; looking beyond the grave for the rest and joy they disdained to seek on earth. The same causes tended to produce elevation and refinement of moral feeling; and it is remarkable

(1) The *Nornas* must not be confounded with the *Valkyrs* or *Choosers of the slain*, the "Fatal Sisters" of *Gray*; whose office more nearly resembled that of the *Parce*.

that with habits so exclusively warlike, and counting valour as the highest virtue among men, the Scandinavians attained to the sense of something yet more sacred in purity and gentleness, and were distinguished above every other race by veneration towards women—a sentiment the most ennobling to human nature, and one which cannot exist in a depraved, a barbarous, or a luxurious state of society.

If the following passage from the Edda conveys, as we are told it does, the pristine creed of this people, then had they preserved in greater purity than any other heathen nation the primæval knowledge of God and his law: its language nearly approaches to that of Scripture. "God made the heavens and the earth, with all that they contain; and especially man, to whom he gave an immortal soul, although his body perish in the dust, or be reduced to ashes. The just shall live for ever with Him in heaven; but the wicked shall be cast down to hell. Heaven shall remain when the skies and the earth have been consumed by fire; and there good and holy men shall dwell for ever." The tradition of an universal deluge, from which one single family was preserved, is found here, as, indeed, it exists in every part of the world; but even in minuter particulars the resemblance to the records of revealed religion is remarkable. Lok, the antagonist of the gods, the evil one, is described as a liar, and the father of lies; his three children are the wolf, Fenris, the serpent, Midgard, and Hela,—destruction, sin, and death. Here, also, we find mention of the sign of the cross as a religious symbol, the use of water in naming a child, and the occurrence of the triune form of worship. These, however, may, for the most part, be referred to an Oriental origin; and since the learned are agreed that the Scandinavians derived their language from the Sanscrit, it is reasonable to suppose that they borrowed their earliest religious doctrines from the same source.

In the fable of Balder, which is closely interwoven with the whole system of northern mythology, modern writers have discovered or imagined a singular resemblance with, and, as it were, a foreshadowing of the mission and death of Christ. This comparison is beautifully, but perhaps somewhat too fancifully, drawn out in several of the popular tales of Fouqué and Frederika Bremer, which have recently become so well known to the English reader. Balder is described in the Sagas as the son of Odin, the most beautiful and beloved among the deities. He was the impersonation of light, of wisdom, and of benevolence; and the judgments he has pronounced can never be altered. His dwelling was called Bredablik, or wide-shining; wherein nothing base or unholy could enter. He was slain by Lok, through the agency of his brother, the blind Hodur, and his death was the type and the forerunner of the destruction of the gods, the reign of universal night. But Balder is again to rise from the dead, together with Hodur, who had deprived him of life, and who perished for the deed; and they will both live together in a new and fairer dwelling, sprung from the wreck of earth and sky. An allusion to this story is contained in Gray's ode from the Nofse, "The Descent of Odin," in which the "king of men" is described as entering the drear abode of Hela, for the purpose of inquiring from the "prophetess of evil," Angerbode, into the fate of his beloved son, and the manner in which his death should be avenged.

The anger of the gods was at length so violently kindled against Lok, that they all united together for his overthrow; and, having seized him, notwithstanding his many subterfuges, he was confined in a cavern under ground, and bound with a sevenfold chain of iron, and a serpent, dropping perpetual venom, was suspended over his head. But the "twilight of the gods," the end of all things, must at last arrive. That day will be preceded by years of strife and misery, of desolating winter, of crime and war. The sun and moon will be extinguished, the stars fall from heaven; then Lok

and his evil progeny break forth, and with the giants attack the dwelling of Odin; and thus begins the great battle, which concludes in the extermination of both parties, and the destruction of the world. Hear how this is described in the words of the ancient Voluspa:—"What is doing among the gods? what is doing among the genii? The land of the giants is filled with uproar; the deities collect and assemble together. The dwarfs sigh and groan before the doors of their caverns. Oh! ye inhabitants of the mountains, can you say whether anything will yet remain in existence? The sun is darkened; the earth is overwhelmed in the sea; the shining stars fall from heaven; a vapour, mixed with fire, arises; a vehement heat prevails even in heaven itself." "But how," asks the inquirer in the Edda, "can this be reconciled with the assurance that mankind shall live for ever?" Then follows a description of the new earth, and of the abodes of joy or misery, prepared for the good and for the evil, in a future state. The highest and best of these is Gimle (or Heaven), and here again we may quote the saying of the Runic Sybil:—"I know that there is a place brighter than the sun, and entirely covered with gold, in the city of Gimle: there the virtuous are to reside; there they shall live happy throughout all ages."

Even these few extracts are sufficient to show the opinions held by our northern forefathers on that most important subject, the existence after life; and to prove how sublime, and often just, were their speculations, whom we are accustomed to look upon as barbarous. Mixed up with much that is wild or trivial, the Edda, and the still more ancient poems from which it was compiled, contain many passages worthy of attention, for the nobleness of their sentiments, and their moral wisdom and truth. We find here the rudiments of those qualities which, directed by the perfect law of Christianity, and polished by civilisation, blazed forth over Europe in later times, in the splendour of chivalry; in the enthusiastic heroism of faith, which lifts man above the earth, and makes even his passions subservient to a more exalted destination. Neither can we fail to regret that so little should be preserved of a literature and religion containing much that is admirable, and that the study of what remains should be so generally neglected, while the more corrupt paganism of Greece and Rome has been carefully made familiar to our minds, and its language permitted too often to usurp the place of truth and common sense.

H. L.

OLD RECORDS OF NEW ROADS.

No. II.

THE South-Western train is to start in an hour from Nine Elms, and we have yet to cross some of the many bridges of which the English are so justly proud. Fortunately none of them are now obstructed by rows of shops on either side, as London Bridge formerly was, and as the Rialto of Venice and the Ponte Vecchio at Florence still are. Nor is it easy to imagine what further improvement modern invention could devise in these magnificent viaducts. One of the titles most honoured in the sovereign of the Papal States is that of "the great bridge maker;" and, whether applied positively to this world or metaphorically to the next, it certainly lays claim to our gratitude. So must every one feel who rolls on in uninterrupted facility across any of the bridges that contribute equally to the convenience and the ornament of our capital.

The one nearest to the Nine Elms is that of Vauxhall, so called from a manor in the parish of Lambeth, to which it gives entrance. Dr. Ducarel states that this

manor once belonged to him whom Pennant styles "that desperate miscreant, Guy Faux or Vaux." Mr. Lysons, on the contrary, asserts that the traitor was never lord of that manor, which he says was the property of Fowkes de Brent. But the conspirators of the Gunpowder Plot certainly held their meetings in a private house at Lambeth, which, by a strange coincidence, was destroyed by fire, two and thirty years afterwards. (1635.)

And now,—On, on, we drive! till, as we approach the goal, we find ourselves in a throng of carriages, all merging like rays towards a common centre; gigs, cabs, coaches, chariots, clarences, broughams, vehicles of every size and denomination, many of which were unknown even by name to our grandfathers, all hurrying onwards with their respective loads of anxious and inquisitive countenances. Then here comes a monster omnibus—the megatherium of conveyances; proud equally of its size and its capacity, it looks down upon all lesser equipages as if it alone was the glory of modern invention. Alas! like other mushroom grandeurs, the insignificance of its origin is forgotten in the magnitude of its present pretensions.

In the latter end of the last century a gentleman of the name of Moore invented a kind of coach which was, in truth, an embryo omnibus; it is described to have been "a common coach reversed, containing six passengers, swung between two large wheels nine feet six inches in diameter;" the driver was placed on the top, and one horse in shafts is stated to have "carried these seven persons with the greatest ease from Cheapside to the top of Highgate hill." (1770.)

But drive on! we shall be too late! hurry and excitement is the order of the day. We pass through the ticket room, scarcely stopping to ascertain if the change for our sovereign is correct, or how much of our luggage is left in the conveyance that brought us hither; and we are almost inclined to grumble if there is a pause of a few moments, before we start on our impetuous career.

And this is the Nine Elms! The place so long noted as one of the limits of the parish of Lambeth in the borough of Southwark. In Chamberlain's Survey, printed in 1769, it would appear that even then, that suburb of London was almost a rustic village, as he describes the boundaries of Lambeth parish to be "from the landing-place northward and eastward along the water-side to the Old Barge House, and thence on to the corner of St. George's-fields, and so on the western side of the ditch to near the Dog and Duck, and thence cross the fields (leaving the ditch on the left hand to Kennington, and thence southward to Kennington Common,) to the cross digged there in the ground, and then cross the fields to the back of Newberry Garden, where they mark on an oaken tree. Thence to Camberwell town through a lane near Dulwich, and so to Delper, also Woodsfadne; and thence near two miles southerly to Friar's Oak, at which oak meet the parishes of Lambeth, Camberwell, Streatham, and Battersea; and from this oak they go to Norwoods Gate, and then to Streatham Common to avoid a wood; and thence to the Windmill House, and through a wood to Cole's farm; which, leaving to the S. E., they pass to the road leading from London to Croydon; which, crossing, they go to Blake Hall and thence to Broom Hill; and thence they go the road that leads to Kennington, and along that road to NINE ELMS; and thence towards Battersea, and thence backwards into the road, and through Havershall to the Thames, and so along the water-side to the plying-place at Lambeth; being, in the whole, a circumference of fourteen miles and a-half."

Where are now the "fields" and the "commons," and the "Friar's oak," and the Windmill house with its adjacent woods? Even the Nine Elms live but traditionally, as there is little connexion between their rural appellation and the substantial and extensive edifice that, under that name, now forms the terminus

of the South-Western Railway; while the St. George's Fields, where, in comparatively recent times,

"Men and maids came out to play
On a sunshine holiday,"

had become, even in Pennant's time, "the wonder of foreigners approaching by this road to our capital, through avenues of lamps of magnificent breadth and goodness." "I have heard," says he, "that a foreign ambassador, who happened to make his entry at night, imagined that 'these illuminations' were in honour of his arrival, and, as he modestly expressed, more than he could have expected." Be it remembered, too, that this outpouring of national pride was written by Pennant before the days of gasometers.

In St. George's Fields, tessellated pavements, coins, and other relics of the Romans, have been discovered; and it is supposed to have been the site of one of their summer lounges, as these fields, from their distance from the river, might have admitted of a temporary occupation; although "its neighbour, Lambeth Marsh," was, on the arrival of the Romans, an extensive lake. The remains of the embankments made by them to reclaim the land are still to be recognised in the names of "Bankside," "Narrow Wall," and similar designations of streets and lanes, now existing. Nevertheless, in the 17th century Lambeth Marsh was overflowed with water; and, even so late as within the last eighty years, the abstracts of accounts laid before the Court of Aldermen by the Blackfriars' Bridge Committee included a charge for "Seventy thousand loads of rubbish laid on the Marsh grounds, on the Surrey side of Blackfriars Bridge, towards making the new roads from thence, by the Magdalen Hospital, to the turnpike, in order to give it a solidity before gravelling."

Six and thirty years afterwards, (1806,) the ground had improved so much, that, it was computed, at least two hundred and fifty acres of Lambeth parish were occupied by market gardeners; but since then, buildings have multiplied in such an incredible ratio, that, like the railways, the calculation of them for one year will scarcely form a datum for that of the ensuing one.

This parish has been the scene of many interesting events in English history. In the ancient royalty of Chenintuna, (now Kennington,) stood a royal mansion, where Hardikanute met his death—some authors say, by poison; others attribute it to his intemperance; as he is said to have usually indulged "in four meals of meat a day."

Spede, who dedicated his Chronicle to James I. (1632), thus mentions the circumstance:—

"At the celebration of a great marriage contracted betwixt a Danish lord, called Canute Prudan, and Lady Githa, the daughter of a nobleman, whose name was Osgot Clappa, (Lord of the Manor of Clapham,) in a solemn assemblée and banquet, at Lambeth; revelling and carousing amidst his cups, he sodainely fell downe, without speech or breath; whose losse was the lesse lamented for his excesse, riotousnesse, and vnwonted exactions. . . . Yea, so farre were all sorts from bewailing him, that, in regard of the freedome from the Danish yoke, which they attained ever since by his decease, ever since, among the common people, the day of his death is annually celebrated with open pastimes in the streets, (as the old Romans kept their fregalia for clearing out of their rings,) which time is now called Hocktide, or Huextyde, signifying a time of scorning or contempt, which fell upon the Danes by his death."

Some writers have conjectured that this feast commemorates the great slaughter of the Danes in the time of Etheldred, "they being all slain throughout England in one day, mostly by women;" whence it comes to pass that the women, to this day, bear the chief rule in this feast, stopping all passengers with ropes and chains, and laying hold on them and exacting some small matter of them; with part thereof they make merry, and part

they dispose of to pious uses, such as the reparations of their churches, &c. Accordingly, in a book of accounts of the Churchwardens of Lambeth, are several entries of the sums collected in each year, at the Hocktyde season, such as—

	S.	D.
1516-17.—Item, for Oke money of the men	v	
Item, for Oke money of the wives	vi	iv
1520-1.—Item, of my Lady of Norfolk, for Hokmoney	xxxii	0 iii ob
1556-7.—Item, of Godman Bundell's wife, Godman Jackson's wife, and Godwife Tegg, for Hoxcemoney by them received for the Church	xii	0

Hocktyde was celebrated on the Monday and Tuesday in the second week after Easter; the first day being devoted to the men, who "then hocked (or bound) their wives, knowing that, by the usage of Hocktyde, they were to be publicly subordinate to them on the Tuesday." The latter feast was considered the most solemn, thence called Binding Tuesday, the name of Hocktyde being derived, by some etymologists, from the bonds of wedlock, in "Hochzeit," or wedding.

Although, at the time of the Reformation when these sources of Church revenue ceased, many sports and pastimes fell, consequently, into disuse, yet in comparatively recent times Shrove Tuesday was celebrated in many parts of England by a kind of dance, "wherein men and women used to bind one another;" and to this day a graceful dance, called the "Handkerchief Dance," is common amongst the lower Irish, which appears, at least in its movements, to resemble the Hocktyde of other days.

But to return to Lambeth. At this palace of Kennington the usurper Harold, without any formality, snatched the crown, and placed it on his own head; and in after times Henry III. here held a solemn Christmas, and also a Parliament. Subsequently Henry VIII. exchanged the manor of Kennington and its palace, with Aldridge, Bishop of Carlisle, for certain houses in the Strand; and thenceforward the royal mansion was called Carlisle House. Several small houses are now erected on its site, which still belong to that See.

The parish of Lambeth also contained another remarkable manor, which, at the time of the Conquest, (1066,) belonged to the Countess Goda, or Garda, sister to William of Normandy. She bestowed it on the Church of Rochester, in whose possession it remained till the reign of Richard I. (1197,) when the Bishop and Church of Rochester granted "their manor of Lambeth, with the advowson, to Hubert Walter, Archbishop of Canterbury, and his successors, in exchange for the manor of Durente," &c.

This Archbishop Walter, and his immediate successors, made the North manor, or Rochester House, (as it was then indifferently called,) their Episcopal residence, and so enlarged and improved it as to give it a just claim to be called Lambeth Palace; but by degrees it was suffered to become ruinous in the troublous times of King John, till a singular incident in the life of Archbishop Boniface occasioned its preservation.

That Prelate being of a wrathful and turbulent disposition, insisted (1292) on assuming the duties of Visitor of the Priory of St. Bartholomew, to which office he had no right; and, on the monks respectfully assuring him that those duties did not belong to the Archbishops, the exasperated prelate rushed on the superior, knocked him down, beat and buffeted him, tore the cape off his back, and stamped on it like one possessed, whilst his attendants similarly maltreated the unfortunate monks. This intemperate ebullition of passion brought down on Boniface not only the censure of Pope Honorius III., but also such popular odium,

that, in deprecation of both, he made compensation for his violence by voluntarily rebuilding a great part of Lambeth Palace, and expending considerable sums in its embellishment. His successor, the munificent Archbishop Chicheley, who had been educated by William of Wykeham, and imbibed his taste, further improved it; and, amongst other additions, he built the Lollards' Tower, which subsequently became the horrible prison of the followers of Wickliffe.

From the time of Richard I. to the present, Lambeth has always been the residence of the Archbishop of Canterbury, with the single exception of those years of anarchy and civil war, when that holy office was suspended. The year before King Charles's martyrdom, the parliament, (1648,) in the intoxication of its powers, caused "Lambeth House (as they designated it) to be put up to sale, and it was purchased with the Manor for the sum of 7073*l.* 0*s.* 8*d.*, jointly by Thomas Scott and Mathew Hardy. The former was Secretary of State to the Protector, and one of the persons who sat on the King's trial, for which he was executed at Charing Cross in 1660. On dividing the purchase between them, the palace fell to the share of Scott, who turned the chapel into a dancing-room, and sacrilegiously opened the tomb of Archbishop Parker, who had been, at his own request, buried beneath the altar. The leaden coffin in which he lay was sold to a plumber, and his corpse was thrown into a hole in one of the outhouses, from whence, however, it was subsequently recovered and re-interred. Such were the enormities committed by these fanatics in the name of Religion! their pretext for these outrages being that, at the time of the Reformation, the protestant Archbishop Parker had, with true Christian charity, given an asylum to the Roman Catholic Bishops, Tunstal and Thirlyke, both excellent and learned men, who were deprived of their dignities on account of their adherence to the Church of Rome.

1660.—At the Restoration, when the venerable Juxon was appointed to the see of Canterbury, one of his first works was to restore Lambeth Palace to more than its pristine splendour. He rebuilt the Great Hall on the old model,—it is 98 feet long by 38 feet broad, and has a Gothic roof,—it alone cost him 10,500*l.* Here the Archbishop, when at dinner, sat with his chosen guests at the high table, where none but nobility or privy counsellors were admitted. The Steward with the servants, (who were gentry of the better rank,) sat at the table on the right hand of his Grace; the Bishops, Clergy, and others were placed at the Almoner's table on the left; whilst the idle poor, who waited in crowds outside the gate, were fed with the meats which were left from the rich man's feast.

Years rolled on, and Juxon died. He was called to prove the truth of his own observation to King Charles on the scaffold, "There is but one stage more to carry us from earth to heaven." The place of his glory knew him no more, and other priests and other rites succeeded. But whilst Sancroft and his contemporaries were reveling in that gorgeous hall, what breaking heart sought an asylum in the humble parish church of Lambeth, whose plain gothic tower rises a few paces distant from the palace?

It was on an inclement night in December 1688, that Mary D'Esté,—the unhappy queen of James II.—fled with her infant boy from the palace of Whitehall, and took refuge under the walls of this venerable church. The rain fell in torrents whilst she waited a long hour, till a common coach was procured from the nearest inn to convey them to Gravesend, whence she sailed never to return. During that agitating hour of aggravated misery, how might the bereaved wife—the dethroned Queen—have looked with envy on the tombs of the great and good, by which she was surrounded! How might she have moralized on the monuments of Tunstal, and Thirlyke, and others! But the moral availed not, and Mary D'Esté left the

church, to wander, another example of the wretchedness which bigotry and ambition inflict whenever they prevail!

And now the signal is given,—the boiler steams and hisses,—the doors of the carriages are authoritatively slammed to, and we rush forwards without horses—without wings—apparently without any extraneous aid, and, before we are well conscious of having left what an old writer calls “the Village of Lance-hithe (dirty harbour),”—behold we have glided over Battersea fields! In our transit we *might* have seen Chelsea Hospital, and Hampstead, and Highgate,—we *might* have beheld the beautiful dome of Saint Paul's, or the windings of the silvery Thames; but here there is no opportunity for “long and lingering looks behind.”—The train is shot like an arrow up a gradual rise of half a mile,—is carried over the road from Clapham to Battersea,—and, “brief as the lightning in a collied night,”—behold! we are at the Wandsworth Station.

The village of Wandsworth not only owes its name to the little river Wandle, on which it stands, but to it, likewise, owes the manufactories for which it has been long celebrated. Of these, the most ancient appears to have been one of brass plates for frying-pans and other culinary vessels, established by some Dutchmen centuries ago, who long kept their craft a mystery. Perhaps to that mystery was owing the value set upon these utensils in former days, as we find that spits, gridirons, and other articles of kitchen furniture, are included in the list of Crown Jewels, so late as Henry V.,—as well as “1 frying-panne, 1 salice, and 1 laddell d'argent.”

A manufacture of hats was also established at Wandsworth, by some French Protestant Refugees, in the reign of Louis XIV., or more properly in that of Madame de Maintenon; and, at this day, on the banks of the Wandle are established various other branches of industry, dependent on the different mills and other machinery turned by its stream, which, before their erection, was no less remarkable for the excellence of its fish as eulogized by Izaak Walton.

Wandsworth is also noted for having been the birth-place of that singular character, Henry Smith, commonly called Dog Smith, from having been always accompanied by one of that species. This eccentric man, who lived in the reign of Queen Elizabeth, was originally a silversmith in London, where he made a large fortune, but to increase it he took up the trade of begging, in which he continued till his death (1627). In his life-time he gave to six different towns, “one thousand pounds a-peece to buy lands in perpetuity, for the relieve and setting poore people on work.” He left by his will legacies to several of the nobility, besides charitable bequests to an incredible amount; and he further left large sums to his poor kindred; “such as were aged, impotent, and unable to help themselves, and especially to the poorest of his sister's children.” A monument is erected to his memory in Wandsworth church, on which these bequests are specifically recorded.

There are but few historical reminiscences connected with Wandsworth, except that, in the reign of Richard II., the citizens of London, who had been deprived of their privileges, sent a deputation of four hundred members of their Corporation to meet his Majesty at that town on his road from Shene, and to implore his pardon, which he graciously granted; and, upon their earnest entreaty, he rode through the City of London on his return to Westminster, on which occasion, the grateful citizens received him with extraordinary magnificence.

Perhaps it may not be irrelevant to observe, that the ancient Palace of Shene was, according to Camden, so called from its shining, or splendour. “Here it was,” he continues, “that the most potent prince, King Edward III., after he had lived long enough both to glory and nature, dy'd of grief for the loss of his warlike son. Here also dy'd Anne, wife of King Richard II.,

sister to Wenzeslaus, Emperor, and daughter to the Emperor Charles IV. She first taught the Englishwomen that way of riding on horseback which is now in use. Whereas formerly, their custom was, (though a very unbecoming one,) to ride astride like the men. Her husband laid her death so much to heart, and mourned so immoderately, that he neglected and even abhorred the very house. But King Henry V. beautified it with new buildings, and in Shene, (an adjoining little village,) he founded a monastery of Carthusians, which he called Bethlehem. In Henry VII.'s time, this royal seat was quite burnt down by a most lamentable fire, but, like a phoenix, sprung again out of its own ashes by the assistance of the same Henry, and took the new name of Richmond, from that country whereof he had been Earl, whilst a private person. This Henry had scarce put the last hand to his new structure, but he ended his days here. From hence it was, also, that ninety years after, his grandchild, the most serene Queen Elizabeth, after she had, as it were, glutted nature with length of days upon earth, (for she was about seventy years of age,) was received by Almighty God into the Heavenly Quire.”

This, I acknowledge, is rather a wide digression from the line of the South-Western Railway. But as Shakespeare says:—

“I must have liberty,
Withal as large a charter as the wind,
To blow on whom I please,—for so fools have.”

And now to return to Wandsworth: one of its hamlets is that of Garrett, where, till within this last century, it was customary to hold a mock election on the occasion of every new Parliament. This burlesque exhibition consisted of the representation of several assumed characters by individuals in low life, who were furnished by the publicans and others with fine clothes, and gay equipment; and, so provided, went round the parish as candidates for the Mayoralty. This burlesque custom gave rise to Foote's well-known farce of “The Mayor of Garrett.” The hamlet itself, about two centuries ago, contained only one house, which was called “the Garrett,” now it consists of more than a hundred.

Formerly miles were counted by hours,—in those days we reckon them by minutes! We have passed under the road from Wandsworth to Tooting,—and over Garrett Lane and the river Wandle (or Vandal). We have apparently cut in two the road from Wandsworth to Merton, and lo! we already hear “Wimbledon Station” re-echoed from side to side.

ON THE SUPPOSED POWER OF CERTAIN ANIMALS TO SEE IN THE DARK.

THE popular belief that cats see in the dark derives abundant support from the recorded opinions of eminent naturalists. Buffon says, “the eyes of the cat shine in the dark somewhat like diamonds, which throw out, during the night, the light with which they were, in a manner, impregnated during the day.” Valmont de Bamares says, “the pupil of the cat is, during the night, still deeply imbued with the light of the day;” and again, “the eyes of the cat are, during the night, so imbued with light, that they then appear very shining and luminous.” Spallanzani says, “the eyes of cats, polecats, and several other animals, shine in the dark like two small tapers,” and he asserts that this light is phosphoric. M. Dessaignes, in his Memoir on Phosphorescence, says, “the eyes of certain animals have the faculty of inflaming, and of appearing as if on fire in the dark.” Treviranus says, “the eyes of the cat shine where no rays of light penetrate, and the light must in many, if not in all cases, proceed from the eye itself.” The same authority also records the case of two Albinoes, a boy and a girl, whose eyes were, as he calls it, phosphorescent. Late in the evening they

displayed a yellowish brightness, which darted forth in fiery coruscations or globules from the interior of the eyes. Michaelis relates, that, for many years, during the interval between day and night, and during the night itself, he observed irradiations of light issuing from his eyes, sometimes so strong that he could read the smallest print.

Without venturing to place in the above category the assertion of another naturalist, that "a person is said to have recognised a robber by the light produced by a blow on the eye," and being strongly of opinion that the effects described by so respectable an authority as Michaelis proceeded from disease, we would remark that the other authorities speak, not from experiment, but from cursory observation and the reports of others. That the eyes of the cat do shine in the dark is to a certain extent true; but we have to inquire whether by *dark* is meant the entire absence of light; and it will be found that the solution of this question will dispose of several assertions and theories which, during many centuries, have perplexed this subject.

A few years ago, Dr. Karl Ludwig Esser published in Karsten's Archives the results of an experimental inquiry on the luminous appearance of the eyes of the cat and other animals; and about the same time M. Prevost also produced a Memoir on the same subject.

Dr. Esser is careful to distinguish between such animals as really evolve light, and those which only reflect it. Among the former he recognises the myriads of medusæ which often light up large tracts of the ocean's surface; and luminous insects. He also admits that among the higher animals a real phosphorescence often occurs: such is the light emitted by the eggs of the lizard; the luminousness of the perspired matter in men and horses; the electrical light evolved by stroking the back of the cat, &c. He next proceeds to inquire whether light is actually evolved from the eyes.

Having brought a cat into a half-darkened room, he observed from a certain direction, that the eyes of the animal, when opposite the window, sparkled very brilliantly, but that in other positions the light suddenly vanished. On causing the cat to be held so as to exhibit the light, and then gradually darkening the room, the light entirely disappeared when the room was made quite dark.

In another experiment, a cat was placed opposite the window in a darkened room. A few rays were permitted to enter, so as to fall upon the face of the animal, while the observer stood with his back to the window. The light of the cat's eyes was of a beautiful green colour, but it vanished entirely when the observer turned his head, or the cat her eyes, a little on one side. By adjusting the light, one or both of the cat's eyes were made to shine. In proportion as the pupil was dilated the eyes were brilliant. By suddenly admitting a strong glare of light into the room, the pupil contracted, and then suddenly darkening the room, the eye exhibited a small round luminous point, which enlarged as the pupil dilated.

The eyes of the cat sparkle most when the animal is in a lurking position, or in a state of irritation. Indeed, the eyes of all animals, as well as of man, appear brighter during rage than in a quiescent state; a circumstance not forgotten by Collins, in his Ode on the Passions, where he describes Anger, "his eyes on fire." It is said to arise from an increased secretion of the lachrymal fluid on the surface of the eye, by which fluid the light is rendered more brilliant in consequence of increased reflection.

Dr. Esser examined the eyes of cats while under the influence of rage and irritation; as also while they were pleased and enjoying their food, and while they were perfectly tranquil; but, in places absolutely dark, he never discovered the slightest trace of light in the eyes of these animals, and he has no doubt that in all cases where cats' eyes have been seen to shine in dark places, such as a cellar, that light penetrated through some

window or aperture, and fell upon the eyes of the animal as it turned towards the opening, while the observer was favourably situated to obtain a view of the reflection.

To prove more clearly that this light does not depend upon the will of the animal, nor upon its angry passions, experiments were repeated on the head of a dead cat. The sun's rays were admitted through a small aperture, and falling immediately upon the eyes, caused them to glow with a beautiful green light, more vivid even than in the case of a living animal, on account of the increased dilatation of the pupil.

Dr. Esser remarked that black and fox-coloured cats evolved a brighter and more conspicuous light than grey and white ones; that the eyes of dogs, horses, sheep, and hares, shone in dimly lighted places, but that the light differed in colour and intensity in the different animals. He also mentions the case of an Albino whose eyes were luminous; he suffered so much from the dread of light that he never ventured abroad except in twilight.

On inquiring into the cause of this luminous appearance, Dr. Esser dissected the eyes of cats, and exposed them to a small regulated amount of light after having removed different portions. The light was not diminished by the removal of the cornea, but only changed in colour. The light still continued after the iris was displaced; but on taking away the crystalline lens it was greatly diminished both in intensity and colour. "It now struck me," says our ingenious authority, "that the tapetum in the hinder part of the eye must form a spot which caused the reflection of the incident rays of light, and thus produced the shining. This was the more probable, as the light of the eye now seemed to emanate from a single spot. After taking away the vitreous humour, I observed that in reality the entire want of the pigment in the hinder part of the choroid coat, where the optic nerve enters, formed a greenish silver-coloured changeable oblong spot, which was not symmetrical, but surrounded the optic nerve in such a manner that the greater part was above, and only a small part below it, and, therefore, the greater part lay beyond the axis of vision. It is this spot, therefore, that produces the reflection of the incident rays of light, and beyond all doubt, according to its tint, contributes to the different colouring of the light, to which, nevertheless, the remaining parts of the eye, when conjoined, seem to be no less necessary."

The above quotation will be more intelligible if, without entering into the anatomy of the eye, it be simply explained that the interior of the eye is coated with a black pigment, which has the same effect as the black colour given to the inner surfaces of optical instruments; it absorbs any rays of light which may be reflected within the eye, and prevents them from being thrown again upon the retina, so as to interfere with the distinctness of the images formed upon it. The retina is very transparent, and if the surface behind it, instead of being of a dark colour, were capable of reflecting light, the luminous rays which had already acted on the retina, would be reflected back again through it, and not only dazzle from excess of light, but also confuse and render indistinct the images formed on the retina. Now, in the case of the cat and many other nocturnal animals, this black pigment, or a portion of it, is wanting; and those parts of the eye from which it is absent, having either a white or a metallic lustre, are called the tapetum. The smallest portion of light entering the eye is reflected by it as by a concave mirror; and hence it is that the eyes of animals provided with this structure are luminous in a very faint light. Many animals which hunt their prey by night are furnished with a white, instead of a black pigment, whereby the action of the luminous rays upon the retina is increased.

Dr. Müller enumerates the animals in which the tapetum is present, and whose eyes, consequently, shine in the dark; these are the ruminating animals, the

pachydermata, cetacea, owls, crocodiles, rays, and sharks. It is wanting in man, in apes, glires, cheiroptera, hedge-hogs, and moles; in birds, except owls, and in osseous fishes. But the rodent animals, bats, the hedge-hog, and the mole, all obtain their food more by night than by day; and many of them behave in the deepest darkness as if they were directed by light. But it has been suggested that the sense of touch, indefinitely extended, or some other sense, new to us, may assist these animals. Spallanzani deprived bats of the use of their eyes, and they flew about, through hoops, &c., precisely as if they saw. The genera that see by night have so irritable a retina that they can only see during a very feeble light, but in those animals which see as well by day as by night, the retina is less irritable. In the former case the tapetum is spread over the whole of the choroid, as is the case with the cetacea, owls, and some amphibia and fishes; but in carnivorous and ruminant animals this shining envelope occupies only the upper portion of the choroid. M. Prevost has noticed the shining of the eyes of some insects, among which he names the death's-head moth. He also notices the colour of the tapetum in different animals. In the ox it is of a beautiful gold green, changing into sky blue; in the horse, the goat, the buffalo, the deer, of a silvery blue, changing into violet; in the sheep, of a pale gold green, sometimes bluish; in the lion, the cat, bear, and the dolphin, of a pale gold yellow; in the dog, the wolf, and the badger, of a pure white edged with blue. He is also disposed to doubt the opinion of Spallanzani, that cats, polecats, and some other animals, move with promptitude and certainty in a medium totally deprived of light. In a state of nature they are never placed in such circumstances, nor is it probable that total darkness ever occurs to them in a domesticated state; for, wherever they may be, there is always a certain amount of light, however small, and, in order to be able to see, they only require to have their pupil susceptible of great dilatation, and their retina of an extreme sensibility. It is said that a man shut up for a long time in a very dark dungeon, becomes at length able to read in it. The nocturnal birds which Spallanzani reared saw very well in a place in which he himself could distinguish no object, and he admits that the eyes of these birds do not shine in the dark. Besides sheep, cows, horses, and several other animals which have shining eyes, would, no doubt, find themselves much embarrassed in absolute darkness. If some animals do move with promptitude and security in complete darkness, it is certainly not to their eyes that they are indebted for it, but to some other sense. The bats, in which Spallanzani discovered this faculty, owe it according to him to a sixth sense, of which we have no idea; and according to Cuvier, to the extent of the membrane which their wing presents to the air, and which renders it capable of feeling its resistance, motion, and temperature.

It appears certain that Albinos are never sensible of the light in their eyes, which is visible to others; and that, on the contrary, the flashes of light perceived when the retina is irritated, are unattended by any emission of light, and are, therefore, never visible to any other person than the subject of them.

The foregoing experiments and observations seem sufficient to prove, first, that the shining of the eyes of the cat and of other animals does not arise from a phosphoric light, but only from a reflected light; that consequently, second, it is not an effect of the will of the animal or of violent passions; third, that this shining does not appear in absolute darkness; fourth, that it cannot enable the animal to move with security in the dark.

CHARACTER OF FENELON.¹

SUCH was the extraordinary charm of Fenelon, and the irresistible ascendancy which he obtained over every one who approached him, that neither differences of age, nor preeminence of rank or titles, nor even the superiority of talents and knowledge in those branches of science with which he was unacquainted, were able to prevent his friends from becoming his disciples; and from interrogating him as an oracle which was invested with an authority to direct all their thoughts and all their actions. Such is the character of him, as it is delivered down to us by his contemporaries; and their testimony is the less likely to be partial, as it proceeded from persons whom difference of opinion, or a certain malignity of mind, would incline to judge Fenelon with severity.

The chancellor D'Aguesseau has given us, in his memoir of the life of his father, the following interesting portrait of Fenelon:—

"The Archbishop of Cambrai was one of those uncommon men who are destined to give lustre to their age, and who do equal honour to human nature by their virtues, and to literature by their superior talents. He was affable in his deportment, and humorous in his discourse, the peculiar qualities of which were a rich, delicate, and a powerful imagination, but which never let its power be felt. His eloquence had more of mildness in it than vehemence, and he triumphed as much by the charms of his conversation, as by the superiority of his talents. He always brought himself to the level of his company; he never disputed, and appeared to yield to others at the very time that he was leading them. Grace dwelt upon his lips; he seemed to discuss the greatest subjects with facility; the most trifling were ennobled by his pen; and upon the most barren topics he scattered the flowers of rhetoric. A noble singularity pervaded his whole person; and a certain indefinable and sublime simplicity gave to his appearance the air of a prophet; the peculiar, but unaffected mode of expression which he adopted, made many persons believe that he possessed universal knowledge as if by inspiration: it might, indeed, have been almost said, that he rather invented what he knew, than learned it. He was always original and creative; imitating no one, and himself inimitable. His talents, which had been long hidden in obscurity, and not much known at Court, even at the time when he was employed upon the mission of Poitou, burst forth at length in consequence of the King's choice of him to educate his grandson, the Duke of Burgundy. The theatre was not too spacious for the actor; and, if his predilection for the mystics had not developed the secret of his heart and the weakness of his mind, there could have been no situation to which public opinion would not have destined him, nor any which would not have appeared inferior to his talents."

The Duke of St. Simon says, "He was gifted with a natural, a mild, and a florid eloquence; with persuasive politeness, but yet dignified and discriminating; and with a fluent, perspicuous, and agreeable power of conversation, which was combined with that precision so necessary for rendering the most complicated and abstract subjects intelligible. He was a man who always appeared to have just as much mind as the persons he might be conversing with; he stooped to their level, but without appearing to do it; this put them at their ease, and excited in them a lively sentiment of delight, so that they could neither quit him, nor, when absent, help returning to his company. To this rare talent, which he possessed in a remarkable degree, we must attribute the steady fidelity of his friends, who remained attached to him all his life, even after his fall, and which, when they were scattered through society, reassembled them together, to speak of him, to wish for him, and to attach themselves to him more devotedly."

(1) From Bausset's Life of Fenelon.

Childhood.

This shrubby knoll was once my favourite seat :
 Here did I love at evening to retreat,
 And muse alone, till in the vault of night,
 Hesper, aspiring, showed his golden light.
 Here once again, remote from human noise,
 I sit me down to think of former joys ;
 Pause on each scene, each treasured scene, once more,
 And once again each infant walk explore :
 While, as each grove and lawn I recognise,
 My melted soul suffuses in my eyes.

* * * * *

In yonder cot, along whose mouldering walls
 In many a fold the mantling woodbine falls,
 The village matron kept her little school,
 Gentle of heart, yet knowing well to rule ;
 Staid was the dame, and modest was her mien ;
 Her garb was coarse, yet whole, and nicely clean :
 Her neatly-bordered cap, as lily fair,
 Beneath her chin was pinned with decent care ;
 And pendant ruffles, of the whitest lawn,
 Of ancient make, her elbows did adorn.
 Faint with old age, and dim were grown her eyes—
 A pair of spectacles their want supplies ;
 These does she guard secure, in leathern case,
 From thoughtless wights, in some unweeted place.
 Here first I entered, though with toil and pain,
 The lowly vestibule of learning's fane ;
 Entered with pain, yet soon I found the way,
 Though sometimes toilsome, many a sweet display.
 Much did I grieve on that ill-fated morn,
 When I was first to school reluctant-borne ;
 Severe I thought the dame, though oft she tried
 To soothe my swelling spirits when I sighed ;

And oft, when harshly she reproved, I wept,
To my lone corner broken-hearted crept,
And thought of tender home, where anger never kept.

But soon inured to alphabetic toils,
Alert I met the dame with jocund smiles;
First at the form, my task for ever true,
A little favourite rapidly I grew:
And oft she stroked my head with fond delight,
Held me a pattern to the dunce's sight;
And as she gave my diligence her praise,
Talked of the honours of my future days.

* * * * *

'Neath yonder elm, that stands upon the moor,
When the clock spoke the hour of labour o'er,
What clamorous throngs, what happy groups were seen,
In various postures scattering o'er the green!
Some shoot the marble, others join the chase
Of self-made stag, or run the emulous race;
While others, seated on the dappled grass,
With doleful tales the light-winged minutes pass.
Well I remember how, with gesture starched,
A band of soldiers, oft with pride we marched;
For banners, to a tall ash we did bind
Our handkerchiefs, flapping to the whistling wind;
And for our warlike arms, we sought the mead,
And guns and spears we made of brittle reed;
Then, in uncouth array, our feats to crown,
We stormed some ruined pigsty for a town.

Pleased with our gay disports, the dame was wont
To set her wheel before the cottage front,
And o'er her spectacles would often peer,
To view our gambols and our boyish gear.
Still as she looked, her wheel kept turning round,
With its beloved monotony of sound.
When tired with play, we'd set us by her side,
(For out of school she never knew to chide,)
And wonder at her skill—well known to fame—
For who could match in spinning with the dame?
Her sheets, her linen, which she showed with pride
To strangers, still her thriftiness testified;
Though we poor wights did wonder much, in troth,
How 'twas her spinning manufactured cloth.—*H. K. White.*

THE SPINSTER'S HEIR.¹

BY MRS. ABDY.

Six months passed away: Miss Paulet's neighbours and friends were gazing with more grief than neighbours and friends usually feel on such occasions, on her funeral procession passing through the village; she had been useful and agreeable to many, dangerous and annoying to none; and the little world in which she lived had not even the excitement of pitying her for having died of a broken heart, from the misconduct of her nephew, for Miss Paulet had fallen a prey to a fever which had been prevalent in the village, and had proved fatal to several of its inhabitants. Vernon was the chief mourner,—and truly did he mourn. How ardently did he wish that he could recall the dear friend whose feelings he had so often wounded, and whose trust he had so often deceived! how many resolutions of reformation did he make! how fervently did he promise to himself that not a spare five-pound note of the spinster's property should ever find its way to the *rouge et noir* table in Regent-street! Alas, poor Vernon! his promise was pretty sure to be kept; the wheel of fortune, although he did not know it, was turning round with him, and spare five-pound notes were, from this time, to be rare and unlooked-for guests in his exchequer.

I have just said that the village sadly wanted some excitement on the subject of Miss Paulet's death: that want was soon supplied. After the funeral, the will was read; small legacies were left to friends and servants, and sums of trifling value to the charitable institutions of the neighbourhood. Vernon's name was not mentioned. Vernon was disinherited! The whole property of Miss Paulet, after the above-mentioned legacies were paid, was bequeathed to her sole executor and residuary legatee.

"And who," inquired fifty voices, "was this favoured person? Had Miss Paulet an unknown lover, or had she been privately married?"

By no means; Miss Paulet's sole executor and residuary legatee was well known to the whole village. Mr. Carleton was the distinguished individual; Mr. Carleton was "The Spinster's Heir!"

This news excited various feelings. Some commiserated Vernon, and some thought he was rightly served. Mr. Anson congratulated himself that he had forbidden him to enter his house, and told Helena how rejoiced she ought to be at her escape; but Helena was in no mood to be rejoiced at any such thing; although generally very mild and charitable, she violated the good old rule of never finding fault with the dead, and censured the unforgiving and barbarous disposition of Miss Paulet in very explicit terms. To make matters even, however, she expressed herself with still more severity of the living, and declared her firm conviction that Mr. Carleton must have worked on the mind of the spinster by a series of the most artful and unwarrantable calumnies, before he could have prevailed upon her thus to injure and wrong her beloved nephew. The ladies of the village, in general, were, however, very indulgent to Mr. Carleton; they surmised that hitherto he might not have considered himself rich enough to marry, but that the coffers of Miss Paulet would put him quite at ease as to the ways and means of providing for a family. He was certainly rather waning in years, but the leading lady of the place, who was the mother of eight unmarried daughters all turned of thirty, avowed that "she considered gentlemen old at no age; and that she had an uncle who cut a tooth, married a young wife, and had the heaping cough in his seventieth year!" This anecdote she took occasion to mention before Mr. Carleton, but was somewhat

disconcerted by his reply, that "the conduct of the old gentleman proved that, at all events, the tooth in question was not a wise tooth!"

Mr. Carleton added not even a poney or a page to his establishment; his second courses had not one extra dish, nor did he give away a blanket or a half-crown more than he had been wont to do. It was evident that Miss Paulet's two thousand a-year were destined to join company with his savings in the Three per Cent. Consols, there to gather, like a gigantic snow-ball, for the future benefit, probably, of some hospital or alms-house; the village fair ones became indignant; they began to pity Vernon; and the younger ladies, particularly, did not scruple to assert that "it was better to squander money than to hoard it." All who knew Vernon's impetuosity and irritability predicted that he must be violently enraged at the late events, expressing himself indignantly of the dead, and vowing vengeance against the living; but all were in the wrong. Vernon was humbled, not angered, at his disinheritance; he acquiesced in the justice of his sentence, and, although he avoided all communication with Mr. Carleton, he did not give way to any bitter observations concerning him. "My aunt's property," he said, "has deservedly been placed beyond my reach; it is therefore immaterial to me on whom she has bestowed it; she has, at all events, given it to one who will not employ it in any disgraceful manner." Neither would Vernon suffer any disrespectful mention of Miss Paulet from another; and, when one of his gay companions condoled with him for suffering under a calamity alluded to by Lord Byron,

"A bad old woman, making a worse will,
Which leaves you minus of the cash you counted,"

some portion of Vernon's former spirit flashed forth, and he indignantly declared that "he would never listen to a slighting word applied to one whose long and unwearied kindness to him had been repaid with such reckless ingratitude."

Indeed, Vernon's gay companions were now anything but acceptable to him; his mind was sobered by misfortune, and his heart was touched by penitence; he resolved to reform. This he had often done before, but he now prayed to his Almighty Father to give him strength to persevere in his resolutions, and his prayer was mercifully heard and answered. Mr. Dornford proved to him a true and kind friend; he counselled him to exertion, industry, and study. Vernon still kept his promise to his friends, that "he would read as much or as little as he pleased;" but his pleasure now was to pass many hours in reading and reflection. London was seldom visited by him, and his own peculiar village not at all. Miss Paulet had defrayed all his out-standing debts a short time before her death; he added no new ones to the amount. His fine and comprehensive mind, devoted entirely to the intricacies of his profession, enabled him to surpass all the expectations even of the hopeful Mr. Dornford; he became useful, valuable, respected; his simple wants were more than supplied from his own labours. The remembrance of Helena Anson prevented him from wasting any of his hours on the contemplation of bright eyes, slender waists, and silken ringlets. No sonnets and sketches were to be found among his law-books, like poppies among the corn, at once ornamental and injurious to their neighbours; adversity had undone the mischief of prosperity, and Vernon might have been gazed on with approval by the shades of his father and grandfather. He was an indefatigable lawyer's clerk!

Seven years had elapsed; Mr. Dornford was good and kind-hearted as ever, but no longer the active and buoyant man of whom Vernon once said "he should make it a principle of duty never to interfere with him, since he could do so very well without his assistance." Mr. Dornford had suffered a stroke of paralysis, and was earnestly warned by his physicians to avoid any exertion which might tend to accelerate a return of it. These injunc-

(1) Concluded from page 234.

tions he was willing to comply with, for he had, to use his own expression, "an invaluable partner,"—one whose intellect was superior to his own, and who, in perseverance and activity, equalled himself in his best days. "My clients," he was used to say, "are all perfectly satisfied with Vernon; the business will not only be kept up by him, but improved. As he frees me from all responsibility and labour, I consider it but just that he should enjoy the larger share of the remunerations during my life; and he shall become the possessor of the whole of them at my death."

It is not surprising that rumours of these changes and events should be carried to the village where Vernon's ladylove resided. She had received several offers of marriage, but had refused them all; and Mr Anson, who, I am afraid I must acknowledge, was, although of the nobler sex, as manœuvring and calculating as any worldly mamma who has ever figured in the pages of a modern novelist, began to surmise that she was probably still thinking of Vernon, and that, as old Dornford could not live long, and the business was known to be an excellent one, she perhaps "might do worse after all."

Some entertainment was about to take place in the village. I really forget whether it was a Fancy Fair, an Archery Meeting, or a Review; but it was one of those occasions which shrewd fathers and mothers of families lay hold of to invite young men to their houses, trusting that the bevy of Marias, Kates, and Julias, who have failed to do execution in the ordinary routine of life, may suddenly become irresistible in the act of selling a pincushion, handling a bow and arrow, or starting and shrieking at a peal of musketry. The note was short, and merely contained a formal invitation; but to the heart of Vernon it spoke whole bookshelves of eloquence. He indited a joyful billet of compliance; obeyed the summons; found Helena more charming than ever; recognised all his old friends with a good grace, feeling that he need not shrink from their scrutiny; and even commanded himself so far as to exchange bows with Mr. Carleton, and return an unqualified acquiescence to that gentleman's observation on "the exceeding fineness of the day." It was indeed a day of unmingled sunshine to Vernon; and half-an-hour's walk with Helena in her own shrubbery was worth all the rest of it. The next day he came again without any invitation, requested a private interview with Mr. Anson, made known his circumstances and prospects, and sued for the love of his daughter; and Mr. Anson, whose habits of selfish expenditure enabled him to give his daughter very little, and to leave her still less, kindly granted Vernon permission to prefer his suit, at the same time putting him in mind that he was doing him a great favour, and that "his daughter's attractions and good qualities might command the first match in the kingdom," a bold asseveration, which Vernon was so far from feeling inclined to dispute, that he expressed the most ardent and ready concurrence in it. Vernon had another interview with Helena, still more delightful than that of the preceding evening. He returned home by moonlight, and made glad the benevolent heart of good Mr. Dornford by the account of his success. Early the next morning he was seen to enter the shop of a neighbouring jeweller, and the young ladies of the town, who for some time had settled in their own minds that Vernon, although disinherited, would be no despicable match, were doomed to have their hopes effectually crushed by beholding the hand on which they were speculating publicly invested with an engaged ring!

It was the wedding morning of Helena and Vernon; the service had been performed, and the carriages had returned from church,—a small number of friends and relatives were assembled round the breakfast table, and the health of the bride and bridegroom had just been proposed,—when a ring at the bell was heard, and Mr. Carleton was ushered into the room, having, as he informed the doubting servant, "come upon particular business." Now, Mr. Carleton's entrance at this parti-

cular time was very much out of good taste, and he could scarcely have calculated upon a cordial reception. Mr. Anson, although he had given a ready consent to his daughter's marriage with Vernon, and had thought and said that she "might do worse," was also perfectly aware how much better she would have done had Vernon not been disinherited; and, consequently, the sight of the person who enjoyed, or, more correctly speaking, possessed, the wealth which should have been Vernon's by right of inheritance, was anything but agreeable to the ambitious father-in-law. Vernon also, happy as he felt, could not help thinking that he should feel much happier were it in his power—as, but for his own indiscretion, it would have been—to have offered to his lovely bride the luxuries as well as the comforts and conveniences of life. He could indeed contrive to clothe her in "silk attires," but not to "braid w' gems her hair;" he could place a poney-chaise at her disposal, but he longed to transform it to a well appointed harouche; she had been used to spacious rooms, but those of the house he had engaged were of moderate size, and had provokingly low ceilings; she had been accustomed to pleasure-grounds and a shrubbery, and his garden was somewhat less than half-a-quarter of an acre. Can it be wondered at, then, that he looked with some coldness on the spinster's heir, and, with the deference proper to a son-in-law, precisely imitated the stiff distant bow with which Mr. Anson received his visitor? The bride, however, had no share in these feelings,—she had never known the value of money from the want of it; she was truly happy to be united for life to the object of her sincere and constant attachment. To her the poney-chaise was a car of triumph, and the narrow house in the noisy street a fairy palace of delight. She wished not for the riches of Mr. Carleton; for was he not an old bachelor, with nobody to love him, and therefore more to be pitied than envied? And she replied to his congratulations by a gracious smile of welcome, and felt no anger at his intrusion, no anxiety for his absence.

"I shall proceed to business," said Mr. Carleton "without further delay, for I perceive that I am about as welcome a guest in this room as the spectre of Alonzo the Brave was at the nuptials of the fair Imogene and her magnificent baron. I must, however, do the 'fair Imogene' in question the justice to say that she bestows on me more kindly glances than I meet with from the rest of the party, and I trust that I may prove myself in some little degree worthy of them."

"Pray sit down, Mr. Carleton," said Mr. Anson, whose principle it was to take all he could get, and who imagined, from this exordium, that Mr. Carleton must at least have come provided with a pearl chain, or a diamond brooch, as an offering to the bride. "So far," said Mr. Carleton, seating himself, "from being an evil spectre, I rather deserve to be considered as a good genius. I think I have some skill in reading thoughts; you, Mr. Anson, and your son-in-law, have already been ruminating for some time this morning on the contents of a certain will, and you are now wondering at the assurance of the insidious double-dealing heir, in thus forcing himself on the presence of the disinherited."

Neither of the gentlemen thus addressed defended himself from the accusation, but tacitly confessed the justice of it by looks rather more bordering on sullenness than quite befitted a wedding morning. "Behold me, then," continued Mr. Carleton, "willing to realize my character of a good genius; you regret the loss of the wealth of your late aunt, Vernon; you are now capable of employing it wisely, and it awaits your commands." A murmur of approbation arose from the company at this unexampled act of generosity, and Mr. Anson commenced a speech of thanks to the munificent donor, but broke down in the second sentence of it, and finished, as most bad orators very wisely do, by taking out his handkerchief, and protesting that "his feelings were too much for him." Helena said nothing; she fixed her soft blue eyes on her beloved Vernon, to

inquire what he thought of the matter; she was not long kept in suspense. "Greatly as I am indebted to the liberality of Mr. Carleton for his offer," said Vernon, with some hauteur, "I must beg leave to decline it. I cannot deny that I should feel gratified in possessing the property of my aunt, had such been her pleasure, but the past cannot be recalled; she deemed it right to deprive me of my expected inheritance; I have never called in question the justice of her decision, and I am determined to abide by it." "If such be your scruples," replied Mr. Carleton, "lay them aside, now, and for ever; it was never the wish of your aunt that any one but yourself should inherit her property." "Impossible," exclaimed Mr. Anson, with unwonted energy, "I went to Doctors' Commons and paid a shilling to see the will immediately after it was lodged there, because I did not choose to take the story of Vernon's disinheritance upon hearsay."

Mr. Anson stopped short, and looked rather confused; his furtive visit to Doctors' Commons had hitherto been a secret locked up exclusively in his own breast, and he had by no means intended to betray it, especially before his daughter and son-in-law; but all were too much excited by the present scene to give any heed to his confession. "Am I to conclude then, sir," asked the bridegroom coldly of Mr. Carleton, "that our eyes and ears were all deceitful, and that you are not Miss Paulet's residuary legatee?" "I acknowledge that I am Miss Paulet's residuary legatee," said Mr. Carleton, "nay more, I avow that her will was made under my advice and direction!" The guests looked at each other in consternation; there was not an individual among them who had not privately believed that Mr. Carleton had suggested this will in his own favour, but his bold avowal of his treachery seemed to strike them with as much amazement as if they had previously considered him a paragon of integrity.

Mr. Anson was the first to recover from the shock; he reflected that whatever unjustifiable measures Mr. Carleton might have employed to gain possession of the property, he had expressed his willingness to give it back to Vernon again; and he accordingly poured out with his own hand a glass of pink champagne, and expressed a hope that the past might be forgotten, and that Mr. Carleton would drink health and happiness to the young couple. "Not yet," replied Mr. Carleton, eyeing the declining effervescence of the champagne as calmly and unconcernedly as a tea-totaller of ten years' standing could have done. "I must first convince this high-minded young gentleman that he is not receiving the property of his aunt from me as a gift, but as a right. I was undoubtedly the residuary legatee of Miss Paulet, but my gains were very small indeed, when all the legacies were duly paid; and, such as they were, I scrupulously added them to the bulk of her property, which she had placed under the care of myself and three other trustees, to hold after her death in charge for her nephew, making it over to him when his reformation should be clear and apparent. The deed is at your service which accompanied this transfer, and you will find in it that your worthy relative entrusted to me the power of watching over you, assisting you from time to time with money, if I thought it advisable so to do; supporting you, if you reduced yourself to want; and enriching you, if you raised yourself to comfort and respectability. I had always told her that you would never be wise or happy till you had graduated in the school of adversity, and the event has justified my prediction; thrown upon your own energies, your excellent talents developed themselves; you shook off the fetters of selfish sloth, and have obtained independence by your unassisted exertions. Had I not persuaded Miss Paulet to visit you with seeming disinheritance, your property might now have been in the hands of the base and designing, and the heart of your young bride have been broken by your neglect and dissipation. Her truth is now tried and proved; seven

years have not taken one charm from her person, and have added many to her mind; you have shown yourself deserving of her, and have honourably and fairly won her. I have only to add, that the trustees associated with myself are all personally unknown to you, and that the kindness you have received from Mr. Dornford, and other friends, has entirely arisen from genuine feeling for the disinherited, and a hopeful reliance on his reformation."

Well indeed had Mr. Carleton fulfilled his promise of proving himself the good genius of the wedding-breakfast, and many were the thanks and praises bestowed on him; but the heart of the young heir was too full for words, and he could only press the hand of his wise and faithful friend in tearful and silent gratitude.

At length the guests separated, the greater part of them to pay visits to their particular friends, and recount the events of the morning; Mr. Carleton, to receive from the whole village population assurances that he was what they had always believed him to be, and what, in his secret soul, he had always believed himself to be, the most sensible and well-judging man in existence; and Mr. Anson to write letters to several of his family, extolling his own excessive disinterestedness in having bestowed his daughter on a man of small income, and relating how his virtue had met with its appropriate reward, by finding the aforesaid small income converted into a large one. The bride and bridegroom meanwhile proceeded on their intended honey-moon excursion, the former heaping reproaches on herself for having ever thought and spoken ill of "that dear Miss Paulet, and excellent Mr. Carleton," and the latter, happier than even bridegrooms are privileged to be on their wedding-day; and, when he knelt in prayer that night, and returned thanks to Heaven for all its gifts, how fervently did he trust that the spirit of his dear aunt might be permitted to look down on the world, and see how thoroughly her plan for his reformation had succeeded, and how deeply grateful he felt for the mercies and blessings which surrounded him, and which would never have been his, had he known himself seven years ago to be "The Spinster's Heir!"

POPULAR YEAR BOOK.

August 22 is the anniversary of the Battle of Bosworth field, which was fought on this day, 1485. Richmond, afterwards Henry VII., landed at Milford-Haven on the sixth of August, and arrived at Tamworth on the eighteenth. On the nineteenth he had an interview with his father-in-law, Lord Stanley, when measures were concerted for their further operations. On the twentieth, he encamped at Atherstone. Richard III. entered Leicester with his army on the sixteenth, having the royal crown on his head; he slept at Elmeathorpe on the night of the seventeenth. On the eighteenth he arrived at Stapleton, where he continued till Saturday the twenty-first, during the whole of which his army and that of the invader were in sight of each other. The number of his forces exceeded sixteen thousand, those of Richmond did not amount to five thousand. On each side the leader made an oration to his troops, which was scarcely finished before the fight commenced. The first conflict of the archers being over, the armies fiercely engaged with swords and bills, and at this period Richmond was joined by Lord Stanley—a junction which determined the fortune of the day. In this battle, which lasted little more than two hours, above one thousand of Richard's adherents were slain. Of Richmond's troops scarcely one hundred fell. Richard is universally allowed to have performed prodigies of valour, and is said to have perished at last by treachery. He was the only English monarch, since the Conquest, that died in battle, and the second that fought in his crown. That circlet of sovereignty was discovered in a

bush after the combat, by Sir Reginald Bray, who placed it on Henry's head.

August 24.—Feast of St. Bartholomew.

This saint suffered martyrdom about A. D. 72, at Albanople, in Armenia, where he was flayed alive by order of Astyages, brother of Palemon, king of that country, according to the then barbarous custom of the East. It has a "horrible celebrity" in connexion with the massacre of the protestants in France, which commenced on this festival, A. D. 1572, by order of Charles IX. In Paris only, ten thousand are said to have been butchered in a fortnight, and ninety thousand in the provinces, making together, one hundred thousand.

OLD CUSTOMS.

An author in 1688, observes that "it is customary for all journeymen-printers to make, every year, new paper windows about Bartholomew tide, at which time the master-printer makes them a feast called a *way-goose*, to which is invited the corrector, founder, smith, ink-maker, &c., who all open their purses and give to the workmen to spend at the tavern or ale-house after the feast: from which time they begin to work by candle-light." The paper windows no longer exist, but the *way-goose* is still maintained, and usually held at some tavern in the neighbourhood. Mr. Gough, in his "History of Croyland Abbey," mentions an ancient practice there "of giving little knives to all comers on St. Bartholomew's Day. This," he says, "was abolished by Abbot John de Wisbech, in the time of Edward IV., exempting both the abbot and convent from a great and needless expense. This custom originated in allusion to the knife wherewith St. Bartholomew was flayed. Mr. Hunter had great numbers of them of different sizes, found at different times in the ruins of the abbey and in the river." At Dorrington, Lincolnshire, it was formerly customary on the morning of this festival, for a number of maidens, dressed in their best attire, to go in procession to a small chapel, then standing in the parish, and strew its floor with rushes; from whence they proceeded to a piece of land called the "Play Garths," where they were joined by most of the inhabitants of the place, who passed the remainder of the day in rural sports, such as foot-ball, wrestling, and other athletic exercises, dancing &c. On St. Bartholomew's day, in the "olden time," the youths of the different Grammar Schools were wont to meet for the purpose of disputation, and to try their proficiency in learning. In the early part of the last century, this practice was not quite extinct in Yorkshire. The disputations and examinations were carried on at Lee Fair, where, early in September, an annual wake and mart for cattle and various kinds of goods, is held. The disputants were the scholars of Leeds, Wakefield, and other places in the vicinity.

August 29 is set apart for the commemoration of the decapitation of St. John the Baptist, in the Kalendar of the Church of England. The Latin Church observes this day as a solemn feast, by the title of *Festum Decolationis*, being a corruption, according to Durandus, of "*Festum Collectionis S. Johan. Baptistæ*," or the feast of gathering up St. John the Baptist's relics, which are stated to have performed numerous miraculous cures in the fourth century.

THE SHEPHERD.¹

FROM the poetry let us turn to the prose of a shepherd's life. He has to stand all weathers; and, though in summer he certainly has the advantage over those whose occupation is more locomotive, this tells the other way in winter. Great must be his powers of endurance, to stand the whole day, always early, and sometimes late, in pinching frost, and piercing wind, and drifting snow, and drenching sleet and rain. He has not the

rests and shelters enjoyed by ordinary labourers at their meals; for he takes his cold meal out with him to the distant down. Nor has he society, except his sheep and his dog. No one more welcomes a chance visitor than a shepherd. The present system of folding the flock in succession upon every acre of tillage, not a little aggravates the hardships of a shepherd's life. He has not the choice of sheltered situations. What must be the cold, when snow, six inches deep the day before, is swept away clean by the wind into the dikes and gullies, till the uniform coating has quite disappeared, and every flint the size of one's hand has a drift behind it a yard long? We have known an instance of bread freezing hard as stone in the pocket of a shepherd's great-coat. His clothing, by the way, had need be something more than usually substantial: he deserves this from his fleecy charge. The shepherd prepares himself against rain and wind, with a thatched hurdle to retire to every now and then, if the sheep are not folded; with an immense great-coat, a thick cloth apron, and hay-bands twined round his legs. Unfortunately, in very rainy weather, his coat and apron are never dry; he puts them on every morning heavy with yesterday's rain. The thickness of their texture makes them long retain the damp; and he will not dry them by the fire, if he had fire enough for the purpose, because fire-dried cloth is said not to throw off the rain; so he lives in hope of sunshine and wind. Happy is he if he does not attempt to fortify himself against the inclemency of the skies, by means ruinous to his health and his substance, and utterly inefficacious in the long run. Throughout the lambing season, which lasts some weeks of the roughest weather in the year, he has frequently to watch whole nights together. There is another part of his task not to be omitted, and that is, pitching the folds. He is continually advancing over the fields his moveable enclosure, constructed with fifty or a hundred hurdles, secured by as many poles or stakes driven into the ground. He prepares the holes for these stakes with a ponderous bar of iron, which he raises in both his hands, then drops, assisting its falling momentum, and then works so as to enlarge the hole sideways. All this is well enough when the ground is in its usual state; but, in seasons of hard frost, the shepherd is sometimes a quarter of an hour making a hole large and deep enough for a stake to stand in; and he has fifty such stakes to plant before the fold is completed. There is a still greater drawback than any we have mentioned. The sheep require tending and folding on Sundays as well as week-days; so the shepherd has the greatest difficulty of all labourers in getting to church. Unless he has boys old enough to take his place, and young enough to be at his disposal, he has to pay sixpence for a substitute every time he goes to church,—as much, perhaps, as a third of his day's pay. But he usually contents himself with a little desultory piety instead,—cutting the Lord's Prayer in the bark of walking-sticks,—writing texts in a pocket-book, and learning a few hymns. We lately heard of a shepherd, who confessed on his death-bed that he had not been in church, or in any place of worship, for seven sabbaths of years.

And here a word on a very important subject,—the qualifications, the requisite talents, attainments, and skill, of a useful agricultural labourer. Writers who have advocated the cause of the artizan, commonly allege that he ought to have considerably better wages than the labourer, because he is master of a greater art and craft; because he has learnt more, and is cleverer, and so forth. Now, we cannot admit that a good labourer, in any department of husbandry, is to be considered a man of no science, or skill, or craft: he need not, indeed, be a good calculator, or a good mechanic. But let us look to a good shepherd, with his average of eleven or twelve shillings a-week, all the year round. His powers of bodily endurance are considerable; he "is so hard, that nothing can hurt him but a flint stone,"—as we have heard a veteran describe himself.

(1) From an essay "On Agricultural Labour and Wages," in a late periodical.

This deserves payment. He has various good moral habits; such as alacrity, patience, and affection for his flock. He knows every individual of his charge; and especially the delicate ewes, and the weakly lambs, of which there is a proportion always. He knows exactly what they thrive upon, and what hurts them: he can tell, in a day or two, whether they are falling off or gaining ground; an important point, as it takes more time to recover flesh, than to lose it. He knows the quality of the soil, and where and when the sheep are apt to take the rot. He carries in his head the whole stock of hay, and turnips, and green food, for the whole year, and the daily consumption of the flock: he has many tricks of craft, receipts and remedies. Through his management, a hundred lambs, or a hundred ewes, may be saved or lost in a single season. If his master is wise, he will leave him a good deal to himself, and not even harass him with too frequent visits to the fold.

To be a good shepherd, then, implies moral and intellectual attainments of a very high order; as high not only as those required to be a good weaver or tenter, but as those of a good factory over-looker or engine-man. Yet his pay is probably not half the latter's; and his chances of accident, illness, and shortened life, almost, if not quite as great.

THE FAIRIES.

WHAT a poverty there is in the literature of the present day, as compared with that of the olden time! The light of reason and knowledge, the spread of science, the dicta of "the school-master," have destroyed all the entrancing charms of ancient days, and have acted on the literature of our ancestors, much as a solar microscope does on a drop of water. We used, in our ignorance, to drink water as the purest and simplest beverage; we know now that it is—*faugh!* a mass of horror, and that, with every glassful we swallow, we convert our stomachs into nurseries for embryo crocodiles, alligators,—in fact for

"All monstrous, all prodigious things,
Abominable, unutterable, and worse
Than fables yet have feigned, or fear conceived,
Gorgons, and Hydras, and Chimeras dire."

In like manner does the light of modern research dispel all the beautiful illusions which gilded the literature of the olden time, like the refraction of sunlight on hoar frost, imparting to the coldest and most tame of objects, a tissue of glory and brilliancy which Iris' self alone could weave. Where are the giants, the dwarfs, and the genii? Where the ogre fell, the potent necromancer, the fearful ghoul, the perturbed ghost, the midnight spectre? Gone, all gone, vanished in the light of reason's rays. Where are the enchanted gardens, the magic caves, the spirit-haunted fountains, the crystal palaces? Alas! they are "proved" to be mere *châteaux en Espagne*. A "talking bird" is now a mere parrot; the "golden fountains" are only waters on which an every-day sun is shining. A boy in swaddling clothes, if his intellect be properly cultivated, will tell you that Sinbad's "little old man of the sea," who used to frighten us so fearfully, was a *monkey*; ere his first lustre is expired, he will refer to his "Catechism of Science," and will find that the rock which drew the nails from the vessel was no marvel, but that the occurrence was only the effect of powerful magnetic attraction; and, by the time he has completed his second lustre, he will tell you that the winged hippogriff, whose flights were to us so marvellous, so enchanting, and so *real*, was

merely a clumsy impersonation of that "Huma of the mind—imagination." The magical feats which wrapt the senses in awe, were but chemical illusions; the awful oracles which emitted responses of mystical import, were merely well-contrived pieces of mechanism, which now any well educated youth can prate about. Oh! it is sad, very sad, this march of intellect: for,

"Though wild the fable, and rude the rhyme,
Yet dear was the tale of the olden time:
Those days of marvel and mystery,
Those days we never again shall see."

And, perhaps, of nothing has literature been robbed, which imparted such a fascinating grace to it, as of that race,

"The orphan heirs of fixed destiny,"

the FAIRIES. From earliest time they have beguiled the imagination and gratified the taste. What were the graceful, benignant beings,—the aerial ministrants at springs and fountains,—the shadowy wanderers amid trees and woods, or on mountains, the gleaming of whose silvery robe beguiled the toil-worn wanderer onward, on his perplexed and tangled path, but *Nymphæ*, whom our classical ancestors honoured with especial reverence? And if, in the mutations of centuries, these magnificent beings have become somewhat dwarfed in their proportions, mental and personal, can we say that it is otherwise with ourselves? They have, indeed, through all ages and in all countries, accommodated themselves to the tempers and habits of those with whom they had to deal, in a way that may well claim the grateful tribute of posterity.

How exquisitely beautiful is the Fairy of the Eastern world, that mild benignant sylph,

"Who i' th' colours of the rainbow lives,
And plays i' th' plighted clouds,"

who subsists only on the odours of flowers; who lingers tearfully, yet hopefully, without the golden gate of heaven, till the term of her probation be ended, and she be re-admitted within its courts!

How beautifully, in the chastest and purest strain of his muse, has Mr. Moore portrayed the exertions of one of these "fairy creatures of the element," to regain the heaven which a moment's lapse had lost:

"Nymph of a fair and erring line,
One hope is thine—
The Peri yet may be forgiven,
Who brings to this eternal gate
The gift that is most dear to Heaven."

Instinct with hope, the Fairy wings her flight to earth, whither, however, her gentle ministrations had, heretofore, oftentimes brought her, but never with the radiant joy which now she felt. Sedulously she peruses its shores, and at length, on the burning soil of India, she beholds a brave and noble youth, sacrificing his life at the shrine of liberty, the only survivor of a gallant band. Eagerly she caught the last drop of blood which flowed from his heart, and bore it to Heaven's gate. No: "holier far" must be the offering.

Again she wanders, and on the arid coast of Africa she sees a gallant man, stricken by the plague, lay himself solitarily, as he hopes, to die. But no, it is not so. She who has plighted her faith to him, follows and succours him, though knowing that death must be the inevitable result. The Fairy bears her last sigh to Paradise.

"High throbb'd her heart, with hope elate,
The Elysian palm she soon shall win,
For the bright spirit at the gate
Smil'd as she gave that offering in."

But no:—

—"holier far
Than ev'n this sigh the boon must be
That opens the gates of Heav'n for thee."

Our readers know the result: the Fairy's next offering was a PENITENT'S TEAR, and it was successful.

The fairies of our own land, and to them alone was it our intention to refer, are less gorgeously radiant than the Peri of the Persian: they are, in fact, more domestic, more suited to that home and domestic life which has ever been a proud characteristic of England. But alas! they are essentially a shy, a gentle, and a timid race, and they have fled amain from the terrors of modern research. It may be, that amid some of the sequestered glades of Wales, the secluded, and as yet *untourized* lakes of Cumberland, or the wild dingles of Lancashire, where, if the impressions of our childhood be correct, we have heard them fluttering on many a leaf, and fancied them hidden in many a flower, and where the sound of the spinning jenny has not yet penetrated, they may yet hold their revels; but their existence even there is almost as problematical as that of a scion of the Ancient Britons in Cornwall, or of the lost tribes in Africa or America. Yet we have it on indubitable authority that our merry island was once crowded with them. In *olde dayes*, says Chaucer,—

"In olde dayes of the King Artour,
Of which that Bretons spoken gret honour,
All was this lond fulfilled of faerie;
The Elfuene, with her jolie compaignie,
Danced ful ofte in many a grene mede."

and the same author tells us of "a doughty swain" Sire Thopas, who was resolved to marry a fairy:—

"All other women I forsake,
And to an Elfuene I me take,
By dale and eke by down:"

showing, at any rate, that they were to be had for the asking. In fact, by a proper and scientific disposal, such as was then well understood, of certain apparatus—as a Venice glass three inches square, the blood of a white hen, holy water, hazel rods, and cabalistic words, anybody might catch a fairy; the only difficulty seems to have been to retain her.

Of yore the fairies were a very chivalric race. Chaucer was permitted to see them in all their pomp of arms,¹ and nor Cressy's field, nor Agincourt's, could boast a more magnificent display of chivalry and valour than was thus betrayed to the rapt vision of the favoured poet. But, alas! England's chivalry, as we all know, declined fast after the death of the gallant young king, Henry the Fifth, and whether it were from sympathy, we know not, but the chivalrous characteristics of the fairies declined likewise; and in Elizabeth's day the knightly demonstrations in the air, as on the earth, were little better than raree-shows. There is, indeed, on record, a duel of King Oberon, which shows that the ancient animus of chivalry still existed in some choice spirits, after its sun of glory was sped; as indeed, in like manner, appeared on the earth, in the person of the brave and early lost Prince of Wales, son of James I.; but, usually speaking, the

Fairies at this time had betaken them to more domestic and matter-of-fact occupations, and had much of the common-place loves, and fears, and jealousies of every-day life. Their Court, and the personal belongings of the royal family were, however, still exquisitely arranged: and when we read of will-o'-th'-wisps, and luck-pennies in shoes, of pinching maids, and upsetting churns, and so on, we are to understand that these were the freaks and frolics of some of the menials of the Court. Oberon, the "glass of fashion" of his time, had a soul above them.

In fact, the only drawback on this monarch's character seems to have been jealousy of his queen, and a rather undue gallantry on his own part, which propensities indeed, in our own sphere, are often found conjoined. He was brave and chivalrous, and his dress and habits were refined in the extreme. For example; the heaviest and most substantial food that ever seems to have approached his table, the beef and mutton course of the banquet, was,—

"The broke heart of a nightingale
O'ercome with music:"

—(Titania preferred the brains of nightingales):—other usual dishes were the unctuous dew of snails stewed between two nutshells, which was considered remarkably easy of digestion; gnat's thighs stewed, and, occasionally, a pickled maggot.

Then his beverage! how coarse in comparison the nectar of Olympian Jove! It was—

"A crystal pearl of infant dew,
Brought, and besweetened in a blue
And pregnant violet."

His costume was equally *recherché*:—

His shirt was formed of the film of a cobweb, and his waistcoat—except in very warm weather, when a lighter material was substituted—was a troutfly's gilded wing; his upper garments, of a most delicate tint, were "dyed in a maiden's blush," and his mantle was of gossamer. We would gladly have omitted all reference to the remaining article, but we are *honest* biographers.

"His cap was all of ladies' love,
So passing light that it could move,
If any humming gnat or fly
But puff'd the air in passing by."

Queen Titania, or Mab, as she is more familiarly called, was equally *point device* in her state and accompaniments, though we need not dwell on them so particularly. Her usual residence, though she was rather fond of rambling, was in a palace belonging to her husband,—

"Somewhat southward toward the noon,
Whence lies a way up to the moon,
And thence the fairy can as soon
Pass to the earth below it."

The walls were made of spider's legs, the windows of the eyes of cats, the roof of the skins of bats gilded in moonshine. Shakspeare describes her chariot as an "empty hazel nut," and so, on common days, it was; but on state occasions it was a snail-shell, the hammer-cloth being composed of the wing of a pied butterfly, and the wheels covered with thistledown to prevent the rattling on the stones. This carriage bore the same comparative appearance to her every-day one, which the Lord Mayor's state coach does to his private chariot.

The worst trait in Queen Titania's character was a

(1) See "The Floure and the Leafe."

tendency to flirtation, which we cannot justify, and which set the worst example to her maids of honour, and caused King Oberon great uneasiness; indeed, on one occasion, had well nigh cost him his life. This was his duel with Pigwiggen; but as, doubtless, our readers are well acquainted with the circumstances of this celebrated fracas, we need not here enlarge upon them. We shall have pleasure, however, in doing so hereafter, should it be desired, and also in referring more particularly to some of the remarkable personages of King Oberon and Queen Titania's court circle.

Poetry.

In Original Poetry, the Name, real or assumed, of the Author, is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

MARY'S MOTHER.

FIVE little girls there are who sing
In simplest village grace,
Glad Christmas carols; and they bring
A pride upon the place.

On Christmas eve they take their round,
And every household greet;
And kindness stirs at that old sound;
And friendly looks they meet.

Each mother gazes on her own,
And while the stream runs on,
Sweet expectation often smiles,
And present cares are gone.

And when the children go away,
They turn, and with a sigh,
'Tis not of grief—but one would say—
For mere sobriety.

Six little girls there were before
Young Mary died; now five.
Her mother met them at her door,
When Mary was alive.

And straight toward her cot they take
Their usual pathway still;
They pass beside the tranquil lake,
And then ascend the hill.

And Mary's mother raised her head,
This little band to see;
She loved them every one, but said,
"Let them not sing to me."

And quick despatched a messenger,
Who bid them not to come;
And she uprose and shut the door
Of that small quiet home.

And round the vale, with merry cheer,
They sung where'er they're known,
While Mary's mother shed a tear,
For she was all alone.

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne*.

FAME CONTEMNED.

ALL men are fond of glory, and even those philosophers who write against that noble passion prefix their names to their own works. It is worthy of observation, that the authors of two religious books, universally received, have concealed their names from the world. The "Imitation of Christ" is attributed, without any authority, to Thomas A' Kempis; and the author of the "Whole Duty of Man" still remains undiscovered. Millions of their books have been dispersed in the Christian world. To have revealed their names would have given them as much worldly fame as any moralist has obtained—but they contemned it! There, religion was raised above all worldly passions! Some profane writers, indeed, have also concealed their names to great works, but their motives were of a very different cast.—*D'Israeli's "Curiosities of Literature."*

SLANDER.

OF the many revengeful, covetous, false, and ill-natured persons which we complain of in the world, though we all join in the cry against them, what man amongst us singles himself out as a criminal, or even once takes it into his head that he adds to the number? or where is there a man so bad, who would not think it the hardest and most unfair imputation to have any of those particular vices laid to his charge? If he has the symptoms ever so strong upon him, which he would pronounce infallible in another, they are indications of no such malady in himself—he sees what no one else sees, some secret and flattering circumstance in his favour, which no doubt makes a wide difference betwixt his case and the parties which he condemns. What other man speaks so often and so vehemently against the vice of pride, sets the weakness of it in a more odious light, or is more hurt with it in another, than the proud man himself? It is the same with the passionate, the designing, the ambitious, and some other common characters in life; and, being a consequence of the nature of such vices, and almost inseparable from them, the effects of it are generally so gross and absurd, that where pity does not forbid, it is pleasant to observe and trace the cheat through the several turnings and windings of the heart, and detect it through all the shapes and appearances which it puts on.—*Sterne*.

What a large volume of adventures may be grasped within this little span of life, by him who interests his heart in every thing, and who, having eyes to see what time and chance are perpetually holding out to him as his journeyeth on his way, misses nothing that he can fairly lay his hands on!

HISTORICAL NOTICE OF ST. KATHERINE'S HOSPITAL, IN THE REGENT'S PARK, LONDON.

CONSIDERABLE sensation was excited some years ago, by the destruction of a fine old collegiate church, and the removal of the establishment connected therewith, to make way for the new docks, now known as St. Katherine's. A new site was chosen for the establishment, on the east side of the Regent's Park, where the Church and Hospital of St. Katherine are beautiful and conspicuous objects. This is the oldest ecclesiastical community in England which has survived the Reformation, and presents in its history several remarkable particulars.

In the year 1148, Queen Matilda, with the consent of her husband, Stephen, King of England, founded and richly endowed, upon the east side of the Tower of London, and on the north bank of the river, a hospital

dedicated to St. Katherine, "in pure and perpetual alms," to secure the repose of the souls of her children, Baldwin and Matilda, who were buried within it before her own decease. The foundation consisted of a master, brothers, sisters, and alms-people. The Queen purchased the site, together with a mill, from the Priory of the Holy Trinity, Aldgate, in exchange for a yearly rent of six pounds, out of the manor of Braughing, in Hertfordshire. This monastery, consisting of canons regular, of the Order of St. Austin, then newly brought into England, was very rich, possessing property in not less than eighty-eight parish churches within the city of London. These monks being then in high repute, Queen Matilda granted them the perpetual custody of this hospital, reserving to herself and her successors, the future queens of England, the nomination of the master, or custos of the hospital, upon every vacancy.

Soon after the establishment was settled, William de Ypres granted a tract of ground, called "Edredeshede," since named "Queenhithe," to the Priory of the Holy Trinity, charged with a payment of 20*l.* to the Hos-

pital of St. Katherine; and thus it continued till the year 1255, when Queen Eleanor, consort of Henry III., brought a suit against the prior and convent, in order to deprive them of their interest therein. By the civil jurisdiction the right of the prior and convent was confirmed; whereupon the Queen addressed letters to the Bishop of London, stating that the patronage of the hospital had belonged to her and her predecessors; that it was become destitute of all discipline; that the goods thereof were wasted by the prior and canons of the Holy Trinity; that her many complaints had produced no amendment; and she concluded by praying the bishop to make due inquiry. This was accordingly done, and in the course of it, it appeared, amongst other things, that the brothers of the hospital were frequently inebriated and very quarrelsome. The result of the inquiry was a decree published by the bishop, excluding the prior and convent from all further concern with the hospital.

In the year 1261, in consequence of some further proceedings, but chiefly by intimidation, the hospital and the estates thereof were surrendered to the Queen. She did not, however, dissolve the hospital until 1273, when, by her charter dated 5th July of that year, she did so, and founded the present royal hospital, also dedicated to St. Katherine, for a master, three brethren, three sisters, ten poor women, called *bedes-women*, and six poor scholars¹ with endowments; and she reserved to herself, and the Queens of England, the nomination of the master, three brothers, priests, and three sisters, upon all vacancies. The *bedes-women* were to receive their sustenance from the alms of the hospital, and lodge within it, for which they were required to pray for the foundress, her progenitors, and the faithful. She also directed that, on the Feast of St. Edmund, (the 20th of November, that being the day of her husband's decease,) one thousand halfpence were to be distributed to one thousand poor men.

During subsequent reigns the hospital was enriched with many benefactions, the most interesting of which need only be noticed here. In the beginning of the reign of Edward III., Raymond Lully, the famous alchemist, resided in or near the hospital. Oldys says of him, that "being a famous alchemist, he pretended to have found out the art of making gold, but happening to counterfeit the coin of this kingdom, he is said to have been banished by the king."

Queen Philippa, consort of Edward III., was a great benefactress to this hospital. She enriched it with further endowments, and gave statutes for its regulation. These statutes, which are valuable illustrations of the manners of the period when they were promulgated, contain, amongst other things, directions for the clothing of the brethren and sisters, their diet, stipend, the number of masses to be said daily, the visitation of the sick, and many other regulations. Our space will not admit of more than two short extracts from these statutes. And first, respecting the costume of the brothers,—"They shall wear a strait coat or cloathing, and over that a mantel of black colour, on which shall be placed a mark, signifying the sign of the Holy Katherine; but green cloaths, or those intirely red, or any other cloths tending to dissoluteness, shall not at all be used. And that the brethren or clerks there assembled, shall have the crowns of their heads shaved in a becoming manner."

The following relates to the diet of the sisters:—"Each of the sisters shall receive her whole allowance in her chamber, to wit, every day two loaves, one of them to be white, of the weight of sixty shillings, and the other brown, of the same weight, and one flagon of ale, or one penny in lieu thereof; and two pieces of different sorts of flesh meat, of the value of one penny and a halfpenny, or fish of the same value, and besides, a pittance or portion of the value of one penny." Fif-

teen days in the year were appointed on which a double portion was to be given.

The statutes also notice the rebuilding of the church by William de Eridesby, master of the hospital, who began that work about the year 1340; to which building the queen was a liberal contributor. They also direct that all savings which should be made out of the revenue of the hospital, and such benefactions as should afterwards be obtained, should be laid out in completing the church.

Queen Philippa died in 1369, and in 1376 Edward III. erected in honour of her memory a chantry, dedicated to St. Fabian and St. Sebastian, and endowed the chaplain thereof with an annual stipend of ten pounds.

In the reign of Henry VI., Thomas de Beekingham, afterwards Bishop of Bath and Wells, was appointed master, and he proved a most liberal benefactor. Finding the revenues of the hospital insufficient to maintain the members, he obtained from the king a charter, whereby the precincts were clearly defined, and declared free from all jurisdiction, secular and ecclesiastical, except that of the lord chancellor. The king also granted this hospital an annual fair, to be held upon Tower-hill, for twenty-one days, with protection to all merchants and their goods coming to it. The king also granted to the master a Court-leet,¹ and view of frank pledge,² within the limits of the said hospital. Several other privileges were also granted, which at the time were valuable.

In the reign of Henry VIII. the guild or fraternity of St. Barbara was founded here by the King, and by Queen Katherine, his first wife, on the 1st December, 1518. It was governed by a master and three wardens, and consisted of many of the nobility of both sexes.

By an account of the revenues of this hospital, taken from the royal survey, twenty-sixth Henry VIII., 1534, it is probable that the king intended at the time to dissolve this house, which it is supposed escaped suppression at the request of Queen Anne Boleyn.

In the time of Philip and Mary (1558) Calais being taken by the Duke of Guise, together with Guisnes and the castle of Hames, and the English being compelled to depart from Calais, many of the inhabitants of the two other places followed them, and settled within the precincts of this hospital, in a place which then acquired the name of Hames and Guisnes Lane, afterwards, by a strange corruption, called *Hangman's Gains*.

In the reign of Elizabeth, Dr. Wylson, one of the Queen's secretaries, was appointed master of the hospital, and abused the trust reposed in him. He surrendered up the great charter of Henry VI. and obtained a new one, in which was omitted the right to hold the fair granted to this hospital. The object of this omission was to enable him to sell the fair to the Lord Mayor and Commonalty of the City of London, for seven hundred marks (466*l.* 13*s.* 4*d.*) which he appropriated to himself. He was also about to dispose of some other of the property of the hospital, when, in October 1565, the members presented a very spirited petition to the secretary, Sir William Cecil, which had the effect of stopping Dr. Wylson's proceedings. The original petition is still in the State Paper Office.

In 1705 a school for the education of poor children belonging to this precinct was instituted. Thirty-five boys and fifteen girls were taught reading, writing, and the first four rules of arithmetic. They were annually clothed, and at the termination of the school course the boys were apprenticed, and the girls sent to service. The school was not part of the institution, only that the chapter, in December 1705, granted a lease to the trustees for the purpose of building a school on some

(1) A court of record, having the same jurisdiction within some particular district, as the sheriff's court has in the county.

(2) The office which the sheriff in his county court, or the bailiff in his hundred, performs in looking to the king's peace, and seeing that every man be in some pledge. The 'view of frank pledge' now exists only as a form.

(1) No persons answering to this description have formed part of the institution for a very long period.

ground adjoining the Chapel, at a rent of 6s. 8d. a-year, which was "to buy a Bible to be given to the most deserving boy or girl of that year."

In 1780, during the riots with which the name of Lord George Gordon is identified, the collegiate church of St. Katherine was nearly destroyed by the mob. The perverse reasoning which guided the rioters in this instance seems to have been, that this church, though consecrated to Protestant worship, yet having been built in the times of Popery, ought to be destroyed. It was, however, rescued by the gentlemen of the London Association.

It will be seen from the foregoing particulars, that this house was never intended to be a monastery, since by the charter of foundation the brothers were secular priests, and the sisters made no vows nor took upon them the veil; but were so far from being confined that they were permitted to go abroad in the city or elsewhere, with leave of the master, but not to stay out after the ringing of the church bells for putting out the fires, commonly called *couvre feu* or *curfew*; their time was to be occupied in hearing mass, praying for their benefactors, visiting the sick, and performing other charitable acts.

The Queens Consort of England are by law the perpetual patronesses; this hospital being considered as part of their dower, and indeed the only ecclesiastical preferment in their gift. They nominate the master, the brothers, and the sisters; and may increase or diminish their number, remove them, alter any of the statutes or make new ones, at pleasure, their power here being unlimited.

When there is no Queen Consort the king nominates the master, brothers, and sisters. But the Queen Dowager has no power or jurisdiction when there is a Queen Consort.

The business of the house is transacted in chapter by the master, brothers, and sisters, and it is remarkable that the sisters have a vote therein equally with the brothers. No business can be done without the votes of at least four of the members, one of each class; thus the master and three brothers or three sisters would not do; there must be the master and either two brothers and a sister, or two sisters and a brother. The other officers of this house, which now no longer exist, were elected by a majority of votes, and their patents confirmed under the chapter seal. Such were the commissary, or official principal, the registrar, the steward, the surveyor, the receiver, the chapter clerk, the clerk, sexton, &c.

To this precinct two courts were annexed, one spiritual, and the other temporal.

The spiritual court was a royal jurisdiction for all ecclesiastical causes within the precinct. Here, as in other ecclesiastical courts, were granted probates of wills, administrations, marriage licenses, &c. All appeals from the judge of this court were made to the Lord Chancellor only (who is the visitor) and therefore came directly to the Court of Delegates. To this court belonged a registrar, ten proctors, and an apparitor.

In the temporal court, the High Steward of the jurisdiction of St. Katherine presided, heard and determined all disputes or litigations arising within the precinct, held court leets, &c. To this court belonged a high bailiff, and a prothonotary. A prison was also attached to it.

The church attached to the royal hospital was formerly surrounded by the master's and brothers' houses on the north, and by the sisters' houses on the south side. This beautiful old structure had been peculiarly unfortunate in the various repairs it had undergone. Numerous additions were made to it early in the seventeenth century. It consisted of a nave and two aisles, the work of Thomas de Beckington, master, about 1443. Before the west door was a modern porch, on which was erected a square tower for the purpose of a belfry. In the porch were heads of Edward III. and

Queen Philippa, in stone, sadly defaced. There were five divisions for the aisles, formed by clusters of four columns, and hollows between each. The choir, the work of William de Eridesby, and John de Hermes-thorp, master in 1369, became narrower, and ran on a line with the clusters of columns in the nave. On each side of the choir were clusters of small columns placed against the walls in four divisions, with a large window between each division. On each side of the entrance within the west end of the choir were four stalls, and within the first two divisions, north and south of the same, were nine stalls. In the third division, on the north side, was the magnificent monument and chantry of John Holland, duke of Exeter.

The pulpit was a curious structure. It was built in the reign of James I. and was a benefaction of Sir Julius Caesar, when he was master of this hospital. It is covered with the representation of "four views of the hospital in its very ancient state," and round its six sides is this inscription:

EZRA, THE SCRIBB
STOOD UPON A
PULPIT OF WOOD
WHICH HE HAD
MADE FOR THE
PREACHIN: NENE". CHAP. VIII. 4.

The number of houses in this precinct in 1821, was 427, inhabited by 685 families, amounting to 2,624 persons. The whole precinct was the property of the hospital. The houses were holden by lease; and the chief estate and maintenance of the church and hospital were derived from fines at the renewal of the leases and ground rent. Dr. Ducarel states that the brothers had annually 40*l.* each, the sisters 20*l.* each, and the bedes-women, 8*l.* each.

In the year 1825 the St. Katherine's Dock Company having obtained their Act of Parliament, the directors entered into an agreement with the Chapter, which acted under the direction of Lord Chancellor Eldon, for the purchase of the hospital and precinct estate, upon payment of the following sums, by way of consideration for the same; 125,000*l.* as the value of the precinct estate; 36,600*l.* to be laid out in building a new hospital, and 2,000*l.* for the purchase of a site. Various minor sums were also to be paid as compensation to certain members and officers of the hospital, for the loss of fees and emoluments, which would cease on removal to a new site. The court leet and profits and perquisites of the court were assigned to the Dock Company. Such part of the property as was not wanted by the Dock Company remained in the possession of the hospital, and it still forms a valuable portion of the estate. The directors also agreed to remove to the new site, at the expense of the Company, the pulpit, font, organ, clock, bells, stalls, altar, railing, monument, tombstones, &c.

The church and other buildings having thus become the property of the Dock Company, they were advertised for sale, preparatory to the ground being cleared. On Sunday, the 30th of October, 1825, divine service was performed in the church for the last time. In the morning the congregation was very numerous. A sermon, alluding to the circumstances, was delivered by the Rev. R. R. Bailey, from the words of James iv. 13, 14, "Go to now, ye that say, To-day or to-morrow we will go into such a city, and continue there a year, and buy and sell, and get gain; whereas ye know not what shall be on the morrow." The uncertainty of human projects, and the frailty of our best formed designs, formed the theme of the discourse. The approaching destruction of the temple by the "unfeeling and encroaching hand of commerce," was briefly but touchingly remembered. The service was concluded with a hymn sung by the "sixty poor children of the precinct," and the melody received a great increase of interest from the reflection that the fine-toned and celebrated organ was on the morrow to be pulled down. In the afternoon's

discourse no allusion was made to the demolition of the church. "After the concluding 'Amen,' the whole congregation pressed forward through the arch which once sustained the rood-loft, to the chancel, and that portion of the building soon exhibited a moveable mass of people filling up every corner." The people expressed their regret at the fate of the building, "and more particularly when the majestic organ, to be broken up on the morrow, pealed forth the anthem of God save the King. So warm were the feelings of the admirers of the old church, that even a relic of it seemed a valuable acquisition; and some paltry modern Gothic ornaments attached to the altar rails were eagerly snatched off by the first who could get them; and a piece of red velvet at the altar, with a tarnished glory, was pulled down and distributed among the many who sought for a remembrance of the venerated building."

The new site chosen for the hospital was on the east side of the Regent's Park. Mr. Poynter was the architect who completed the buildings as they now stand. The west front of the church and the houses of the brothers and sisters, comprise the three sides of a quadrangle, the public road being the fourth. The chapel is built in the style of architecture which prevailed at the commencement of the fifteenth century. It consists of a nave only, without side aisles, the small wings seen from the outside, which have the appearance of side aisles, being the chapter house and school of the establishment. The magnificent west window is a correct and elegant composition. The houses of the brothers and sisters are built in the domestic style of the sixteenth century, of brick, with stone dressings, producing a very pleasing effect. In front of the chapel is a pump, a neat design executed in stone, and has the appearance of an ancient conduit. The master's house is erected on the other side of the road, facing the college buildings. It is in the same style as the brothers' and sisters' houses, but more highly decorated. It stands upon two acres of ground, which is laid out in ornamental gardens and shrubberies. In the conveyance of the site for all these buildings by the Commissioners of His Majesty's Woods and Forests, the sum of 2,000*l.* paid by the Dock Company for the purchase of a site, was presented to the hospital.

Some time after the buildings were completed, the foundations were found to be insecure, and large sums of money were expended in repairing them. The dry rot was found to have made considerable progress in the houses of the master and brothers.

The ancient and valuable monuments transported at the expense of the Dock Company to the Regent's Park, were restored at an immense expense: the Exeter monument alone cost more than 1,000*l.* to restore and re-edify. Indeed, the chapter found it necessary, in addition to the grant by the Dock Company, to expend large sums on the interior of the chapel, and upon certain ornamental works and improvements about the grounds and buildings.

In the year 1837, the Commissioners of Charities published a report on this hospital, from which we gather some additional particulars respecting this interesting establishment.

It appears that the establishment still consists of a master, three brothers, three sisters, and a certain number of bedes-people. The late master was Sir Herbert Taylor. According to Stow, "the masters have formerly been of the clergy, and which seems to be required by the foundation; but the considerable benefit accruing to the masters made it desired and sought for by persons of quality of the laity, and such have of late times held it." The master has a yearly allowance of 1,200*l.*, together with a house and ground.

The brothers are clergymen of the Established Church, and are not restrained from marriage. Each brother has a separate house, and a yearly allowance of food. One brother is required to be in residence constantly, in order to conduct the service of the chapel,

in which he is assisted by a gentleman called the reader, who is paid 100*l.* a year.

The sisters are usually spinsters: instances have occurred of a widow being appointed, but they are rare. Each sister has an annual allowance of 200*l.* and a separate house, but they do not in general reside in the hospital, in consequence of a privilege, or rather an indulgence, sanctioned only by custom. They are allowed to let their houses, and at the period of the inquiry two of them were let at 90*l.* a year each, which the sisters received in addition to other emoluments and privileges.

At the time of the inquiry, the yearly income of the hospital amounted to 5,504*l.* 18*s.* 4*d.* derived from land, houses, and funded property. In many instances the rentals were found to be the same as at the time of the survey in the reign of Henry VIII., the increase being in the amount of fines received on the renewal of leases. Such fines, which sometimes amount to large sums, are distributed in certain proportions between the master, brothers, and sisters.

At the time of the removal of the hospital to its present site, the Dock Company took possession of the school, and allowed it to be carried on in a spot adjoining the old site, until the remaining scholars were provided for, when it ceased altogether. It was, therefore, recommended, in order to add to the respectability of the establishment, and the extension of the objects for which the endowment was originally made, to appropriate a portion of the surplus income to the support of a school of thirty-six boys, or twenty-four boys and twelve girls, to be clothed and educated free of all charge to their parents, and to be apprenticed in the proportion of six in each year, with premiums of from 15*l.* to 25*l.* It was further recommended to add to the establishment ten bedes-women, and twenty bedes-men, at 10*l.* each. These suggestions were adopted on the proviso, that the two situations of bedes-men and bedes-women should not be held at the same time by any two persons standing in the relation of husband and wife to each other. The annual charge for the forty bedes-people is 400*l.* and for the school and apprenticing, 300*l.* The bedes-people are appointed solely by the master: they consist, for the most part, of decayed small tradespeople, old servants of good character, and infirm aged people. They have no residence in the hospital, and no duties to perform, but simply an annual allowance of 10*l.* each.

The children attend divine service in the chapel on Sundays, and between the services they are allowed a dinner of cold roast beef and pudding.

In speaking of this school, the commissioner, Mr. Gunning, in his report, expresses a hope that the number of the children may be kept up, "and that nothing will be allowed to interfere with this beneficent and excellent application of so small a part of the extensive funds of this hospital; but on the contrary that there will be found every inclination on the part of those possessing the power, to carry out this interesting branch of the charity to its fullest extent. With respect to the increased annual expenditure of 300*l.* sanctioned by Lord Chancellor Lyndhurst, for the creation of thirty additional bedes-people, it does certainly appear useless in comparison with the benefits which would probably have resulted from the application of a similar sum to the purposes of education, by extending the school; and in any future scheme for applying the surplus income of the charity, it will be most desirable that this important subject should have due consideration, and the utmost encouragement."

ROAD-SIDE SKETCHES OF GERMANY AND THE GERMANS.

No. I.

I REMEMBER an instance of a gentleman, who, being on the borders of Italy, procured a carriage to drive him half-a-day's journey into that classic land and back again, that he might say he had been there. I remember another who crossed to Boulogne, ate his dinner, and came back again that evening, with the view of being able to say he had been in France. Lastly, I remember a lady who stated that she had been nineteen times to the top of Ben Lomond, and regretted pathetically that her advanced age prevented her attempting it again, so that she might say she had been there twenty times. This passion for doing things that we may say they have been done, seems to be inherent in British nature, and has, I suspect, been peculiar to this island from time immemorial. I am quite certain that many of our doughty knights tramped off to the Crusades with big crosses on their shoulders, and never a cross in their pockets, for no other purpose than to say they had been there; and from that time to this the same system has prevailed; it has been caricatured, laughed at, written at, but all in vain. John Bull cannot think that any one should have seen anything which he has not seen, or done anything which he has not done, so he 'en tucks his stick under his arm, takes his hands out of his pockets, and sets off, to grumble, anathematize, and be miserable for the allotted period; his sole, but supreme, satisfaction all the time being, that when it is all over, he can say he has done so and so.

Perhaps the most striking exemplification of this peculiar phenomenon of the British mind is the rage which has of late years been manifested for what is technically termed, "going up the Rhine," that is to say, crossing from London to Ostend or Antwerp, rushing on to Cologne, embarking on board the steamer there, and dashing up the river as fast as the engine can work against the stream, stopping now and then to sleep, or to look at a ruin. This is going up the Rhine, and coming down is a still easier matter, for the steamer goes three times as fast down the stream, and, of course, you need not look again at what you have once seen. "Oh! three weeks will do it easily; three weeks, why, you may see everything in a fortnight or less, so Mrs. Gumbs says, and she ought to know, for she went to Vienna last year, and slept there a night, and came back again all in three weeks. Now really Mr. W." continues Mrs. Waddilove, "since it takes such a very short time, I do think we should go." Mr. Waddilove shakes his head; it will be very expensive; but then he does not like not to have been up the Rhine as well as Gumbs, and the Misses Gumbs always seem to pity his daughters for not having been on the Continent, so he makes up his mind to do the deed; the family spend a fortnight of delight and misery on board dirty steam-boats and in comfortless inns, and return home, thanking Heaven that they can say they have been "up the Rhine."

"Nay, now you are really carrying matters a little too far: do you mean to say that these people have no pleasure in seeing the magnificent views—in visiting the interesting ruins of Rhineland? Do they obtain no advantage from their journey but that of being able to say they have made it?"

"Undoubtedly, Sir, they do derive pleasure from seeing all you allude to, but the main foundation of that pleasure is the power of saying they have done so. If there were any extrinsic interest in such matters, do you suppose that ninety-nine out of the hundreds of Waddiloves know any thing more about Cologne than that it produces the veritable Eau, or have heard of any other

celebrated Roland than he of the Macassar? Then, as to the contingent advantages they will derive from the journey, the young ladies no doubt will, on their return, be entitled to say 'Ach Gott,' and the young gentlemen to wear moustaches and long hair for a while, but further than these I am not aware of any beneficial results. No, I have made a careful calculation, and I believe that perhaps one-fifth of our countrymen who are to be found on the Rhine every autumn, go there on their road somewhere else, or for health, or really to see the country and the people; as to the other four-fifths, I declare my solemn conviction, that they had much rather stay at home, but that they *must* be able to say they have been 'up the Rhine.'

These considerations were forced strongly on my mind as I sat one afternoon in the garden at the back of the Coursaal, at Wiesbaden. It was a very fine day—we had eaten a very good dinner for twenty-pence, at the table-d'hôte kept by the Grand Duke, who, on Sundays, presides himself, in the character of Boniface,—and were now drinking coffee and smoking our cigars in all the luxury of the half-hour after dinner. Dozens of people, of all nations, ages, sexes, were around us, engaged in the same manner. There were rosy little children playing at hide and seek in the bushes, or feeding the ducks in the ponds, whilst their fat mammas and fatter papas walked about, or sat under the shade of enormous umbrellas, of various colours—red, blue, green; the Germans are, at any rate, gay in their umbrellas. One gentleman, in particular, I remarked, of peculiarly short and corpulent habit, with a delicious greasiness of face, and an expression of plethoric sentimentalism, who carried an umbrella of a delicate roseate pink colour; he was, doubtless, a metaphysical novelist of the new romantic school.

It was here, I say, that the considerations recorded above were forced into my mind; and for the very reason, that I had made acquaintance with, and was now sitting opposite to, one of the true Waddilove school. He came from London, and had been living for six weeks on the Rhine, and yet he had no ostensible object in doing so—he did not like it—he was much more comfortable at home, he repeated again and again. Then why did he ever come abroad? He declared his reason honestly enough—it was to say he had been up the Rhine! And as to the amount of additional knowledge he had gained, that may be inferred from the fact, that, though he had been six weeks at Baden, looking on at the gaming-tables, he had not the least idea of the principles of roulette—he knew not a syllable of the language; and though he must have heard the words fifty times a day, he *would* call Mannheim, Mainham; and in speaking of rouleaus of money, called them either rollers or rollos, reminding me of a venerated old lady, who once applied to me, as an indisputable French scholar, to know whether Paris should be pronounced Payris or Payree. This gentleman, however, had taken six weeks to his tour, and the principal information gained thereby was, that too much Rhine wine gives one the stomach-ache. What information those gain, who take as many days for the journey, may be more easily imagined than described; or rather it may be very easily described—by a cipher.

I consider it perfectly certain, that any one may see quite as beautiful scenery, by taking twenty shillings worth on the top of a coach, through Kent and Surrey, as by a week's run up the Rhine, and may see it, too, far more agreeably. But then you will say—"Consider the people—you have an opportunity of studying the German character." Well, I do consider the people, and I say that there can be no greater libel on the people of Germany, than the taking those on the banks of the Rhine as a fair specimen, for they are not Germans. Centuries have passed since they were so—for hundreds of years back they have been a mixture of French and Germans, and refugees of all nations; and of late, in consequence of the travelling mania, they have been

inoculated with the vices, without being benefited by one of the virtues, of the shoals of foreigners who swarm about them—so that if a modern Diogenes were to set out in search of honest men, the Rhine is the last place he should go to, to look for them; for I doubt if there is an individual deserving that character along the whole river. Not that I blame them for it. Is it to be supposed that something of the old spirit should not still remain in the bosoms of the descendants of the gallant old robbers, who formerly garrisoned those innumerable castles, once so romantically terrible, but which now only furnish sketches for enthusiastic young ladies, and subjects for ballads by poetical young gentlemen? These same old robber knights were wont to levy contributions from all who came within their territory; and their successors follow up their system quite as effectually, though in a different way—but it is this very difference that I complain of. There would be something romantic, or, as we used to say at school, some fun, in being seized by a party of gentlemen in huge hessian boots, broad belts, and flapped hats, which, I understand, has always been the classical costume of German bandits from time immemorial; in being carried off to the neighbouring castle, built at an inaccessible height, and there plundered and thrust into a dungeon from which you are finally rescued by the baron's daughter, a young lady of resplendent charms and superior moral character—there would, I say, be something in this; but to be robbed, thaler by thaler, and stiver by stiver, by innkeepers, waiters, boatmen, commissioners, is quite another thing; there is all the injury, without any of the romance; it is not the loss so much which afflicts, as the dishonour of the thing. And, in truth, all that was once romantic on the Rhine has wellnigh disappeared; for who, I should like to know, can associate anything beautiful with scenes, to which he is led, like an ox to the slaughter, by a shabby, snuffy-nosed *lacquy-de-place*, in the midst of a crowd of similarly bear-led miscreants, or can call up poetical ideas, when that same rascal is pouring into your ear, in the regular drawling showman-tone, the hackneyed legend of the place, all his stories having one and the same moral, namely, that you should give him something extra for the immense local knowledge possessed by the guide you have been so fortunate as to obtain? It may be an illiberality on my part, but I cannot feel the same interest in any place, however interesting *per se*, when I know that it is drivelled over, and poked into daily, by hundreds of individuals, who came to see because others have seen, and to admire because they ought to admire: and I cannot help thinking, that this age, which has revived the love of the truly picturesque and poetical, has, by the very excess of the passion, done more to destroy the possibility of such feelings, than any age for centuries back.

"Do you mean, then, to say that there is nothing worth seeing on the Rhine?" By no means. I merely say, that you should not post up and down it as if you were doing a match against time: if you do, you will come back disappointed; you will not allow you are so, I know, but the truth that you are disappointed will lie at the bottom of the well of your heart, and you will be afraid to look down steadily, for fear you should see it. No; if you wish to enjoy, if you wish to see, you must see by yourself and for yourself—go and spend some weeks there, explore the lovely little valleys which lie along the banks, the beautiful streams which run into the mighty flood—stop a day or two here, and a day or two there—mingle with the country people, who have not yet been contaminated by the influx of strangers—take time to see, and digest what you see—and you will gain much knowledge, and more enjoyment.

I well remember the first time I saw the Rhine: it was at Cologne. I had just arrived from Aix-la-Chapelle, and wandered down to the river side to have one view of it before night set in. It was a lovely evening;

the last faint rays of the sun yet glimmered on the houses, and sparkled on the topmost windows of Cologne—the dark trees cast a black waving shadow on the water—behind and beside lay the ancient city, with its battlemented walls, its countless spires, and its still sturdy relics of those buildings which the haughty Roman erected there in the plenitude of his power—before me rolled the vast river, turbid but calm in its resistless course, honoured for centuries as the boast and the bulwark of the old German name. It was years since I had seen so mighty a stream, and yet, looking back into the dim vista of time, I conjured up before me an often-seen vision of a river, to which this was but a streamlet; palm leaves rose along its sandy banks, boats of strange shape glided over its waters, and the imagination became more and more vivid, till I scarcely knew if I was standing beside the Ganges or the Rhine. The long solemn swell of a church bell aroused me from my dream, and the true reminiscences of the place came upon me. I was viewing that river renowned in story since the days when Herman vanquished the legions of the haughty Emperor of the world—on whose banks Charlemagne had sat enthroned in all the barbaric splendour of the young northern race—which had witnessed the struggles of one generation of warriors after another, and still rolled on in primeval majesty, whilst they, and almost their names, had been swept away by the rushing stream of time, like the idle weeds borne down to silent oblivion by the mighty flood before me. As I mused, the night settled darkly down; the lamps on the opposite side began to twinkle out one by one, and the bridge across was only marked by the row of lights, which stretched along in a glittering line, and were reflected in the dark waters, glimmering transiently like the thoughts of Heaven and of higher things which float dimly on the turbid soul of man. I went into the hotel, and tried to make a supper of Rhine salmon, which I was told was superb, and was, I have no doubt, highly prized, as, from the length of time it had evidently been kept, it must have been quite an heir-loom in the family.

Cologne is a place plagued with a swarm of guides and commissioners; they stand at every corner, and offer you their services; and I do not know a more laughable sight than that of a party of Englishmen led by one of these tormentors to see the lions: the placidly unhappy way in which they trudge along, melancholy but enduring, whilst their guide screams into their ears a long tissue of jargon of which they do not understand one quarter, is extremely edifying; and, after all, they are quite right, for in such places, which swarm with lions in every street, I hold it to be flat heresy in any one to maintain the propriety of leaving the least unvisited. Of these the Cathedral is, of course, the lion *par excellence*; and, unfinished as it is, one cannot but feel that, if ever it were possible for man to raise a temple suited to the dignity of religion, this is it. It is at present undergoing the process of renovation and completion. The lovers of art are, of course, delighted; but I could not help thinking that the gaudiness of the new paintings and freshened windows destroyed the religious solemnity of the time-hallowed edifice; besides, the time for these things is gone by. When Cologne was the Rome of the North—when monarchs crowded to it in pilgrimage, and its Archbishop was an elector and a prince of the Holy Roman Empire—they were realities—the Cathedral then was a Cathedral: now it will be a mere fine building; and, in my poor opinion, it is far better to let the old memories of the past cling around the ancient fragments, than to brush them away, and furbish up a new and glittering, and maybe a complete, but yet an unmeaning, edifice. With such sentiments, it jars painfully on one's feelings to be obliged to go and look at the skulls of the Three Kings of the East, crowned with gold and gems, and listen to the long farrago of nonsense told about their pilgrimages and their miracles. And yet, what can

one do!—to have been at Cologne, and not seen the Three Kings, is like having been in Egypt and yet never ascended the Pyramids.

Cologne is famous, too, for the ill odour of its streets. Every body knows Coleridge's unsavoury stanzas on the subject; and, though I am not sure that I have not encountered quite as much olfactory annoyance in Paris, yet the city of the Rhine is bad enough in all conscience; and you feel it more particularly on a hot day, trotting after a guide up one street and down another in search of churches. I suppose it was this peculiar fragrance of the atmosphere of their town which drove its inhabitants, in despair, to the manufacture of their celebrated scent, which is undoubtedly the only good, and the only wholesomely smelling, water to be got in Cologne. This, however, in passing;—those who wish for a full account of the rest of the lions of the town, such as the picture of St. Peter with his head downwards, Rubens' house, &c., may read the full account of them in Murray's Hand-book.

For myself, I must confess that nothing, not even the Cathedral with its Three Kings, gave me such unmixed satisfaction as the sight of the churches of St. Ursula and St. Gereon, where are exhibited the bones of that celebrated lady and her eleven thousand virgins, and of St. Gereon and his Christian legion of martyrs. It was something to see the length to which human credulity and human absurdity can go; but it was still better—it was absolutely delicious, to see the superhuman gravity with which the exhibitors related their legends,—the perfect absence of a smile, whilst they pointed out the skulls of the various officers of the legion, and of the principal ladies in St. Ursula's train. Had Cæsar heard them, I am sure he never would have wondered at two augurs being able to meet each other without laughing.

I would advise every one who cares for pictures to visit the Museum—not that it contains many by the great masters, though there are some very pleasing ones, but simply on account of one picture, which I am astonished has not been mentioned by any of the guide-books. It is said to be by Albert Dürer, and I have no doubt is so. It is small, and painted on wood; the subject, two musicians, one of the figures evidently being a portrait of Dürer himself; the colouring is excellent, and the drawing still better. The whole expression of the picture is so light and graceful, so perfectly free from vulgarity, and yet so merry, that, with the exception of a woman and child by him at Vienna, it is my favourite of all the works I have seen of this master. If this notice should induce any one, while in Cologne, to visit this picture, I am sure they will be amply repaid for their trouble.

Cologne and Bonn are the two usual points of embarkation for those going up the Rhine. I would advise every one, unless labouring under the *embarras de richesses*, and absolutely yearning to throw away his money, to eschew the latter place most carefully. There is absolutely nothing to be seen there, except the rooms which were hallowed by the residence of Prince Albert, when at college, and a few uncouth looking, and only half German, students; on the other hand, the charges at the inns are marvellously adapted for raising a gentleman's bill, and lowering his cash.

THE FROZEN SUB-SOIL, OR GROUND-ICE, OF SIBERIA.

OBSERVATIONS hitherto made under the surface of the ground, all tend to prove that there is a stratum, at the depth of from 40 to 100 feet, throughout the whole earth, where the temperature is invariable at all times and seasons, and which differs but little from the mean annual temperature of the country above. At the equator that stratum is said to be at the depth of little

more than a foot, in places sheltered from the direct rays of the sun; but in temperate climates it is at a much greater depth. In the course of more than half a century, the temperature of the earth, at the depth of 90 feet, in the caves of the Observatory at Paris, has never been above or below 53°, which is only 2° above the mean annual temperature at Paris. "This zone, unaffected by the sun's rays from above, or by the internal heat from below, serves as an origin whence the effects of the external heat are estimated on one side, and the internal temperature of the globe on the other."

During the last hundred years a vast number of observations have been made in the mines of Europe and America, which agree in proving that the temperature of the earth becomes higher in descending towards its centre. To this interesting subject we propose to offer some further details hereafter; our present purpose being to notice a curious phenomenon connected with the inquiry; viz. that in the cold regions of the earth's surface, the soil, to a certain depth, is *always* frozen, whatever may be the temperature of the air and vegetable soil above, or of the strata below. That this is the case, to some small depth, has been long known in Siberia; but it is only recently that the great thickness of the frozen stratum has been ascertained. Gmelin, in his Travels in Siberia, states that at Yakutsk, shortly after the foundation of that town, about a century and a half ago, the soil was found frozen at a depth of ninety-one feet, so that the inhabitants were obliged to give up the sinking of a well. Persons were sent out by the Academy of Sciences of St. Petersburg, about the middle of the last century, to make observations on this subject; they all concurred in the general facts, but appear to have been discredited by men of science. Von Buch, so late as 1825, said, "I am fully convinced that the accounts of the soil being frozen in summer to the depth of many feet, in districts capable of maintaining the growth of shrubs and bushes, are not to be relied on, and that Gmelin's statement that the soil was frozen in a well at Yakutsk at the depth of 100 feet, ought no longer to be quoted in elementary works upon natural philosophy." It will be seen, however, that a much more striking statement than that of Gmelin is now believed by natural philosophers.

A few years ago, a merchant at Yakutsk, of the name of Schargin, began to sink a well, but found the ground frozen so hard that he was about to give up the attempt. Admiral Von Wrangel, the celebrated traveller, advised him however to proceed until he came to the bottom of the icy ground; he did so, and sent to the Academy of Sciences at St. Petersburg a record of his proceedings. He had to dig through a depth of 382 English feet, before he arrived at the loose and unfrozen soil; the whole of the vast intermediate mass of earth being at a temperature below the freezing-point, and almost totally uninfluenced by summer heats. The temperature was about 18° Fahrenheit (14° under the freezing-point) at a few feet below the surface of the ground; and gradually increased with the depth until the freezing-point was attained at about the depth mentioned above.

This observation being deemed worthy of credence, the philosophers of Russia and Germany have been anxious to collect additional facts of a similar kind, in order to determine the limit of frozen soil; that is, the latitude at which the heats of summer become sufficiently powerful to thaw the *whole* of the ground frozen in winter. Humboldt has found the soil frozen at a depth of six feet in lat. 60°. Near Beresov, Erman has found the temperature of the soil, at a depth of twenty-three feet, only just above the freezing-point; and a dead body was found there, which had been buried upwards of ninety-two years in a bed of frozen soil, without showing signs of decomposition. Towards those parts of Siberia which border on the Pacific Ocean, no frozen soil has been found; but in the interior many records have been collected of ground permanently frozen.

It is desirable to explain somewhat more fully what is meant by "frozen soil," or, as it is sometimes termed, "ground-ice," especially as the latter expression is often used in a very different sense. Professor Von Baer, in a communication to the Geographical Society of London, describes the state of the frozen ground very clearly. If the ground be totally free from moisture, it cannot be frozen; but the ground in high northern latitudes is never in this state. Even the sand, though in the arctic summer its surface may now and then be perfectly dry, is always saturated with wet, before the winter begins. If ground be examined which contains only very little moisture in a frozen state, it is very difficult to detect the ice, as it forms an extremely thin partition between the single particles of the earth. Should the moisture be somewhat more considerable before the freezing comes on, small pieces of ice are perceivable in the frozen earth, wherever the spaces between the particles of the soil are large enough to admit them. "These bits of ice," says Professor Baer, "which look like small crystals, I have particularly noticed between the upper layer of soil, which is thawed, and the lower layer in a frozen state. But in the flat marshy districts of the high northern latitudes, which in Russia are called *Fundun* (originally a Finnish word), there is so much water in the ground, that the quantity of water frequently exceeds that of the soil mixed with it. If in the summer you drive a pole into the turf, which is here formed by the grass or the moss, dirty water, mixed with soil, spurts up in a stream, to a considerable height." He also states, that in *Nóvala-Zemlia*, the ground is frequently penetrated by perpendicular clefts or shafts of ice, never more than four inches in thickness, and occurring, principally, in loamy soils. The ground in that region is penetrated by fissures in all directions, which are the result of contraction produced by the frost. In these fissures, which are usually from one to three inches in width, water is collected in summer, and frozen in the following winter; if the fissures go to any considerable depth, the water is never thawed. This is especially the case if the spot be gradually overgrown with a layer of moss.

The term "ground-ice," which is certainly appropriately applied to this frozen soil, is however sometimes applied to ice which forms at the bottom of rivers under certain circumstances, and which it has been suggested to term "bottom ice," to distinguish it from the former. That ice, which is lighter than water, should be formed at the bottom of rivers, while the liquid current flows over it, though often asserted by some, has been strenuously denied by others; but recent observations have confirmed the fact as a real occurrence; and, as the mode of explaining it has some connexion with our present subject, we will briefly allude to it. Different observers have found, that, at the bottom of very rapid rivers, in cold climates, when the bulk of the water is only just above the freezing point, ice may be seen, generally in small crystalline pieces, and apparently attached to the ground by a slight cohesive force. Sometimes the pieces, without any visible cause, become detached from the bottom, and rise to the surface of the water, bringing with them adherent fragments of sand and stone. M. Weitz, the superior officer of the Imperial Russian Mining Corps, observed this phenomenon with great attention in one of the Siberian rivers, and in a Memoir, since translated from the Russian by Colonel Jackson, he thus states his views of the cause of this apparent anomaly. "I conceive that the intensity and long continuance of the cold may freeze the soil to the depth of the bottom of the river, particularly where it is not deep, and that there the diminished velocity of the water permits its congelation, particularly if there be any hollows where the water remains stagnant. So long as the congealed masses continue small with regard to the volume of water immediately above them, they adhere as if rooted to the bottom, but when by degrees they increase in bulk, the difference in their specific gravity operates to overcome their adhesion to the bot-

tom, and they rise, bringing with them such gravel and stones as we find attached to them."

With respect to the depth at which the Siberian ground is frozen, Professor Baer remarks that its determination would throw great light on the nature and formation of springs; because most of the Siberian springs, which have their source at a small depth below the surface, cease to flow in winter, as if their very sources were frozen up; whereas others, which flow all the year round, are supposed to have their source in the warm strata beneath the frozen ground. That the Siberians are familiar with the fact of the drying up of small streams in winter, was shown by an odd incident which occurred to Admiral Wrangel a few years ago. He was riding (to the north of Yakutsk, in about 65° N. lat.) over the ice of a pretty considerable river, when the ice suddenly gave way, and his horse sank: he was himself saved by being thrown on the ice, at the moment his horse fell. He was lamenting the loss of his horse to the Yakutskers who accompanied him, as he knew not how to get another; but they laughed at him, and assured him they would soon get his horse back, and with a dry skin too. They procured some poles and broke away the ice, under which the bed of the river was perfectly dry, as well as the horse and his pack. The cause of the phenomenon, which appeared to be well understood by the natives, was this—the surface of the river had become frozen before the spring itself, but when the latter froze likewise, the supply to the river was cut off, and the river emptied itself, and left a hollow shell of ice where the surface of the water had once been.

The Academy of Sciences at St. Petersburg, desirous of ascertaining how far the influence of the air and of summer heat affects the frozen ground, caused a number of thermometers to be buried in the earth at the sides of the deep well sunk through the soil at Yakutsk. The thermometers were placed at the depth of 1, 3, 5, 10, 20, 50, 100, 150, 200, 250, 300, and 350 feet, two at each depth, the bulb of one immersed in the side earth to the depth of a foot, and the other to that of a fathom. These thermometers were to be observed daily for a long period, and there will doubtless be some valuable results obtained from their indications.

Professor Baer has pointed out the desirability of tracing a line round the northern hemisphere, beyond which, northward, there is permanent frozen soil, or ground-ice: and also of determining the depth to which the surface soil is affected by the heat of summer, and the depth of frozen ground beneath. To aid in these investigations, he solicited the cooperation of the Royal Geographical Society of London, at whose suggestion Dr. Richardson, the able and enterprising Arctic traveller, has drawn up a series of instructions for the servants of the Hudson's Bay Company. The object is to collect information from every part of the Company's vast territories in North America, respecting the state of the soil at various depths from the surface, and in various latitudes. Investigations of this kind are now being carried on in the northern parts of both continents, and we may confidently look forward to the acquisition of much valuable information on this interesting subject.

TRUE HUMILITY.

If we can forbear thinking proudly of ourselves, and that it is only God's goodness if we exceed other men in any thing; if we heartily desire to do all the good we can to others; if we do cheerfully submit to any affliction, as that which we think best for us, because God has laid it upon us; and receive any blessings He vouchsafes to confer upon us, as His own bounty, and very much above our merit; He will bless this temper of ours into that humility which he expects and accepts.—*Lord Clarendon.*

THE MAGPIE.

NATURAL HISTORY OF BIRDS.

No. V.

THE CORVIDÆ, OR CROW FAMILY. (Concluded.)

IN the preceding paper the habits of a large portion of the Corvidæ were described; four species, the raven, carrion-crow, hooded, and red-legged crow, have passed before us from their woodland haunts, or rocky homes on the sea-coast. Let us now turn to the fifth division of the crow family.

V. THE ROOK. (*Corvus Frugilegus*.)—This bird is continually confounded with the crow, even by persons who are accustomed to see both birds every day. There is some little excuse for this error, as the appearance of the two Corvidæ is nearly the same, though their habits are sufficiently distinct to prevent such a classification by naturalists. When the rook is full grown, it may be distinguished by a peculiar bareness round the lower part of the beak, as if the constant habit of digging in the ground for insects had worn off the feathers; not that such is the case, as we shall presently see: This bareness gives a white and scaly appearance to the base of the bill, which may be readily observed, even at a distance. The colour of the bird is a rich glossy black, relieved by bluish tints on the sides of the neck and head.

Linnaeus gave it the name of *frugilegus*, which term signifies a collector of grain, and was deemed an appropriate designation for a grain feeder. The appellation would be correct did the rook live wholly on grain, but this is not the case, as the food of the bird consists chiefly of insects; certainly, it feeds as much on them as on grain. *Frugilegus* is, therefore, scarcely more appropriate to the rook than to the crow.

Some have lately tried to elevate the rook by giving him a new name, which is, however, more objectionable than the old-fashioned Linnean appellation. This new term is *predatorius*, a word of bad sound, implying the possession of savage qualities, habits of prey, and a thievish disposition. To all these charges the rook may plead "not guilty." The term *frugilegus* may not be sufficiently descriptive, as it comprehends only one of the bird's feeding habits, but it is true as far as it goes; whereas *predatorius* conveys a wrong notion, and is more appropriate to the hawk or vulture than the rook. The name of *grain-collecting-crow* is certainly more applicable than that of the *preying-crow*; the term *frugilegus* has, therefore, been retained in this article, as more appropriate than *predatorius*, to this bird. For though the rook does sometimes engage in battle with hawks, this is for the protection of its young, not from a predacious disposition. The food of this bird may be inferred from the perseverance with which it follows the plough as it turns up the bottom of the heavy clods.

How seldom do we see the plough-share at work without the attendant rooks following with watchful eyes the plough-man's track! Mark how the birds descend into the furrows, how repeatedly the powerful bill searches into each freshly turned up clod! What is the object of this scrutiny? Not grain, certainly; but abundance of worms and grubs are thrown up from their former hiding places, and exposed to the keen eye of the hungry rook. When we consider the clouds of rooks which, in the course of a year, descend on the lands of one parish, it must be evident that myriads of insects and grubs are annually destroyed by these birds. In those instances, the rook is certainly a friend to the farmer; such hosts of insects would quickly reduce his most promising field to a waste. But the services of the *corvus frugilegus* are not over when the ploughing season has passed. The daily wants of the bird force him to a perpetual seeking for food, and it so happens that the grubs and insects most destructive to vegetation are eagerly sought for by the rook. When the young wheat springs up, it is exposed to the depredations of numerous grubs, which feed on its roots, and soon render the plant sickly. Now these grubs are the rook's prized morsels; he quickly discovers the fields where they lurk, and attacks the subterranean depredators. The rustic, seeing the rooks descend on the wheat lands, and dig up the wheat, fancies the birds are destroying the hope of the future harvest, and immediately attacks his valuable auxiliaries with powder and shot. He does not probably detect the appearance of disease in the wheat, and is ignorant of the important services the dreaded birds are rendering.

The agriculturist may be certain of one thing, that the rook is more beneficial than hurtful to his crops; the bird never *prefers* grain; it would much rather feed on insects; and in spring these are generally abundant, consequently the rook has then little temptation to attack the newly sown seeds. This may sometimes be the case in frosty weather, when insects cannot be procured; or in dry seasons, when they are too deep in the ground to be reached by the rook's beak. Wheat-ricks are then attacked; but this is an extraordinary event, and, therefore, no criterion by which to ascertain the food most preferred by the rook. Those who have tamed these birds, always find insects eaten in preference to seeds; indeed, grain is uniformly rejected when an insectivorous diet is procurable. The farms in our southern counties are often infested by the grub of the cockchafer; these are eagerly sought by the rook, which thus removes a source of mischief from the land.

Those who have seen a field of turnips perishing from the attacks of insect myriads, can estimate the advantages derived from the destruction of the eggs, from which so terrible a pest has issued. The good services of the rook are nevertheless often overlooked, and his whole species persecuted to death by the farmers in some places. What is the result of these rook-slaughters? Abundance of grain, plentiful crops, and full barns? Let us see what happened in our own country not many years ago. Some Devonshire agriculturists, having brought themselves to regard the *corvus frugilegus* as the destroyer of their corn, combined for the annihilation of all such birds within their district. Powder and shot soon began their work; the surprised rooks fell in thousands, and their gothic destroyers exulted over the effects of their skill and valour. The birds had no chance in such a war; whole colonies perished, and the caw of a rook was almost as great a rarity as the scream of an eagle. The farmers were in high glee; village boys had reaped a harvest of pence for their efforts in the grand extermination: but the time of retribution came; the laws of nature had been disregarded by such a destruction in one of her kingdoms, and the results appeared in a shape most unexpected by those who had neglected the great truth, that nothing has been formed for evil. For three years the crops failed, insects and grubs of every order

increased, and the *Corvidæ* at last awoke to some perception of their egregious blunder. Every attempt was then made to attract rooks to the neighbourhood, and some landholders went so far as to procure numbers of the birds from a distance to replenish the desolated rookeries of the district. These efforts at last succeeded: though some time elapsed before the consequences of the great slaughter were checked. Such lessons have often been taught to those men who are ever regarding nature as their foe. It is impossible to estimate the benefits derived from the operations of the rooks upon ploughed lands, from which millions of grubs are extracted by these birds. It has been calculated that sixty thousand acres of wheat are destroyed every year in England by the wire-worm only. The employment of boys to pick out the grubs has frequently cost the agriculturist large sums of money; fifteen thousand have been taken from a single acre by boys, each of whom collected six hundred a day. How much more effective a flock of birds, on such lands, than a troop of boys! How rich is the appearance of the ploughed fields, when the pale golden light of the evening sun casts its mellowing tints over a thousand furrows! How little do we suppose that tens of thousands of destructive grubs are lurking in those smiling fields to destroy the farmer's hopes! For their destruction various flocks of birds are provided in the system of nature; and the rook is not the least efficient amongst such agents.

Few peculiarities in the habits of the rook have attracted more observation than those colonies, called rookeries, which so frequently impart a charm to ancient English parks. The traveller hears, amid the evening stillness, the cawings from some crowded establishment break upon the solitude; the rooks seem engaged by thousands in some "faction tumult," starting, by their multitudinous voices, the prowling fox, or flitting owl. There are certain times of the year in which these rook-argumentations are more frequently heard; the beginning of April is particularly signalized by such *conversaciones*. Probably the various little pifflings then committed by the less honest birds upon the nests of others may contribute to these evening tumults. We can imagine a pair of rooks labouring through the day to build a comfortable house for their young, and conceive their rage upon finding, at their return from a long journey, the half-formed nest despoiled of the materials collected with so much toil. At once the alarm cry is raised, the whole rookery responds, till at length a thousand aerial tocsins send their echoes for miles around. At other times these combined cawings are of a more peaceful character, as if the rooks were enjoying a pleasant consultation over the events of the world beneath, before retiring to their nightly rest.

What tranquil and pleasing feelings are called up, when these soothing sounds are heard in the happy quietude of some half-park, half-forest district! An avenue of ancient elms, planted in the time of James I. forms the noble approach to an old manorial residence, the foundation stones of which can tell us somewhat of the days when the Third Edward brought within the halls of Windsor the chivalry of England. The home of an ancient family is in ruins, gnarled and gigantic ivy trunks prop the weary walls like faithful adherents of a departed lord, and wild flowers, growing on the turrets, wait their fragrance over the desolate courtyard.

Here, for ages, amid changes of royal dynasties, the rooks have held their homes, faithful to their ancient trees. Oft, at fall of evening, their melancholy cawings sound in peculiar unison with the plaintive and never-ending voice of the distant water-fall. Such sounds suit such places, and produce in feeling minds all the effects of rich and tender poetry. The writer has often felt the power of those melancholy rook-notes, in the solemnly beautiful church-yard of St. P—; there, in the calm days of May, the voice of the bird sounds

mournfully soft over the numerous hillocks and tombs which mark the undisturbed homes of many generations. It is marvellous that persons can be found to destroy rookeries beautifully placed on an estate, and furnishing, throughout all seasons of the year, innumerable matters to delight and interest the owner. Still it is not easy to destroy a rook-kingdom; the birds will submit, age after age, to constant attack, and annual slaughterings of their young, preferring their ancient homes with perpetual dangers, to a new settlement with peace.

The rooks are certainly fond of noises, either produced by themselves or human beings; they appear also to take pleasure in the operations and busy works of man, and frequently establish themselves in the heart of a crowded city, where, from their high places, they observe, with an amusing gravity, the pomp and circumstance of earth, the triumphal march and funeral procession. Many rookeries are found in and about London, though its vast extension, and the destruction of many clumps of old trees, have diminished the corvine colonies. Rooks cannot, it is presumed, have any particular sympathy with legal pursuits; the customs of common law comprehend no privilege for them, nor do statutes recognise their rights; but these birds did formerly honour the lawyers in the Temple with their company, and amused by their tricks many a pupil of Themis. Probably those who have described what they facetiously, and with a sly reference to Westminster Hall, called "Rook Courts," (a jabbering assemblage of quarrelsome rooks,) in which we are gravely told a thievish bird is formally tried, condemned, and punished, by its fellow rooks, may find a good reason for the existence of rooks in the Temple. Such solemn proceedings must have required some little acquaintance with Temple studies, if not with the practice of the Old Bailey Court or Westminster Hall! Whether the moral notions of the rooks received a shock from their intimacy with gentlemen learned in the law, or they suffered persecution from the templars, is a nice question, into which the reader must not be drawn. These birds are no longer heard in the Temple, and the future Attorney-general, or Chancellor, must be contented with the occasional view of some passing over the spot which all must regret to see abandoned by such companionable bipeds.

The desire for nearness to human habitations is sometimes singularly manifested by the rook. Some have been known to build on the tops of weather-cocks, as was the case in Newcastle, in Welborne, and other places. Many of those who read these accounts have, perhaps, seen an engraving representing a rook's nest built on the vane of the Exchange in Newcastle. The print brings before the eye a spire surmounted by a tall weather-cock; on the vane is a nest, on the nest a rook is sitting, and round it a flock of young rooks are circling in sportive flight. The construction of a nest on such an ever-moving foundation may be represented as a proof of the perfection of bird instinct; into this metaphysical sea we are not about to sail; the fact is only adduced to illustrate the rook's determination to be at times a very near neighbour to man. Vast numbers of rooks made their dwellings in the ancient walls of Windsor Castle, trusting to the immunities secured by the vicinity of royalty, and laying under contribution the wide domain of that rich part of Berkshire. In the early dawn, on a still summer's morning, were their countless cawings heard by the sentinel pacing the ramparts, and thousands of dark wings swept over the keep, long before the royal standard of England opened its rich folds to the rising sun.

The extensive repairs undertaken by George IV. led to the expulsion of the rooks from their castellated homes, though large rookeries are yet abundant in the vicinity of the Castle. These rookeries are not increased by the influx of birds from other settlements, the laws of these republics being most rigid in the exclusion of foreigners. No sooner does a stranger attempt

to settle in an old colony than he is furiously attacked and beaten off by the natives. A rook wishing to change his home must, therefore, retire into solitude, construct a lonely nest, and become the founder of a new colony. No opposition is ever made to the settlement of the young broods in the rookery, but these frequently depart in flocks to form small rook-states in the neighbouring trees. The fondness shown by the rooks for their nests does not keep the birds to their lofty homes through the year; after the young have flown, the rookery is for a time deserted; both old and young preferring the freedom of the fields and woods to the limits of their settlement. In this respect we may liken the rooks to those wild Indian tribes who pass one period of the year in their wigwams, and the remainder in the hunting-grounds.

During the bright flush of summer's beauteousness the rooks range hills, plains, and woodlands, giving themselves up to the gladsome spirit of that happy time. The first cry of the autumnal storms sends the rooks to the shelter of the forest; but, when primroses steal softly out on the sunny banks, and the violet peeps from her leafy nooks, then the birds return to their winter-shaken nests, which are quickly put into a habitable condition.

Notwithstanding the preference evinced by the rook for the neighbourhood of human beings, it has an unmistakable objection to come very near to men themselves. Those who attempt to shoot these birds know the extreme difficulty of getting within gun-shot distance. The sight of a stick carried over the shoulder is sufficient to send an immense flock from the most prized feeding-ground. A passenger going along the road suffices to set a thousand wings in motion. This wariness arises from the constant attacks made upon the young birds, which naturally retain some dread for anything in the shape of a gun. The rook is a migratory bird in high northern latitudes, where he does not object to pass the summer, but departs on the approach of the winter storms. This bird visits Siberia on the approach of summer, soothing the Russian exile with its long drawn note, and sweeping with busy wing over the extended northern plains.

When winter sounds his approach in whirlwinds and snow, the rooks gather in vast flocks, and sail towards more temperate regions. With us the bird remains the whole year, enjoying the luxuriance of our summer, and sustaining the severity of winter with little harm.

Sometimes a hot summer destroys a great many, as no insects can then be obtained except at the earliest dawn, when the freshening dew sparkles on millions of light green blades, and attracts to the surface numerous worms. But such a time is too short for a satisfactory meal, and the rook is unable to procure nourishment from the parched soil. It is at these times that the rook becomes injurious to the farmer. He will then dig up young potatoes and turnips, and also steal grain from the stacks. Thus, when we are delighting in the gorgeous splendours of rich landscapes, and the summer-tinted foliage of ancient forests, the rook is starving in the midst of all this beauty, which is to him a desolation.

There is one peculiarity in the rook which has caused numerous disputes amongst naturalists. The lower part of the beak in young birds is covered with feathers, which fall off in August. The question which has been raised is, whether the feathers fall off *naturally*, or in consequence of the *friction* caused by the beak entering the earth in search of food. The latter supposition does not seem worthy of much credit, as the same effect is not produced in birds which thrust their beaks into the ground quite as deep as the rook. The carrion-crows, magpies, and jays, use their beaks for spades in a most effective manner, without depriving themselves of their feathers. If friction produces such a bareness in the rook, how do those birds retain their plumage? The feathers have been found to fall out at the proper time

in tamed rooks, which had not used their beaks to dig for food. In this case the feather-dropping cannot be ascribed to friction. If the loss of the feathers arose from friction, they would appear again after moulting, which is not the case. The bared part is covered by a whitish and rough skin, indicating a complete alteration in the bird's system. The reason of this peculiar organization is not known, though some important end must be answered by such a change.

VI. THE JACKDAW. (*Corvus Monticola*.) This bird has a great resemblance to his brother the rook in habits and voice, and Cowper might not improperly say of it,

"There is a bird who, by his coat,
And by the hoarseness of his note,
Might be supposed a crow."

In size, the jackdaw yields, of course, to the crow or rook, being seldom above thirteen or fourteen inches long; but in activity and cunning is surpassed by no member of the feathered tribes. If the reader has ever crept into a turret inhabited by these birds, he may have seen something of the manners of these loquacious strutting *corvidæ*. The appearance alone entitles it to some little attention. It has not certainly the brilliant-coloured coat of the parrot; but its grave colours partake of the sprightliness pertaining to the bird's air and habits. His coat may be called black, but pleasing bluish tints give richness to this black, which is further relieved by a greyish colouring on the neck and breast. This is the general dress of the jackdaw; sometimes a member of the family wears a garb wholly black, whilst others appear in grey apparel. It is pleasant to see a flock darting about some time-worn tower on a sunny day, when their bright bodies flash out many brilliant hues as they dart to and fro. Most birds show a preference for certain localities, away from which they are not happy. Some delight in the deep solitudes and gloom of pathless woods, others choose the caverns of sea-beaten cliffs, where the surges ever beat and foam. The jackdaws have also their favourite dwelling places, in the choice of which they evince a disposition to become the companions of man. Where cathedral pinnacles point heavenwards, there may these birds be found; where college towers rise from ancient homes of learning, the gowned student hears their incessant converse. Gothic spires, and castellated ramparts afford many a retreat for the jackdaw, which sometimes, however, will stoop to inhabit chimneys and such like places of refuge. At Cambridge the jackdaws are nobly lodged, having appropriated the towers of that glorious pile, the chapel of King's College, for their homes. There, in the silence of the "long vacation" they enliven the place; often, when the stranger is hastening to attend the chapel service, his attention is arrested by flocks of jackdaws darting from those regal towers.

However interesting such a spectacle may be to the student or townsman, it cannot be said that the keepers of the neighbouring botanical gardens have much reason to like the proximity of these jackdaws. The birds have found the pieces of wood, on which the genus and species of each plant are marked, well suited for the construction of their nests, and have drawn them from the ground in such numbers, that the most phlegmatic gardener might be excused for wishing "death to the jackdaws." The extent of this annoyance may be judged from the fact that eighteen dozen of these label-sticks were at one time taken from a chimney in the neighbourhood of the garden. They had been collected there by a pair which, from some jackdaw whim, or, perhaps, from quarrels with their fellows, preferred a nest in the sooty receptacle to a more elevated home in the chapel turrets. The quantity of materials sometimes used for a nest, and the skill shown in its construction, were demonstrated by one raised in the bell-tower of Eton College

(1) Perhaps it is needless to inform the reader that Henry VI. founded this college.

Chapel by a pair of jackdaws. They had built their house on the ledge of a narrow opening left in the turret wall for the admission of light. A flight of stone steps leads to the top of the tower; one of these steps was under the nest, and upon this a large pile of sticks had been raised, until the summit touched the base of the nest, which was rather wider than the ledge. The birds did not require this cartload of sticks for the nest, but for the construction of the column of support. The process by which the jackdaws were led to raise such a pile may thus be exhibited. The birds having finished the nest, found the ledge on which it had been built too narrow for a safe support. The nest required a prop; this was quickly supplied by the stack of twigs and sticks raised on one of the turret stairs, and continued upwards against the wall until it reached the bottom of the nest, which was then securely fixed. This supporting column was ten feet high, and occupied the laborious birds seventeen days in the spring of 1842. The jackdaws did not long enjoy the fruit of their labours; their curious bit of architecture attracted so many visitors that the little constructors became frightened, and abandoned the place. Cowper has humorously alluded to the love of the jackdaw for church towers, steeples, and similar places, in the lines translated from the latin of Vincent Bourne, whose piece beginning "*Nigras inter aves avis est*," is thus modified by the English poet:—

"There is a bird, who, by his coat,
And by the hoarseness of his note,
Might be supposed a crow;
A great frequenter of the church,
Where bishop-like he finds a perch,
And dormitory too.

"Above the steeple shines a plate,
That turns and turns, to indicate
From what point blows the weather;
Look up, your brains begin to swim,
'Tis in the clouds—that pleases him,
And chooses it the rather.

"Fond of the speculative height,
Thither he wings his airy flight,
And thence securely sees
The bustle and the raree show,
That occupy mankind below,
Secure and at his ease."

The jackdaws soon become on familiar terms with man, who sometimes suffers from their incessant pilfering habits; for the jackdaw, with all his agreeable qualities, is rather unmindful of human laws in his appropriations of property. Often some elegant bit of lace, frills, handkerchiefs, gloves, and even pieces of money are found in the nests. Such objects, when placed on a bush to dry, or left on the grass, are soon seized upon by the meddling bird, which seems unable to resist the temptation to steal bright and attractive articles. This bad character belongs to the jackdaw in all countries frequented by the species, so that little hope exists of amendment.

Jackdaws remain in England through the year, but only visit the northern parts of Europe during summer; for, unlike some members of the crow family, they love an easy life of bright sunshine, in pleasant climes, where insects, worms, and fruit abound.

This species is general throughout Europe, and abounds in Ceylon, where it performs the work of the carrion-crow, consuming the offal and other decaying substances. For these services it is protected by the natives, and leads a secure and happy life, unmolested by guns or snares. These birds keep in pairs through many years, and, perhaps, as some assert, for life; thus presenting, amidst a multitude of mischievous propensities, one quality which betokens affection and steadiness. The eggs have a bluish or greenish tinge over which many dark brown or black spots are scattered.

VII. THE MAGPIE. (*Corvus Pica*.) Few would, perhaps,

reckon the magpies amongst the crows, to which family their habits unite them. Certainly, the dark crow differs much from the variegated magpie in appearance; but in temper and mode of life they will not be found to differ. The magpie is a beautiful bird, and few sights are more interesting to him who walks at eventide in a lane shaded by rich foliage, than the sudden appearance of the pied wings glancing in the golden sunset. There are two varieties of this bird, the larger, called by some the tree-magpie, the smaller, the bush-magpie. The tree-magpie displays a more brilliant plumage, and is much heavier and stronger than the other variety, from which it is easily distinguished by an attentive observer. The beauty of the magpie cannot be clearly discerned during the short time of its appearance on the wing, when, startled from some leafy retreat it flies heavily to the nearest sheltering copse or brake. We see then only the black and white plumage; but could we approach sufficiently near, various brilliant hues of violet, green, and purple would appear. These bright tints are lost in the tamed magpie, which has not a sufficiency of the excitement necessary to preserve the perfect colours of the plumage. As an Indian taken from his woods or wild savannahs to a dungeon loses the fierce air, and bold carriage, of his tribe, so do certain birds lose, in a restrained state, the vivacity and beauty which belong to them in their native haunts. The magpies are fond of dwelling in the neighbourhood of human habitations, though careful not to approach too near to man himself, a distrust taught by a too free use of the gun against their race. In Norway, where they are from some cause respected, numbers perch on the dwellings in the towns, building their nests about the houses and churches as swallows do with us, and are seen in the church-yards, perching on the grave-stones, and chattering amidst the solitudes of the tombs.

One peculiar custom prevails in Drontheim at Christmas, when the inhabitants place a sheaf of corn outside the houses for the magpies, that they may share in the festivities of the season.

In some parts of the North of England the birds, being little molested, build close to farm-houses, where a pair will dwell year after year, growing in familiarity with the residents.

The magpie's nest has long been celebrated for its beautiful construction, and some marvellous stories are told of the ingenuity displayed in its formation. Whatever we may think of such tales, the architectural skill of the magpie is indisputable.

This bird is placed amongst the dome-builders, in consequence of an arch-like structure thrown partly over the nest; the object of which is, probably, to secure additional protection for the eggs or young against the attacks of predacious birds.

The construction of the nest attracted the observation of the earliest writers on Natural History, and Albertus Magnus, a bishop and voluminous writer of the thirteenth century, makes two assertions, which yet engage the attention of Naturalists. The first supposes the magpie to construct a hole in that part of the nest which is immediately opposite the entrance, through which back-door the bird escapes from an enemy attacking the front entrance. For hundreds of years, has this been reported of the magpie's nest. Is it true? One assertion may safely be made. All magpies do not so form their houses; for in many nests no such opening can be detected. On the other hand, some magpies' nests exhibit something like an opening, through which the bird in a moment of danger might make its escape; and Mr. Jesse states distinctly, that a magpie once escaped from him through such an aperture; remarking that it was not a well-defined hole, but sufficient for escape. This writer very justly doubts whether all magpies form their nests on this plan, and is disposed to ascribe such nests to the bush-magpie, which, from building in low shrubs, is more exposed to danger than

the larger species. If the two-doored structure be admitted to exist, it shows a peculiar application of bird-instinct; and to deny it wholly seems unreasonable. May not this imperfect opening be a result of the bird's sitting on the nest? The bush-magpie, in whose nest the hole occurs, has a tail longer, in proportion to its body, than the tree-magpie; and, the nests being deep, the tail of the bird must press strongly against the side. May not this constant pressure displace many twigs, and produce an opening, through which the bird darts, when the true entrance is blocked up by an enemy? We are also told by some that the magpie aims to deceive those who search after its nest, by building a number of false nests in the vicinity of the true. May not these nests have been abandoned for some reason by the birds? The magpie, undoubtedly, evinces much caution in the choice of a place for its nest, which requires the densest foliage to conceal it, as the diameter from one *outside* to the opposite is full twenty-five inches, the sides being very thick. We accordingly find these structures in the centre of impenetrable masses of briars or thorns, which defy the approach of the naked human hand; or so concealed in the heart of tall thorns, or ancient ash-trees, that few eyes have a chance of detecting the bird's home. This combination of skill and prudence was the origin of the following fable, which depreciates the architecture of other birds, as much as it praises the skill of the magpie.

"As the magpie alone knew the art of building a perfect nest, many of the feathered tribe came to him for instruction, upon which he began: 'First of all, my friends, you must lay two sticks across, thus.' Said the crow, 'I thought that was the way to begin.' 'You must then lay a feather on a bit of moss.' 'Certainly,' said the jackdaw, 'I knew that must follow.' 'Then place more straw, feathers, sticks, and moss, like this.' 'Yes, doubtless,' said the starling, 'any one could tell how to do that.' At last, when the magpie had gone half way, finding every bird seemed to know as well as he did what to do, he said, 'Gentlemen, I find you can all build nests, so you need not my instruction; and away he flew. So to this day, none but the magpie can build more than half a nest.' This bird has never fallen into a like bad repute with the raven or owl; but the peasantry in many parts regard the magpie's motions with superstitious feelings. Some imagine that all cattle will quickly die, on which the bird has perched, though, with a peculiar logic, they infer the safety of a house, on the roof of which a magpie has been seen. Should one of these birds cross a bridal party on the road to church, sad are the apprehensions of all. The magpie's food resembles that of the carrion crow, consisting of eggs, which the bird carries off on its bill, young birds, leverets, fish, frogs, mice, carrion, and grain, to which last it only resorts when hungry. Rats are often killed by magpies, which thus compensate for any little tax which they may lay on the game preserves. Magpies often hide for the future the food which may not be required for present use, and great stores have sometimes been discovered by workmen. These birds inhabit an extensive range, being found in most European countries, also in China, North and South America. The variety of their food, and active habits, evidently fit them for such diversities of climate. The Irish think their country was formerly without magpies, and an old versifier sings—

"No pies to pluck the thatch from house,
Are bred in Irish ground."

The magpie has now found its way thither, and the above lines can be sung no more by Irish harpers.

The magpie is exceedingly watchful during the night, when it is aroused by the least noise, and is suspicious of evil in any unusual sound. Thus orchard-stealers have been detected in consequence of the clamorous outcries raised by the frightened bird, and Waterton mentions the detection of a thief by himself from the

same cause. The bird's concern is, of course, for its nest or young, which plunderers approach nearer than is agreeable to the magpie's notions of safety.

If one pair can arouse a whole house at night by their sharp angry notes, the reader may imagine the tumult caused by undue intrusion into their winter haunts in woods, where hundreds of magpies collect during the severe weather.

The eggs of these birds are of a pale yellow, spotted with brown and slate coloured-marks. Such are the usual markings, but those acquainted with birds are aware of the differences constantly occurring between eggs of the same species. Thus the magpie's egg has sometimes a greenish, in place of a yellowish ground. These varieties are as much to be expected in the eggs belonging to the same species of birds, as in the complexion of children of the same race or country.

The space appropriated to these articles compels the writer to close at this point his notices of the *Corvidæ*.

He had intended to furnish some account of the jays, (*Corri glandarii*), but the descriptions already given of the crow-family, will, it is hoped, suffice for the reader's introduction to this division of the bird-world. The *Corvidæ* are the first family of the order *Insectorum*, (perching birds,) as yet noticed in this series; others of this large order will follow, disclosing many of those principles of adaptation and beauty by which the world of life is ever ruled.

THE AUSTRALIAN EXPLORING EXPEDITION.¹

A LETTER from Captain Sturt, dated the 21st of December, states, that on the preceding day he had reached the Darling, after a most perilous journey from the depôt, a distance of 270 miles. He effected his retreat with great difficulty, the first water being 115 miles from the depôt. He was absolutely forced to make the attempt, for the only other alternative was to remain and "rot at the old post." The heat was perfectly horrible; and had they not been providentially visited with a change of wind and a shower of rain, which cooled the air and ground, they would have perished. They did not, as it turned out, lose even a sheep. After this account of the retreat, Captain Sturt proceeds to detail the transactions from the time when he was last heard of. It may be remembered that it was his intention to proceed to the north-west, in the hope of finding an inland sea. He says:

"I went from the old depôt to Lake Torrens, hoping to find a country affording a practicable route to the north, but was disappointed. I returned to the depôt to make a more extensive excursion to the north-west. On the 14th of August I left the camp with Mr. Brown and three men, taking fifteen weeks' provisions; but after penetrating to latitude 24° 30' and longitude 138°, I was obliged to return, from the failure both of water and grass. Mr. Brown also suffered greatly from scurvy, but was too high-minded to complain. He is indeed an estimable young man, and has been as a brother to me.

"We passed over a country of alternate sandhills and flats, until I struck upon a creek, beyond which the country was more open, and more subject to floods; we crossed over extensive plains subject to deep inundations, but soon again got on sandhills. From them we descended to a stony plain of boundless extent, on which the horses left no track, and where no object was visible on the horizon from which take to bearings. Cross-

(1) From a recent No. of the Adelaide Observer.

ing these, we descended to flats like a ploughed field, on which water had subsided, stretching to the north-east and south-west, further than the range of vision, and without a blade of vegetation. From this we again ascended sand-ridges of a most formidable description, and found the country to the west so bad, where we attempted to penetrate in that direction, and surface-water so scarce, that we were obliged to turn to the north at 50 miles, with only two small puddles to depend on. I struck a creek, which I traced up 60 miles, when I got on a country of salt formation, covered with samphire, and other salsolaceous productions, with numbers of dry beds of lagoons, all white as snow with salt. Passing this, we once more found ourselves among sand-ridges, perfectly insurmountable, and so close that the base of one touched the base of another—the whole country sand. The sandhills were of a fiery red, and they ran for miles and miles in parallel rows, with points like the vanishing points of an avenue. But there was neither grass nor water to be found; and after trying all points of the compass, I gave it up, and returned to the depôt, after an absence of seven weeks, and a ride of 924 miles.

"The men were all knocked up, and the horses completely leg-weary; but I was dissatisfied with this journey, and there was little time for hesitation. Therefore, after giving the animals six days' rest, I left the camp, with Mr. Stewart, leaving Mr. Brown in charge of the camp, whose readiness to do any thing I wished lightened my labours. I took two men and nine weeks' provisions, my object being to try to enter the tropics, to ascertain if there was any water between me and the north coast, or if the desert extends to the very tropics. I went due north, and struck a most splendid creek at 123 miles from the depôt. Here I had a thunder-storm that lasted half an hour, and left some surface-water, dependent on which I crossed it, and ran out 170 miles without finding a single channel for conveyance of water. I dug five wells, but had little hope of benefiting from them. I was at length brought up by a stony desert, that stretched before us in absolute boundlessness. Where there were sandhills in it before, the sandhills were now covered with stone, similar to the plain itself. I was in the centre of a dark and adamant sea, without an object by which to steer my course. I was 41 miles advanced in this gloomy region, and 52 from water. My horses had already been one day without water, and I could not hope to reach the other water under a day and a half, including part of the night; yet I hesitated to turn back. It was an irresistible influence that drove me back, certainly contrary to my own inclinations. I was well nigh too late. I lost three horses, but that was of no consequence on such an occasion. I got back to the creek, after having reached latitude $25^{\circ} 45'$, and longitude $139^{\circ} 13'$.

"From the creek on which I was I had seen high and broken ranges to the north-east, and I now determined on examining them and the creek. I therefore went up the latter 120 miles; but I found that it was leading me away from the ranges, and I ultimately got to its termination, or rather head, in some extensive plains. The creek was as large as the Darling, and was flanked by a box-tree forest, in grassy land, to a considerable distance from its banks. Here I fell in with a numerous population, passing three or four small tribes every day; but the news of our kind treatment of them had spread through the country, and they evinced no alarm, but did all they could to serve us.

"On October 3d, I was at the head of the creek, and all at once found myself in presence of about 270 or 280 natives, encamped on a rising piece of ground under a large sandhill I had descended. On seeing us they set up a great shout, but when I rode slowly down the hill there was a dead silence; then I dismounted, and, giving my horse to one of the men, walked over to the

natives, who received me very kindly, brought me troughs of water and baked seeds, and invited me to sleep at one of their fires; but, observing a small clump of trees about 50 yards away from the native camp, I told them that I would sleep there, to which they gave a ready assent, and carried over firewood for our use, which was very scarce. These people were the finest I have seen in Australia. Many stood six, several more than six feet high. They were well made, and had not the pot-bellies of the natives in general. They were frank and merry people, and told me all they could. They assured me there was no water to the east or north, and were quite distressed when I persisted next day in going to the eastward. The women were engaged to a late hour in bruising seed for cakes, and the noise they made was like the working of looms in a manufacturing town. At ten o'clock all was hushed, and, for the remainder of the night, no one would have known that there were so many human beings near.

"From this point I turned westward, and, taking up a branch creek, went towards the ranges; but I got into a terrible country, and found that the effects of refraction had deceived me with regard to the ranges, and that they were nothing but masses of sand or rock, 300 to 500 feet high. I saw that I was getting near the scene of the greatest turmoil, where the water passed over this dreary waste, and left the shivered fragments of mountains behind it. Here again water and grass failed me; and I was forced to abandon this trying task on the 9th of November, being unable to contend against the season and country. I had done all that I could do, and had again run the risk of being altogether cut off; indeed, so near was it, that I drained the last drop of mud—for it was not water—out of a pool that four weeks before was 150 yards broad, and 200 to 300 long. I lost two horses, and regretted them very much. I reached the depôt (which Mr. Brown had been obliged to move during my absence, in consequence of the putridity of the water) on the 17th, having ridden 843 miles in five weeks, less three days.

"I had been exposed for twelve weeks to an excessive heat, had had insufficient food, had drunk loathsome water, and at length my iron constitution, under disappointment, anxiety, and weakness, gave way. The day I made the camp I had been eighteen hours on horse-back; and when I dismounted, the spasmodic action of the muscles of my thighs was so violent as almost to throw me forward. I had, in truth, ridden all day in great pain. The next day the scurvy, latent in me for eleven months, seized me. The muscles of my thighs contracted, and I was laid prostrate on my mattress. I am still unable to walk or stand, but I am otherwise well in health; and I hope that, with all the good things my friends have sent me, I shall get round."

Another note says:

"The Ana Branch of the Darling, Jan. 5, 1846.

"I have, as you will hear, done nothing but toil through a desert that I believe is unequalled in the world. My investigations, however, were geographical, not with any direct view of finding good land; and as far as the geography of the interior goes, I think there will not be much difficulty, from the data I shall be enabled to furnish, in making a pretty good guess as to what the greater portion of it is. All I can say is, that this has been one of the most difficult and anxious tasks that could have fallen to the lot of any man. For myself, thank God, I am getting better. Six weeks are quite long enough to be deprived of the use of one's legs; but I am yet thankful it is no worse. I hope to be in Adelaide about the end of the month. I cannot at present ride, but shall be able to do so in a week or ten days."

Poetry.

[In Original Poetry, the Name, real or assumed, of the Author is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

THOMAS THE RHYMER.¹

"The earth has bubbles as the water hath."
SHAKESPEARE.

I.

Where green and fair, around a crystal lake,
Its flowery banks an endless fragrance fling,
Where birds, untired, perpetual music make,
And all the year is fresh unfading spring;
There lies the land, if ancient tales speak truth,
Of Elf and Fay—the wondrous "Land of Youth."²

II.

Oft sits the Mermaid, when the sun is high,
Beside that stream, and combs her golden hair,
Watching the waters with unwearied eye,
Which tell, how truly, that her form is fair.
While, all in arms, O'Donoghue the Brave
Spurs his white charger o'er the crested wave.³

III.

'Tis said, they dwell beneath the silent stream
In unseen palaces, and sunken domes;
There the Elf-Queen her sceptre sways supreme,
And rules the revels in the fairy homes:
And hence the moon recalls them from their mirth,
To work their pleasure on the Sons of Earth.

IV.

Their pomp and joy there are who lightly hold,
And say their feasts are fictions for the eye:
Not such the tale the Truthful Rhymer told,
Who fix'd his love, and not in vain, so high.
O that his harp were in my hand, to tell
The wondrous tale as truly and as well.

V.

He sate at noon beneath the Eildon Tree,⁴
Musing perchance on ancient prophecies,
When lo! a maiden, passing fair to see,
Brightest of visions, passed the minstrel's eyes;
Around her form a grass-green mantle flow'd,
Shrouding the milk-white palfrey that she rode.

VI.

Well might his heart such moving charms confess—
He laid his hand upon her broider'd rein,
And ask'd one kiss upon her lips to press;
But long besought the maiden's love in vain.
"Ah, no!" she said; "for should I grant the boon,
The charms you praise would change and vanish soon."

VII.

Yet still so warily and so well he wooed,
Won by his prayer the blushing maid relented:
Sprang from her steed, and as she dubious stood,
The fatal kiss was given—and repented.
Sad was the change! a wrinkled hag, and old,
Toothless, and bald, the Rhymer's eyes beheld.

VIII.

No time for wond'ring grief—she bids him fly,
Mounted behind her, on a perilous chase,
And leaving the green earth, and sun, and sky,
Swiftly they sped through dark and pathless space;
Nor sight nor sound of earth was in their course,
Save a deep rushing as of waters hoarse.

IX.

At length returning light a garden show'd
From whence three paths to different regions led;
And gliding swiftly down the narrowest road,
Mid marvels strange, to Fairy Land they sped:
Nor drew they rein till at a castle's gate
Their palfrey panted with its double freight.

X.

"Here, 'neath the waters," said the maid, "I dwell,"
(And lo! in all her former charms she stood!)
"Yon is the road to Heav'n, and yon to Hell!"
And there the Tree of Evil and of Good;
The realm around my lightest word obeys,
For I am monarch of the Elves and Fays.

XI.

"And hence of old, above the rippling wave,
I raised my arm to give the mystic brand,
Which Arthur claim'd, the bravest of the brave,
What time his own had shiver'd in his hand."⁵
'Twas through you rock the Prophet Merlin came,
Drawn to my empire by an Elfin dame.⁷

XII.

"Now, see my subjects pass before thine eyes."
With ebony wand she smote the palace gate,
And forth the fairies troop'd in various guise,
Giant and dwarf, of every form and state;
They seem'd no fewer than the dead leaves cast,
Rustling and dancing, by the autumn blast.

XIII.

Puck first advanced, the blithest elf of all.
"Whence art thou, Boy?" the Queen of Enery cried.
"Hither and thither at my duty's call;
Eastward and West I've flown," the elf replied;
"In every form to every coast I've been,
To work the bidding of my gentle Queen."

XIV.

And next came many a most mis-shapen sprite,
Who toss'd above them their dismember'd heads;⁸
Their task it was to frighten thieves by night,
And crouch in ugliness on misers' beds,
With goblins all in arms to whom 'twas given
To meet and combat knights who rode unshriven.⁹

XV.

There too was seen the Banshee, boding ill,
Who roams the earth, a minister of death;
Piercing the air with warnings harsh and shrill,
That claim the tribute of a mortal's breath:
While Jack O'Lantern danced along the way;
The same who leads benighted swains astray.

XVI.

They pass'd, and vanish'd from the Prophet's glance,
Each to his pleasure, or his toil on earth;
Round the green fairy-rings to tread the dance,
Or make their sport of those of mortal birth;
While some, right willing, on the mushroom's head,
Uncerthly dainties for the banquet spread.

XVII.

"Now rest we, Bard," the Queen of Elf-land said,
"On this green bank, for I have much to tell;"
Thus, then, they sate, the minstrel's favour'd head,
Borne on the maiden's knees, and listening well;
And there she told him all the varied lot,
In future wars, of Southron end of Scot.

XVIII.

"And now," she said, "a tongue of truth I give,
Henceforth thy lips shall never utter lie;
More would I say, but mortal may not live,
Who lingers here to see to-morrow's sky:
A demon comes, who seeks thee for his prey;
True Thomas, fare thee well, away, away!"

XIX.

Fain had he linger'd in that land of flow'rs,
For though he reach'd it three long years before,
Those pleasant years seem'd scarce as many hours,
And gladly had he spent as many more;
But suddenly he saw the vision flee—
And lo!—he sate beneath the Eildon Tree.

XX.

Thus speak old legends of the land of youth.
But where are they of whom true Thomas told?
There lacks all witness to his tongue of truth,
Save the dark elf-rings where they danced of old.
Enough, they lived—for bards shall never fail
To weave their history into song and tale.

POEM TO A CHILD.

Thy memory, as a spell
Of love, comes o'er my mind,
As dew upon the purple bell,
As perfume on the wind;
As music on the sea,
As sunshine on the river;
So hath it always been to me,
So shall it be for ever.
I hear thy voice in dreams
Upon me softly call,
Like echo of the mountain streams
In sportive waterfall.
I see thy form as when
Thou wert a living thing,
And blossom'd in the eyes of men
Like any flower of spring.

Thy soul to heaven hath fled,
From earthly thralldom free;
Yet 'tis not as the dead
That thou appear'st to me:
In slumber I behold
Thy form as when on earth;
Thy locks of waving gold,
Thy sapphire eye of mirth.

I hear in solitude
The prattle kind and free,
Thou utter'd'st in joyful mood
While seated on my knee.
So strong each vision seems,
My spirit that doth fill,
I think not they are dreams,
But that thou livest still.

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne.*

AGAINST HASTY OPINION.

THERE are numbers of circumstances which attend every action of a man's life, which can never come to the knowledge of the world,—yet ought to be known, and well weighed, before sentence with any justice can be passed upon him. A man may have different views, and a different sense of things, from what his judges have; and what he understands and feels, and what passes within him, may be a secret treasured up deeply there for ever. A man, through bodily infirmity or some complexional defect, which perhaps is not in his power to correct, may be subject to inadvertencies—to starts—and unhappy turns of temper; he may lie open to snares he is not always aware of; or, through ignorance and want of information and proper helps, he may labour in the dark: in all which cases he may do many things which are wrong in themselves, and yet be innocent;—at least, an object rather to be pitied than censured with severity and ill-will. These are difficulties which stand in every one's way, in the forming a judgment of the character of others.

It is interesting and useful, though often very painful, to retire into ourselves, after the first tumult of excited feelings has subsided, and consider the probable consequences of our words and actions. We may indeed frequently be mistaken, and magnify or diminish the importance of what has occurred; or look forward to events that may never happen; but by endeavouring to connect the past and the future, we strengthen a habit of thoughtfulness, and are able to trace more easily the secret sources of the sufferings which so frequently arise, apparently from the ignorance or selfishness of our fellow-creatures, but in reality from some error in ourselves.—*Gertrude. Edited by Rev. W. Sewell.*

It is a bitter consciousness—(none can tell how bitter but those to whom it has been given)—when we are wakened from our youthful dream of happiness by some stern reality, and know that from henceforth it may never be indulged again—when an all-powerful, though all-merciful, hand has passed over the beautiful vision we so fondly cherished, and its dazzling colours have faded beneath the touch, and we see that the form is the same, but the lustre can never be recalled. We may have thought that our minds are ready for the change,—we may have pictured it to ourselves, and sorrowed for the inevitable hour, and even prayed for strength to bear it,—but the experience of one real grief will teach us what no preparation will impart. It will show us our own weakness, and the vastness of that mercy which stooped to share a nature endowed with such capacities for suffering. It will force us to look upon the unknown future with a chastened and a thoughtful eye; and whilst it bids us bear thankfully in our hearts the remembrance of our early joy, as the type granted us by God of the blessings reserved for us in heaven, it will tell us that from henceforth the warfare of human life must be ours; and that, till the grave has closed upon our heads, we may hope but for few intervals of rest.—*Gertrude.*

No man's spirits were ever hurt by doing his duty: on the contrary, one good action, one temptation resisted and overcome, one sacrifice of desire or interest, *purely for conscience' sake*, will prove a cordial for weak and low spirits, far beyond what either indulgence, or diversion, or company, can do for them.—*Paley.*

He had learnt a most useful principle of life, which was, to lay nothing to heart which he could not help, and how great soever disappointments had fell out, (if possible,) to think of them no more, but to work on upon other affairs, and some, if not all, would be better natured.—*Life of Sir Dudley North.*

Nature has scattered around us, on every side, and for every sense, an inexhaustible profusion of beauty and sweetness, if we will but perceive it. The pleasures we derive from musical sounds, and the forms of trees, are surely not given us in vain; and if we are constantly alive to these, we can never be in want of subjects of agreeable contemplation, and must be habitually cheerful.—*Basil Hall.*

Portincross Castle.

PORTINCROSS CASTLE is situated in the barony of Ardroneill, a few miles north of Ardrossan, in the county of Ayrshire; but, owing to its retired position, it is little known, and seldom visited either by the antiquary or the tourist.

About the time of Robert II. it, along with the barony, became the patrimony of the Boyds, who shortly afterwards rose to be one of the most powerful families in Scotland, and who retained it in their possession until the year 1737, when it fell into the hands of the present proprietor, John Crawford of Auchnanes.

The only circumstance which renders this ancient fortress at all memorable, is, its having been frequently visited by the first two Stewart kings of Scotland, a fact attested by the numerous charters which received their signatures within its venerable walls.

That these visits were protracted for any length of time, however, seems very doubtful, as even the name would appear to indicate that it was used more as a "port" from which to "cross" to the adjacent shores than a royal residence. This, we may suppose, they had frequent occasion to do, on their way either to Dundonald in Kyle, or Rothesay in Bute, for both of which places this promontory forms a convenient crossing point. From this circumstance its antiquity is undisputed, and generally held to be greater than any other castle about

the place. Notwithstanding the lapse of so many years, its walls are still pretty entire, but the interior completely ruinous. But, besides its venerable age, it particularly claims our attention for the remarkable beauty of its situation, commanding as it does one of the finest prospects the eye could wish to rest upon.

Standing alone on the point of a rocky promontory, not much above the level of the sea, with high precipitous cliffs rising in the background, and looking forth on the Northern Channel, with the Alpine heights of Arran towering in the distance, its situation is at once highly picturesque and solitarily grand. Unaffected by the revolutions of time and the rapid strides of civilization, the face of nature all around still remains the same in all its primitive grandeur and enchanting beauty, although the castle itself, unable to bear up against the same influences, is left a melancholy spectator of its former greatness.

After the dispersion of the celebrated Spanish Armada in 1588, one of the ships having made its way up the frith of Clyde, was stranded on a sand-bank close by the castle. A great many cannons of brass and iron were saved from the wreck; all of which were taken away except one of iron, which still lies on the rock beside the ruin, and on which may still be traced the crown and arms of Spain near the breech of the piece.

REMINISCENCES OF THE COURT OF CAROLINE MATILDA.¹

THE work from which the following particulars are taken, though without the pretension of being an historical memoir, is nevertheless regarded in Denmark, in some degree, in the light of an authentic record. The minute and characteristic traits of the Danish court of that day, handed down through tradition, have enabled the author to give, as it were, a living portrait of Matilda, and successfully to trace the adverse influences by which she was surrounded, from the first moment of her landing upon Danish ground.

The story of Caroline Matilda is a no less interesting page in Danish history, than that of Mary Queen of Scots in our own. The parallel to be drawn, however, should be rather that of circumstances and endowments, than of character. Both were beautiful, calumniated, and persecuted. In the all-important question of guilt or innocence, the cases are widely different; for, while conflicting evidence restrains the sober student of history from according a full measure of sympathy to the misfortunes of Mary, preponderating testimony tends to vindicate the moral character of our royal countrywoman, and to prove that, from close investigation of the conduct which is supposed by some to have been visited by deserved punishment, the only charge that can be established against Matilda is, that with her, impulse was the principle of action, and that the unreflecting character of her mind peculiarly unfitted her to carry out the political reforms she laboured to effect, in opposition to the cherished prejudices of her adopted country.

It is difficult to imagine a more uncongenial atmosphere than that into which the young Queen was introduced on her first arrival at the Danish Court. She was then only in her sixteenth year, possessing more than the ordinary vivacity of youth, and characterised by that peculiar ease and frankness of manner, which is often, as it was in her case, the result of a happy childhood. With a temperament thus disposed to view all around her in the sunshine of her own feelings, it would seem she was wholly unprepared for the trials she was about to encounter, or to comprehend the sacrifice she made, in exchanging the secure advantages annexed to the station of an English princess, for the doubtful ones attending her union with the Sovereign of Denmark. Suitability of years was the only circumstance in which there was not disparity between Christian VII. and his consort. In character they were as unlike as in personal appearance. His pallid countenance, receding forehead, compressed lip, and sunken eye, with a slender and stooping figure, seemed, in some degree, to denote the measure of his moral and intellectual qualities. He appears to have had a keen sense of his royal dignity, and, conscious, perhaps, of being deficient in the qualities which give personal influence, entrenched himself in forms on the one hand, while on the other, contrary to the practice of despotic rulers, he clung to the guidance of his favourite ministers, Struensee and Brandt, with almost the instinctive helplessness of childhood. Matilda's exterior was equally indicative of the qualities within. Her beauty was of a brilliant order, all sparkling and joyous. Unlike her consort and his minister, Struensee, she was endowed with a larger share of moral courage than is usual in her sex. In circumstances under which the spirit of

the King appears totally to have sunk, as, for instance, in the disturbances which the author describes as having taken place at Hirschholm, the Queen displayed a self-possession, as well as care for the lives of the mutinous mob, which left its impression on the minds of the people. Had she been more ambitious, or less generous, it is probable the whole tide of public opinion would have turned in her favour. That she possessed the elements of popularity is certain; it is no less certain, that she never sought to avail herself of them for her own advantage: though it is reasonable to conclude, that some apprehension of this sort was entertained, from the suddenness and secrecy attending her arrest. At Zell, her life seems to have passed unrepiningly in the society of her sister, the Duchess of Brunswick, and as Danish history is silent as to any attempt, emanating from herself, to regain a footing in Denmark, the conclusion is warranted, that her experience of the uneasiness attending a crown had reconciled her to her fate. One tie, however, and that a strong one, still bound Caroline Matilda to Denmark—her children. These, she knew but too well, were deprived, not only of maternal care, but of the fostering influences of relationship. The Dowager Queen, Juliana Maria, had the superintendence of their childhood and education; and facts, notorious in Denmark, make it evident, that the spirit of persecution exercised towards their royal mother, was displayed, as far as circumstances would admit, towards her offspring. The late King Frederic VI., though too young at the time of his mother's death personally to feel her loss, it is well known, cherished her memory with sensitive tenderness; apparently judging from the cheerless recollections of his childhood, of the extent of the wrongs which had embittered the youth of Caroline Matilda. Few, however the world may frown upon them, are yet so desolate as to be entirely without friends: there were still some faithful hearts, devoted to the interests of Matilda, at the Danish court, who ministered to her consolation in the only way in their power, by giving her from time to time reports, on which she could rely, of the welfare of her children. In the work before us, this fact is prominently introduced, and having thus premised, we will at once enter upon its pages, and present to our readers, in company with the author, an old courtier of the days of Matilda, the faithful and devoted Chamberlain, Sophus Norden, who is described as follows:—

"The old gentleman had passed the greater part of his life at Court, and belonged to a class which will soon exist only in traditions of the past, and will ere long be numbered among the extinct species. He especially loved to dwell on the brilliant period of his youth at court, the recollection of which always put him in such spirits, that he was wont to rub his hands, and exclaim, 'That was life, *mon cher!* That *was* a court—there was something worth living for, then!'

"Elderly persons commonly take pleasure in making comparisons between the past and present, when these comparisons are in favour of the by-gone period to which they themselves belong. It would be almost superfluous to add, that he had discontinued his attendance at court, and that it had nearly forgotten him; but he did not, therefore, neglect the observance of a single courtier-like duty or usage, and still continued to portion out his time in the same manner as when he was in office. He changed his dress several times a day, left and received visiting cards, and was acquainted with every detail of the proceedings and ceremonials of court festivities. The only remaining member of the aristocratic court of Caroline Matilda, is the old Chamberlain. He has out-lived his generation. He broods over its relics, like Scipio over the ruins of Carthage; but he is greater than Scipio, for he weeps not over departed glory—he smiles—he is an old courtier. He does not, therefore, mourn the less for what has been engulfed in the insatiable stream of time, and, as he daily comes forth as "the last of the Romans," or at least as the last

(1) Gamle Minder. By Carl Bechard. Copenhagen, 2d Ed. 1840.

representative of that brilliant Decennium, it is with a consciousness that it is incumbent on him to maintain the dignity of the old school, against the attacks of the present thoughtless generation.

"The Chamberlain was a tall slender man, dressed in an embroidered coat trimmed with sable; he moved with a dignity which was neither wanting in grace nor ease; it was just as distinct from the precise military bearing which betrays the veteran officer, as from the careless deportment generally characteristic of the college student; it was at once aged and youthful; it imposed respect, as well as inspired confidence; and it was natural, or at least the force of habit had rendered it a second nature. A deportment like the Chamberlain's is not to be learned from any dancing-master—not in general society—not at court-balls—it was the acquisition of a whole life—a life begun as a page, and ended as a courtier. He leaned on his gold-headed cane in an altogether peculiar fashion; he moved his arms quite differently from all the rest of the world, and this was particularly observable in the position of his shoulders. On accosting an acquaintance he first saluted with his fingers, and waved his hand encouragingly, bowed his head with dignity, rather backward than forward, lastly took off his hat, and to ladies always with especial deference. No one else now bows in this fashion, and no one knows how to express so much in their salutation. With him, history began in the first year of his paghood, and ended five-and-thirty years afterwards. But he had witnessed all that had passed within Christiansborg Palace during this long period; he had known all its inhabitants, from the greatest to the least. He was a living register of the court chronicle for five-and-twenty years, and though his chronology was often confused, he had nevertheless forgotten nothing of what he had seen and heard."

The author having thus introduced the Chamberlain to the acquaintance of his readers, goes on to inform us, that through the medium of frequent conversation, he succeeded in gathering from him more circumstantial information of the events of that period than are yet to be met with in history, thus obtaining, not only a full view of the *dramatis personæ* upon the stage, but gaining occasional admittance behind the scenes. Matilda's history, as may be supposed, is the chief theme of their conversation. The following description of her personal appearance, drawn from the portrait which the Chamberlain had rescued from the fate that had attended most of the portraits of Matilda after her downfall, (when they disappeared as if by magic,) we shall quote. Having ourselves seen the best portrait extant, we can vouch for the likeness. It was painted shortly after her coronation, by an English artist of eminence.

"The portrait represents a lady in a dress of pale blue satin, embroidered in gold and trimmed with lace. The sleeves and the folds of the corsage are of a brownish brocade; around her neck is a closely clasped circlet of large pearls, with earrings to correspond. Her hair is turned back and powdered; and, according to the fashion of the day, shows a height and breadth, larger, in proportion, than the whole face. The contour of the face is oval, and very full; the forehead high, the eyebrows regularly arched, the nose inclining to Roman, the mouth rather large, but the lips red and full; the expression of the clear blue eye is at once mild and serious, penetrating and confiding. I can describe all the minutiae of the dress—each line of the features—but should vainly attempt to portray the peculiar expression, the attractive dignity and loveliness which beam from the youthful face, whose bloom I never yet saw surpassed. It were needless to glance at the crimson mantle trimmed with ermine, to be assured that this is the portrait of a queen—it is altogether queen-like. This had been felt by the painter, for the ermine border of the mantle is so small as to be scarcely noticeable: it seems as if he meant prophetically to imply, 'This woman would be a queen, even without a throne.' I am

perhaps too diffuse in my description; but this portrait has always fascinated me, and from my earliest youth I have shared the old Chamberlain's enthusiasm for Caroline Matilda."

Beautiful as this portrait is, the Chamberlain, as well as the author, seem agreed in the opinion that no portrait could do justice to the original. But it was not so much her beauty, as the kindly qualities of her nature, which had secured the Chamberlain's devoted admiration. Among other traits which bear testimony to the queen's character, we learn that almost immediately after her arrival in Denmark, and before her attention was drawn to the political reforms in which she was afterwards so fatally involved, Matilda took a special interest in the condition of the poorer classes. Not satisfied with ministering relief through the usual channels, she frequently visited, and enquired in person into cases that had been particularly brought before her notice. On these occasions a strict incognito was observed, the queen being accompanied only by one or two of her ladies in waiting.

We have already said that this work is not professedly an historical memoir. The history of the Chamberlain and his early love, Lisette, forms an episode in the book, of much interest, more particularly as being descriptive of the manners of the time, and the Scandinavian character. Did our limits permit us, we should gladly dwell upon it at some length; but, as our object in introducing the work is to convey to English readers the impression universally entertained in Denmark of Caroline Matilda, we shall only select those passages which bear immediately upon the queen's history.

Carl Beonhard, like his predecessor Ingemann, wherever he deals with historical characters and facts, adheres scrupulously to his text; the professed aim of the latter, in his historical romances, is to revive and illustrate the chronicles of Denmark, and, to use his own expression, "awaken the national self-consciousness of his countrymen." The aim of Carl Bernard seems to be the same with reference to Matilda. That he succeeded in his aim, we ourselves can bear witness; happening to be in Denmark at the time of the appearance of "Gamle Minder." It was read as well in the cottage as the palace, and we frequently heard the wish expressed, that a book so calculated to enlist the sympathies of both nations, might be made known to the English public through the medium of translation.

To return to the Reminiscences. It appears that on Matilda's arrival in Denmark she had to conciliate not only the king's step-mother,—the Queen Dowager, Juliana Maria,—but Sophia Magdalena, also a Dowager Queen, who is described by historians as having a mind wholly occupied with the maintenance of court etiquette; one whose thoughts, even on the most ordinary occasions, were always "en grande tenue." We leave it to our readers to judge of the difficulty, or rather the impossibility, of bringing into affinity elements of character so uncongenial. Queen Juliana Maria, sister to the Duke of Brunswick Wolfenbüttele, and mother to the king's half brother, was a spirit of a different order. In her character we trace a resemblance to that of Catherine of Russia; inasmuch as they both regarded men and events only as subservient to their schemes of political ascendancy. Denmark and Russia were at that time in close alliance: the Russian minister, Count Philozofov, headed the anti-English party devoted to the interests of the Dowager Queen Juliana, and took every occasion to further her views, and those of his imperial mistress, by fostering intrigues against the young queen. Whilst the latter was absent with her consort and court on a progress through their German dominions, Juliana resided, almost in cloistered seclusion, at the palace of Fredensborg, distant about twenty miles from Copenhagen. Here all the rigid ceremonials of the court were scrupulously observed; it being, apparently, her aim to conciliate the ancient nobility, who viewed with distrust Matilda's avowed

dislike of the stiff etiquettes which then characterised the Danish court. The royal party were magnificently entertained on their progress by some of the principal nobility of Holstein, when, in conformity with the wishes of both Matilda and the king, court ceremonials appear to have been set aside. In such a country as Denmark, this course, at that period, was especially imprudent: the frankness of Matilda's nature rendered her incautious in conversation as well as in conduct. At that day, as at present, English manners, in every class, were characterised by more freedom than coincides with Danish ideas of decorum. A Danish gentleman of the present day, after even some lengthened acquaintance, would think it extraordinary were a young lady to offer him a friendly shake of the hand at the conclusion of a morning call; nothing short of imminent peril would justify a lady, unless betrothed, to accept of a gentleman's arm in a walk. In general society, and at balls, gentlemen and ladies seldom enter into anything like a sustained conversation, without exciting remark; English ladies, therefore, to whom such trammels are unknown, unconsciously expose themselves to unfavourable comments in the fashionable circles of Copenhagen; we may also add, that the topics on which the fair sex are supposed to be qualified to enter, are few in number. We recollect an anecdote which will confirm our statement. A Danish gentleman having condescended to enter into a discussion with an English lady on the subject of reforms much wanted in the education of the poorer classes, lamented to her that no efficient assistance could be expected from ladies, they being mere cyphers in the community. To this remark our countrywoman replied, with a half-repressed smile, "Allow me, Sir, however, to remind you, that it is *cyphers* that give value to *units*."

We shall now quote a letter from one of the ladies in attendance on the queen during her progress.

"From the Baroness Depenau to her Friend Mademoiselle de Reiffenstein, maid of honour to the Queen Dowager Juliana.

"MY DEAR FRIEND,—You set me a difficult task, and I scarcely know whether I shall succeed to your satisfaction. I am to tell you *all*—but have you considered the full import of the expression? think only! what a chaos of trifles and matters of importance, of justly grounded reflections and unfounded conclusions, are comprehended in that word! The tone which prevails in this modern court is something quite startling to me; it is so opposed to that which was in fashion when I was last in Copenhagen. What a galaxy of youth and beauty, outshining even the pomps of royalty itself! and then the variety of individual character! that mixture of recklessness and principle, of the confidingness of youth, and the suspiciousness of age, in short of the most opposite elements. Count Tannenberg understands the planning of fêtes, and it is easy to see from his happy blending of northern and southern amusements, that he has made the most of his experience of Petersburg and Paris. Each day brings with it fresh schemes of pleasure; new surprises, new tableaux, new acquaintances; indeed we are all, without exception, so smitten with the mania of appearing in disguise, that it is difficult to recognise each other. The pastoral age is revived again. None know the difference between the queen and the peasant girl, the master and the servant, nor distinguish the saloon from the forest, nor day from night. Our system of freedom and equality is perfectly paradisaical, and we live in a perpetual bustle, which it requires *une santé britannique* to keep up with. We have dancing, theatricals, boating, riding, fishing, music, it is impossible to enumerate all our contrivances to kill time, which nevertheless is always too short lived for us. And yet, with all this, it seems to me as if there was a secret gloom among us—a dark demon which shows its claws at times. We are sometimes seized by panic horrors, the rustling of the leaves will suffice to freeze the blood in our veins, we tremble like hares at one

moment, and the next we laugh each other out of countenance like the veriest Bacchantes. We live in a state of perpetual fever, and while I write I am perhaps not free from its influences. You can easily imagine that my attention has been chiefly directed to this *parvenu*, Struensee, who takes his place in society with as much confidence as if he could boast of sixteen quarterings, and undertakes to manage the state as he would treat an *ague*. I must own he has exceeded my expectations; he is not very handsome, but he has good manners, much conversational talent, much conventional tact, and has acquired as much of *our* tone as might be looked for, from his having so long moved in our circles. When I see the king with his declared favourite, I always think of Marshal d'Ancre, of Griffenfeldt, of Cinq-Mars, Lauzun, or others of the same stamp. While these names are fresh in our memory, I cannot comprehend how any one can yield to the temptation of being a royal favourite. We have before us living proofs of the *uselessness* of the study of history; we all think ourselves individually wiser than this ever ancient, yet ever new, volume. All the experience of the past is lost upon us of the present generation; and I know of none who so completely throw away their talents as historians, except, perhaps, it be moralists. As to her majesty, I suspect she is jealous of the king, at least I have often imagined I saw tears in her eyes on certain occasions. But here, where mirth quickly chases away each gloomy thought, it is hard to say whether it is the tear of sorrow, or of laughter, that trembles in the glistening eye.

Farewell, my dear Friend, I wish you a pleasant summer at Fredensborg, and counsel you in your own words 'be circumspect in every thing, for nothing is a trifle in the great world.' Despite the *nécessaire* displayed in this letter, I remain your sincere friend,

CHARLOTTE, BARONESS DEPENAU."

Struensee, it is well known, was the son of a Lutheran Clergyman, and for a short time in early life was a medical student. He possessed great versatility of talent, and considerable knowledge. It was his misfortune, however, to be much in advance of his age, and in a country like Denmark, this mainly contributed to his downfall. He seems to have comprehended and admired the spirit of the English Constitution: a prepossession in which the young queen naturally shared, and both seemed equally to forget, in their theories of reform, that it had been the growth of centuries; whilst, in Denmark, despotic rule rested on a foundation equally ancient. The freedom of the press, established by rescript in 1770, was an unpopular and fatal measure, and by its introduction, Struensee furnished dangerous weapons, which were speedily turned against himself. Public opinion, if such might be said to have then existed in Denmark, was influenced by the party writers in the interest of the Queen Juliana, whose views, after this period, seem to have assumed the definite air of effecting the downfall of Matilda, and the obnoxious ministers. Struensee appears to have been a sincere enthusiast in politics, but, like most theorists, completely at fault when called on to encounter practical difficulties. The manner in which he met his fate showed he was not deficient in personal courage, but he was singularly wanting in that presence of mind which enables its possessor to retrieve the consequences of rash measures. That he desired the welfare of the nation cannot be doubted, but so little did he consider popular opinion as the necessary ingredient of power, that he never bestowed a thought of conciliating either the nobility, who never forgot the inferiority of his birth, or the middle classes, with whom, from his office as minister, he had frequent opportunities of intercourse. His contempt of the Danish language and manners was notorious; and this naturally drew upon him general dislike. In personal appearance, he is described as bearing so striking a resemblance to Matilda, that they

(1) In allusion to his having been a medical student.

might have passed for brother and sister, and this resemblance seems to have extended in some degree to the mental qualities of both.

Count Brandt, the faithful friend and colleague of Struensee, was descended from an ancient Danish family, but owed the title of count to the favourite minister. The circumstance of his birth disposed the nobility to view him in a more favourable light. Comparisons were frequently made between them, always in favour of Count Brandt, whose slightest gesture, it was pretended, gave evidence of a noble descent.

According to our author, the count, shortly after their return from Holstein, repaired to the palace of Hirschholm, situated half-way between Copenhagen and Elsinore. Its disappearance has been alluded to with regret, for though Denmark is rich in royal residences, none, like Hirschholm, represented the age of Louis XIV., that culminating point of gorgeous magnificence and human vanity, and was therefore called the Versailles of Denmark. It was pulled down a few years after the attack of Lord Cathcart upon Copenhagen in 1807. Our author's mode of describing the destruction of this edifice is worth quoting:—

"Its foundations were not broken up by the hand of time; its halls were not devastated by fire like those of Christiansborg. No, Hirschholm fell as the proud tree of the forest falls before the rude stroke of the axe. The hammer rapidly loosened stone from stone, the garnered pomp of years was laid waste with ruthless speed. The wind now sweeps over the grassy plain where Hirschholm once proudly towered. A little church is built upon the site. It stands lonely and forsaken, without churchyard or spire; where, through the green waters of the lake are to be seen fragments of broken columns and fractured capitals. It is a vast grave, covered with a trembling turf. Traveller, pause! a palace lies beneath. The white church stands as a monument on the grave of earthly vanity. It is symbolical, for the greatness of man passes away; but whatever is of God shall have eternal life."

The splendid saloons, the ornamental gardens, and high terraces of the palace were the delight of Caroline Matilda. The audience-chamber was particularly splendid, the doors and pannels being inlaid with massive silver, the wainscotings with ebony and mother-of-pearl. Polished crystals and coloured stones sparkled every where. The frames of the large mirrors, and also of the chandeliers, were of silver. In short, it resembled the palaces we read of in fairy tales, raised by an enchanter's wand, and, like all scenes of enchantment, as rapidly vanished from the eyes of the beholders. The mode of life pursued here seemed most in accordance with the queen's taste; and, while at this country residence, she was enabled to form around her a circle of almost domestic privacy. The ladies of the court, in imitation of her example, passed most of their time in either knitting or sewing for charitable purposes; but the author tells us, that from the indifferent air with which this occupation was pursued, it was evident it was rather in compliance with the wish of royalty, than from any real interest for the necessitous class of the community, at all times far removed from the notice of a court. In the midst of peace within, dark storms, however, were gathering from without. The Danish government had been engaged for some time in an unsuccessful expedition against Algiers. A general discontent prevailed among the sailors of the Danish fleet, which Struensee's measures were by no means calculated to remove. More ships of war were ordered to be fitted out, and the workmen, as well as the sailors employed, were compelled to labour without wages. After a lapse of some time, they determined upon seeking either justice or revenge. Several thousand of the malcontents formed themselves into a body, and marched to Hirschholm, resolved to lay their wrongs before the king. The mob surrounded the palace gates, which they presently burst open, and forced their way into the court-yard. On

becoming aware of the tumult, and hearing the shouts with which his presence was demanded at the balcony, the king hastily left the saloon where the royal party were assembled. The queen, being thus left alone, was appealed to, as to the best course to be taken in this emergency. She was strongly urged by the heads of the anti-English party to command the guards to fire upon the mob. This proposal was indignantly rejected by the queen, who, on the contrary, expressed great anxiety that the mutineers should be treated with as much leniency as, indeed, the nature of their grievances appeared to her to demand. Struensee was wholly unprepared for this outbreak of public opinion, and shrinking as well from offering counsel to his sovereign on this occasion, as from facing the mob, appears to have meditated a speedy flight. His colleague, Count Brandt, unlike his friend, displayed both courage and presence of mind. We shall here make a short extract from the book, descriptive of the scene.

"The silence of the saloon was suddenly interrupted by the sound of hastening footsteps. Count Brandt led the king by the hand, and they proceeded to the balcony, followed by several gentlemen. The count's countenance was expressive of undaunted determination, but the king's eyes were fixed on the floor, and there was an evident reluctance in his step, as if the timidity of his character shrunk from obeying the dictates of a sterner will. Struensee also was among those who followed the king, but he paused without the door of the balcony, probably apprehensive lest his presence should call forth renewed expressions of disapprobation. The king hastily stepped into the balcony, followed by his suite, but made an involuntary movement, as if about to retreat, at the shouts of acclamation with which he had been greeted; his nerves being manifestly unequal to encounter the noise of the tumult. Count Brandt, on the contrary, stepped boldly forward, still retaining his hold of the king's hand. He endeavoured to command silence, but, as the shouts continued, the king, after repeatedly bowing to all sides, unceremoniously withdrew his hand from Count Brandt's, and left the balcony with a precipitancy which almost resembled a flight. Brandt was the last to quit his station; he jostled against Struensee as he passed, as if to arouse him from a dream, and when he closed the door of the balcony behind him, it was with a violence that caused the windows to rattle and re-echo throughout the saloon."

The king having thus deserted his post, it was urged on Matilda that her appearance at the balcony was of the highest importance at this moment; but this she refused, alleging, that it was inconsistent with her dignity as a queen, and unbecoming her sex, to step forward and court applause like a stage heroine. The king did not again appear; but the mob, on receiving a royal message, promising the redress of their grievances, dispersed, without exhibiting any of the violence which had been apprehended. From this account, which is received as historical truth, we gain a still further insight into Matilda's character. Had she been desirous of forming or heading a party, what might not have been gained by her addressing the people at this critical juncture? With a spark of ambition in her nature, would it have been possible to resist the impulse which would have prompted her to seize the evident advantage of the moment? Had she appeared at the balcony, how different might have been her fate! And yet we would not venture to say that it would have been a happier one.

We have, we think, detailed some circumstances hitherto not generally known in England. The outline of the concluding chapter of Matilda's short but eventful history, as given in this book, is already familiar to the reader; but yet it may be interesting to be made acquainted with the views entertained by our Danish author of the secret causes that were at work to effect the ruin of the queen and her ministers.

On attentively considering these, there is the strongest presumptive evidence in her favour; and no less strong testimony against the dowager queen and her party. The secrecy with which the whole scheme of the arrest of Matilda and the ministers took place, at the early hour of four in the morning, after a masked ball, (January 16th, 1772), may indeed be considered as an almost conclusive refutation of the charges brought against the queen. The Dowager Juliana's enmity towards her was such, that we cannot doubt, could any delinquency, either moral or political, have been proved against Matilda, her disgrace would have been made as public as her arrest was private. Besides other accusations, she and the ministers were charged with intending to force the king to abdicate, and take the regency into their own hands. At an early hour in the morning, the Queen Juliana entered the king's apartment, and informed him of the treasonable designs meditated against him; though startled at the communication, he does not appear to have given credit to it; and it was only in consequence of the urgent entreaties of his step-mother that he consented to sign the order for arrest, which consigned his young queen to imprisonment in the fortress of Cronborg, and the favourites with whom he had a few hours before been engaged in the familiarity of confiding intercourse, to chains and death.

After Matilda's removal to Cronborg, the queen dowager came prominently forward. Court balls, and festivities of all kinds, celebrated the triumph of her party; perhaps they were encouraged with a view of dissipating the misgivings that would naturally arise in the king's mind. The author winds up his reflections on these events by exclaiming, "Would that this chapter could be expunged from Denmark's history!"

The queen's detention at Cronborg, was of short duration. George III. seems to have consulted Matilda's true interests by removing her from a country where only the gloomiest prospects awaited her. On the 28th of May, three frigates under the command of Commodore Macbride arrived in the Sound, to convey the queen, with her attendants, (among whom was Lady Mostyn,) to Zell. One little anecdote connected with her embarkation is still preserved at Elsinore. From the gates of Cronborg to the quay, the path was covered with crimson cloth. On observing this unlooked-for manifestation of deference, Matilda exclaimed, "This for me! what mockery!"—We shall conclude our extracts from "Gamle Minder," with the author's description of the embarkation.

"Spring had returned in all its beauty—the birds were singing, the bees hummed among the fragrant flower cups, nature unfolded her stores in joyous pride around the gloomy walls of Cronborg Castle—for nature's heart bestows not one sympathising throb on the cares and sorrows of humanity. One morning, towards the close of May, the beach of Elsinore was covered with crowds, gazing with expectant curiosity at three English frigates, with waving flags, anchored in the Sound before Cronborg, where the waters of the North Sea and the Baltic mingle, and besprinkle with their foam the walls of this gothic fortress. A bright summer sun, despite the sadness of the occasion, seemed to give the scene a festal air. The spectators had already waited for some time in silence, unusual in so numerous an assemblage. Meanwhile boats plied backwards and forwards from the frigates to the Castle, and preparations for departure were every where to be seen. At length a murmur spread throughout the crowd; the queen entered the boat. A thick veil covered her features, and concealed the cheeks, bedewed with tears, which she had for the last time pressed to those of her tender infant. When the boat pushed off from shore, the royal salute thundered from the English frigates, and soon shrouded the silent walls of Cronborg in a cloud of smoke, which compassionately withdrew from the sight of the unfortunate queen the prison where she

had parted for ever from a beloved child. It seemed as though the last tie which bound Caroline Matilda to Denmark was audibly rent asunder at this moment. She sank back in the boat with a faint shriek. The smoke undulated in dense volumes, and concealed the boat from the gaze of the assembled crowd, even before it reached the frigates; when it dispersed, the queen had also disappeared, but many a tearful eye was raised towards heaven, and many a loving thought was given to the royal exile. The frigates weighed anchor, their sails filled with a gentle breeze. Slowly they bore away the youthful and beautiful queen from the silent shore of Denmark, which but a few years before had welcomed her with almost idolatrous acclamation. Political death led Matilda to a living grave."

On leaving Denmark the queen had just entered her twenty-first year. She died at Zell, the 10th of May, 1775, of a malignant fever. She retained her consciousness to the last, and shortly before she expired, expressed her perfect forgiveness of the persecutors whose machinations had robbed her of a throne, and of what she far more dearly prized, her fair fame, her children, and her friends. In bidding adieu to Denmark, endeared to her as her children's father-land, the bitterness of death seemed to have passed, and she was resigned, and even cheerful, in the midst of the little court which looked up to her with admiring sympathy and affection. The evening on which the tidings of her death reached Copenhagen had been fixed for a court ball, which, in keeping with the conduct of Matilda's enemies, was not postponed. The Crown Prince, her son, (the late king,) was required to attend. We have reason to think that even at his early age the impression he then received lasted throughout life. He seems to have dwelt with tenderness on the slightest memorial of his injured mother.

We cannot better wind up our article than by quoting the words of the devoted old courtier, as given by the author, expressive of the general feeling on the subject:—

"The sorrow at the queen's death was universal in Zell, where she was almost worshipped for her many deeds of benevolence, and yet in Copenhagen the Court assembled at a ball! Who now bestows a thought on Caroline Matilda? and yet how many did not owe her a debt of gratitude! It may be said both of the queen and of Struensee, that they each possessed great virtues: indiscretion proved their ruin; crime would have rendered their position secure." J. F. G.

ROAD-SIDE SKETCHES OF GERMANY AND THE GERMANS.¹

No. II.

AND now begins the real sightseer's part of the Rhine—every body gets out his Murray, adjusts his eye-glass, and calls up a stock of expressions of admiration and delight. Young ladies sigh as they pass the Nornenwerth and the Rolandseck, those who have learned German repeating the Ritter Toggenburg, and those who have not Campbell's "Brave Roland," two admirable poems, each with the same important moral, that no irretrievable step should be taken till you are sure of what you are about. Then, too, there is the Dragon Rock, and its long stories about "the horny Siegfried" and the "hapless Krumhelda." But it is further up, when you get amongst the castles, that the real interest of the scene commences. Such a referring to the red books! such a discussing as to which is such a castle, and which is such another! All this has one advantage however, that, if you wish to get into conversation with any particularly interesting camosel, the pointing out of these relics (which, though declared by our Murray to

(1) Continued from p. 265.

be most magnificent ruins, always seem to me to bear a horrible resemblance to broken-down sheepsteeles will generally form an admirable introduction, and the acquaintance can be further cemented by a relation of their peculiar legends, which, of course, can be very easily invented for the nonce. The most curious point about these same castles is their great number. One cannot help thinking that, in former times, the profession of gentleman bandit must have been at least as much overstocked as most of our professions are now-a-days. I suspect, if the matter were investigated, it would be found that these lordly counts and barons, for all their quarterings and their titles, were not so well off as a west-end pickpocket in good practice.

Marksburgh is the castle in best preservation, and is generally visited by travellers with the view of seeing a real Ritterschloss of the middle ages; but there is in it, I think, little besides the usual vulgar accompaniments of dungeon and tower. Those who wish to get an idea of the domestic chivalrous life, will find it better to visit the little castle of Rheinstein. It is a mere plaything, being fitted up as a summer residence by Prince William of Prussia; but the arrangements of the ancient building have been preserved as much as possible, and the whole is done in such good taste, that the reality of it is much greater than is usual in toys of this kind: it is far better, for instance, than the royal castle of Stolzenfels, which has also been renovated after the antique, but in a completely cockney pasteboard style. The great defect of Rheinstein is its very small size; the knightly hall is not bigger than a good-sized China closet, and the other apartments so confined, that the Charivari was not far wrong when it wickedly said, that if Queen Victoria wished to change her stockings, she would be obliged to open the door of her bedroom in order to have space for the operation.

And now, when you have reached thus far—that is, when you have past Coblenz—you cannot wonder that this unfortunate river has been so be-rhymed and be-scribbled. Despite the blasting influence of guides and guide-books—of having it continually dinned into your ears what you are expected to admire, and of being surrounded by dozens who are utterly incapable of appreciating—in spite of all this, it is impossible not to feel the enchantment of such beauty. It is not so much the individual aspects of beauty which strike one; there is far wilder scenery to be found anywhere in Scotland—as much rich pastoral beauty in Kent and Devonshire—as fine specimens of what is called pure riverscenery on any of the English streams: but it is the height to which all these different species of beauty are carried—the constant change of scene—the blending together in an harmonious whole objects and scenery so widely different, that elsewhere you would think it impossible they should be congruously united. It is this bringing into one and the same picture the softest and the wildest, the rocky crag, the swelling meadow, the rushing stream, and the waving wood—it is the continual shifting and changing of the scene, yet retaining all its variety and all its beauty—which constitutes the peculiar charm of the Rhine. Nowhere is this peculiarity more observable than at and near the little town of Bingen! Oh you, who are in haste, and yet wish to stop a day or two at some place, so as to be able to explore one point, take my advice, and let that point be Bingen! You will there find almost all the beauties of the Rhine collected together within a day's labour of pleasure. Go to the top of the hill, on the opposite side of the river—it is not a very difficult climb—and spend an hour or two in looking at the view. You will be told that you see eight independent countries; but that, methinks, is not of much consequence, when half of them are not bigger, nor half so wealthy, as so many English shires; the real point is the extent and magnificence of the prospect. Before you swell the vast plains of France, stretching far away into the distance, fringed by Bingen, with its little tributary stream, and

imbedded in vine-gardens and orchards; there, to the left, is the Rhine, winding down to Mannheim, and then pursuing its devious course amidst the woods and the islets, which every now and then shroud it from view; yonder, on that round brown hill, that huge barn-like building is Metternich's *château*, Johannisberg, ever honoured in the topography of toppers; opposite lies Ingelheim, sunken amongst little vine-clad hills, the favourite retreat of Charlemagne; beneath you sinks a huge precipice, many hundred feet in depth, beside which the Rhine roars along, washing the famous island castle of Bishop Hatto, and then pursuing its noble unswerving course, amidst mountain, and ruin, and vineyard, till the eye loses it as it passes the spires of Coblenz, and the massive, battlemented rock of Ehrenbreitstein. Go and see this view in the afternoon, when the declining sun is pouring a flood of golden radiance over all the Rhine land; look at it as you ought, enjoy it as you ought; and then, in spite of all that has been said at the beginning of this paper, and which I now almost wish had never been said, you will, even though your only object in visiting the Rhine was to say you had been there, you will go home a wiser, aye, and a better man.

Another reason for stopping at Bingen is, that you will find the White Horse a very comfortable inn, which is more than can be said of all the Rhine hotels, in spite of their vaunted magnificence. The town itself, and more especially this inn, is a curious specimen of the change effected in this country by the mania for touring. I met, one day, at the *table d'hôte* there, a very gentlemanly man, a professor from Carlstadt, who told me that he remembered the day when Bingen was a small hamlet of two or three houses, and this inn a public house, with a couple of rooms, whither he and his fellow-students were wont to come to spend a few days in summer. Bingen now is a thriving country town, with several hotels, of which this is considered the second. The landlord seems to have progressed with his house, and is a hale corpulent jolly-looking Boniface of sixty, a fine hearty fellow to talk to, and speaking most execrable French. He took us to see his garden and his aviary, and his tame roebuck; but the pride of his heart, and what he evidently considered a triumph of artistic skill, was a small summer-house on the bank of the river, the windows of which were formed of glass of different colours, so that the landscape might be viewed at pleasure as flaming red or sickly yellow, or again a deep blue.

Those who wish to see a real German watering-place, and one of the most celebrated of them, may reach Wiesbaden in an hour or two from Bingen. I cannot say I have ever found much to interest me in these places. There is, as usual, a great number of narrow, very hot, very dusty streets, with nobody in them; and there is water to drink, which is not very disagreeable, unless you look at the well whence it is drawn, and see the thick dirty-looking scum which gathers at top. There is also the Coursaal, a magnificent building, in the true stucco Greek style, in the colonnades of which is held a small bazaar, where you may buy things of no conceivable use for ten times their proper price. The principal hall, however, is a fine room. Here, on Sundays, the *table d'hôte* is held, and, as I have before mentioned, the Grand Duke of Nassau (who draws his principal revenue from these baths) sits at the head of the table, in order to form an attraction for those persons who may wish to say that they have had the honour of dining with that puissant potentate. Those who are fond of seeing gambling may view the *roulette* and *rouge-et-noir* tables in full operation, for the greater part of the day. To me it is anything but a pleasant exhibition, that of rational beings spending day after day in such a pursuit. It surely argues ill for the moral character of Germany, that men and women, even of rank and respectability, should not be disgraced by being seen at the gambling-table in public. It is most disgusting in the women—

not only as being more unconsonant with their sex, but because the effects produced on them appear to be greater, and are much more apparent. I remember a woman at Aix-la-Chapelle, who seemed to spend her whole time at the *rouge-et-noir* table. She was evidently, from her dress and appearance, of some rank, young, and, though not handsome, decidedly good-looking; but though I have, I believe, had opportunities of seeing some of the most degrading phases of female depravity, I never remember anything which struck me so much as the expression of that woman's face, as she sat coldly marking down the run of play, or as it lighted up when her own turn came—there was in it a demoniacal malignity of cold-hearted satisfaction when she won, and a lurid glare of suppressed fury when she lost, which was perfectly appalling. If there ever was a woman in whom, for the time, every good and holy feeling seemed to have been blotted out, it was she.

From Wiesbaden to Frankfort-on-the-Maine is about an hour's journey, by a tremendously-jolting railway; and travelling by this conveyance has one advantage, that it will give, even to the most unimaginative person, an exact idea of what travelling in a bathing machine must be—if indeed that be an imagination which one would wish to realize.

Frankfort is a town which must be seen by every one who wishes to form an idea of Germany as it was and is; it is the centre of its commercial power, as it is the seat of its principal political engine—The Confederation. Its peculiar position too as one of the few remaining Free Towns gives it an interest; one feels as if going back to the Middle Ages, when entering a town which is in itself a separate independent state, and a state too of no mean consequence. It has a curious mediæval effect, the seeing the town garrisoned by its own burgher troops, hearing people talk of the contingent which the town furnishes to the Germanic army, and being reminded that here are no kings or dukes to be looked to as governors, but simply the burgomaster and his citizen council. But if all this has an antique effect, the town itself does not seem by any means so far back as its institutions. Frankfort is said to be the richest city of its size in the world—a town of millionaires—and, in good sooth, there never was a place which more exactly answers one's idea of a city of merchant princes. The streets are broad, cheerful-looking, and well kept; throngs of people hurry backwards and forwards with that peculiar air of having some object in view, which distinguishes a real business town; the shops are large, gay, and evidently enjoying plenty of custom. But it is in the outer part of the town that the appearance of quiet wealth is most striking. Here are the residences of the principal merchants and bankers. Large white mansions, with green jalousied windows, the side turned to the street, and the entrance by a court-yard—all of these houses are magnificent from their size, and thoroughly wealthy in look, but some of them are perfect palaces! Enclosed in beautiful gardens, adorned with the rarest plants and most beautiful flowers, massively comfortable, and yet tasteful in style, and sumptuous in decoration, these buildings give one an idea of real mercantile power, which is displayed in no other city in the world, London not excepted; for, in London, the gorgeous abodes of our merchants are mingled with those of our nobility, whereas in Frankfort all is commercial splendour. The scene in the public gardens of an evening is curiously characteristic of the town. These pleasure-grounds were originally the ramparts, but are now, as at Hamburg, laid out in beautiful gardens, and of an afternoon, especially on holidays, are thronged by people of all classes. The promenade is very brilliantly attended, but the drive is the most striking feature. Here are to be seen numerous carriages, accompanied by most superb chassieurs, the equipages being such as to surpass anything to be seen on the continent, except at Vienna, and even rivalling those of Hyde Park.

With all this, the society of Frankfort is said to be tainted with the usual defects of mercantile communities, pride of purse, ignorance of all beyond their commercial routine. A curious instance of the sharp eye which the inhabitants of this free town keep to the main chance, is the regulation against allowing paupers to remain in the city. As soon as a person is convicted of pauperism he is forthwith expelled; no matter where he is to go to, he can no longer be allowed to pollute the air of Frankfort with the greatest of all crimes—want of money. On the other hand, as an evidence of the carelessness of every thing but business, I was told a story of a person, who, inquiring what sort of house Goethe's was, meaning that in which the great poet was born, was answered that it was an excellent house, in very good repute, and did a great deal of business; it being supposed that the mercantile house of that name was alluded to. And yet, the people of Frankfort would seem to be great encouragers of art in one way, for their museum contains some of the finest specimens of modern German painting; and the celebrated statue of Ariadne, by Danneker, is in the possession of one of the first merchants there, and is most liberally exhibited to strangers. Perhaps, however, it is not only at Frankfort that the laying out of large sums of money on pictures and sculpture is not a necessary proof of taste for, or knowledge of the principles of, art.

As yet, however, we have only given one view of Frankfort—we have only seen it as the flourishing mercantile city of the nineteenth century, with its millionaire bankers, and peaceable population. There is another portion of it not so unique, but very interesting to those who are not going farther into Germany—I mean the old parts of the town: for those who have more time it is not so important, because other places, such as Nuremberg and Ratisbon, present better specimens of the same style. There is one street, however, quite unrivalled in its way—I mean the Jews' Street, where, in former times, all and now most of the Jews reside. A large portion of the population, and more especially of the richest part of the population, of Frankfort, are Jews; and the most splendid mansions in the new town belong to the Rothschilds, who, in fact, are natives of the place; but it is in the Juden Gasse that the Hebrews most do congregate, and it is, in truth, a most extraordinary scene. Imagine a very narrow long street, of very old high houses, with pointed gables, projecting windows, and heavy galleries, all of a black colour, so as to look as if made of old coffins, swarms of hook-nosed and very ragged children, and numberless very ugly, very dirty, and very old women (by the bye the Mosaic Arab race seems to have a special faculty for producing hideous specimens of the female antique). Imagine the utmost extent of filth, squalor, and wretchedness, and yet apparent contentment and real activity, and you have the Jews' Street of Frankfort. I made a point of visiting it more than once, and always found it interesting. The trade carried on seemed to be much the same as in the generality of Jewish communities—old clothes, rags, old iron, old furniture; such were the staple articles of traffic. The people exhibited the usual shrewdness of their race, mingled with a touch of German openness and humour; they seemed pleased at the curiosity manifested about them, and pointed out anything which they thought most worthy of observation. The age of the houses is evidently very great; one proof of their antiquity being the strength of the doors, and the thick bars before the small windows, marks of a period when to be a Jew was necessarily to stand in danger of life and limb. The mother of the Rothschilds was said still to live in this street, and her house was pointed out to me—whether her residence there be fact or fiction, I can only say it would take a good deal to persuade me to live there, even to be a Rothschild: however, tastes differ.

The other parts of the old town are not so curious, but yet well worth observation. The narrow-paved

streets, with the high houses, the heavy windows, and the lamps hanging across the road, bring one back to those days when the burghers of Frankfort had not unfrequently to buckle on armour in defence of their commerce against the predatory nobles around, when Diets met within the sheltering walls of the town, and Emperors were elected in the old cathedral, and feasted in imperial state in the town-hall. These two buildings are amongst the most curious of the city; with little of architectural beauty to recommend them, they yet have a quaint and imposing air, which at once strikes the spectator, and one cannot help pausing for a moment to reflect on all they have seen, the changes they have witnessed, and the centuries that have passed, since they were the arena of lordly pomp and political strife.

The finest part of the old town, I think of the whole city, is by the side of the river Maine. The houses here are of many stories; and as a friend of mine lived in one a good way up, I had the advantage of enjoying the view from his windows. Here, on the opposite side of the stream, is the ancient suburb of Sachsenhausen (originally a colony of pagan Saxons transported thither by Charlemagne), its venerable looking houses washed by the river; beyond lie gardens and verdant hills, and beneath you is the Maine, crowded with barges, and bordered by the busy wharves—whilst across it stretches the old bridge, one of the most picturesque in Germany, with its huge mouldering but still sturdy piles, overgrown by parasitic climbers. This has always appeared to me one of the finest street views in Germany, and I would advise any one who can to see this view from one of the uppermost stories of these houses; it will amply repay the trouble, to say nothing of the curious character of the houses themselves. They cannot, however, be very pleasant residences in winter, for, if the river rises, they are inevitably flooded;—my friend told me, that, for a considerable time during last winter, he had been obliged to row up to the first floor in a boat, a mode of entry which may be pleasant enough in Venice, but must, I should think, be quite the reverse here.

In the centre of the bridge stands an old statue of Charlemagne, of red stone, and very rude workmanship. Passing it one evening, and observing its appearance of great antiquity, the thought struck me to ask whether there were no traditions as to its being in the habit of walking, a custom to which old statues in all places are so much addicted. My friend, in reply, told me the following story, for the truth of which, however, I do not pretend to vouch.

Once upon a time there dwelt in one of the little streets which run down to the bank of the Maine, a cobbler named Hans Fuchs, or as we should say, Jack Fox. He was a good-hearted merry little fellow, a favourite with every one, and so good a workman that he must have thriven had it not been for one unfortunate failing which threatened to be his ruin. Hans was a great deal too fond of good beer, and many a customer he lost and many a pair of boots he spoiled in consequence. In vain did his mother scold and his wife entreat, Hans could not get over this weakness.

One night the little cobbler was returning home from a tremendous jollification; it was his Saint's festival, and he thought he was in honour bound to be merry on that day; not that he was thoroughly drunk, for, as he kept repeating to himself, it was impossible it should be so, since he was perfectly aware that he was anything but sober. However he staggered along, with some difficulty keeping out of the river, till he came to the bridge. The moon was shining brightly, and the old statue of the Emperor stood out in strong relief against the dark houses on the other side. Somehow the idea struck Hans that he would go and have a look at the figure before finally returning home. Accordingly he walked over to the centre of the bridge, and leaning against the parapet, stood gazing intently at the statue. He was quite alone, and might have remained there a

few minutes, when the cathedral clock solemnly tolled out the hour of twelve. Scarcely had the last stroke died away in the air, when, to the cobbler's astonishment, the stone Emperor nodded, as if beckoning to him; he could not believe his eyes; but the motion was distinctly repeated. Hans, however, could not leave the friendly wall which supported him; there were more reasons than one for this. What then was his horror when the statue, gradually swaying itself to and fro, at length descended from its pedestal, and moved across the bridge to where he stood paralyzed with terror!

"Who art thou, fellow?" asked the figure in a hollow voice, which curdled the cobbler's blood.

"A poor cobbler, Hans Fuchs, please your Majesty," was the tremulous reply.

"Art thou a native of Frankfort?"

"Yes."

"And a good Catholic?"

"Yes."

"Good. Bear up our train, and follow me." So saying, the statue turned, and made as if it would proceed towards the city.

Hans hardly knew how to act. A train carved out of stone was a thing which scarcely required to be borne up; but, on the other hand, the commands of a moving and speaking statue were not to be despised. So, stooping down, he took hold of the train and followed the Emperor; the stiffness of this article of dress having at least this advantage, that Hans, by leaning against it, made a shift to proceed much more steadily than he could otherwise have done. They crossed the bridge, and entered the city, the cobbler wondering all the time what had become of the town-watch, not one of whom was to be seen: the streets, too, were quite deserted,—there was not even a light in any one window. Thus they passed along in silence and solitude till they stood beside the Saalhoof, that huge, gloomy building erected on the site of the old Carolingian Palace. Here they stopped, and the statue spoke again.

"Mortal," it said, "know that here lies a mighty treasure, bound under a tremendous spell, which I alone can loose. The counter spell can be taught only to one who meets me alone at midnight on the bridge, and who must be a native of this town, a good Catholic, and free from taint of drunkenness. Thou art all these three?"

Now, had this question been put to honest Hans on the bridge, he would at once have confessed the state he knew himself to be in, and been glad to have got off so cheap. But he had natural courage enough to say nothing of the Dutch article, and his well-known familiarity with the statue; besides, the treasure—should he give that up for a pardonable fib? Thoughts of Hochheimer and Johannisberg, instead of frothy beer, passed through his mind, and he answered at once,—

"Ja wohl."

"Good, then," replied the statue. "Repeat the verses after me—

'When the night-bird shrieketh dread,
And the graves give up their dead.'"

But the additional courage which Hans now felt had one evil effect,—so long as he was in extremity of terror, he was comparatively sober; but his sobriety fled with his fear, and he now could scarcely stammer out with a hiccup—

"When the dead bird,—what is it? Donnerwetter!"

"Wretch, thou art drunk!" cried the statue, with a hideous frown.

"Not drunk, your Majesty; only jolly," replied Hans with a shout, and an attempt at a reverence.

"Miserable man, receive the reward of thy folly," answered the Emperor; and, raising his heavy stone sceptre, he struck the cobbler such a stunning blow on the head, that he reeled and fell senseless to the ground. As he awoke from his insensibility he felt a sensation

of intense pain in the head—ten thousand lights danced around—and a rough voice called out—

"Fifty thousand, the drunken schelm has fallen against the kerb-stone and cut his head open."

He was lying on the bridge, opposite the old statue, which stood grim and motionless. Around him were some of the city guard, who took him to the watch-house, where his head was bound up.

Next morning Hans went home to his wife, a sadder but a wiser man; for, from that day, he never was intoxicated again. Drink, he said, had been the cause of his losing the spell-bound treasure, and that was an injury which must part the best of friends. Hans' wife said nothing; but, in her own mind, she thought he had got a far greater treasure, for he had got—sober.

So there is my story of the statue on the bridge of Frankfort; and I dare swear it is as genuine a legend as one half of those told in the Guide-books.

THE CAVERN OF YEERMALLIK.¹

The following account of this remarkable natural curiosity will be new to most of our readers, as the book from which we extract it, Captain Burslem's *Peep into Toorkisthan*, has only just issued from the press. After giving an account of his journey from Cabul to the Doab in Toorkisthan, the author thus proceeds:—

"The following morning, as we were preparing to start, I happened to enter into conversation with an aged Moolah, the solitary sicerone of the Doab, who gave us a brief but very extraordinary account of a cavern about seven miles off. Our curiosity was so much excited by the marvellous details we heard, that we determined to delay our departure for the purpose of ascertaining how much of his story was due to the wild imagination of our informant. We accordingly gave orders to unsaddle, and communicated our intentions to the Khan. At first he strongly urged us not to put our plan into execution; declaring that the cave was the domicile of the evil one, and that no stranger who had presumed to intrude upon the privacy of the awful inhabitant had ever returned to tell of what he had seen. It will easily be imagined that these warnings only made us more determined upon visiting the spot. At length, finding our resolution immovable, the Khan, much to our astonishment, declared that it was not from personal fear, but from anxiety for our safety, that he had endeavoured to deter us, but that, as we were obstinate, he would at least afford us the advantage of his protection and accompany us. I confess we were not sanguine in our expectations that he would keep his word, and were not a little surprised to see him shortly after issuing forth from his fort, fully armed, and accompanied by his principal followers. We immediately made all necessary preparations, and started on our visit to his satanic majesty.

A bridge-path conducted us for some miles along the edge of a gentle stream, whose banks were clothed with long luxuriant grass extending on either side for a few hundred yards. We proceeded rapidly at first, keeping our horses at a hand gallop, as the path was smooth, and also to escape from the myriads of forest flies or bloodsuckers, which were perpetually hovering around us, and irritating our cattle almost to madness whenever we were obliged to slacken our pace; our tormentors, however, did not pursue us beyond the limits of the pasture land, so that we were glad to exchange the beauties of the prairie for the stony barren ground which succeeded it. We soon reached the base of a hill, from whence the wished-for cavern was visible, situated

about half way up its face. We were now obliged to dismount, and leaving our horses under the charge of an Uzbek, who could hardly conceal his delight at being selected for the least dangerous duty, we commenced the ascent.

During our ride, I had endeavoured to gather a few more particulars concerning the dreaded cavern, and, as might have been expected, the anticipated horrors dwindled away considerably as we approached it; still, enough of the marvellous remained to keep my curiosity on the stretch. Shah Pursund Khan confessed that he was not positive that the devil actually lived there, but still he said it was very probable; he had first heard of the existence of the cave when he obtained possession of the Doab, twelve years ago, from the very Moolah who was our informant. Urged by a curiosity similar to our own, he had ventured some little distance inside, but suddenly he came upon the print of a naked foot, and beside it another extraordinary impression, which he suspected to be from the foot of Sheitan (the devil) himself; quite satisfied that he had gone far enough, he retreated precipitately, and from that day to this had never intruded again. He argued, that any human being living in the cave would require sustenance, and of course would purchase it at his fort, which was the only one where the necessaries of life could be procured for many miles around; but he knew every one that came to him, and no stranger had ever come on such an errand; he therefore concluded with an appealing look to the Moolah, who was with us. The Moolah, however, had a tale of his own to tell, and seemed to have no great respect for the superstitious fears of his patron. "The name of the cavern is Yeermallik, and the fact of the matter is this," said he, settling himself in his saddle for a long story. "In the time of the invasion, six hundred years ago, of Ghengis Khan the Tartar, seven hundred men of the Husaren tribe, with their wives and families, and a stock of provisions, took possession of this cavern, hoping to escape the fury of the ruthless invader, and never stirred beyond its mouth. But the cruel Ghengis, after wasting the country with fire and sword, set on foot a strict search for such of the unfortunate inhabitants as had fled from his tyranny. His bloodhounds soon scented the wretched Husarehs, and a strong party was sent to drive them from their place of refuge. But despair lent to the besieged a courage which was not the characteristic of their tribe, and, knowing that, if taken alive, a lingering torture and cruel death would be their fate, they resolved to make good their defence at every hazard. The mouth of the cave was small, and no sooner did the invaders rush in than they were cut down by those inside; in vain were more men thrust in to take the place of those slain; the advantages of position were too great, and they were obliged at length to desist. But Ghengis was not to be balked of his victims, and his devilish cunning suggested the expedient of lighting straw at the mouth of the cave to suffocate those inside; but the size of the place prevented his plan from taking effect; so he at last commanded a large fragment of rock to be rolled to the mouth of the cavern, adding another as a support, and having thus effectually barred their exit he cruelly abandoned them to their fate. Of course the whole party suffered a miserable death, and it is perhaps the spirits of the murdered men that, wandering about and haunting it, have given a suspicious character to the place; but," concluded he, rather dogmatically, "the devil does not live there now—it is too cold!"

After scrambling over loose stones, climbing up precipices, and crawling round the projecting rocks, which consumed an hour, we found ourselves on a small ledge in front of the outer aperture, which was nearly circular, and about fifty feet high. We were now in a cavern apparently of no great extent, and, as I could not discover any other passage, I began to fancy that it was for this paltry hole we had undergone so much fatigue, and had had our expectations raised so high.

(1) From "A Peep into Toorkisthan," by Captain Rollo Burslem, London, Richardson, 1846.—A book in which will be found many entertaining particulars regarding a country which recent events have made of much interest in England.

I was about to give utterance to my disappointment when I perceived the Uzbegs preparing their torches, and arranging the line of march, in which it seemed that no one was anxious to take precedence. I now began to look about me, in the hope that there was something more to be seen, and was delighted to observe one adventurous hero with a torch disappear behind some masses of rock. We all followed our leader, and it was with great difficulty that, one by one, we managed to squeeze ourselves through a narrow gap, between two jagged rocks, which I presume I am to consider as the identical ones that were rolled to the mouth six hundred years ago, at the stern command of the Tartar Attila.

I confess that hitherto I had treated the Moolah's account as an idle tale; my unbelief, however, was quickly removed, for, just as we entered the narrow passage, the light of the torches was for an instant thrown upon a group of human skeletons. I saw them but for one instant, and the sight was quite sufficient to raise my drooping curiosity to its former pitch.

We proceeded down the sloping shaft, occasionally bruising ourselves against its jagged sides, until our leader suddenly came to a dead halt. I was next to him, and, coming up as close as I could, I found that one step further would have precipitated the adventurous guide into an abyss, the bottom and sides of which were undistinguishable; after gazing for a moment into this apparently insurmountable obstacle to our further progress, I could just perceive a narrow ledge about sixteen feet below me, that the eye could trace for a few yards only, beyond which it was lost in the deep gloom surrounding us. Our conductor had already made up his mind what to do; he proceeded to unwind his long narrow turban, composed of cotton cloth, and called to his comrades to do the same; by joining these together they formed a kind of rope, by means of which we gradually lowered each other, till at last a party ten in number were safely landed on the ledge. We left a couple of men to haul us up on our return, and proceeded on our way, groping along the brink of the yawning chasm. Every now and then, loose stones, set in motion by our feet, would slip into this bottomless pit, and we could hear them bounding down from ledge to ledge, smashing themselves into a thousand fragments, till the echoes so often repeated were like the independent file-firing of a battalion of infantry. Sometimes the narrow path would be covered, for a distance of many feet, with a smooth coat of ice, and then it was indeed dangerous. After moving on in this way for some minutes, the road gradually widened, till we found ourselves on the damp and dripping flooring of a chamber of unknown dimensions. The torch-light was not strong enough to enable us to conceive the size of this subterranean hall, but all around us lay scattered melancholy proofs that there was some sad foundation for the Moolah's story. Hundreds of human skeletons were strewed around; as far as the eye could penetrate these mournful relics presented themselves; they were very perfect, and had evidently not been disturbed since death. Some had more the appearance of the shrivelled-up remains which we find in the Morgue, on the road to the Grand St. Bernard, and lay about us in all the varied positions induced by their miserable fate. Here it seemed that a group had, while sufficient strength yet remained, huddled themselves together, as if to keep up the vital warmth of which death so slowly and yet so surely was depriving them. A little further on was a figure in a sitting posture, with two infants still clasped in its bony arms; and then again, the eye would fall upon some solitary figure with outstretched limbs, as if hurrying that death which, on the instant, responded to the call. Involuntarily, my thoughts recurred to Dante's beautiful description of the *Comte Ugolino's* children, and their piteous end in the *Torre della Famine*—but here a sickening sense of the dreadful reality of the horrors which, it was evident from these

mute memorials of man's equality to his fellow, had been endured, quite oppressed me, and I wished I had never visited the spot. I felt myself so much harrowed by this sad scene, that I endeavoured to distract my attention; but what was my astonishment when my eye fell upon the print of a naked human foot, and beside it the distinct mark of the pointed heel of the Afghan boot. I hope my reader will give me credit for truth—I can assure him that it was some time before I could believe my own eyes, though I considered that the result of our explorations would explain, in part, the sight which appeared to me so extraordinary, and which tallied so strangely with the footprints which had frightened Shah Pura-hund Khan twelve years ago. I was still absorbed in reflections of no very gay colour, when one of the attendants warned me that if I staid all day among the "dead people," there would not be sufficient oil to feed the torches, and we should be unable to visit the ice caves. I was immediately roused, and proceeded onwards with the party through several low arches and smaller caves. Suddenly a strange glare spread itself about me, and, after a few more steps, a magnificent spectacle presented itself. In the centre of a large cave stood an enormous mass of clear ice, smooth and polished as a mirror, and in the form of a gigantic beehive, with its dome-shaped top just touching the long icicles which depended from the jagged surface of the rock. A small aperture led to the interior of this wonderful congelation, the walls of which were nearly two feet thick; the floor, sides, and roof were smooth and slippery, and our figures were reflected from floor to ceiling and from side to side in endless repetitions. The inside of this chilly abode was divided into several compartments, of every fantastic shape; in some, the glittering icicles hung like curtains from the roof; in others, the vault was smooth as glass. Beautifully brilliant were the prismatic colours reflected from the varied surface of the ice, when the torches flashed suddenly upon them, as we passed from cave to cave. Around, above, beneath, everything was of solid ice; and, being unable to stand, on account of its slippery nature, we slid or rather glided mysteriously along this hall of spells. In one of the largest compartments the icicles had reached the floor, and gave the idea of pillars supporting the roof. Altogether, the sight was to me as novel as it was magnificent; and I only regret that my powers of description are inadequate to do justice to what I saw.

After wandering for some time amongst these extraordinary chambers, we proceeded further to examine the nature of the caverns in which they were found. These seemed to branch out into innumerable series, which again intersected each other. Sometimes they expanded into halls, the dimensions of which our feeble light prevented us from calculating; and again they contracted into narrow passages, so low that we were obliged to creep along them on our hands and knees. Our party had just emerged from one of these defiles, and were standing together on a kind of sloping platform, when the declivity seemed to become more precipitous as it receded from our sight, when our attention was suddenly arrested by the reappearance of the mysterious naked footprints which I had before observed in the chamber of skeletons. I examined them minutely, and am certain, from the spread of the toes, that they belonged to some one who was in the habit of going barefoot. I took a torch, and determined to trace them as far as I could. Had I met with these prints in the open air, I should have decided upon their being quite fresh; but the even temperature and stillness of atmosphere which reigned in these strange regions, might account for the tracks retaining that sharpness of outline which denotes a recent impression. The direction I took led me immediately down the slope I have just mentioned, and its increasing steepness caused me some misgivings as to how I should get back, when suddenly a large stone on which I had rested my foot gave way beneath

my weight, and down I came, extinguishing my torch in my fall. Luckily, I managed to stop myself from rolling down the fearful chasm which yawned beneath, but the heavy, rounded fragment of rock rolled onward, first with a harsh, grating sound, as if reluctantly quitting its resting-place, then, gradually acquiring impetus, down it thundered, striking against other rocks and dragging them on with it, till the loud echoes, repeated a thousand times from the distant caves, mingling with the original sound, raised a tumult of noise quite sufficient to scare a braver crew than our party consisted of. The effect of my mishap was instantaneous. Our followers raised an universal shout of "Shietan! Shietan!" (the devil! the devil!) and rushed helter-skelter back from the direction of the sound. In the confusion, all the torches carried by the natives were extinguished, and had not my friend Sturt displayed the most perfect coolness and self-possession, we should have been in an alarming predicament, for he—uninfluenced by any such supernatural fears as had been excited amongst the runaways, by the infernal tumult produced by my unlucky foot, and though himself ignorant of the cause of it, from having been intent upon the footmarks when I slipped—remained perfectly unmoved, with his torch, the only one still burning, raised high above his head, waiting patiently till the panic should subside. Order was at length restored in some degree, but the thirst of enterprise was cooled, and the natives loudly declared they would follow the devil no farther, and that we must return forthwith.

Shah Pursund Khan, who was just as great a coward as the rest, declared it was no use following the track any more, for it was well known the cavern extended to Cabul!!! Finding it useless endeavouring to revive the broken spirits of these cravens, we reluctantly commenced a retrograde movement, and I was obliged to remain in lasting ignorance of the nature of the mysterious origin of the footprint.

We had considerable difficulty in finding our way back to the ice-rooms. The fears of our followers had now completely got the better of them; they lost their presence of mind, and consequently their way; and it was not till after we had wandered about for more than an hour, that we hit upon the ledge which eventually led us to the drop which we had originally descended, by means of the ladder of turbans. At the head of this drop we had left a couple of men to haul us up. As soon as they perceived the light of our expiring torches, they called out loudly to us to make haste and get out of the place, for they had seen the Sheitan, about an hour ago, along the ledge beneath them, and disappear in gloom beyond. This information raised the terror of the poor natives to a climax: all made a rush for the rope of turbans, and four or five having clutched hold of it, were in the act of dragging down turbans, and torches, upon our devoted heads, when Sturt intervened, and by his firm remonstrances, aided by the fall of a few well-aimed stones upon the heads of the crew, made them relax their grasp, and ascend one by one.

The chief, being the lightest, claimed the privilege of being drawn up first, which was readily agreed to, and so in succession, each when he had mounted assisting in drawing up his companions, till at last we were all safely landed at the top, out of the reach of any ordinary sized devil. We soon emerged into the open air, covered with dust from head to foot like Indian Faqueers, after having been for nearly four hours wandering in the bowels of the earth. Our followers soon regained their courage, now that the danger was past, and each in turn began to boast of his own valour, and sneer at the pusillanimity of his comrade; but all agreed, that nothing on earth or in heaven should ever tempt them again to visit the ice-caves of Yeermallick."

MY COUSIN KATE.

[THE following tale I compile from my diary of a year long gone by. I am old now, but my heart I hope is young. Kate's eldest daughter, a pretty black-eyed girl of fifteen, is my adopted and loving child; my sight begins to fail, so she acts as my amanuensis. She is much surprised to hear such things of the staid lady whom she addresses as mother; and reads in my pleasure, at the memories of these occurrences, hopes for herself in connexion with the handsome heir of William Russell.

Robert and Kate are coming to stay a whole month with me, and will bring me the rest of their children. I must go and superintend the preparation of rooms for them all.]

"I hear the bees in sleepy music winging

From the wild thyme when they have passed the noon;

There is the blackbird in the hawthorn singing,

Stirring the white spray with the same sweet tune.

Fragrant the tansy, breathing from the meadows,

As the west wind bends down the long green grass,

Now dark, now golden, as the fleeting shadows

Of the light clouds pass, as they were wont to pass."

L. E. L.—*A long while ago.*

One evening last August I was in a state of no inconsiderable anxiety. I had been expecting my cousin Kate ever since noon, and she had not yet arrived. Visions of carriages overturned were before me in an instant, but I banished every such thought as soon as I could. My windows were open, and the sweet odours of the flowers were borne in to me by the soft breath of the summer air. I looked again and again from my book down the gravel path which led somewhat circuitously to the lodge. Still no cousin Kate! I surveyed with no little complacency the arrangements of the tea-table, and then I was anxious again. It began to grow dusk. I shut up my book, and was in a reverie, which must have been a deep one, for it was uninterrupted till I heard the sound of carriage-wheels close to my windows. I rushed into the hall; Kate herself was there, and, after a hasty embrace, she disrobed, and we were sitting calmly and happily side by side in the home of our childhood.

I had so wondered to myself whether she would be changed, though she had only been away from me three months; but she was the identical cousin Kate over whom I had shed tears at parting. If possible she had returned more coquettish than she set out, and a little, just a little, fonder of talking.

"A delightful old house, that of the Russells, Emma," said she; "such carved oak stair-cases and long galleries, and interminable vistas of old dark portraits,—I believe I should have grown sentimental if I had not read somewhere that it injured the health. I have read all Scott's novels again, and I don't know how much more; but, dear me, what beautiful jessamine! how fragrant it is!"

I wish I could give Kate's blush when I answered that Robert Westall had left it that morning in expectation of her return, but I cannot. She went on—

"The Russells are inveterate readers; Mrs. Russell had her own particular lamp lighted as soon as it grew dusk, and persevered till she could scarcely keep awake. She being a lady of the old school, had dreams about household duties, which never disturbed Ann and Caroline; they began directly after breakfast. It was really ludicrous at dinner sometimes; some of us had been interrupted in a tournament, others had broken in on the repose of Keats' poetry, to attend to the grosser wants of mortal existence, and each bore the stamp of her separate employment. I was dull for three weeks, though perpetually sitting alone in a library where the books were all strange. The Russells read in their bedrooms, to be beyond the possibility of disturbance. Then Charles and William came home from Oxford, and fine fun we had. Such wanderings by moonlight, such reading, and singing, and talking together; and, in

short, we were quite happy. By the bye, how very handsome William is, and so droll, I am sure I laughed as if tears were imaginary things—not a sad reality. But when the excitement was over, Ann and Caroline read as usual, so the young men and I were left alone. They are so clever! Well, how delightful it is to be at home once more! How very well that dress becomes you, Emma: you look enchanting. And now, pray tell me some news."

"Really, Kate, I have been very quiet since you have been away; I dined once at the Lindens—"

"Yes, and Mr. Morison looked fidgety," interrupted Kate; "and Mrs. Morison kept so strict an eye on the servants, that they did not 'act well,' as engineers say; I understand."

"The Westalls have been at Brighton till yesterday, Kate; they came home at six last night; at seven Robert was here to know if you had returned." [Kate was silent enough now.] "Mr. Westall, of course, could not leave his business, being a lawyer. You know, Kate, people will quarrel and be ill, so lawyers and physicians have never any leisure. But Robert passed his examination just before he came, and wanted recreation. He is very pale. Of course, while you were away Ravenswood was dull enough, so he went to Brighton with the rest; and I have invited him to spend the day in the woods with us to-morrow."

"To-morrow! A day in the woods! delightful! Who is to go?"

"Robert and yourself, Miss Crompton—oh I forgot to tell you, she is at her uncle's for a few weeks again."

"Full of London chatter, of course," said Kate. "Well, who else?"

"Ensign Lavington, Edwin Fenton, and myself."

"Six; that will do. When do we start? Early, I hope."

"Yes; at eight o'clock, after breakfasting here together."

"I am delighted. How do poor Edwin's poetries go on? Symptoms as violent as ever—turn-down shirt collars—and indomitable perseverance in injuring his health by sitting up at nights?"

"I think he is as poetical as ever, love: but really, Kate, you look pale and anxious in spite of your enjoyments at the Russells."

"Pale, Emma; you jest?"

"Not now," said I, kissing her blushing cheek, while I twined Robert's jessamine in her black hair. She was very fatigued, and soon retired. I remained down stairs to superintend the final closing of the house, being rather nervous. When I lay down beside her, the flowers were on her pillow, and I heard her murmur "Robert" in her sleep. What may this betide? thought I.

The morning came. I jumped out of bed, and, having ascertained that it was a fine day, and just five o'clock, soon had my head on the pillow again, and was going off into a magnificent dream, when Kate's kiss awoke me. We congratulated each other on the weather, and, after anticipations of enjoyment for the day, prepared to dress. Without her knowledge I placed a spray of Robert's jessamine in her hair—it was very much faded, for though it had not been very long gathered, its nature was so delicate that the mere cutting it from the parent stem injured it materially. She looked lovely. I hoped from my heart that she would not be mischievous to-day, for Robert and she had not met for six months—he having been studying hard in London long before Kate left. The last interview she had with him was to refuse his offer of marriage; and I really felt concerned, for he was truly amiable and intelligent, with a manly decision of his own, excepting Kate were in the case,—then he submitted directly; but this, I thought, marriage would cure, and I knew a little restraint would improve Kate wonderfully: but really she was such a coquette!

Presently we were seated round the table to which I had so eagerly welcomed Kate the evening before. The only one wanted to complete the party was Miss Crompton, and even she was only half-an-hour behind

her time; but she came yawning in spite of her scrupulous conventional politeness, to show us how much later she rose in London.

While the rest are at the breakfast table I will step aside to give a slight sketch of our companions.

Robert came first. I was distressed to see Kate receive him without the least emotion, as if they had parted only a day or two since; but O! how comforted to see her leave the room, and come back with her eyes rather less bright, but much more tender and beautiful than usual. The Ensign, in all the glory of a spotless uniform and a flaxen moustache, was our second arrival. With an easy condescension he bowed to Kate and shook hands with me, coxcomb that he was! as if he were supremely contented in himself, but just kept up a communication with ordinary mortals out of pure benevolence. He twisted his fair moustache impatiently round his fore-finger, admired our prospect, and avowed his intention of enjoying himself that day. He wished Miss Crompton had commissioned him to call her, he would have thrown stones at her windows, and damaged more panes of glass than the most indefatigable glazier could mend in a long summer's day. Having relieved his feelings about Miss C.'s late rising by this candid expression of them, he applied himself to the dispatch of his breakfast. Edwin Fenton came, looking billious and out of spirits as usual. He considered himself quite a Byron; indeed he confidentially said to me one evening, "Byron! he was a happy man to me! he could get rid of his superfluous excitement by writing it down and selling it; but my fate interferes with such an arrangement. It is all here," (touching his forehead with his finger,) "but it is incommunicable, and that increases my misery." Even this unhappy individual honoured our excursion day with an attempt at a smile, when we painted in glowing colours the delights that were before us. After breakfast the carriage arrived, and after sending, by way of pioneer, a gig carrying a servant and provisions, we set out. Never did I see anything more beautiful than the country that day. It could not be the charm of novelty, these scenes were as familiar to me as my breath. I was born and bred here, the orphan heiress. I was acquainted with almost every tree that grew. Perhaps the cause of my happiness was, that Kate, the being I loved best on earth, (since Robert's elder brother died,) had just returned to me, and I sat with my hand in hers the whole of the way. The hedges yet boasted their beautiful wild roses; the foliage was richly green; here and there a tree shadowed forth to our mind the coming autumn, and it suggested to me a person prematurely wise. The nightingale's song was heard from the wood we were entering; my whole external life breathed poetry, and my heart leaped up and echoed the happiness that was around me. My grief had long lost its boisterous character; it was to me now as a gentle sad companion, in whose presence levity can never come, though much delight may be experienced. I drank the inspiration yielded to me by the high spirits of my companions and the bright weather; but I was as I always am—quietly happy. Kate and the rest laughed, but Kate was unusually silent that day. Once I was going to put my arm round her waist but found myself too late—that position was already occupied by Robert, who sat on her other side. Kate's coquettishness had been my plague, I fervently hoped here was an end to it.

Miss Crompton and the Ensign took wonderfully; he entertained her with an imaginary siege, in which he had performed feats of valour hitherto unheard of. Now, thought I, you have your match for the first time in your life, for certainly his military achievements were not more wonderful than her adventures in London. The prominence of the first person singular, was the most striking feature in each case. Edwin Fenton had chosen to sit with the driver, and I could hear his melancholy opinions about the harvest, the state of the country, &c., and Ben's answers full of ignorant fear. Not that Ben did not know how fine the wheat was about us,

but Edwin staggered him with statistics, which were a species of deception quite above him; and the end was that Edwin worked him up to a promising state of despondency about the coming winter, and persuaded him that Englishmen are the most over-taxed, ill-used, and patient people in the world. At last we came to the springs, and sat down by a clear streamlet whose lulling voice was music to our ears, with the tall trees above us, through the interstices of whose boughs the very sun, made merry by the good he was doing in the rich orchards and sunny vineyards of Europe, played at jack o' lantern on the soft fresh turf. Here each took his own course and did as he chose; Miss Crompton, who likes one beau better than none, and two than one, had somehow drawn Edwin Fenton into her net, so she, the Ensign, and the Poet went off together after a few minutes. We sat still. I had always favoured Robert's suit, but never so much as when I contrasted his manly bearing with the appearances of the other two young men who were with us to-day. It was impossible not to feel his superiority. Solemnly, and half sadly at first, he told Kate of his love—his earnest love; told her that she had in no slight degree been the cause of his present success in life. He said that she had formerly expressed a wish that young men would establish themselves well in life before they thought of marrying. "That wish," said he, "has kept me awake and working many many weary hours. For you, dear Kate, I have studied—done everything. I have the brightest prospects before me; but if you refuse me again, I shall never try for anything on earth afterwards." During all this, Kate had hidden her head in my bosom and was weeping. I gently disengaged myself, and left them together: when I returned they were excellent friends.

I loved to contemplate their happiness. Love to them, I thought, has hitherto been sweet; its very pains have been pleasures. Oh that they may never weep regretfully over the remembrances of the promises made in so much joy to-day! We passed the hours delightfully: all met by common consent at the springs to dine, and our dinner was truly a dinner to be eaten in such a place; a romantic affair, quite different from the servant-encumbered, lamp-lighted, curtain-closed proceeding of in-door life. Cool salads; Robert repeated Sidney Smith's directions how to make a salad for a man of taste, which seemed quite *à propos*; from this we got into a discussion about various things connected with that celebrated man,—creams, such as Milton describes Eve to have made, from "dulcet kernels pressed," and various more substantial preparations well suited to the occasion. My excellent tenant, who occupies the farm we had left about a mile behind, brought us a sylvan feast of fruit freshly gathered. Robert amused himself by garlanding Kate's dark hair with young vine leaves, and then making her look into the stream to admire herself, and he told her with more grace than I can put into so tame a thing as a chronicle, that she had every temptation to imitate Narcissus; but he hoped she would summon her powers of imagination and let him be her image. I need not say the other division of the party had left us long before this. There was something so beautiful in the love of these fair young creatures, that made me glance at my own deep mourning, and think how soon prospects as fair as theirs had, in my case, been blighted for ever, by the death of him who was husband to me in all but name—my dearest friend. I wept, silently and aside, for it would have been a sin to put anything of grief before them now, I was soon calm again for their sakes. We all strolled together along the brook-side, and admired the beautiful water-lilies, which really seem to be each

"An urn; some nymph
Swims bearing high above her head."

The day passed pleasantly away, and when the sun began to tinge the west we bade adieu once more to the wood, now endeared, to three of us at least, by lasting recollections.

"Dear me, Kate," said Miss Crompton, when we were once more seated in the carriage, "where did you get those splendid wild hyacinths? I haven't seen any."

"Common things," soliloquised Edwin, "yet beautiful. Ah! like everything else worth having, they seen fade."

"Pretty things enough," carelessly remarked young Lavington; "but, dear me! nothing to the flowers I saw in India; near our station was a grove of the celebrated 'Rafflesia arnoldi,' and they were so fine that the nectaries of the flowers generally held three quarts."

"Remarkable!" ejaculated Miss Crompton.

Robert said afterwards, he thought she would believe anything from a man in uniform. They were soon deep in another battle scene; young Fenton looked moody and uneasy, as I saw when he turned round and looked into the body of the phaeton. We soon reached home. Next morning I heard that the Ensign and the Poet had taken Miss Crompton home politely and peaceably enough, but that they quarrelled dreadfully about her afterwards; and that Edwin, true to his wretched fate, had given her up to his rival, and vowed himself unfortunate—more unfortunate than Byron.

But I must return to Kate on the evening of this day in the woods. I never saw her so naturally happy as when Robert had tenderly bidden her farewell, and she came up into our own room. What bright anticipations of the future she had! How she wept that she had ever been coquettish to any one so good and true as Robert!

When she found the jessamine in her hair, she laid it on her pillow as she had before done. She threw her arms round me and begged me to pray for her happiness. Indeed I required no great inducement to do this.

The next morning a letter lay on the breakfast table awaiting me, in a legal hand-writing. I knew at once it was from Robert's father. In it he requested me to give him an interview at eleven that morning. Of course I answered the note, and said I should be glad to see him. At eleven precisely, Mr. Westall, scrupulously dressed, as usual, in an unexceptionable suit of black, with a gold chain depending from his neck,—the same bow, so elegant at first, and so suddenly cut short. He was the Mr. Westall of my childish days, and the kind friend and protector of my riper years. Robert, being as open-hearted as a child, had told his father of his success the night before. He, good father that he was! had come to make arrangements for as speedy a marriage as possible, and also to ask my consent to the engagement, formally, as Kate's guardian. I gladly offered him every thing I could in each case.

I went to consult Kate about the "early day," and she, being persuaded by Robert, agreed to that day month. Robert had come while I was engaged with his father, and looked very happy.

Mr. Westall and Robert left Ravenswood for London that afternoon, and after a stay of three days, (during which the postman had to call at the lodge more than once,) returned, bringing news of a capital practice which Robert's father had bought for him.

So the wedding-day came. The weather all smiles and sunshine; Kate all tears and blushes. Robert's temperate exultation and fervent gratitude quite delighted me, and his bride too, I believe. Ann and Caroline Russell came to be bridesmaids. Caroline is very peccol; I really believe she and Edwin Fenton will perpetrate matrimony. Charles and William were there, and were as merry as usual, but Charles confidentially told me he had thought Kate loved his brother; "but, dear me!" soliloquised he, "one may as well prophesy which way the wind will blow, as be sure who such a coquette as Kate would fix on at last!"

After the marriage, Robert and Kate spent a week or two in Devonshire with some of his relatives; they then spent a farewell month at Ravenswood. When they left us for their home in London I felt very dull, and being particularly so one afternoon, sent to borrow the County

Chronicle, where the following announcement met my eyes:

"On the 29th October, in London, Edwin Fenton, Esq., of Ravenswood, to Mary Anne, only daughter of Frederic Crompton, Esq., of that city."

"On the 30th, at Bishopsgate Church, Ensign Lavington, to Caroline, younger daughter of the late John Russell, Esq., of that place."

So I was quite out in my guesses; but I cannot think how Miss Crompton came to prefer Edwin to the Ensign. Ann Russell, who is staying with me, says, "he asserted to her sister, that he never made Miss C. an offer at all; but just wanted to amuse himself, and vex the Poet at her expense."

L.

THE LABOURER.¹

VERY great pains have been taken lately to disabuse the agricultural poor of the notion that they have a certain right in the land. Argument and legislation have both been used. "You are not the landlords," has been repeated a thousand times, and impressed on the imagination by the vivid image of a union workhouse, which seems to say, "Whether you are the landlord or not, you shall not be." The poor have been told they have their labour, the farmer his labour and stock, the gentleman his land. Now a belief so often denied must have a certain universality, and something of a foundation in human nature and in the visible order of things. And in fact we do really think it is not altogether such an absurd and preposterous belief—such a mere chimera—that the poor have a certain sort of right and property in the land. It is always held as natural that what men have made, they should, in some sense, consider their own; and that they should be allowed a certain right of makership, paternity, and ownership, in everything they have helped to create, or reclaim, or improve. If a man has added to the public stock, surely he has a claim upon it, unless he has done something to forfeit that claim; surely he has the world in his debt, unless the world can prove the balance of debt is against him.

Let us now see how this matter stands with regard to land. The labourer has helped to make it what it is; he has watered it with his sweat, and, it may be said, his very blood; he has sunk thereon his whole capital, and devoted to it his little all. He knows the land is now more valuable for his labour; how should he not, then, think he has a right in it? Surely it is no idle dream. No, it is founded in truth and justice; and were it not so, it would not be so inveterate an opinion, so deep-rooted a sentiment. Let us endeavour to express this sentiment in words and images—though words cannot reach what is so deep and heartfelt. Here is an aged labourer, whom Providence has suffered to survive his strength. He was born in the parish, and there was brought up; or perhaps, without being under that obligation to it, he yet gave to it the first-fruits of his labour. His whole life has been one of use and service to the parish. As far as he or any mortal man can strike the balance, he has given vastly more than he has received, and thereby has deserved a blessing. All that he sees or hears tells him of his work, a work which, in the case of most labourers, is a work of love. He knows that he has added to the productiveness of the soil. He sees a present triumph, which is the result of fifty hard-fought battles with Nature. It is no barren victory, but an actual conquest, producing sterling fruits. It is written on the face of Nature, which as the veteran contemplates, he feels that he is the chief part of the tale; he helped to redeem that bog from barrenness; he helped to overcome the obstinate sterility of the moor, and the lean hill side; those fields of wheat which now present such

an uniform though undulating surface of golden ears, rising shoulder high, once would only produce in alternate stripes; half the crop was drowned or starved by standing water,—he under-drained it; he has seen the flock of sheep that feed upon that down gradually increase from five to seven or eight hundred—many a winter month has he toiled knee-deep in mud at those dykes and entrenchments, and assisted to give its present useful direction to that stream, which, in the reeds and willows that now fringe its bed, seems to forget the violence once done to it; he tempered with marl that field of hungry sand; he, when plough and harrow and hoe had failed, dug up with his pick-axe, and tore up with his hands one by one, the myriads of matted and ropy weeds that once incurably infested that northward slope; in some one or other of the numerous processes of modern agriculture, he has traversed a hundred times every square foot of the parish, till he knows every mark and character, natural or artificial, as if it were in his own cottage garden; he first set, and has five times trimmed down to the stocks, those ancient hedges; he helped to plant that belt of forest trees, now grown enough to adorn and shelter the country, and supply both fuel and timber; he helped to make and maintain the roads and the bridges; he has contributed his labour to every improvement, everything that has increased the productive value, the comfort, the beauty of the village and the parish.

What closer connexion can there be than that? It is all in a manner the work of his own hands; the village, the parish, the land, the fields and meadows, the woods, the streams, are part of himself. He is indeed, as he is sometimes insolently called, a clod of the soil; well may he be so called; the trees that grow on the land are not nearer to it. The mere connexion of ownership is nothing to this. Though he, who has thus helped to make not only the yearly produce, but the very soil itself, and the permanent natural qualities and features of the country, should be separated ever so far, it seems as if something must come of it. So infinitely nearer and dearer a tie is it, than a mere right by title-deed to enjoy the produce.

Yet is not all told. This relation of makership, this long partnership with the very powers of Nature, is cemented by suffering, and endeared by the most affecting associations. The poet who tells the British sailor that the spirits of his fathers start from every wave, would only speak the unborn poetry of every rustic breast, if he said the same here. The labourer's fathers, brothers, friends, have all died in this bloodless, though not painless warfare. Perhaps he is the last of a gallant band of companions, the last to tell their deserts, the last to receive in his one person the rewards of many. As for himself, he is not without honourable wounds: his body remembers the elemental strife: his sprained sinews, his aching joints, his blunted organs, recall continually this or that tempestuous scene; many a winter day on the bleak hill side, many a night-watch, many a surprise of flood and storm. Above all does he remember the last time he forgot he was old, and, after a useless bravado of endurance, crept home late one terrible day, from the scene of half a century's labours, never to return to it again. Of his children, some died in their infancy, yet not too young to have tasted the hardships of their condition; a daughter caught a chill in the fields at fourteen, was never strong after, and died at twenty; a son, who had roughed it well enough so far, returned to work too soon after the scarlet fever, and lived an ailing but still a working man, till five-and-twenty. His surviving kindred and offspring live as he lived, labour as he laboured, suffer as he suffered. He still serves his generation through them, and looks for a portion in the fruits of theirs, that is, of his labour.

We are justly proud—too proud, our neighbours say—of our Greenwich and our Chelsea; and take care that all nations shall see, as they come up our noble river,

(1) From an article on Agricultural Labour and Wages, in a recent Periodical.

how we house and maintain the wounded or worn-out soldier and sailor. But in what buildings, and with what uniform, and with what fare, and in what company, and with what terms of designation, are we preparing to treat those equally stout-hearted patriots, who devoted the flower and strength of their days to preserve us from famine and death?

Poetry.

[In Original Poetry, the Name, real or assumed, of the Author, is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

STANZAS.

REV. H. THOMPSON.

WHEN Hope, in Possession's proud noon riding high,
Sets quench'd in eternal eclipse,
And, like fruits of Asphaltus, the pleasures we try
Turn ashes and dust on the lips;
When the joys we have nurs'd into bitterness burst,
And the forms we have follow'd are fled,
Oh where shall we find a repose for the mind
That dwells with the wreck'd and the dead?

Oh why was Youth's pathway so gallantly strewn
With flowers of each perfume and hue,
If their beauty and fragrance must waste in the noon
Where fresh in the morning it grew?
Oh why is the scene of existence serene,
As to ardour's young eye it appears,
If its sunshine be warm but to nurture the storm,
That bursts into ruin and tears?

Nay, murmur not, mortal! the fraud is thine own;
Who bade thee a shadow adore?
Earth's blessings were given for thy solace alone;
Thy hopes and affections for more.
Then turn thee from earth to the rights of thy birth,
To the armies of glory on high,
And seek above those the unbroken repose,
The garland that never must die.

Nay, murmur not, man! like Halcyone, thou
Thy nest on the billow hast made;
Thou hast trusted the calm of the summer, and now
The tempest thy trust hast betray'd;
Go, bind on the Rock that looks down on the shock
Of elements combating free,
Where no clouds part thine eye and the ever bright sky—
No woes thy Creator and thee!

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne*.

A WONDERFUL CIRCUMSTANCE.

In the small village of Herne Hill, near Canterbury, there is a postman, who is stone blind, yet still, unaccompanied by any dog or companion, he goes his daily round, never omitting a single letter, or giving a wrong letter to any one. The only thing which affects him is snow, after a fall of which he is prevented going his usual round.

It is in the relaxation of security, it is in the expansion of prosperity, it is in the hour of dilatation of the heart, and of its softening into festivity and pleasure, that the real character of men is discerned. If there is any good in them, it appears then or never. Even wolves and tigers, when gorged with their prey, are safe

and gentle. It is at such times that noble minds give all the reins to their good nature. They indulge their genius even to intemperance, in kindness to the afflicted, in generosity to the conquered; forbearing insults, forgiving injuries, overpaying benefits. Full of dignity themselves, they respect dignity in all, but they feel it sacred in the unhappy. But it is then, and basking in the sunshine of unmerited fortune, that low, sordid, ungenerous, and reptile souls swell with their hoarded poisons; it is then that they display their odious splendour, and shine out in the full lustre of their native villany and baseness.—*Burke*.

BEFORE an affliction is digested, consolation ever comes too soon;—and after it is digested, it comes too late: there is but a mark between these two, as fine almost as an hair, for a comforter to take aim at.—*Sterne*.

It is curious to observe the triumph of slight incidents over the mind, and what incredible weight they have in forming and governing our opinions, both of men and things—that trifles light as air shall waft a belief into the soul, and plant it so immoveable within it, that Euclid's demonstrations, could they be brought to batter it in breach, should not all have power to overthrow it.—*Sterne*.

It appears by a calculation made by the printer of Stevens's edition of Shakspeare, that every octavo page of that work, text and notes, contains 2,680 distinct pieces of metal, which, in a sheet, amount to 42,880, the misplacing of any one of which would inevitably cause a blunder! With this curious fact before us, the accurate state of our printing, in general, is to be admired, and errata ought more freely to be pardoned than the fastidious minuteness of the insect eye of certain critics has allowed.—*Curiosities of Literature*.

THE Abbé Olivet has described an amusement of Pelisson, during his confinement in the Bastille, which consisted in feeding a spider, which he had discovered forming its web in the corner of the small window. For some time he placed his flies at the edge, while his valet, who was with him, played on a bag-pipe; little by little, the spider used itself to distinguish the sound of the instrument, and issued from its hole to run and catch its prey. Thus calling it always by the same sound, and placing the flies at a still greater distance, he succeeded, after several months, to drill the spider by regular exercise, so that at length it never failed appearing at the first sound to seize on the fly provided for it, even on the knees of the prisoner.—*Ibid*.

THE brave only know how to forgive;—it is the most refined and generous pitch of virtue human nature can arrive at. Cowards have done good and kind actions,—cowards have even fought—nay, sometimes even conquered; but a coward never forgave: it is not in his nature;—the power of doing it flows only from a strength and greatness of soul, conscious of its own force and security, and above the little temptations of resenting every fruitless attempt to interrupt its happiness.

THE ROMANS IN BRITAIN.

THERE are none, even of the most imperfectly instructed in the history of this country, who do not know generally, as a historical fact, that, a long while ago, Britain was a Roman province; and any boy of ordinary attainments can tell us, that the Romans first landed here under Julius Cæsar, and that they continued in possession of the country until the Emperor Honorius recalled his troops to Italy, to defend the heart of the empire against the incursions of the barbarians, and so surrendered a sovereignty which he was no longer able to retain. The fact, in this naked outline, most people know,—that the Romans came, and that they departed; but not one in a hundred—perhaps not one in a thousand—knows much more. The accounts given to us of the Roman occupation of the country form the first and the shortest chapter in every history of England, and the most barren of all detail. There is seldom any attempt to weave it into the general thread of the story, or to trace what influence it may have exercised upon the character or fortunes of the country. We satisfy ourselves with knowing that such a thing once did happen, and there we leave it.

It is when we begin to look into dates, and by their help to measure, with some degree of accuracy, the magnitude of the event in question, that the meagreness of our information, and the languor of our curiosity, respecting this period of the history of the island in which we live, strikes us as remarkable. The date of Cæsar's landing was fifty-five years before the commencement of the Christian era; and Honorius's renunciation of the sovereignty of Britain took place about the year 420. The occupation of Britain by the Romans thus extended over a period of nearly 480 years—no inconsiderable proportion of the age of the world, and an entire fourth of the time which has elapsed since the island of Britain became known to history. But it is when we compare it with some other period, regarding the extent of which we have a comparatively definite impression—for example, the most recent one of equal duration—that we become still more fully sensible how large a portion of the average life of a nation is comprehended in a period which we are accustomed to regard as a mere point, scarcely discernible in the distant horizon by which our view is bounded. Looking back 480 years from the present time, we find ourselves at the year 1386, about the latter part of the reign of Edward III., and at a point considerably more than a century anterior to the Reformation; a time, the interval between which and the present day embraces almost all that we are accustomed to consider of much interest in relation to the constitution or government, the wealth, greatness, religion, or literature of the country. To the Romans of the time of Honorius, then, the landing of Cæsar must have been something like what the achievements of the Black Prince are to us; to the mass of the people a mere tradition, and known only in any of its details to the learned, and even to them as remote from present personal interest, and as deeply buried in the mists of antiquity, as are to us the battles of Cressy and Poitiers, or any of the narratives in the pages of Froissart. The memorials of their presence which the first invaders had left, had most of them, by that time, been long obliterated; those of which any traces remained had become grey time-worn ruins; their places of encampment, subjects of antiquarian controversy; their armour, their coins, their dress, their mode of life, subjects of antiquarian curiosity, pretty much as they are even at

the present day. For so long a period, embracing so many successive generations of men, cannot have run its course without having produced much moral and physical change;—in the case of a civilized people like the Romans, much mental progress. The acorns which were shaken to the ground by the wind which filled the sails of Cæsar's galleys, and bore him to the then unconquered shores of Britain, had become, ere his successors took their departure, aged moss-covered giants of the forest, and furnished, for anything we can tell, the timber of which were built the ships which carried them away. And during the long roll of years in which these were advancing through all the stages of growth, maturity, and decay, with a progress so slow that its perceptible steps are to be marked, not by years, but by decades of years—how much change—how much decay of old things and growth of new—how entire a revolution in feelings, habits, and associations—must have taken place in the living denizens of the soil! To many of the Romans (for it would be violating all probability to suppose a continued succession of legions merely occupying fortified posts for so many hundreds of years, without some, at least, spreading themselves over and into the country, cultivating the soil, and acquiring rights of ownership in it, and its fruits,) Britain must have been much more a home than Italy. The ashes of their fathers and brothers rested in it; their own fondest associations were connected with its scenes, with which all their recollections of infancy and youth were entwined. They must have formed connexions, more or less intimate, with the native inhabitants—intermarriages, in all probability, leading to the necessary consequence of families of mixed blood. With this there cannot fail to have been a partial fusion of feelings, prejudices, and superstitions; a gradual wearing down of the most salient points of difference; an approach to the formation of a mixed dialect, in which the necessary intercourse of the two races could be conducted; and, probably, something like the growth of a new race, neither altogether Britons, nor altogether Romans, but combining the distinctive characters of both. A mere military occupation for a short period—for half, nay, for a whole century—might, perhaps, have consisted with the preservation of an entire separation between the governors and the governed; the former might, for all that period, have continued to be in the country, but not of it; but for nearly five centuries it is scarcely conceivable that any offshoot of a foreign stock should have been in contact with the soil of the country, and not taken root in it,—should have remained so entirely distinct, and free from all entanglement of interest, alliance, and affection, that they should be able to take flight in a body on a sudden call, like swallows at the approach of cold weather, and leave nothing to recall the memory of their presence but a few deserted and mouldering nests; not to mention the other and greater wonder, that, after five hundred years' occupation, they should not have preferred remaining in Britain, and leaving Italy to its fate, to encountering the scarcely doubtful chances of a conflict with the countless swarms which were pouring upon the empire from the inexhaustible hordes of the north. When we reflect upon the actual state of matters, upon the length of time during which the Romans occupied Britain as one of the outposts of their empire, and the consequences which, in conformity to all experience in similar circumstances, must have followed upon that occupation, we cannot help feeling, that to talk of their leaving Britain at the time of Honorius, appears little less marvellous than if we should now talk of the Saxons or Normans leaving it, and returning whence they came at the period of their respective conquests.

And yet this, inconceivable as it is, is the idea we generally entertain. We think of the Romans as having paid this country a passing visit, and, when they

found it necessary to discontinue their intercourse, having left it very much as they found it; and as having themselves in their departure carried with them no trace of their residence among us. We look upon the Roman occupation of Britain as an unimportant episode in the history of the two countries, marking the conclusion of the one, and the commencement of the other; but which might be left altogether out of either history, without leaving any perceptible gap to be filled up. And yet that which we accustom ourselves so to regard,—which we treat with the same contemptuous indifference with which Milton treated the struggles of the kings of the Heptarchy, when he likened them to the contests of kites and crows, is, in reality, when we look at it narrowly, a long tract in the history of a people, every page of whose annals, if rightly written, cannot fail to have been full of interest and importance, and comprehends a series of events extending over a period of time sufficiently long to embrace the entire life of a nation, and entitled to an independent and substantive place of their own in the volume of history. There was space enough in it for a state to have passed through all the stages of infancy, manhood, and decay. It can be no exaggeration to assume that many things in the habits, mode of life, feelings, and institutions, of the two races thrown into contact, which were young long after the commencement of the era we are speaking of, had, after enduring their full period of mature vigour, grown old, decayed, and utterly died out, long before its close. We cannot think otherwise, if we only consider what a much shorter period has done for the greater part of the continent of America.

If then we are, as we apprehend to be the case with even our most learned students of history, almost entirely ignorant of the actual condition of Britain during the long period we have been speaking of; if we know little more than a few of the most worthless and unprofitable of those facts which form the skeleton of history,—the names of successive commanders, and the date of this or that battle, and even these most darkly and uncertainly; leaving all that concerns religion, literature, government, civil polity, domestic institutions, the happiness or misery of the people, one entire blank; we cannot help looking upon that very ignorance as a most remarkable circumstance in connexion with historical literature: not unusual, it may be, and perhaps not wonderful, when we consider how inadequately history has, at all times, and in relation to all countries, performed its noblest function, of preserving, for the benefit of future ages, the really valuable facts in the condition of a people by which the steps of human progress are noted, and the operation of its various causes illustrated; but at all events very mark-worthy, as helping us to understand what history is, compared with what it ought to be. It is not a mere crumb of history that has slipped from our grasp,—a detached corner that has been broken off,—an insignificant islet that has been submerged by the waters of oblivion; a whole continent has disappeared—the annals of an entire race of men have been lost. We should have no right to wonder that, in savage tribes, generation after generation should arise and disappear in long succession, and leave no more lasting trace of their existence, than the leaves of the forest to whose growth and decay the exquisite simile of Homer¹ so touchingly likens them. But Britain, during the time we speak of, was not peopled by mere savages. The Romans were then at the very height of their civilization. They were perfecting that system of law which still lies at the foundation of the jurisprudence of nearly the whole civilized world, and which, for its sound principles of equity, and its refined adjustment of the most complicated questions of right, continues to be the theme of universal admiration. That law un-

doubtedly they administered in Britain; and it is morally impossible that any tribes, however rude and barbarous originally, could have remained long with such a system brought to bear upon their daily transactions, and their various social relations, without having their minds quickened, refined, and cultivated by it. The unearthing of the civil law in the twelfth century from its long burial, gave the first decided impulse to the civilization of Europe after the dreary night of the dark ages; the practical working of its principles could not have failed to produce an effect something similar upon the aboriginal tribes of Britain, when they were subjected to its influence. There must, therefore, have prevailed throughout the whole of that part of Britain over which the Roman power extended, a considerable amount of civilization—there must have been some degree of social order—an established relation of rights and obligations—the idea of property distinctly implanted in the minds of the people, with its cognate ideas of rank and power—all these opening a field for the exercise of the moral and intellectual energies, and rendering it impossible that the habits of the people should be the mere unvarying obedience to animal impulses which constitutes the whole history of savage life.

Wherever there is such an amount of civilization, there must, we conceive, be the materials for a history worth knowing something about. There must have been conflicts of rights, struggles between right and might, the decay of one kind of power and the growth of another, the gradual development of principles originally latent in the relation established between the two races, as operated upon by their respective national, physical, and religious peculiarities; there must have been a gradual forming and perfecting of institutions,—there must have been patriots and tyrants, aristocrats and demagogues, poets and philosophers,—all the various forms into which the activity of the human mind, forcing its way from under the weight of controlling circumstances, and shaped and directed by individual and national tendencies, throws the several elements into which a society becomes divided. It cannot have been otherwise, on the supposition that there existed those seeds of progress which the residence of a civilized race cannot fail to have implanted in the rudest soil, giving play to the vital energies of the popular mind, and so rendering such progress, and the varied succession of events arising out of the conflicts of feelings, passions, principles and interests, which constitute the materials of history, unavoidable. Let us grant all that can be asked of the corruption of the Romans, of their lapse from the lofty nobility of character which marked the purer period of their Republic—let us make every allowance for the illiterate rudeness of a mere soldiery, such as most of those who were successively sent to Britain may have been; still whatever their vices, and whatever their ignorance, they had at least, and were able to communicate, that kind of civilization which, derived from a familiarity with artificial relations, keeps the mental energies in play, and so necessarily gives birth to social progress and change.

It is well known that, under the Empire, the Romans of the upper classes were extremely luxurious, and that everything connected with their houses, tables, and persons, was carried to the highest pitch of refinement. We cannot suppose, then, that the patricians by whom the Roman legions were officered could have endured a lengthened residence in a province, in which they should be condemned to the primitive and uninviting fare of which Cæsar has left us a description, or even to much abstinence from any of their accustomed enjoyments. We know that they did not do so in other provinces, for the extravagant luxuriousness of the proconsuls was the never-ending theme of fashionable gossip at Rome; and there is no reason for supposing Britain an exception to the general rule. But luxury cannot be

(1) *Iliad*, Book VI. l. 146 to 150.

maintained, especially in a country like Britain, where luxuries are not of spontaneous growth, without a variety of artificial institutions, necessarily resulting in a certain amount and kind of civilization. There must have been commerce; and commerce, even in its rudest form, requires a variety of arrangements and provisions made for carrying it on, absolutely incompatible with the primitive rudeness of barbarians. It cannot subsist without ships, warehouses, and harbours, these implying the possession of mechanical and scientific skill, and the cultivation of various arts. It cannot be carried on for any length of time without the existence of merchants as a distinct class, and that alone is a sufficient guarantee for civilization. A commercial people is necessarily, by the very fact of being so, a civilized people. The peaceful intercourse with other lands which commerce opens up,—the acquaintance which it gives with their manners, resources, and wants,—the stimulus which it imparts to the inventive powers in order to create subjects of exchange which may make it a source of profit,—the habits of industry which it forms, and the superiority which it gives to such habits, as well as to the qualities of sagacity and foresight, over mere physical strength—all these necessarily "*emolliunt mores, nec sinunt esse feroces*,"—they create that state of the public mind which prepares the way for progressive improvement in the conditions by which men are united to each other in society,—in other words, for civilization. The continued residence, therefore, for a long tract of years, of men of luxurious tastes and refined habits in Britain, must have made it a kind of necessity that many of the more complicated arrangements of an advanced state of society should have been adopted and observed in it.

We may carry our suppositions still further, without overstepping the bounds of probability. What more likely, in such a state of matters, than the existence of educational institutions, in the benefits of which those of the higher classes at least participated? Latin, the language of the conquerors, would be cultivated from motives of policy by the conquered, and, in the works which existed in that language at the time of Cæsar, with the successive additions made to them in the long period which followed, they had an ample store of whatever in literature is most fitted to ennoble the mind and enlarge the faculties.

Political institutions, it is probable, there were none, for there was no political liberty; but there must have been courts for the administration of justice, with the apparatus necessary for carrying their sentences into effect. They had, in the civil code of the Romans, as we have already remarked, one of the most complete, and, in its general principles, most soundly constructed bodies of law which ever existed. Having such laws, no doubt they had lawyers, sage jurisconsults, whose *dicta* contributed to swell the mass of authority which has been creamed off for the benefit of posterity in the Pandects of Justinian. In addition to this, as a necessary consequence of a fully developed system of law, there must have been a more or less thoroughly organized system of public records. The impossibility of trusting to mere tradition for the safe preservation of the evidence on which those rights rest, which it is the business of law to determine, and the necessity for guarding against the written evidence of them being destroyed, mutilated, interpolated, or forged, would suggest, in a very short time, the establishment, either in connexion with the general government, or with each separate court, of records to which, as permanent evidence of rights already adjudicated upon, future appeals might be made with certainty. A refined system of law without public records, would be a moral impossibility: and no nation ever yet had public records whose history had not something worth preserving.

But to conclude the enumeration of circumstances from which we infer the condition of Britain during the period of its occupation by the Romans to have

been one worthy of a larger place in history than it is now possible to assign to it, we must mention, as one of the most important, the state of religion. At what time, and by whom, the Gospel was first preached in Britain, is a question into which we shall no further enter, than to say that there can be no reasonable doubt that that event took place within the first century, and that, long before the time of Constantine, Christianity had obtained a firm footing in the hearts of a great proportion of the people. For, immediately after the conversion of that emperor, we find, according to the most credible accounts, the Church in Britain flourishing in a vigour indicative of a long establishment as one of the institutions of the country, as well as of the present enjoyment of courtly favour. The island, we are told, was covered with churches. And the Church in Britain was of sufficient importance to have its bishops to represent it at more than one General Council. The Church has been from the first, in every land in which it has been planted, the most effective instrument of civilization. In no country can it have subsisted for the shortest period which it is possible to assign to its establishment in Britain, previous to the fall of the Roman Empire, without having exercised the most marked influence upon the character, the general habits, the civil and political institutions, and the social condition, of the people.

It is not difficult to explain why Britain, during this period, with all that we have said, and much more that we might have said, but have no room to say, of the advances which it must have made in refinement and civilization, should occupy but a slender space in general history. It was but a province, and, considering what things alone it is that history generally troubles itself to record, a province can have little or no history of its own; all is absorbed in the history of the parent or dominant state. Who of us at the present day knows much of the history of Jamaica? Or how much of its internal history during the last two hundred years will be known to any one some centuries hence? The inhabitants of this country are as much interested in, and much better acquainted with, the proceedings of the parish vestries of St. Marylebone or St. Stephen's Walbrook, than with those of the House of Assembly of Jamaica, although it represents the interests of an island not much smaller than Great Britain. The interest which we take in public events, and on account of which we give them a place in history, necessarily gravitates around the centre of government, where the great interests of the state are represented. The local and sectional interests which are to be found at the extremities are excluded from history, and the facts which concern them remain unknown to us, for the same reason that the heroes who lived before Agamemnon continue unknown to fame, *carent quia vate sacro*, because history has had its hands full elsewhere. Still, if it was natural that the Romans should have forgotten all about such a mere corner of their dominions, we (the Britons) might at least have been expected to retain some memory of so much of our history for ourselves; for we think the considerations we have here dwelt upon tend to show, that if history has been almost entirely silent as to the period we have been speaking of, it has not been because there were not matters which it might have well taken the trouble to preserve. We have ourselves felt these considerations, as often as they came vividly before us, rebuke an erroneous apprehension lurking in our minds regarding the real extent and importance, in relation to the history of Britain, of its occupation by the people who were so long the masters of the world, and have, therefore, imagined that it might not be amiss to offer some suggestions fitted to correct such misapprehensions if existing anywhere else. If important facts are lost for ever, it is at least something, and preserves the truth of our views of history, to keep before us the empty places which they should have occupied.

Biographical Sketches of Eminent Painters.

MICHAEL ANGELO BUONAROTI.

THIS celebrated sculptor, painter, and architect, was the son of Ludovico Buonaroti Simoni, a gentleman of small fortune, but descended from an ancient and noble family. Michael Angelo was born in the year 1474, in the castle of Chiusi, in the territory of Arezzo, in Tuscany, where his parents then resided, and he was placed at nurse in a village called Settignano, about three miles from Florence.

The inhabitants of Settignano were principally sculptors and stone-cutters, so that Michael Angelo used to say that he imbibed the art of sculpture with his sustenance when an infant, for his nurse was the wife of a sculptor.

At the proper age he was sent by his father to Florence to be educated: but his genius for sculpture and painting soon developed itself, and caused him to neglect every other pursuit; for which he was often chastised by his master, and reprimanded by his father, who considered the vocation of an artist as derogatory to his rank. Michael Angelo continued, however, to seize every opportunity of studying the art which his ardent disposition impelled him to practise; and having become acquainted with a young artist, he borrowed models from him, which he copied with indefatigable zeal. At length his father was persuaded to allow him to become a disciple of Domenico Ghirlandaio, a painter who was much esteemed, not only at Florence, but throughout Italy.

Michael Angelo was then fourteen years of age, and, being at liberty to follow the bent of his genius, he applied himself so zealously to his art, that his master was astonished at his rapid progress. In a short time the disciple surpassed his instructor; and on one occasion, having observed some defects in a design of a female figure, drawn by Ghirlandaio, he pointed out, and corrected them, to the great surprise of all who witnessed this proof of the young artist's superior talent.

Nor was his skill confined to drawing and painting: his powers were equally remarkable with regard to sculpture. When only sixteen years old, he executed figures in marble which called forth the admiration of all who saw them, and caused him to be considered as a prodigy.

Lorenzo de Medici, surnamed "The Magnificent," who was the patron of genius and industry, observing the superior qualities of the youthful Michael Angelo, took him under his protection, and employed him in several noble works, particularly in statuary, by which he gained universal applause.

At the death of his generous patron, Michael Angelo quitted Florence, and after visiting Venice and Bologna, he repaired to Rome, where his extraordinary talents were highly appreciated and extolled. Being solicited by his friends to return to Florence, he did so, and there sculptured several statues. It was at this period that his fame became increased by the production of a figure which is considered to be one of his masterpieces, and even worthy of being compared with the works of the

ancients. This beautiful marble statue represents David with his sling; and it is related that Pietro Soderini, who purchased it, remarked that he thought the nose was too large, which observation proved his want of judgment, for it was in exact and delicate proportion. Michael Angelo, however, being willing to gratify Soderini, appeared to assent to his remark, and taking some marble powder in his hand, with the chisel at the same time, he began apparently to work on the nose, dropping gradually some of the powder as he proceeded. The deception was not discovered by Soderini, who, when the sculptor laid down his chisel, exclaimed with delight, that those touches had given life to the statue.

Michael Angelo was also engaged at this period in designing some pictures, which he intended to paint in conjunction with Leonardo da Vinci; but he was summoned back to Rome by Julius II. to erect a magnificent monument, which that Pope destined for himself. Michael Angelo was twenty-nine years of age when he commenced this great work, which, however, was soon interrupted. Various reasons have been assigned for this. Some writers have attributed it to the impetuous temper of the sculptor; others to the no less irritable disposition of Julius: but, whatever may have been the cause, it is certain that the mausoleum was never finished, and that, after it was begun, Michael Angelo suddenly quitted Rome, and was absent for some time.

On his return to that city, he was employed, by order of the Pope, in other works, among which were the frescoes¹ in the chapel of Sixtus IV. in the Vatican. Michael Angelo did not wish to be thus employed; and he was not only willing, but anxious to recommend Raphael as his substitute: but Julius was inflexible, and Buonaroti was compelled to abandon the completion of the superb tomb which he had commenced, (which was a work quite in conformity with his genius for sculpture) and to devote his talents to the embellishment of the Sistine chapel.

Having once undertaken this important task, the illustrious artist wrought with his accustomed ardour; and, not choosing to be interrupted or intruded upon during his labours, he invariably declined to admit any person into the chapel whilst the frescoes were in progress; but when he had executed about half of his great work, Julius could not resist the desire he felt to see it, and he insisted that the scaffolding should be removed, and the public allowed to view the paintings. This must have been very annoying to Buonaroti, particularly as the Pope was continually urging him to hasten the completion of the frescoes.

One day, the Pontiff having asked him rather sharply when the work would be finished, Michael Angelo answered—"When I feel satisfied that I have done justice to my noble art!" "And we," retorted Julius, "desire that you should satisfy us, also, by finishing the work promptly:" adding, that if he delayed doing so much longer, he should be severely punished.

This threat alarmed the artist, who was well

(1) *Fresco* is a kind of painting performed on fresh plaster, or on a wall covered with mortar not quite dry, and with water colours. The plaster is only to be laid on as the painting proceeds; no more being done at once than the painter can despatch in a day. The colours, being prepared with water, and applied over plaster quite fresh, become incorporated with it, and retain their beauty for a great length of time.

aware of the Pope's violent disposition; accordingly, he painted his figures rapidly, not even retouching many parts after they were dry, which might have imparted more grace and softness to them. Neither did he enrich the vesture of his personages with gold, and glowing colours, as he might otherwise have done, and which would have corresponded better with the other decorations of the chapel. The Pope remonstrated with him on this account, still pressing him, however, to finish his task; therefore Michael Angelo, knowing that it would require considerable time to execute these ornamental parts, properly observed to Julius, that the holy men he was painting did not wear golden ornaments, and that they despised riches.

At length, on the 1st of November, 1512, the frescoes were completed. Besides the twelve compartments of the roof, a portion of the side-walls of the chapel was painted by Michael Angelo; and although he had no assistance, and even ground his colours himself, the whole work occupied him but one year and eight months.

After the death of Julius II., which took place in 1513, his successor, Leo X., sent Michael Angelo to Florence, in order that the Pontiff's native city might be embellished by the productions of that superior artist. He was recalled to Rome by Clement VII., in 1523, and it was at his suggestion that Michael Angelo executed the cartoons of his famous picture of *The Last Judgment*, which adorns the altar of the Sistine chapel. This fresco was not commenced, however, during the life-time of Clement; but Paul III. who succeeded him, having seen the cartoons, ordered the picture to be begun immediately. Michael Angelo worked at this extraordinary composition during eight years, and it was completed at the end of the year 1541. He also painted two large pictures for the Pauline chapel in the Vatican; one representing the conversion of St. Paul, and the other, the martyrdom of St. Peter. His picture of the Crucifixion is likewise universally admired.

It has been observed that the works of this eminent man always surprise the beholder with the appearance of something unusually grand, though they may not, in every instance, produce a pleasing impression. There is no doubt but that he was the first painter who inspired the Italian artists with the taste for the sublime, and that his example induced them to forsake the dry, stiff manner of Perugino¹ and others.

Michael Angelo's genius was very extensive, and his powers of representing his ideas were bold, even to rashness. He possessed extraordinary anatomical knowledge; and although his attitudes are not always beautiful, yet even Raphael himself—as most writers affirm—derived considerable improvement from observing the grand conceptions and noble taste of design of Buonaroti, though the former was far superior to him in elegant simplicity, in grace, and adherence to nature.

It is said that there is not one undisputed oil-painting of Buonaroti's in existence. Several are exhibited which are ascribed to him, but it is generally admitted that such have no claim to that honour. They may, perhaps, have been the work of his pupils, and he may have given a few touches to them himself; but it is well known that he despised oils, and thought fresco-painting much

more meritorious, and, consequently, more worthy of his superior genius. This predilection is to be regretted, because pictures in oil are so much more durable than those painted on plaster, however skilfully and carefully they may be executed.

In the National Gallery in London, there is a picture—*The Resurrection of Lazarus*—which, though painted by Sebastiano Del Piombo, is believed to have been composed by Michael Angelo Buonaroti, and it is said that the figure of Lazarus was entirely executed by the hand of that great master.

Among Michael Angelo's most celebrated works in sculpture, are the beautiful statues of the Dukes of Florence which adorn the tombs of Julian and Lorenzo de Medici. The chapel which contains these tombs, and which communicates with the church of San Lorenzo, at Florence, was erected by Buonaroti.

When he had attained the advanced age of seventy-two, Michael Angelo was empowered by Pope Paul III. to superintend the rebuilding of the cathedral of St. Peter, at Rome, and, in the brief by which he received his appointment, he was authorized to do, and undo, whatever he pleased; and it is worthy of record, that the same document specifies that the architect undertook the work for the love of God, and without any salary or reward. Michael Angelo insisted on the insertion of this declaration in the brief.

The task he had undertaken was by no means an easy one, for he was constantly impeded in his labours by the jealousy of his brother architects, who endeavoured to injure him in the estimation of the Pope by their unjust complaints. But his wonderful talents and high character triumphed over all these clamours, though he was so disturbed and wearied by them, that he would willingly have retired to Florence, and ended his days there in peace. He persevered, however, for many years; and though St. Peter's was still in an unfinished state when Buonaroti died, it will ever be a memento of his enterprising genius.

After a glorious career of eighty-nine years and eleven months, beloved and honoured by the sovereigns and great men of the age in which he lived, Michael Angelo Buonaroti expired at Rome, on the 17th of February, 1564. His remains were eventually conveyed to Florence, and deposited with great funeral pomp in a magnificent tomb, in the church of Santa Croce. This tomb is embellished by a bust, which is said to be a correct resemblance of the eminent man whose history has been thus briefly related. Three marble statues, representing Painting, Sculpture, and Architecture, also adorn the mausoleum.

It is interesting to connect in the mind the contemporaries of remarkable characters; and among those of Michael Angelo Buonaroti, were the following celebrated individuals: Henry VIII. King of England; the Emperor Charles V.; Francis I. King of France; Pope Leo X.; the great Reformers Luther and Calvin; the Italian poet Ariosto; the admired painters Raphael, Titian, and Leonardo da Vinci; Christopher Columbus; Fernando Cortez, the conqueror of Mexico; and Pizarro, the conqueror of Peru.

(1) Perugino was the instructor of Raphael, and he was one of the painters employed to decorate the Vatican.

DISCOVERIES IN AUSTRALIA.¹

It is not our intention to give a formal review of these most interesting volumes: our ignorance of matters purely nautical renders us incompetent to appreciate their peculiar merits. We would rather select such portions of the work as, we trust, will be agreeable to our readers, convey to them instruction as well as amusement, and, perhaps, induce them to peruse the whole work, which, we boldly assure them, will amply recompense them for their exertion.

Captain Stokes sailed from England in the year 1837, to survey the north and north-west coasts of Australia, and returned in the year 1843. This protracted voyage has been attended with most beneficial results. Not only have great additions been made to the natural history of that strange and wonderful region, but its capabilities of melioration are pointed out by many sensible and original observations, and the facilities of communication with the interior have been enlarged by the discovery, and exploring to a great extent, of four rivers—the Adelaide, the Victoria, the Albert, and the Fitzroy. Of these the Victoria admits vessels of considerable burden; thus giving a stimulus to commercial enterprise, and an opportunity of more widely diffusing the blessings of Christianity.

The work is written in a lively and amusing style, with that keen perception and vivid portraiture of the beauties of nature which characterises Sir Walter Scott's delineations of landscape scenery. But, what is still better, it is written in a candid and religious spirit. It is rarely that Captain Stokes finds fault with his precursors in the same track, and that reluctantly, and only when the concealment of error might endanger the future navigator. It is constantly that he acknowledges the hand of a superintending PROVIDENCE, and never fails to impress the duties incumbent upon His creatures, arising from His bounty and mercy. And there pervades both volumes that tempered enthusiasm which an active and zealous explorer of new regions cannot but feel, and that ardent hope of future beneficial results which glows in the heart of the patriot and philanthropist.

We will now select some passages fully illustrative of the preceding remarks.

"Though this was neither my first nor second visit to Bahia, I was still not indifferent to the magnificent, or rather luxuriant, tropical scenery which it presents. A bank of such verdure as these sunlit climes alone supply, rose precipitously from the dark blue water, dotted with the white and gleaming walls of houses and convents half hidden in woods of every tint of green; while, here and there, the lofty spires of some Christian temple pointed to a yet fairer world, invisible to mortal eye, and suggested, even to the least thoughtful, that glorious as is this lower earth, framed by Heaven's beneficence for man's enjoyment, still it is not that home to which the hand of Revelation directs the aspirations of our frail humanity."—Vol. i. pp. 36, 37.

"During dry seasons it not unfrequently happens that an immense tract of land is desolated with fire, communicated either by the design or carelessness of the natives, to the dry herbage on the surface. The moment the flame has been kindled, it only waits for the first breath of air to spread it far and wide: then, on the

wings of the wind the fiery tempest streams over the hill sides and through the vast plains and prairies: brushwood and herbage—the dry grass—the tall reed—the twining parasite—or the giant of the forest, charred and blackened, but still proudly erect, alike attest and bewail the conquering fire's onward march; and the bleak desert, silent, waste, and lifeless, which it leaves behind, seems for ever doomed to desolation! Vain fear! the rain descends once more upon the dry and thirsty soil, and from that very hour, which seemed the date of cureless ruin, Nature puts forth her wondrous power with increased effort, and again her green and flower-embroidered mantle decks the earth with a new beauty!"—Vol. i. pp. 105, 106.

"I must be pardoned for again alluding to our old enemies, the mosquitoes, but the reception they gave us this night is too deeply engraven on my memory to be ever quite forgotten. They swarmed around us, and by the light of the fire the blanket bags in which the men sought to protect themselves seemed literally black with their crawling and stinging persecutors. Woe to the unhappy wretch who had left unclosed the least hole in his bag! the persevering mosquitoes surely found it out, and as surely drove the luckless occupant out of his retreat. I noticed one man, dressed as if in the frozen North, hold his bag over the fire till it was quite full of smoke and then get into it, a companion securing the mouth over his head, at the apparent risk of suffocation: he obtained three hours of what he gratefully termed comfortable sleep—but when he emerged from his shelter, where he had been stewed up with the thermometer at 87°, his appearance may be easily imagined.

"Our hands were in constant requisition to keep the tormentors from the face and ears, which often received a hearty whack, aimed in the fruitless irritation of the moment at our assailants, and which sometimes ended in adding head-ache to the list of annoyances. Strike as you please, the ceaseless humming of the invincible mosquito close to your ear seems to mock his unhappy victim!

"One poor fellow, whose patience was quite exhausted, fairly jumped into the river to escape further persecution."—Vol. i. pp. 143, 144.

"In one corner, that at first escaped my curiosity, so completely had it been shut out from the gaze of all by a winding bowery walk, I found, in a sort of alcove, the tomb of a child; upon it lay a fresh bouquet of flowers, revealing that the dead was not forgotten by those who were left behind. It was easy to divine, and I afterwards learnt this to be the case, that it was the mother—who came every morning to pay this tribute of affection to the departed. A weeping willow drooped its supple branches over the tomb, some honeysuckle and sweet briar surrounded it, loading the air with their rich fragrance; not even the chirping of a bird disturbed the solemn silence that reigned around; everything seemed to conspire to suggest holy and melancholy thoughts, and I lingered awhile to indulge in them, but, perceiving by the few footmarks that I was an intruder, hastened to retire; by no means sorry, however, to have discovered this evidence of the enduring love a mother bears her offspring."—Vol. i. p. 275.

"I may here mention a singular custom that came under notice some time after, at the Protectorate in the valley of the Loddon, in the vicinity of Melbourne. Several women were observed, having their faces completely concealed by their opossum-skin mantles. Not satisfied with this, moreover, in passing a party of men, they moved in a sidelong manner, so as to render it impossible, even if the covering came to be displaced, that their faces should be seen. In the evening, at the Coralbery, these persons, three in number, were seated in the circle of women, so as to have their backs turned to the dancers or actors, their faces being still wholly concealed. They remained seated, motionless, taking no part in the singing, or the gestures of encouragement indulged in by the other women. It was subsequently

(1) *Discoveries in Australia; with an Account of the Coasts and Rivers explored and surveyed during the Voyage of H.M.S. Beagle, in the years 1837—1843. Also a narrative of Capt. Owen Stanley's visits to the Islands in the Arafura Sea.* By J. Lort Stokes, Commander, R. N. 1846.

explained, by a Protector, that these were women who had daughters betrothed to the men of their tribe, and that during the period of betrothment the mothers are always thus rigidly veiled."—Vol. i. pp. 284, 285.

"I may here take an opportunity of remarking, that, as a general rule, it is the labouring classes that thrive best at Sydney. They can, in tolerably prosperous times, earn sufficient in three or four days to support themselves throughout the week. During the remainder of the time the sober and industrious man employs himself in building a house; but I am sorry to say that the generality repair to the vast number of public houses that swarm on every side, and get drunk. This is evident from the annual revenue derived from rum, which, in 1839, was £190,000, amounting to more than seven gallons for every individual in the colony."—Vol. i. p. 309.

"Among the other buildings in progress was the church, which, planted as it was on the northern shores of the Australian continent, was expected to form a nucleus from which offshoots might, by degrees, draw within its influence the islands in the Arafura sea, and thus widely spread the pure blessings of Christianity. It is highly characteristic of our countrymen, that where with other nations the tavern, the theatre, the dancing-house, are among the earliest buildings in a new settlement, with us, everywhere, the church is first thought of. In few corners of the world where English influence has extended itself is this otherwise than true; and it is a highly enviable distinction. It seems, indeed, that wherever the flag of Britain floats, there is made known the word of God in its purity; and, as an empire has been vouchsafed us on which the sun never sets, the extent of our influence for good in this respect is incalculable. We may venture to express our sincere hope that our country will ever continue to enjoy this noble supremacy."—Vol. i. pp. 385, 386.

Would that we could persuade ourselves of the reality and truth of this assertion! We fear that the "wish is father to the thought," and that Captain Stokes's religious feelings rather lead him to anticipate what *ought* to be done, than what *actually is* done. It is, however, gratifying to hear that tardy justice is to be rendered to this highly interesting portion of the globe; and that two colonial Bishops are about to be sent out to Australia, though their respective positions are not yet determined.

"On the 24th, a party of natives made their appearance on Point Emery. Their voices, shrill like those of all their fellows, were heard before they were seen. With these it was particularly so, though on all occasions the speaking and hallooing of the Aborigines can be heard at a very considerable distance. They were found, when on shore, to be of the party we had before seen in Shoal Bay, with the addition of five strange men. All appeared actuated by the same friendly dispositions, a very strong indication of which was their presenting themselves without spears. Like most others on that coast, they had a piece of bamboo, eighteen inches long, run through the cartilage of the nose. Their astonishment at the size of the wells was highly amusing; sudden exclamations of surprise and admiration burst from their lips, while the varied expressions and play of countenance showed how strongly their feelings were at work within.

"It is very singular, and not very susceptible of explanation, that although they climb tall trees by merely resting their toes in a slight notch cut as they ascend, the natives will hesitate in alarm before looking over the edge of a precipice or height. It was therefore some time before this party could be induced to look down the well. At length, by stretching their spare bodies and necks to the utmost, they caught sight of the water in the bottom. The effect upon them was magical,

and they stood at first as if electrified. At length their feelings gained vent, and from their lips proceeded an almost mad shout of delight. Nothing, perhaps, could have more decisively shown the superiority of the white men to these savages, than our being thus able to procure this necessary of life from so great a depth; there being, moreover, no outward appearance of any. Perhaps their delight may be considered a sign how scarce is water in this part of the country. I should certainly say, from the immense quantity each man drank, which was two quarts, that this was the case. A further corroboration of the extreme importance of this element to the Western Australian is, that a native, in describing a fine country, always opens his narrative by stating the important fact—"plenty water."

"The deep interest which, in the natives, always succeeds to the discovery of this necessary article, must strongly impress the explorer, who will ever afterwards look upon streams, even in other countries, with far different feelings from any before experienced. In no land does the presence of water more rapidly enrich the landscape, changing it from a thirsty-looking plain to a rich green spot, than in Australia; and it is in journeying through such a country, when one suddenly meets with a luxuriant valley, that the eye naturally dwells with delight on the changing scene, and the impression, not easily forgotten, clings to us even when far away. When gazing upon the superabundant water that flows in almost every corner of the earth, we cannot but reflect on the scantily supplied Australian, nor fail to wish him a more plentiful supply. Naturally, we are disposed to reflect but little on the great blessings of the most ordinary things. In the eyes of the civilized man, fire and water are matters scarcely worthy of thought; but it is the traveller who learns to appreciate how great blessings they are in reality.

"An Influenza appeared to be raging among the natives; all having the remnants of colds—coughing severely when we met them. Several attempts were made to induce them to come on board, but they proved vain. Sometimes, just as the boat was leaving the shore they would enter the bow of it, as if about to accompany us; no sooner, however, was the boat in motion, than out they jumped, laughing, and apparently delighted to deceive us; acting, in fact, exactly the part of noisy children.

"Our friendly intercourse with these natives sustained a shock, which at first threatened to annihilate it, but which fortunately ended as it began, in smoke. One of the officers used a common flint and steel in order to procure a light for his cigar; at this new mode of procuring fire all eyes were open, for doubtless they procure it only by means of friction; but, when he proceeded to place the lighted cigar between his lips, and roll forth from thence a thick and perfumed cloud, fright took full possession of them, and exclaiming *irra irra*, with the arm extended, and a slight vertical motion of the hand, they darted off most unceremoniously, clambering up the face of a precipitous cliff, with extraordinary agility. Their cry of *irra irra*, and their manner of delivering it, were identical with those of King's Sound, under somewhat similar circumstances. In a few days they had forgotten their fright, and had returned to renew the friendly relations this little incident had interrupted."—Vol. ii. pp. 19—22.

"I left here a paper in a bottle, giving an account of our proceedings, and should have been sorry to think, as Wallis did when he left a similar document on a mountain in the Strait of Magellan, that I was leaving a memorial that would remain untouched as long as the world lasts. No; I would fain hope that, ere the sand of my life-glass has run out, other feet than mine will have trod this distant shore; that colonization will, ere many years have passed, have extended itself in this quarter; that cities and hamlets will have risen on the shore of the new found river; that commerce will have directed her track thither; and that smoke may rise

from Christian hearths, where now alone the prowling heathen lights his fire. There is an inevitable tendency in man to create, and there is nothing which he contemplates with so much complacency as the work of his own hands. To civilize the world, to subdue the wilderness, is the proudest achievement to which he can look forward; and to share in this great work by opening new fields of enterprise, and leading as it were the van of civilization, fills the heart with inexpressible delight. It is natural, therefore, as I traced the record of our visit, and deposited it on Indian Hill, that I should look forward in a mood very far different from that of Wallis, to the speedy fruition of my hopes."—Vol. ii. p. 46.

"I cannot at this place resist the temptation of relating an anecdote, which, though it is not exactly connected with the subject of my work, may not be thought uninteresting by the reader. I was one night sleeping at a friend's house; all the family had retired to rest, and I have no doubt that a perfect stillness prevailed around. Suddenly, a noise like thunder startled me from my slumbers, and, as soon as I was able to collect my scattered thoughts, I distinctly heard a series of violent blows against a door at the foot of the staircase leading up to my bedroom. Though the first impression might have been that the disturbance was caused by thieves breaking into the house, it appeared improbable that such characters should make their approach with so much clamour. I instantly leaped out of bed, and arrived in time to see a sight which I shall never forget. The owner of the house, who slept on the ground-floor, equally astonished with myself at the noise, had also quitted his pillow, and arming himself with a sword and taper, advanced in the costume of Iago when he re-appears upon the stage after stabbing Cassio and Roderigo, towards the door, against which the monotonous thumping still continued at regular intervals. It now appeared, that the cause of his alarm was on the inside, and my host, who believed that a party of robbers had introduced themselves into his premises, hailed them in a loud voice, promising that, if they did not cease their hammering and surrender, he would put them every one to death. So far from attending to his suggestion, the thumps increased in rapidity and violence, and he had scarcely time to put himself in a defensive position when the door burst open, and out rushed his assailants—a multitude of round figures of all sizes, without heads, legs, or arms. His first thought was, that the supernatural existences of New South Wales had now for the first time revealed themselves to his eyes! Here was material for a fairy tale! The genii of this country, in which everything runs into leg, were then it appeared all body. Such were the fancies that flashed through his mind as he made a desperate plunge at the advancing foe, one of whom he transfixed from breast to back, whilst the rest in an instant overthrew and trampled him under foot, if I may use the expression. And now arose a wild scream of laughter from myself and the others who had witnessed this mortal combat—for the disturbers of our night's repose were no other than a number of huge pumpkins, which had been placed in a heap upon a press on the landing, and from having been perhaps carelessly piled, had given way and rolled one by one down stairs, accumulating at the bottom against the door, until by their weight they forced it open."—Vol. ii. p. 248.

"I witnessed in his family an instance of affection for a departed child, which, though it exhibited itself in this peculiar manner, was extremely touching. The wife had treasured up the bones of the little one, and constantly carried them about with her, not as a *memento mori*, but as an object whereon to expend her tenderest emotions, whenever they swelled within her breast. At such times, she would put together these bones with a rapidity that supposed a wonderful knowledge of osteology, and set them up that she might

weep over them. Perhaps, in her imagination, as she performed this melancholy rite, the ghastly framework before her became indued with the comely form of infancy, bright eyes once more sparkled in those hollow cells, and a smile of ineffable delight hung where in reality was nought but the hideous grin of death. I exceedingly regret that the mother who could feel so finely, was some time afterwards overpersuaded to part with the bones of her child. I may here mention that the medical officer of the settlement was in the habit of extracting teeth for the natives, who found the European method much more easy than their own mode of knocking them out. The supercargo of a vessel, learning this fact, was anxious to become a purchaser of teeth to some extent for the London market, being persuaded that they would find a ready sale among the dentists; and it is more than probable, that many of our fair ladies at home are indebted for the pearls on which the poets exhaust so much of their fancy, to the rude natives of Australia."—Vol. ii. pp. 355, 356.

We must conclude our extracts with an account of a native dance, at Banda, by Captain Owen Stanley, R. N. We have heard that this enterprising and intelligent officer is again going out on a voyage of survey of the numerous islands that lie to the north and north-east of New Holland. If this be true, many important results, we trust, will spring from his well-known activity and zeal.

"The commandant of the troops, Capt. De Stuers, nephew to the Governor-General of the Moluccas, who had very civilly pointed out the best anchorage to us, and given us every information in his power on our first arrival, finding that we were interested in the manners and customs of the natives, very kindly invited us to see a menado-dance performed by some of the native soldiers of the garrison. We landed with him in his oram-bay, a large native boat pulled by twelve men, who kept time by striking their round-bladed paddles against the gunwale, between every stroke.

"On landing, the prettiest sight possible awaited us. The barrack-square, a green grass-field of considerable extent, was covered with the native soldiers, all dressed in their gayest holiday costume, and decorated with scarfs and handkerchiefs of the brightest colours, which streamed loosely from their elbows. Some of the men were armed with narrow bamboo shields, others with wooden swords, and the remainder with the light stems of the sago palm, which were to be used as javelins. Each of these warriors came dancing up to us in turn, to make his obeisance, as we advanced to the spot where seats had been prepared for us. As soon as we were all seated the dance commenced; at first, the spearmen advanced towards each other, holding the spear in the right hand, and the bamboo shields in the left, keeping time to the rude music of a couple of drums with very great accuracy, and dancing quite as much with their arms as their legs, in the most graceful manner possible. When they had approached sufficiently near to each other, one threw his spear with great force and dexterity, still keeping time to the music, and the other parried the weapon with his bamboo shield. I only saw one instance of failure, and then the unfortunate man received the blunt spear full on his breast with such force, that it sent him rolling head over heels, much to the amusement of the spectators, and equally to his own discomfort.

"As one of the Port Essington natives, a very fine active man, had accompanied us on shore, we persuaded him with some difficulty to join in the dance, thinking that the quickness of eye, so common to all savages, would enable him to avoid the spear; but in this we were all disappointed, as he was struck nearly every time the spear was thrown. After the dance was over, sundry gymnastics followed, and the evening was wound up by an exhibition of the Ombres Chinoises, in which

the soldiers seemed to take very great delight. The moving figures were very cleverly managed, and to judge from the shouts of laughter which accompanied the story-teller in his tale, it must have been a very amusing one."

A PORTUGUESE SUPERSTITION.¹

THE most terrific of all the supernatural beings in Portugal is the *bruxa*, (pronounced *brooda*.) She is somewhat in her propensities like the Eastern ghoul, or vampire, from whom, probably, she was derived. In the day-time she is like any other woman, performing the duties of her household in a most exemplary manner. She may be a daughter of honest, good parents; she may marry, and have children; she may even be considered amiable, and is often very beautiful, though there is a certain fierce expression in her eye, and an ominous wrinkle on her otherwise fair brow, which the sceptical would suppose proceeded from care or affliction. Nobody can tell who are *bruxas* and who are not. They never allow any mortal to discover it; and woe betide the wretch who shall attempt to pry into their secrets! They are a heaven-accursed sisterhood—their souls pledged to the prince of darkness by a compact renewed every night. Sometimes their daughters become *bruxas*, if they by chance escape their infanticidal and vampirish propensities; or else they keep up their numbers by inveigling some hapless maiden, whose heart has been turned from the right path, and who has abandoned the holy religion of the church, to join their association. She knows not whither she is to be led, or what is to be her fate, till it is too late to retract—when the fatal compact is signed and sealed with her blood—then, miserable girl! her shrieks, her cries, are of no avail. Repentance is impossible; even the saints themselves have no longer power or will to preserve her. From sunset to sunrise this demoniacal power possesses her; for, during the day, she returns to her family, no one suspecting the dreadful truth. When darkness has overspread the world, and the spirits of evil are let loose, the *bruxas* rise from their couches, leaving, if married, their mortal and unsuspecting husbands, and flying to the company of their diabolical paramours. They are then, as a punishment for their crime, we may suppose, transformed into the shape of some noxious bird of night—owls or bats of gigantic size. Away they fly, at a prodigious rate, far from their homes, over hill and dale, but especially across marshes, stagnant pools, and lakes. Unwillingly they skim along the surface, gazing on their hideous forms reflected in the water, and perfectly conscious of their fate. They will sometimes, on these nocturnal rambles, encounter some friend or relation proceeding in one direction, and either by allurements, such as practised by Ariel in Prospero's Island, or by force, will carry him to an opposite point, far away from the one he wished to reach; indeed, over strangers or anybody they meet, they have the same power, provided he is not under the especial protection of the saints. Many a poor wretch has thus been led across the country, over rough rocks, and through brambles and briers, which have scratched his face, and torn his clothes, till, almost worn to death, wet, weary, and bloody, he has at length returned home: his wife cursing the hellish *bruxas* who have thus maltreated and led him astray. Truly, the wine-shops have less to answer for than the *bruxas*; for surely he could not have scratched his face against the bush hung up near the door, or when drunk have tumbled into a ditch! Oh, no! the good man

was never drunk in his life—he is rather pale now from very natural fear—the diabolical *bruxas* did it all! After these demon-excited occupations, they, in one or other of the hideous forms allotted to them, with vampirish hunger, will fly back to their peaceful homes, where sleep in calm repose their innocent offspring, born of a mortal father. Yet feeling a human loathing for their terrific task, their accursed propensities overcome their maternal love, and seizing on their babes, their black wings fanning them to repose, they suck the life-blood from their veins—dreadful fate! conscious all the time that they are destroying the only ones they love on earth. When they have destroyed these, they enter the cottages of their neighbours and friends, depriving of life in the same way their sleeping infants; and often, when a child is found dead, livid, and marked with punctures, the sage women whisper to each other with fear and trembling, "A *bruxa* has done this," casting eyes of dread suspicion at each other; for no one knows who the *bruxa* may be. As the first streaks of the grey dawn appear, the miserable females return to their mortal forms, awaiting the time when they must perform their dread orgies, never forgetful of their fate. I do not think that the most poetical imagination could paint a more dreadful lot than that of the hapless *bruxa*; a being devoutly believed in and dreaded in most parts of the country. A destiny scarcely inferior in wretchedness to the *bruxa*'s is that of the *lobishomes*, except that, as far as I can learn, it endures only for this life, and is owing to no fault on their part. They are born under an inauspicious star, and a sad necessity rules their fate. Every family is liable to this curse, from the highest to the lowest in the land; and though they themselves are conscious of it, they keep it a profound secret, as it is considered a great disgrace to be afflicted with it. It is common to both sexes among young people; those who suffer from it never attaining an advanced age. I have been unable to learn at what time of life it appears. If seven sons or seven daughters are born in one family, the seventh generally is subject to the demoniacal influence; at all events, one of the younger ones. The only preventive against this fate is by christening one of the seven Adam: should this be neglected, it is almost certain to visit the family. In the day-time they are free from the spell; but even then wear a peculiarly sad and pained expression of countenance. They moop by themselves, are taciturn and reserved; never enter society if they can avoid it, and then evidently are incapable of its enjoyment. The lower orders sit by themselves, without speaking, in a corner near the kitchen-fire—the expression of their countenances wild and forbidding, their hair and beard long and tangled, their garments disarranged and squalid. In travelling through the country such beings are frequently pointed out as *lobishomes*. As night draws on, these hapless beings rush from their abodes—the high-born damsel from her bower, the noble youth from his baronial hall, or the hard-featured peasant from his humble cot. No human power can restrain them—the demon has entered into them—they seek some solitary, wild spot, untrod by the foot of man. There they leave their habiliments, and are immediately transformed into the appearance of horses, with long flowing manes and waving tails, fire darting from their nostrils, fury in their eyes; yet fear it is which urges them on. Away they fly, fleet as the wind, over rugged mountains and deep valleys, across streams and winter torrents, through frost and snow, rain and the fierce lightning. Leagues are traversed in as many seconds—all other animals fly before them—they neigh in agony as they rush on, yet have no power to stop. On, on, on! their pulses beat quicker, their breath grows thick, but they cannot, they dare not, rest. They sweep round, forming a wide circuit some hundred leagues in extent, yet before the morning breaks they must return to the spot whence they set out; and there, resuming their mortal forms, and don-

(1) From Kingston's Lusitanian Sketches.

ning their garments, they once more seek their homes, pale, fainting, and wretched. It is not surprising, after such a night's work, they should be averse to social intercourse. Often at midnight are the cottagers in remote districts startled from their slumbers by unearthly sounds, like the cry of a horse in agony; loud trampling is heard, and a noise as if a sudden blast passed by; and they exclaim, "It is some hapless lobishome! may the saints have mercy on him!" At times, also, as the shepherds are watching their flocks on the mountain's brow, they see a wild steed dash by, on the plain below, fleet as a fiery meteor, while the sheep and goats exhibit their consciousness of something supernatural by scattering far and wide. Their faithful dogs, too, forget to obey their call; and it is with the utmost difficulty they contrive to reassemble their affrighted flocks. The lobishomes endure not this dreadful existence for more than seven years, if even so many; death invariably putting an end to their sufferings at the termination of that period—frequently before. I have been informed of but one mode of escape from this doom, or it may be said, of being freed from this extraordinary species of enchantment. While in full headlong career they should be boldly encountered by some fearless person, who must wound them slightly in the chest, so that their blood shall flow. No sooner does the ruddy current reach the ground than they are instantly restored to their proper forms. The malign influence henceforth has no further power over them; nor do they ever resume the appearance of a horse: they then become like other mortals. All well-authenticated narrations speak of the horse as the only form they are thus compelled to assume, though some persons suppose, from the name given them, it is that of a wolf; but this I have ascertained to be a mistaken notion. It is to be hoped political economy and liberal institutions will completely banish this curse from the families of Lusitania to the far lands whence it came. Portugal also possesses a class of persons denominated *feiticeiras*, or female soothsayers, with characteristics very similar to our English witches.

POPULAR YEAR BOOK.

September.

SEPTEMBER, the ninth month of the year, was originally (as its name denotes) the seventh in the Latin and Roman calendars. Its title is composed of *septem*, seven, and a contraction of *imber*, a shower of rain; this month having been considered as the commencement of the rainy season.

It was dedicated by the Romans to Vulcan; and was termed by the Saxons *Gerst-monat*, or barley-month, because it was the time of their barley harvest. "The more modern Saxons," says Brady, "called it *Hærfest-monat*, or harvest-month, when they varied the original title of August, which *before* alluded to the harvest, and changed that latter to *weod*, or *weed* month: September, therefore, in the illustrations of the characters of this month, in some of the old Saxon calendars, after such alteration, is depicted as a vintager; whereas, prior to that, this month was characterised by a boar-hunt, the men armed with spears, and dogs in full pursuit." After the establishment of Christianity, September was called *Hælig-monat*, or holy month, in reference to some important religious ceremonies then peculiarly observed. In other paintings of less ancient date than those above alluded to, September is drawn as a man with a cheerful countenance, clothed in a purple robe, and adorned with a coronet of white and purple grapes, holding in his left hand a small bundle of oats, and in his right a cornucopia of pomegranates and other fruits, together with a balance; the latter in token of the sign of *Libra*, which the sun enters on the 23d of this month, and makes the autumnal equinox, or that period designed to be

typified by the *balance*, when the heat and cold are supposed to be equally striving for predominance.

Spenser takes advantage of the exuberance of harvest, and the sign of the zodiac in September, to read another lesson on justice. He sings:

"Next him September marched eke on foot;
Yet was he heavy laden with the spoil
Of harvest's riches, which he made his boot,
And him enriched with bounty of the soil;
In his one hand, as fit for harvest's toil,
He held a knife-hook; and in th' other hand,
A pair of weights, with which he did assay
Both more and less, where it in doubt did stand,
And equal gave to each as justice duly scanned."

Although the mornings and evenings of September are sometimes chill and foggy, and the days are now very sensibly shortened, it is generally serene and pleasant, partaking of the warmth of summer and the vigour of autumn. If it be not so bright with promise, and so buoyant with hope, as May, it is even more imbued with that spirit of serene repose, in which the only true, because the only continuous, enjoyment consists. Spring "never is, but always to be blest;" but September is the month of consummations—the fulfiller of all promises—the fruition of all hopes—the era of all completeness. "Its noblest feature," to cite a modern writer, "is a certain festive abundance for the supply of all creation. There is grain for men, birds, and horses; hay for the cattle; loads of fruit on the trees; and swarms of fish in the ocean." The sunsets of September, in this country, are perhaps unrivalled for their variety and beauty. Those of more southern countries may match, or even surpass them, for a certain glowing and unbroken intensity; but for gorgeous diversity of form and colour, exquisite delicacy of tint and pencilling, and "a certain placid sweetness and tenderness of general effect," which frequently arises out of a union of the two latter, there is nothing to be seen like what we can show in England at this period of the year.

Hares congregate in this month, and squirrels, field-mice, dormice, &c. lay up their winter stores of food. Partridges are now in season. These birds make their nests in corn-fields, where they rear their young, which run after the parents like chickens. While the corn is standing they have a safe refuge in it; but after harvest, when the sportsman may freely range over the stubble with his pointers, they are either obliged to take to the wing, and offer themselves to the shooter's aim, or are surrounded by nets on the ground, and thus taken in whole coveys. The fern-owl, blackcap, swallow, warbler, ring-dottrell, whitethroat, shrike, tern, wagtail, wheatear, and flycatcher, disappear for the warmer climates, leaving only a few stragglers behind, (probably from weakness or sickness,) who hide themselves in caverns and other sheltered places, and occasionally appear upon warm days. The curlew, snipe, ring-ouzel, redwing, and fieldfare, arrive from still more northerly countries. They feed chiefly on the berries with which our woods and hedges are plentifully stored all the winter.

Among the insects that appear in September, are the saffron and clouded-yellow butterflies; the death's-head hawk-moth, and convolvulus hawk-moth; ladybirds, crickets, spiders, beetles, and glowworms. The snake casts its skin—literally creeping out at its own mouth. Immense shoals of herrings are seen off the eastern and western coasts of England, where they come to spawn. Yarmouth is the principal place from whence our fishermen proceed in quest of this valuable booty. Perch and dace are in season.

The few additional flowers this month are corn-flowers, Guernsey lilies, starwort, and saffron—a species of crocus. This is cultivated mostly in Essex and Cambridgeshire, in separate grounds. The stamens of this flower are picked off, dried, and pressed together in cakes. They are of a high orange colour, and have a very strong aromatic odour. Saffron is used in medicine as a cordial; it gives a fine deep yellow dye, and its

flavour was formerly much esteemed in cookery. The clown in the *Winter's Tale*, reckoning up what he is to buy for the sheep-shearing feast, mentions "saffron to colour the warden pies." Mints, wormwood, groundsel, plantain, mallows, and the clematis are in blossom; and

"The Michaelmas Daisy, among the dead weeds,
Blooms for St. Michael's valorous deeds."

The fresh trees and shrubs in flower are bramble, laurustinus, ivy, chaste-tree, wild honeysuckle, spirea, and arbutus, or strawberry-tree, which produces blossoms and fruit at once. Hazelnuts, walnuts, filberts, and chestnuts, are gathered; and elderberries are ripe, and fit for making excellent wine. Acorns and beech-nuts fall. These, in countries where there are large forests, afford a plentiful food to swine, which are turned into the woods at this period. The farmer ploughs, and sows wheat upon his fallows, finishes his hop and saffron harvests, and gathers in orchard fruits for sale, and cider and perry making; and the gardener removes decayed plants, digs, gathers seeds, and sows and plants for the next year. Hardy annuals, intended to flower in the spring, should now be sown; annuals of curious sorts, from which seed is to be raised, should be sheltered till ripened; and auriculas in plots, which were shifted last month, moderately watered.

In the Alban Kalendar, September consisted of sixteen days; Romulus assigned to it thirty, which were continued at Numa's reform; Julius Caesar added to it one more, but Augustus Caesar reduced it again to thirty, at which it has ever since remained.

September 1—is dedicated to St. Giles in the Kalendar of the English Church. This saint was a native of Athens, and came into France in 715, having first disposed of his patrimony to charitable uses. He was afterwards made Abbat of the Abbey at Nismes, department of Gard, province of Languedoc. On one occasion he gave his coat to a sick mendicant, who was cured miraculously by putting it on. Hence he became the patron of beggars. He was also the patron of cripples; for, according to his historians, he would not be cured of an accidental lameness which had seized him, lest he should not, otherwise, have sufficient means of mortifying himself. It is related that he raised the dead son of a prince to life, and made a lame man walk. He put off mortality in 750. The church of St. Giles, Cripplegate, was consecrated under his invocation.

September 2.—The Great Fire of London took place on this day, 1666. It broke out in Pudding-lane, and ended at Pie-corner. It consumed eighty-nine churches, the city gates, Guildhall, many public structures, hospitals, schools, libraries, a vast number of stately edifices, 13,200 dwelling-houses, and 430 streets; of the twenty-six wards it utterly destroyed fifteen, and left eight others shattered and half burnt. The ruins of the city were 436 acres, from the Tower, by the Thames side, to the Temple Church, and from the north-east, along the city wall, to Holborn-bridge. An estimate of the value of property consumed by the fire amounted to ten millions six hundred and eighty-nine thousand pounds. The occasion of the conflagration was the subject of parliamentary inquiry. It was imputed to the Roman Catholics, but a dispassionate consideration of all the circumstances, by impartial men, tends to acquit them of the crime: and in 1831 an inscription charging them with it was erased from the Monument, pursuant to a vote of the Court of Common Council of London.

September 3.—Bartholomew Fair is annually proclaimed on this day. The proclamation is read at the gate leading into Cloth-fair, by the lord mayor's attorney, and repeated after him by a sheriff's officer, in the presence of the lord mayor and sheriffs, and also of the aldermen. The procession afterwards proceeds round Smithfield, and returns to the Mansion-house, where, in the afternoon, the gentlemen of his lordship's household dine together at the sword-bearer's table, and thus the ceremony is concluded. As Bartholomew Fair is rapidly

dwindling away, and will shortly be reckoned among "things bygone," it may amuse our readers to read the following account of it, written in 1641. "It is contained in no less than four several parishes, namely, Christ Church, Great and Little St. Bartholomew's, and St. Sepulchre's. Hither resort people of all sorts and conditions. Christ Church Cloisters are now hung full of pictures. It is remarkable, and worth your observation, to behold and hear the strange sights and confused noise in the fair. Here, a knave in a fool's coat, with a trumpet sounding, or on a drum beating, invites you to see his puppets. There, a rogue like a wild woodman, or in an antick shape like an incubus, desires your company to view his motion: on the other side, hocus pocus, with three yards of tape or ribbon in his hand, showing his art of legordemain, to the admiration and astonishment of a company of cockloaches. Amongst these, you shall see a gray goose-cap (as wise as the rest,) with a 'What do ye lack?' in his mouth, stand in his booth shaking a rattle, or scraping on a fiddle, with which children are so taken, that they presently cry out for these fopperies: and all these together make such a distracted noise, that you would think Babel were not comparable to it. Here there are also your gamesters in action: some turning of a whimsey, others throwing for pewter, who can quickly dissolve a round shilling into a three-halfpenny saucer. Long Lane at this time looks very fair, and puts out her best clothes, with the wrong side outward, so turned for their better turning off; and Cloth Fair is now in great request: well fare the ale-houses therein, yet better may a man fare (but at a dearer rate) in the pig-market, alias pasty-nook, or pie-corner, where pigs are all hours of the day on the stalls, piping hot, and would cry, (if they could speak,) 'Come eat me!'"

Bartholomew Fair originated in two fairs or markets; one for the clothiers of England and drapers of London, granted to the prior of the convent of St. Bartholomew, and held within the church-yard; the other granted to the City of London, for cattle and goods, held in the field of West Smithfield. "For many years," says the Editor of the London Almanack, "the fair lasted fourteen days, and was a great source of revenue to the Corporation: in 1735 it was restricted to three days, and it now extends but to one day."

EUDOSIA; OR, SELF-RESPECT.

A TALE FOR THE YOUNG.¹

MADAME D'AUBONNE watched with true maternal interest the gradual development of mind and character in her daughter Eudisia, a little girl thirteen years of age. It was with feelings of profound happiness that she discovered in her the germ of every virtue joined to uncommon talent. Eudisia needed but to know that virtues are bestowed on us to regulate our own conduct, and not to enable us to judge that of others.

Her sincere love for all that was right, her anxiety to act always in the best manner, disposed her to blame their faults severely, and to expect of them a rectitude equal to her own.

Although Eudisia was too reserved and too timid to express her opinions to any one but her mother, to whom she told everything, and who also reposed perfect confidence in her, yet Madame d'Aubonne carefully corrected this disposition in her daughter; for she knew that it was not enough to watch over her words, but that it was also necessary to regulate her thoughts, and those of Eudisia in this respect appeared to her neither just nor right. She had had, however, but few occasions

(1) From the French of Madame Guizot.

to reprove her, for, with the exception of her cousin Constance, who was much younger than she, Eudisia seldom saw any but persons much older than herself, whose conduct, therefore, she could not attempt to censure.

Madame d'Aubonne had passed many years in the country, taking care of her invalid father; after his death she returned to Paris, from whence she went to spend two months at Romecourt, the estate of Madame de Rivey, an old friend of hers, who had one daughter, named Julia, whom Eudisia hardly knew, not having seen her for six years. Madame d'Aubonne found at Romecourt her aunt, Madame de Croissy, who had come there to pass the same time as herself. Madame de Croissy had with her her two granddaughters, Adèle and Honorine, with whom Eudisia was no better acquainted than with Julia, although they were her cousins. Her timidity made her look forward to her new position almost with terror, the more so as her three companions, although about her own age, were far from being as sensible as she.

Julia, naturally a good child, but much spoiled by her mother, answered her sometimes with a degree of impertinence, which shocked every one who heard her. Adèle looked upon a falsehood as the simplest thing in the world; she told them sometimes for fun, sometimes seriously, and even just before the untruth must be detected. As to Honorine, she was really like a wild colt, without steadiness, without reflection, never imagining that her whim of the moment could meet with an obstacle, or that a thing which pleased her might possibly be improper or unbecoming.

Madame de Croissy took very little pains with their education; provided little girls made no noise, and did not join in the conversation, she always thought them well brought up; she left them constantly with her maids, and was much annoyed that at Romecourt they were almost always in the drawing-room, because Eudisia and Julia seldom left their mothers.

This system was equally displeasing to the two girls, but little accustomed to their grandmother, who, when they were with her, never spoke to them except to desire them to sit upright whenever she thought of it, and to hold their tongues every time that their voices rose above a whisper. They would have liked to be let stay with their grandmother's maids as was their custom, provided they could have taken Julia with them; for, as for Eudisia, they cared but little for her company. Indeed, it must be confessed that she had not behaved very amiably towards them; disgusted with their rude manners, their disobedience, their satirical tone, to which she had been quite unaccustomed, confounded at seeing that they were not even acquainted with the principles which from infancy she had been accustomed to respect; she blushed deeply when she saw Honorine read without scruple a letter which she had found open, play with the gardener's son, and stand at the park gate to talk through the grating to the little boys and girls of the village; she trembled when she saw Adèle, almost under the eyes of her grandmother, cut the needleful of silk which she was to have added to her embroidery, to shorten it, and say that her task was finished; she could not recover from her surprise when she saw that Julia only required to receive an order from her mother to do the contrary immediately. She then thought herself transported to a new world, where every one was a stranger, where all appeared incomprehensible; avoiding to speak to her companions, to whom she could say nothing to their taste, whom she knew not how to answer when they spoke to her, she left them as often as she could, and went to take refuge with her mother.

The others saw plainly that Eudisia, though she said nothing, did not approve of their behaviour; they also

felt themselves ill at ease with her, and were far from pleased when Madame d'Aubonne, who wished to accustom her to live with others, to accommodate herself to their manners, and to endure their faults, sent her to join in their amusements and conversation.

Eudisia was not more pleasing to Madame de Croissy, whose principles of education were very different from those of Madame d'Aubonne, and whose granddaughters did not resemble her daughter in any respect. As Madame de Croissy was the sister of Madame d'Aubonne's father, she had gone without her granddaughters to see him a short time before his death, and had met Eudisia, whose amiable disposition and refined tastes were praised by every one who knew her. As Madame de Croissy had never heard those praises of her granddaughters, this put her in an ill humour; she thought, besides, that Madame d'Aubonne conversed too much with her daughter, treated her too much as a companion, was too much occupied with her (although this was never at the expense of others), so that she had said to every one, and had returned home persuaded, that Madame d'Aubonne "would never make anything of this little prodigy but a little pedant."

Her ill humour had redoubled since she came into the country, from the striking contrast which Eudisia's conduct presented to that of her cousins; as her grand-aunt she thought herself privileged to find fault with her, and she did so continually, either openly or by indirect allusions. Her looks, constantly bent upon her, seemed to watch for the slightest error which might escape her, and she never called her anything but *Mademoiselle Eudisia*. Eudisia then would have found but little enjoyment in the country, but from the pleasure which she derived from conversing with her mother, who talked to her as to a sensible person, and who, even when she had occasion to reprove her, concealed none of her affection,—and, it may even be said, of her esteem; for, excepting in her want of indulgence, which in some measure spoiled her good qualities, Eudisia deserved all the esteem that could be deserved at her age.

One morning the four girls sat at work in the drawing-room. Eudisia, seated near her mother, was diligently employed at her work; the three others assembled in a corner, talked in whispers, laughed, let their work fall, and forgot to pick it up, hardly doing three stitches together. If they were desired to work, they did so languidly, and with an appearance of fatigue. Eudisia looked at them from time to time, and then at her mother, with an air which plainly expressed her feelings. Madame de Croissy surprised one of these looks, which caused her to turn hers upon her granddaughters.

"Have the goodness to work, young ladies," said she, very sharply. "Do you not see how you scandalize *Mademoiselle Eudisia*!"

Adèle and Honorine pretended to begin their work. As for Eudisia, overwhelmed with confusion, she bent her eyes upon her own, without venturing to raise them as long as she continued in the room. When they had retired to their own room, Madame d'Aubonne said to her,

"You were much engaged with those young ladies?"

"Oh! mamma, because they were so foolish."

"And does it please you to see people acting foolishly?"

"Quite the contrary, mamma, I assure you."

"I do not think it can be 'quite the contrary,' my love, for they caused you to raise your eyes more than twenty times from your work, which I know you are fond of."

"I assure you, however, mamma, that it was the pleasure which I felt."

"It was, at least, a great interest; and did not this interest arise from the satisfaction you felt in seeing them less industrious than yourself?"

"Oh! mamma!"

"Come, my Eudisia; it is to examine our less amiable feelings that we have need of courage; the good

are easily discovered. Ask your conscience frankly, what is the truth?"

"Mamma," said Eudisia, a little confused, "I assure you that at first I never thought that it was that."

"I believe it, my child; it is a feeling which we indulge without being aware of it. Many people do so, and think that the defects of others heighten their merit. But tell me, my Eudisia, would there not be a higher pleasure in being superior to those people, than in being superior to your companions in activity and application?"

Eudisia agreed, and resolved to become so. She was always glad when her duty was pointed out to her, so great was her pleasure in doing it.

Having gone down stairs to look for something in the room next to the drawing-room, the door of which was open, she overheard Madame de Croissy saying to Madame de Rivey, "I always said that Mademoiselle Eudisia would never be anything but a little pedant."

Madame de Rivey, although fond of Eudisia, agreed that she was more occupied in criticizing her companions than in associating with them.

"That would compromise her dignity," replied Madame de Croissy.

From that time, Eudisia tried to overcome her repugnance and timidity; she joined in her companions' amusements more frequently, and seemed to take pleasure in doing so. But, becoming familiar with them, she told them her thoughts more freely, and when she could not induce them to listen to reason, she left them with expressions of impatience, which she could not suppress.

"Why are you angry?" said her mother to her one day; "are you offended? are others wanting in their duty to you, when they are less reasonable than you?"

"No, mamma; but they are wanting in their duty when they are not reasonable, and that makes me angry."

"Listen, Eudisia," said her mother. "Do you remember how angry you used to be with your cousin Constance, because, never looking before her, she threw down everything that came in her way? One day you happened, by a heedlessness of the same kind, to throw down my writing table; if I remember rightly, from that day you were never angry with Constance."

"Oh! no, mamma, I assure you."

"Did you think the fault less then, because you had fallen into it?"

"Quite the contrary, mamma; but that showed me that it was more difficult to avoid, than I had thought before."

"That is what experience teaches us every day, my child, of faults which we did not know before. Thus," added she, laughing, "I do not despair of seeing you indulgent towards those young ladies, if you learn some day in the same manner, that it is very difficult not to be an arguer like Julia, a storyteller like Adele, and a romp like Honorine!"

"As to that, mamma," replied Eudisia, quickly, "that is what I shall never learn."

"Are you then made differently from them, that you think what seems so easy to them would be impossible to you?"

"Yes, I believe so," replied Eudisia, much piqued.

"How then, in that case," continued her mother, smiling, "can you require of them the same as of yourself? You do not expect Julia, who is shorter than you, to reach so high; you only expect it of Honorine, who is the same height."

"But, mamma," said Eudisia, after a moment's reflection, "should they think then that, because they are less sensible than others, they are at liberty to do less?"

"They would be wrong to think so, my child; for every one is called upon to do all the good in his power. But every one also is enjoined to examine his own duties,

and not those of others; think then only of your own. Do you think it just and right, that you should enjoy the pleasure of feeling that you are better than they, and yet at the same time be angry with them for not being as good as you?"

"Mamma, is it right, then, to think that one is better than others?"

"Yes, my child; for to think that one is better than others, is simply to feel that one has more strength, more mind, more means of doing good, and consequently to feel that one is bound to do more."

This conversation gave Eudisia a feeling of satisfaction which made her more indulgent, more patient with her companions; but in this indulgence might be observed perhaps a little pride; she had something of the kindness of a superior person, never losing her self-possession, so much above others that she was not hurt if they did not act as well as herself.

Eudisia insensibly acquired the habit of considering her companions, and almost of treating them, like children. One day that the four girls when sitting together compared their work, and that Honorine's, the same as Eudisia's, was found to be not nearly so well done: "That stitch is very difficult," said she, with the air of one excusing a child of six years old. She did not seem to imagine that the same reason might apply to her.

The others began to laugh.

"Go on," said Honorine, "you see that Eudisia has the goodness to protect me."

Eudisia felt so hurt that the tears came to her eyes. She was satisfied with herself, thought she had a right to be so, and met only with injustice and ridicule. She again began to separate herself from her companions.

Her mother observed it, and wished to know the reason. Eudisia felt some difficulty in explaining it, although she did not think she had done wrong; but she felt ashamed of the ridicule which had been thrown on her. At last, however, she told her.

"You were angry then at Honorine's imagining that you wished to protect her," said Madame d'Aubonne; "it appears then that you would have thought it very ridiculous?"

"Oh! mamma, it is not necessary for it to be ridiculous to make them laugh at it."

"But tell me, Eudisia, if they had happened to laugh at you because you love me, because you listen to me, and do all that I wish, would that have grieved you?"

"No, indeed, mamma; it would have been my turn to laugh at them."

"Why, then, did you not do so when they laughed at the tone which you had taken with Honorine? If you considered this patronizing manner the most suitable, what signifies it if they thought otherwise? Are not you more sensible than they, and consequently better able to judge?"

"Mamma," said Eudisia, after a moment's silence, "I now think I was wrong to take up a tone towards Honorine which displeased her; but I only wished to show indulgence for the mistakes which she had made in her work."

"My child, we must have indulgence for the faults of every one, but not make it be felt by those whose conduct does not concern us, except when it is their own desire. In any other case, as we are not called upon to reprove them, neither are we to pardon them; it is a right which we cannot take unless they give it to us."

"But what should we do then, mamma, when they commit faults?"

"Not see them, if possible, instead of excusing or diminishing them; for instance, to point out something in Honorine's work that was well done, that what was badly done might not be observed. But in order to that, you must not be glad to have found your work better than hers; you must place all your pride in being superior to those little advantages."

Eudisia profited by all that her mother said to her,

(1) Surely there may be a moral, as well as an intellectual pedantry. *Trans.*

and improved every day in gentleness and sociability. Madame de Croissy had nothing to say of her, her companions began to take pleasure in her society. Eudisia heard all their secrets, at least as many as she would hear: and, when she saw the fear, the anxiety, which their inconsiderate conduct often caused them, saw them blush at the least word which seemed to allude to a fault which they had concealed, and saw them treat her with a kind of deference which they no longer denied to her superior sense, since it was no longer exerted at their expense, she constantly felt more and more how great is the pleasure of self-respect.

"And yet," said her mother, "you are still far from knowing all its value; you will never know it until you have paid what it is worth, until you have purchased it by difficult sacrifices."

And Eudisia could not believe that any sacrifice would be difficult in order to obtain it.

(To be continued.)

DESCRIPTION OF AN ISLAND ON HUDSON RIVER,

WHEN IN POSSESSION OF ONE OF THE FIRST SETTLERS.

OPPOSITE to the grounds lay an island, above a mile in length, and about a quarter in breadth, which also belonged to the Colonel. Exquisitely beautiful it was, and, though the haunt I most delighted in, it is not in my power to describe it. Imagine a little Egypt, yearly overflowed, and of the most abundant fertility. This charming spot was at first covered with wood, like the rest of the country, except a long field in the middle, where the Indians had probably cultivated maize; round this was a broad shelving border, where the grey and weeping willows, the bending osier, and numberless aquatic plants not known in this country, were allowed to flourish in the utmost luxuriance, while within, some tall sycamores and wild-fruit trees towered above the rest. Thus was formed a broad belt, which in winter proved an impenetrable barrier against the broken ice, and in summer was the haunt of numberless birds and small animals, who dwelt in perfect safety, it being impossible to penetrate it. Numberless were the productions of this luxuriant spot; never was a richer field for a botanist; for though the ice was kept off, the turbid waters of the spring flood overflowed it annually, and not only deposited a rich sediment, but left the seeds of various plants swept from the shores it had passed by.

The centre of the island, which was much higher than the sides, produced, with a slight degree of culture, the most abundant crops of wheat, hay, and flax. At the end of this island, which was exactly opposite to the family mansion, a long sand-bank extended; on this was a very valuable fishing place, of which a considerable profit might be made. In summer, when the water was low, this narrow stripe (for such it was) came in sight, and furnished an amusing spectacle; for there the bald, or white-headed eagle, (a large picturesque bird, very frequent in this country,) the osprey, the heron, and the curlew, used to stand in great numbers in a long row, like a military arrangement, for a whole summer day, fishing for perch, and a kind of freshwater herring, which abounded there. At the same season a variety of wild ducks, who bred on the shores of the island, (among which was a small white diver of an elegant form,) led forth their young to try their first excursion. What a scene have I beheld on a calm summer evening! There, indeed, were "fringed banks," richly fringed and wonderfully variegated; where every imaginable shade of colour mingled, and where life teemed prolific on every side; the river, a perfect mirror, reflecting the pine-covered hills opposite; and the pilant shoots, that bent without a wind,

round this enchanting island; while hundreds of the white divers, saw-bill ducks with scarlet heads, teal, and other aquatic birds, sported at once on the calm waters! At the discharge of a gun from the shore, these feathered beauties all disappeared at once, as if by magic, and in an instant rose to view in different places.

How much they seemed to enjoy that life which was new to them—for they were the young broods first led forth to sport upon the waters—while the fixed attitude and lofty port of the large birds of prey, who were ranged upon the sandy shelf, formed an inverted picture on the same clear mirror, and were a pleasing contrast to the playful multitude around! These they never attempted to disturb, well aware of the facility of escape which their old retreats afforded them. Such of my readers as have had patience to follow me to this favourite isle, will be, ere now, as much bewildered as I have often been myself on its luxuriant shores.

Poetry.

[In Original Poetry, the Name, real or assumed, of the Author, is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

PAST—PRESENT—FUTURE.

BY H. I. THORNTON.

THE past, ah! say, what is the past?
Time's brief, and fleeting hour;
Visions too fair and bright to last;
The sunshine, and the shower:
A dubious, unconnected dream,
To which we turn, and sigh,
And pause, to snatch from Lethe's stream
The spell of Memory.

The present—what is it to man,
No sooner here, but gone;
Neglected, for some future plan,
To which each thought we turn;
Enjoyed but when the heart is young,
When life is in its spring,
When all that o'er our path is sung,
Unsullied pleasures bring.

The future, idol of the heart,
Whence is thy magic spell,
That bears, in every dream, the part,
O'er which we love to dwell?
The past, the present, fade away,
With scarce a thought, or care;
We prize alone thy distant ray,
For Faith and Hope are there.

FANNY LEIGH.¹

MRS. TOOGOOD.

UNSKILL'D in lore was Fanny Leigh,
But learn'd in wisdom mild,
That glow'd all soft and tenderly
In that meek, blue-eyed child.

And why the sigh? why sad the brow?
She cou'd it o'er and o'er,
And found out anxious thoughts, and how
They prey upon the poor.

Her soft young hands, she did not fear,
Could aid the feeble old:
How blest, for her to wipe their tear,
And clothe them from the cold!

And she hath left the rose-clad cot,
From youth's one home to part,
Arm'd with resolve—revealing not
What tempest at her heart.

(1) From Mrs. Grant's Memoirs of an American Lady.

(1) See Engraving, p. 289.

None saw the drops that dimm'd her eye,
When a sad breeze and keen
Came answering with a long-lorn sigh
From that still village scene.

Forth hath she gone—a summer boat
Skims o'er the glassy bay
With slender strength—nor dreads to float
Where the stern waters lay.

Eorth hath she gone, from dewy field,
And used to fondest care,
To try the desert—will it yield
One shelter from the glare?

Where Innocence is shamed to quail
Before the worldling's mirth;
And beautiful, will learn to veil
Its scorn'd, yet heavenly birth.

Forth so she went, yet mid the pest,
The blast of noxious night;
A lamp burn'd steadfast at her breast,
And cast its certain light.

And oft she heard a mellow'd tone
Streaming above the din;
A Voice that loves the pure and lone,
And strengthens them within.

O! there was joy, even unto pain,
When, pass'd those days so drear,
As music, Fanny's steps again
Fell on each aged one's ear.

And who, the gladdest of the glad,
Stands at the gate? I pray.
Is 't he who then a very lad
So wept her going away?

'Tis he, who while he fed his flowers,
(Stronger her bright chain grew;)
Saw constantly through haunted hours,
Those eyes of gentlest blue.

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne*.

"LADY ELEANOR DAVIES, the wife of the celebrated Sir John Davies, the poet, was a very extraordinary character. She was the Cassandra of her age; and several of her predictions warranted her to conceive she was a prophetess. As her prophecies in the troubled times of Charles I. were usually against the government, she was at length brought by them into the Court of High Commission. The prophetess was not a little mad, and fancied the spirit of Daniel was in her, from an anagram she had formed of her name,

Eleanor Davies.
Reveal O Daniel!

The anagram had too much by an L, and too little by an S; yet *Daniel* and *reveal* were in it, and that was sufficient to satisfy her inspirations. The Court attempted to dispossess the spirit from the lady, while the bishops were in vain reasoning the point with her out of the Scriptures, to no purpose, she poisoning text against text. One of the deans of the Arches, says Heylin, shot her through and through with an arrow borrowed from her own quiver; he took a pen, and at last hit upon this elegant anagram:

Dame Eleanor Davies.
Never so mad a Ladie!

The happy fancy put the solemn Court into laughter, and Cassandra into the utmost dejection of spirit.

Foiled by her own weapons, her spirit suddenly forsook her; and either she never afterwards ventured on prophesying, or the anagram perpetually reminded her hearers of her state—for we hear no more of this prophetess.—*Curiosities of Literature*.

NATURALISTS assert that animals and birds, as well as "knotted oaks," as Congreve informs us, are sensible to the charms of music. This may serve as an instance:—"An officer was confined to the Bastille; he begged the Governor to permit him the use of his lute, to soften, by the harmonies of his instrument, the rigours of his prison. At the end of a few days, this modern Orpheus, playing on his lute, was greatly astonished to see, frisking out of their holes, great numbers of mice; and, descending from their woven habitations, crowds of spiders; who formed a circle about him, while he continued breathing his soul-subduing instrument. He was petrified with astonishment. Having ceased to play, the assembly, who did not come to see his person, but to hear his instrument, immediately broke up. As he had a great dislike to spiders, it was two days before he ventured again to touch his instrument. At length, having overcome, for the novelty of his company, his dislike of them, he recommenced his concert; when the assembly was by far more numerous than at first; and in the course of further time, he found himself surrounded by a hundred musical amateurs. Having thus succeeded in attracting this company, he treacherously contrived to get rid of them at his will. For this purpose he begged the keeper to give him a cat, which he kept in a cage, and let loose at the very instant when the little hairy people were most entranced by the Orphean skill he displayed."—*Curiosities of Literature*.

THERE are no principles but those of religion to be depended on in cases of real distress; and these are able to encounter the worst emergencies, and to bear us up under all the changes and chances to which our life is subject.—*Sterne*.

To *condog*, *v. n.* We should be unwilling to re-introduce this word into common conversation, though it is legitimately compounded and derived, and of old was not unfrequently used. We bring it forward on account of the following tradition. It is said that when Dr. Adam Littleton was compiling his Latin and English Dictionary, he employed an amanuensis, who wrote at his dictation, and when they came to the word "concurro," the amanuensis asked, "To *concur*, I suppose, Sir?" "To *condog*, I suppose, Sir," was the Doctor's reply: and accordingly *condog* was set down. Whether the tradition be true or false, certain it is, that in one of the dictionaries, 1678, 4to, the first meaning given to *concurro* is "to *condog*." But we doubt the truth of the story. The word is found in Lyly's *Galathea*, "the just proportion of the fire and all things concurre." "Concurre, *condogge*, I will away." Also in Heywood's "*Royal King and Loyal Subject*;" and in the second edition of "*The English Dictionary*, by H. C. [Cockeram] gent. 12mo, 1626, second part," to Agree, Concurre, *Condog*, Condiscead."

TROUBLE is a thing that will come without our call: but true joy will not spring up without ourselves.—*Bishop Patrick's "Heartsease."*

A GLANCE AT MARIENBERG, AT BOPARD ON THE RHINE.

A SKETCH.

WHETHER faith in the efficacy of cold water as a therapeutic agent be in the ascendant, or whether, having reached its zenith, it is now making its descent, is a problem we pretend not to solve, as much is said on both sides; some persons affirming that the healing virtue of this liquid begins only now to be known, while as many others maintain that, like various remedies from time to time proclaimed as effectual for all ailments, it has had its day, and, with its predecessor-specifics, will speedily sink into oblivion.

It may be thus or not. We come not forth as the champions of the system, at least not of that

universal power for which its most devoted adherents argue, having, for our part, only a modicum of faith therein. Of the benefits arising from a plentiful use of water in general, no one can doubt; of its purifying, bracing, and refreshing effect on the outer man, none can be ignorant; although it may not be so readily granted, or so universally acknowledged, that these healthful results even penetrate to the inner man, imparting elasticity to the mind, and cheerfulness to the temper. For its abundant use in the last sense, none can out-advocate our plea, since we are not of those who would seek to "crawl to heaven in rags besmeared with dirt," but rather hold to the homely saying, "that cleanliness is closely allied to godliness." Indeed we confess perhaps a weakness when we affirm,

that we cannot conceive a dirty personage to be either very virtuous, or full of grace; and we greatly admire the Jewish practice of frequent ablutions.

Having, therefore, we trust, a due appreciation of the properties of water, we are ready to render it all homage up to a certain point; and possibly we may hereafter see cause to extend the limits of our cold-water-cure belief. Meanwhile we only seek to amuse our readers by a rapid sketch of a short residence in one of the temples consecrated to the pure and restoring element. We must, however, state, that we went thither neither as an experienced votary to the shrine, nor as a novice to be initiated into the mysteries of the varied modes of immersion or emersion; we only appeared as a visitor, who might, or might not, participate in the delights of a douche bath, a wave bath, a plunge bath, or a Rhine bath, as humour prompted. We left England for the coast of Holland on a certain day of a month not much to our liking, whose blaze of meridian splendour is usually rather oppressive; a time wherein we miss the softening graces of the gladsome spring, and seem to long for the subduing influence of mournful autumn, with its rich beauty, chastened by the sober tints of the withering and seared leaf. Our party on board the steamer was tolerably numerous, considering that we took not the route now most in fashion, that passage being preferred from whose place of debarkation the railway is ready to whirl the lovers of speed to where they will;—some travellers having a peculiar monomania, which urges them to try and see as many different towns, rivers, fields, and church spires, as is possible within an incredibly short space of time; this feat on their return home forming the chief subject of their self-laudations. We old-fashioned people, not feeling much inclined to emulate the rapidity of the lightning's flash, were resolved to take matters more leisurely, and to be indebted to steam in another shape for our projected ascent of the well-known German river.

We reached the city of canals, bridges, and tall straight trees, in time for the *table d'hôte*, on the day following our departure from the Thames. This of course was a mighty comfort both to our own countrymen and others,—for who ever heard of an Englishman whose sorrows could not be assuaged by the savoury smell of a good dinner? And, from the satisfaction expressed by our Dutch friends, we conclude, that neither were they impervious to the soothing influence of the many edibles which “lay smiling before us.”

Next morning early we parted from this city rescued from the sea, to proceed on our journey up the Rhine. There were few persons on board the steamer, and these few by no means fascinating. Among the company were some Dutch dames with children and servants *en route* to their summer quarters: an old priest, with a three-cornered hat, an ample black surcoat reaching to his heels, a huge walking-stick, and a lengthy pipe, without which it is doubtful whether a native of Holland could exist; an exquisite, or dandy, of the Dutch school, with cigar in mouth, lemon-coloured French gloves, a slender cane, and shining boots much turned up at the toes, a specimen probably of Young Holland!

Cows standing in the water to cool themselves, church spires, willow trees, and windmills, were the

dominant objects, and the prime ingredients of every landscape that passed before us for many long hours. Here we might make a digression, and, in the mode of some writers, anxious that their readers should have the full benefit of all their lore, enter into a disquisition to prove the truthfulness of the paintings of the Dutch and Flemish artists who have depicted those rather sleepy-looking scenes. We, however, have an antipathy to such effusions when they cross our own path, and therefore we will do in this case as we would be done unto, and leave the productions of the Cuyp, Botses, and Wouvermans, in peaceful repose for the present. We paid a short visit to Dusseldorf, had an ice in the Hof Garten, and saw all the good folks of the place in holiday attire, as they chanced on that day to be commemorating the feast of one of their saints, and not a few wonders were to be seen in the shape of terrific paintings of Daniel in the lion's den, the three holy children in the fire, etc., as signs of shows, into the interiors of which, however, we had no time to take a glance. Music was heard in every direction, and dancing was going on merrily; mirthful recreation ever mingling with religious rejoicing in all catholic countries. And why should it not be thus? Cologne with its three kings, its treasures, and gemmed croziers, we found to be as dirty as ever; but, worse than all, the vulgar spirit of traffic seemed to have taken unaccustomed possession of it, of which sundry indications were given, such as new buildings springing up every where, and busy worldly-wise countenances meeting the stroller at each corner of the narrow streets. Alas! alas! railways will be the destruction of all the grandeur of the past—of all things venerable! To find a quiet nook unvisited by these iron tyrants, we must travel far away indeed.

We bent our steps towards Ems, intending to remain there for some time, but found the heat in the narrow and mountain-girt valley of the Lahn so intolerable, that we were thankful to leave it after a sojourn of a few days. We could not make up our minds to be stifled in this hemmed-in spot, although many delightful walks awaited our footsteps by the side of the river, and on the heights; while many were the gay visitors from all quarters to be met with, and looked at. In spite of such attractions we returned to Coblenz, and then proceeded to Boppard, a place not much frequented by mere travellers, but possessed of various charms to those fond of antiquities, or of rambles in a lovely district, and known to many who are believers in the cold water cure, as it boasts of two such establishments, with a third in progress.

Boppard, though but slightly mentioned by Murray, (that constant companion of all travellers, to whatever quarter their faces may be turned,) is, nevertheless, an interesting and pleasantly situated small town, lying close to the Rhine, whose waters wash its venerable walls. Many are the proofs still visible of Boppard's ancient splendour, as well as of its sanctity, if we may judge from the various churches, convents, and monasteries, which once on a time flourished here. On the opposite bank of the Rhine smiles the pretty village of Fielzin, with its tall church spire; and above are the fertile mountain-tops of Nassau. At a short distance higher up the river stand the ruined castles of the Brothers, with what was formerly the convent of

Bornhosen, now converted into a large inn, reposing at the base of the eminence on which the two castles stand.

The romantic legend of the Brothers is known to all visitors of the Rhine, or readers of the red volume, as Murray's hand-book is called; by the unwearied perusal of which the Germans recognise their English guests, who, it is said, are never seen without a red-book in their hands while traversing the Rhenish land. In the other direction, a few miles further down the river, is to be seen the renowned fortress of Marksburg, where the unfortunate Henry of Germany, while a child, was immured for a brief space, when lured by his enemies to take (according to their story) a pleasure sail on the beautiful Rhine. It is a gloomy place, now used by the Duke of Nassau for the safe keeping of political offenders. We asked the soldier who conducted us through it "if there were now any prisoners within its walls, or if it were much used." He said the last who had been there left it about six months previous, and that it was rarely needed.

Let us not forget that her Majesty of England was in the neighbourhood at the time of which we speak, the attraction of whose presence, along with that of other royal and ducal personages, allured many of the quiet inhabitants of this *locale* from their wonted state of repose. In imitation of the thunders of Ehrenbreitstein, which welcomed our lady Victoria to Coblenz and the proud castle of Stolzenfels, the good people of Boppard fired a salute when she passed, while we English evinced our loyalty by waving hats and kerchiefs, and by hoisting colours on a flag-staff in a garden that lay close to the water's edge. One of the party, in his exuberant devotion to his royal mistress, almost fell into the river, so resolved was he to show his English face, (a good honest one it was,) and to let his English hurrah be heard; as he declared none but Englishmen knew how to give a hearty cheer. As the Fairy (her Majesty's steamer) came close to the shore, where this son of Albion stood shouting and waving his hat, along with the rest of his countrymen, there is no cause to doubt that, unless her Majesty were deaf indeed, she heard this truly British cheering, as distinctly as she heard the cannonading when she glided under the heights of the redoubtable Ehrenbreitstein.

But, to return to our scenery. There are two hills here from which fine views may be had; the one called Jacobsberg, the other Kreutsberg: on the former stands an edifice which was once a convent, and on the summit of the latter a ruined chapel is to be seen; the way thither from the base to the summit of the eminence is pointed out to the pious wanderer by shrines, crosses, Madonnas, and saints.

As we already stated, there are two cold-water-cure establishments at Boppard; one called Marienberg, the more stately and aristocratic; the other of humbler aspect, called Mühlbad. No comparison can be made between them, were we to judge from external appearances. Marienberg, once a convent inhabited by noble dames alone as religious sisters, looks proudly down from its eminence on the broad waters of the Rhine, and over the ancient remains of Boppard's better days, when both heathen and Christian emperors, kings, princes, knights and barons, had alternately been its possessors and occupants. Now, where princesses and

countesses once "told their beads at Mary's altar," a few gloomy-looking mortals wander up and down the dim cloisters and long corridors, seeking to wash away, not their sins, but their physical ailments, by undergoing the *wasser-kur*! Their faith in the omnipotence of the element might be commended, were it in consequence of the idea that the fountain had been consecrated by saints or blessed by angels, or did it rest upon an assurance that Marienberg was a spot where "holy spirits love to linger;" but when the matter-of-fact conviction is forced upon us, that these pale-faced, disconsolate wanderers believe in nothing save—Hydropathy! our interest and sympathy diminishes, if it does not altogether vanish, and we are almost tempted to wish that the princely dwelling had been left in peaceful stillness, with its proud and sacred memories.

Mühlbad, "the bath of the mill," in contrast to that of "the Mountain of Mary," nestles at the foot of a narrow valley called Mühlthal, or, as we would say in English, Milldale, with vine-clad hills rising on either side. The house is modern, and stands close to the high road; a great objection with some persons, as, from this circumstance, it wants the privacy and quietude which is desirable in a place destined to such purposes; although others may consider this objection counterbalanced by the proximity of the magnificent river, rolling on in its ceaseless course, and by the cheerful sight of the various boats and rafts which are constantly borne past on its broad bosom. In the evening, the view of the town of Boppard from this locality is very fine; the lofty spires of its ancient church piercing the bright sky, and Marienberg glittering in the golden radiance of the sinking sun, and towering majestically above the crumbling walls and towers of the once strongly fortified town; while the silent river pursues its destined way, too full of its own great mission to heed what passes around, indifferent to whose standard floats from the stern fortress, or whose gay banner waves from the palace or castle which it alternately sweeps past. Like a mighty spirit, it owns no mortal sway, and renders homage to heaven only, "imagining by day the clear blue sky,—by night the silver stars."

Marienberg is decidedly the place for dreamers, poets, incipient monks or nuns, time-past worshippers, young Oxonians, or Englishmen thickly crusted with reserve; as space sufficient is afforded in the cloistered aisles, and spacious galleries, for each self-sufficing "I" to move in all directions, without his dignity being compromised by contact with anything less wise, less good, or less important than himself.

Some persons hinted that it was rather *triste*, but these must have been volatile Frenchmen, who like to have listeners, even should they be inclined to act the part of a Hamlet or a Jacques.

Mühlbad may best suit the more every-day sort of person, who thinks of comfort, good dinners, kind faces, and home feelings; all those commonplace and vulgarisms of which the "rapt enthusiast" knows nothing, and which are entirely beneath the notice of the antiquarian or the learned in mysticism.

It is reasonable to believe that many who visit these hydropathic establishments as patients, recover their health (if they have ever lost it), and their spirits, (were they really depressed,) as much

by regular hours, healthful exercise, and simple diet, as by the use of cold water, either internally or externally administered; not to speak of the pleasant companions who may be met at such places, in spite of gout, rheumatism, or disordered nerves. To those who underwent the cure to its full extent, it could be no easy work, but the reverse, as great toil, perseverance, and courage, were involved. Let us imagine being roused at four or five in the morning by two attendants, wrapped up in a wet sheet, and covered with sundry blankets and ligatures, until neither hand nor foot could be stirred, be the exigency ever so great—the house on fire, or a fly tickling your face; the latter not a minor evil in these circumstances, as we have heard some say, who every morning were thus prepared for the rest of the day's labours. In this state the invalid is left in bed for half an hour, an hour, or longer, as needs be, until he gets into a profuse perspiration, when he is then taken out of bed, placed in a large chair, wheeled away in the thousand wrappings, like a mummy embalmed, and all at once lowered by machinery into the depths beneath, and suddenly plunged into a cold bath. After this shock he is hoisted up again, dresses, and takes his morning promenade, drinking as many tumblers of cold water as he may find suits him.

From seven until nine o'clock, breakfast, which consisted of bread and milk, was on the table: tea or coffee visitors might be provided with, but the patients were forbidden such stimulants. About eleven o'clock another bath was taken, sometimes of one kind, sometimes of another, as the doctor of the establishment might deem best for the particular case. Walking and drinking again until one, when dinner was served, of an excellent, though plain, description, generally consisting of soup, boiled meat, roast beef or mutton, chickens, vegetables, a pudding or pancake, all well cooked. Until about four or five most of the inmates remained within doors, when another bath was taken, another walk, and the business of the day concluded with supper at eight o'clock, which, like breakfast, was composed of bread and milk, (delicious milk it was,) with the addition of preserved fruits, eggs, and such like. After this hour the inmates amused themselves, as best they could, with music, reading, or conversation, and generally before ten all went to rest, when not a sound was to be heard in the whole house, unless a mouse, more curious and bold than its companions, stole forth on a voyage of discovery.

It can be no marvel, if persons exchanging, perhaps, a luxurious mode of living for this simple one, fashionable late hours for early rising, and a good brisk walk, or a climb up a hill, for a lounge on a sofa, forget their ailments, and find themselves even without the plea of a headache, for preferring breakfast at ten or eleven, rather than seven or eight! We speak at present of those who are only half ill, or ill from their over care and love of ease; of those who never walk when they can ride, and never drink water when wine can be had. Others certainly there are, who, when all things else have failed, have resorted to the cold water system as a last resource—persons who are really and seriously ill;—and these assert that cold water has been their restorer from sickness to health, their deliverance from the approach of death.

We have no cause to doubt such assertions, as, in some instances, cold water certainly produces wonderful effects on the human frame; but, that it can do this in every case, we are more than sceptical. Were we to credit all we have heard of the miracle-working powers of this element, hydro-pathy may stand side by side with mesmerism; and its disciples are not one whit less zealous in the advocacy of its fame, and of its truth, than are those of the more mysterious agent. As far as the ease of the patient is concerned, the latter stands a good chance of being the preferable remedy of the two, as, for its success nothing seems requisite or essentially necessary, save a due amount of faith in the influence proposed to be called into action, whereas, in the water system, unceasing and continuous exertions are indispensable. As yet, however, few having any faith in "unseen agents," a science or system so nearly bordering on the occult is shunned with pious horror; therefore the cold-water-cure system, for the time being, boasts of more adherents than its rival.

We might lengthen our sketch by a glance at some of the picturesque spots in the neighbourhood of Marienberg, or Mühlbad, and dilate on the many pleasant strolls which may be taken up the different valleys or glens leading to the mountain-tops, or luring the pedestrian into some wood or forest, from which it is not always such an easy matter to emerge when once fairly in.

We might pay a visit to Stolzenfeld, where we were shown a small drawing in pencil, said to have been executed by the Royal Victoria's fair fingers, who had left it on the table of her boudoir.

We might listen to the hymns of the pilgrims, as they rowed down the Rhine on their homeward journey, or stand and see them pass, as they onwards moved towards some far-famed shrine, with the bright figure of saint or martyr floating over them, in the rich silk banner fringed with gold.

We might do all this, and more, but we fear trespassing on the patience of our reader, who may not admire so much as we do the scenery to be found in the neighbourhood of "Old Father Rhine." We therefore arrest our pen, hoping to resume it at some future time.

THE PROTEUS ANGUINEUS,

OR AUSTRIAN SIREN.

THE visitors of the Linnæan Society are not generally aware of the curiosity contained in one of the remote chambers of that useful institution. Through the kindness of the Librarian we were favoured with a sight of this rarity, which is a model in wax of that unearthly-looking creature, the Proteus Anguineus, or Austrian Siren. This extraordinary animal, half fish, half lizard, was unknown except to the learned few, till a detailed account of it was given in Sir Humphrey Davy's "Consolations in Travel." From the popularity of that work, it became a common topic of conversation; and, in 1829 or 1830, the late Captain Kater imported a living specimen, which he and his amiable and highly accomplished lady procured from the Grotto at Adelsberg, but which we believe did not long exist in this country.

The Proteus Anguineus is found in no other part of the world but Carniola, and there chiefly in the grotto

of the Magdalena at Adelsberg, in a small subterranean lake. It has also sometimes been found at Sittich, about thirty miles distant, thrown up by the water from a subterranean cavity, and Sir H. Davy, who was extremely fond of the "Alpine country of Austria," as he called this district, (having spent many months at Laybach, both in 1817 and 1827,) and who had studied its geology minutely, was of opinion, that the natural residence of these animals is a vast lake far below the surface of the earth, and that those found both at Adelsberg and at Sittich proceed from the same reservoir. Indeed, when we take the nature of the ground into consideration, and the periodical appearance of the animals, (in the spring, and again in the autumn, particularly after heavy rains,) the supposition will not appear unreasonable.

The Julian Alps, which traverse this part of Carniola, consist entirely of limestone, which has the property of becoming disintegrated, and forming immense caverns and grottoes, so that in many parts the mountains may be said to be hollow. Large lakes are formed within them, and rivers flow through them, or have their source in their dark recesses. The Laybach disappears twice before it finally emerges from their base a full-grown and navigable stream. One of the largest caverns is that which contains the grotto of the Magdalena, at Adelsberg, the most magnificent in Europe, in comparison with which even those of Derbyshire are insignificant. It has been explored to a distance of nearly three miles, where it terminates in a lake, and it is probable that its extent would be found to be much greater, if the side passages and chambers were traced out. The subsoil and surface of this region are both calcareous, and the waters that fall from the atmosphere disappear through funnel-shaped apertures, which are abundant in every declivity. The want of moisture on the surface, which this occasions, gives the country the appearance of the most repulsive barrenness, except in the valleys. The mountains are totally destitute of even the simplest vegetation, and the dreariness increases till it becomes absolutely a howling wilderness in the broad waste of rock and sand, called the *Karst*, which extends to within five miles of Trieste, and which is ravaged by the tremendous wind called the *bora*; but the most remarkable feature of the country is the Zirkniss See, a lake, which is entirely filled or emptied by subterranean sources, and which is generally believed to communicate with all the other lakes and rivers. The waters of this lake disappear for four or five months at a time; during which the peasants make hay, and even sow and reap millet or buckwheat on what was the bottom of the lake, and thus gather their harvest where they have before thrown their nets for fish. The return of the waters is sometimes so sudden as to fill the basin in twenty-four hours, when there has been much rain, or snow which has melted; and they come with a fearful force, rushing, foaming, and bubbling up from upwards of four hundred natural apertures, like the craters of volcanoes, some more than fifty feet deep, with which its bed is perforated, and which communicate with the subterranean reservoirs, through which the waters are replenished or drawn off. Few things can be more striking than the return of these waters, or more calculated to impress the mind with awe and reverence for His Almighty hand, who has created these wonders, and by whose power even the fountains of the great deep were broken up.

Many have been the learned men who have treated of

this *lusus nature*, and various and contradictory have been the opinions concerning it. The first notice of the animal was communicated by Dr. Laurenti, in 1768, who gave it the name it still bears. Linnæus only knew it from a drawing and description; it has since been carefully dissected by Schreibers, the predecessor of Kollar in the Imperial Museum at Vienna, as well as by our own Hunter, and others, without removing the doubts which have always existed as to whether this ambiguous reptile is the young of some species of lizard, or a perfect animal. When Spix and Von Martius were setting out on their voyage to Brazil, in 1817, they procured some specimens of the *Proteus*, which they carried with them, in hopes that the warmth of a tropical sun would favour their development; unfortunately, just as they were entering the torrid zone, the vessel containing the Sirens fell over into the sea, and thus all their hopes of settling this disputed point were destroyed. The whole appearance of the animal is singular in the extreme. It is all over of a pale pinkish flesh-colour, excepting a crest, something like a cock's-comb, round the throat, which is bright scarlet. This crest, consisting of a mass of blood-vessels, contains the respiratory organs of the animal, which are connected with lungs, so as to enable it to breathe above or below water. The general form of the body is that of an eel, but it has no fins. It has four feet, like a lizard, but is destitute of ribs or a breast-bone. The fore part of the head is flat, like the bill of a duck, becoming broader behind. It has two black dots, one on each side of the jaw, which are called the eyes, though the animal is supposed to be devoid of sight, and they are attached to the under side of the skin. It has a number of minute teeth, and is supposed to feed on the smaller aquatic animals, the head and bones of small fish having been found in the stomach of one. But it has never been observed to take food, though specimens have been kept alive for several years, by occasionally changing the water in which they were placed. Its voice is stronger than might be expected from the size of the animal, emitting a kind of hissing noise, with the fore part of the body out of the water, and hence, perhaps, the familiar name of Siren applied to this genus, the fore feet resembling hands with three claws or fingers, and the creature, when out of the water, walking on its hind feet and holding itself erect.

The largest specimens which have been found, are about thirteen inches long, and one inch in diameter; but they are sometimes seen no thicker than a horse-hair. Sir H. Davy supposes these animals to be of an immense size when mature in their native place; and from their internal structure, he cannot allow that they are larvæ. Indeed, notwithstanding the most careful researches that have been made during many years, and the frequent fishing which takes place in the lakes and caverns of the neighbouring country at all seasons of the year, no animal has hitherto been detected of which it can possibly be the larva. One is almost tempted to believe it to be a species of those antediluvian Sauri (of which many varieties are found, bedded in the limestone caverns of the country,) which had escaped, in the bowels of the earth, from the destroying waters of the deluge—an animal to which the presence of light is not essential, and which can live indifferently in air and in water, on the surface of the rock or in the depths of the mud, adding one instance more to the number already known of the wonderful manner in which life is produced and perpetuated in every part of our globe, even in places which seem the least suited to organized existences. Such is the *Proteus Anguineus*, to which Divine Wisdom has assigned for its abode the dark subterranean caverns of Carniola.

THE TELESCOPE.

WITH SOME ACCOUNT OF THE EARL OF ROSE'S REFLECTING TELESCOPE.

THAT there should be such a thing as a *glimpse* of Astronomy—that is, any amount of *positive knowledge* regarding bodies placed at a distance from us so great, that the imagination falls powerless from the attempt to form a conception by the aid of which we can reach to the faintest idea of it, is one of the most wonderful of the many triumphs which the understanding of man has achieved—the clearest illustration of the divinity of its origin. We should have said, had we not known the fact to be otherwise, that, if there was any thing whatever in the creation of God placed beyond the reach of human investigation, it should be the laws by which are regulated those “twinkling points of fire,” which are so immeasurably removed from us, that the powers of our perceptive organs are exhausted before reaching the nearest of them. What data could we ever imagine would be discovered for calculating the magnitudes and distances, and ascertaining the conditions, of bodies dwelling in a region so remote, that a space large enough to permit thousands of such globes as our earth to roll about with ease within it, in their yearly orbits, appears to us so small, that it might easily be covered with the head of a pin? When we look out upon the heavens in a clear frosty night, we appear to be enclosed in a concave wall of polished ebony, in which the heavenly bodies are set, like spangles on a dark-coloured robe. To the unassisted eye alike of the philosopher and the peasant, does this wall seem to present the extreme bounds of human observation. Those twinkling stars, the natural supposition would be, may have been set there to inform us simply of the fact, that there are innumerable worlds beyond the sphere of our observation, and that, when we have reached the utmost possible limit of all that we can know, we have still attained to but an insignificant fraction of all that is to be known; but, set as they are in that impenetrable wall, the most remote and the nearest appearing to our sense at an exactly equal distance, it might almost seem as if that was intended to mark the boundary beyond which the mind of man was never to penetrate, and to trace out the limit of an outer world, in which his understanding was never to gain any triumphs.

The distances of the bodies which are the subjects of astronomical sciences are so vast, that our earthly measures of space are altogether inadequate, not merely to give us an idea of them—that is out of the question—but to furnish us with a language in which to express them. Leaving miles and leagues to measure earthly spaces, or at most such a mere step as the distance to the moon, philosophers are obliged, in order to find such an expression for those inconceivable distances as can be thrown into a manageable form, to adopt a measure which in itself far transcends the power of our faculties to conceive,—the velocity of light. Light traverses a space equal to the circumference of the earth in the eighth part of a second, that is, in about the smallest period of time which it is possible for us by any effort of the mind to mark. We have, by the help of this measure, a sufficiently astounding distance indicated to us, when we are told that the light of the sun takes 160 minutes to move to the Georgium Sidus, the remotest

planet of our Solar system. This tells us of a distance equal to 76,800 times the circumference of our globe,—a space, of which, though it is not difficult to mark it in figures, it is altogether impossible to approach to any conception in thought. But even this sinks into nothing when compared to the distances of the fixed stars. The nearest of these is so far from us, that light would require five years to traverse the space which divides it from this earth; and stars have been discovered, by means of the telescope, so distant, that the light which now reaches our globe from them must have set out on its journey before the creation of our world.²

The mind is thrown back stunned and bewildered from the attempt to grasp any of these wonderful facts. We feel that, though we know of them, we do not know them. They are to us as an algebraic formula, stuffed with all manner of complex and incomprehensible relations of quantity, which, though we can fully assure ourselves of their truth, and though we can use the formula in which they are expressed, like a sealed casket containing a rich jewel, as an infallible step in the prosecution of our researches after other truths, we cannot receive into the mind as substantive facts, or objects of knowledge. We can ascertain that there are truths for which the language we use is the proper expression, but what they are we are as really ignorant as if we had not a language in which to express them at all. We cannot conceive them, or give them a place in our minds. So, with regard to the distances we have been speaking of, however accurately we denote them, our mind is not more truly cognizant of what they really are, than is the naked eye of the relative magnitudes and distances of the myriads of stars which bespangle the firmament. We know, however, that philosophers, in their investigations regarding them, have arrived at their results by steps of reasoning so secure, and so firmly linked together, that nothing can be more absolutely certain than their truth; so much so, that it may be said, that, of all sciences, the surest in its conclusions is that whose objects are the furthest removed from the ordinary cognizance of our senses.

To lay a foundation for the science of astronomy, all that is required is, that the heavenly bodies should be brought within the reach of our observation. In the same spirit with the boast of Archimedes, (if we can call that a boast, which was but a forcible mode of stating an undoubted physical truth.)—“Give me a place to

(2) The circumstance of objects being visible from such a distance that the transmission of light from them to the eye is not instantaneous, is calculated to create a singular confusion in our established ideas of time in its connexion with the sense of sight. The only case in which we are in some degree familiar with the fact of an interval elapsing between the occurrence of the cause of an impression upon our senses, and the impression itself, is that of hearing. We meet with proofs of the existence of such an interval every day. The flash of lightning precedes the thunder-clap,—the smoke and flame from a gun precede the report, by a very perceptible interval; even at so short a distance as that between the spectators of a game at cricket and the players, we can, by looking sharply, perceive that the ball is struck before we hear the sound of the stroke. But no sound is audible at all from such a distance that the interval counts practically for anything important. We doubt much if any sound, however loud, is capable of being transmitted to a distance which it would require five minutes to reach. It is very different when we come to speak of hours, days, and even years. We generally look for no stronger evidence of the present existence of anything than that we now see it. To have seen a thing at a particular time in a particular place, is universally held conclusive of the fact that it was at that time in that place. Any exception to this is generally, and most truly, set down as an optical delusion, arising from disease of the organ of sight. How marvellous does it then appear to us to be told, that, carrying our glance beyond the narrow limits of our earthly horizon, we can not only see far off into space, but far back into time! that we can receive information of things existing ages before we were born, not from report, or tradition, or written record, but from the testimony of our own senses! Nay, it is quite conceivable that the object perceived, and the organ perceiving it, may never have co-existed; that the one may have been destroyed long before the other was created. How astonishing to think of light thus bearing upon its wings to future ages the memory of existences long since departed! There would be no end to the speculations, each one more wonderful than another, upon which we might enter in connexion with this very remarkable fact.

(1) We are indebted for a great portion of the materials out of which this paper has been drawn up, to an article in the “North British Review,” for November, 1844, which, if we may hazard a guess, founded upon the understood connexion of that periodical with the Free Church of Scotland, as well as upon various circumstances of internal evidence, we feel inclined to attribute to one of the most eminent in this department of science of the present race of Scottish philosophers.

stand upon, and I will move the earth,"—man can say, and with equal truth, of the numberless worlds which roll around him, "Only let me see them—I ask no more—and I will tell you the laws which regulate their motions, their distances, magnitudes, orbits, and velocities." The accuracy of the observations which were taken before the students of the heavens had the advantage of artificial aids to the sense of sight,—the patience with which these observations were carried out through long courses of years, and their results transmitted from hand to hand, until they formed a body of facts sufficiently comprehensive to admit of general conclusions being drawn from them,—and the ingenuity with which these conclusions were drawn, effects traced to their causes, and the laws of phenomena assigned,—are worthy of all admiration; nor ought we so much to wonder that erroneous theories were formed, as that so much truth was discovered under difficulties so formidable. But it is from the invention of the telescope, an invention which, it would scarcely be too much to say, has raised the physical nature of man, in one of its most important departments, from the level of humanity to that of a higher order of being, that the real growth of astronomy as a science is to be dated. By the discoveries which it brought to light, what might before be deemed only happy guesses, were established as ascertained facts; commonly-received errors were exploded; and the whole science established on a basis of the most irrefragable certainty.

For the benefit of our unscientific readers, we may here state, in one word, without affecting scientific precision of language, the principle on which the construction of telescopes depends. It is simply this—that the relative magnitude of any object, as it appears to the eye, depends upon the magnitude of the angle which it subtends at the point where the rays of light reflected from it into the eye converge. This is the reason why, of two objects of equal size, the nearer appears larger than the more distant. Any method, therefore, by which we can throw an image of an object into such a position in relation to the eye, that it will subtend a larger angle than the object itself does, must make it appear larger to us. This may be effected in two ways—by refraction, or by reflection; by refraction, when the light reflected from an object, passing through a transparent lens of proper form, forms an image of the object in a point called a focus, on the other side of the lens,—and by reflection, when the light striking upon a polished surface of proper form, and reflected back from it, forms an image of the object in a focus between the object and that surface. In these two cases, if we can fall upon means of obtaining a distinct view of the image formed in the focus, we shall see the object magnified, more or less, according to the place into which the image is thrown, which again is dependent upon the form and size of the lens or reflector.

The principle exemplified in the first form of telescope, viz. that by a certain combination of lenses distant objects may be made to appear as if they were near, was the accidental discovery of a Dutch spectacle-maker, named Metius. But its application to the examination of the heavens was the work of Galileo, the wonderful rapidity of whose steps in making this application, with the brilliant series of discoveries immediately resulting from it, are thus eloquently described by Professor Playfair:—

"It was in the year 1609 that the news of a discovery made in Holland reached Galileo, viz. that two glasses had been so combined, as greatly to magnify the objects seen through them. More was not told; and more was not necessary to awaken a mind abundantly alive to all that interested the progress either of science or of art. Galileo applied himself to try various combinations of lenses, and he quickly fell on one which made objects appear greater than when seen by the naked eye, in the proportion of three to one. He soon improved on this construction, and formed one which magnified thirty-two

times, nearly as much as the kind of telescope he used is capable of. That telescope was formed of two lenses; the lens next the object convex, the other concave; the objects were presented upright, and magnified in their linear dimensions in the proportion just assigned.

"Having tried the effect of this combination on terrestrial objects, he next directed it to the moon. What the telescope discovers on the ever-varying face of that luminary is now well known, and needs not to be described: but the sensations which the view must have communicated to the philosopher who first beheld it, may be conceived more easily than expressed. To the immediate impression which they made upon the sense, to the wonder they excited in all who saw them, was added the proof which, on reflection, they afforded of the close resemblance between the earth and the celestial bodies, whose divine nature had been so long and so erroneously contrasted with the ponderous and opaque substance of our globe. The earth and the planets were now proved to be bodies of the same kind, and views were entertained of the universe more suitable to the simplicity and magnificence of nature.

"When the same philosopher directed his telescope to the fixed stars, if he was disappointed at finding their magnitudes not increased, he was astonished and delighted to find them multiplied in so great a degree, and such numbers brought into view, which were invisible to the naked eye. In Jupiter he perceived a large disc, approaching in size to the moon. Near it, as he saw it for the first time, were three luminous points, ranged in a straight line, two of them on one side of the planet, and one on the other. This occasioned no surprise, for they might be small stars not visible to the naked eye, such as he had already discovered in great numbers. By observing them, however, night after night, he found these small stars to be four in number, and to be moons, or satellites, accompanying Jupiter, and revolving round him, as the moon revolves round the earth.

"The eclipses of these satellites, their conjunctions with the planet, their disappearance behind his disc, their periodical revolutions, and the very problem of distinguishing them from one another, offered to an astronomer a series of new and interesting observations.

"In Saturn he saw one large disc, with two smaller ones very near it, and diametrically opposite, and always seen in the same places! But more powerful telescopes were required, before these appearances could be interpreted.

"The horned figure of Venus, and gibbosity of Mars, added to the evidence of the Copernican system, and verified the conjectures of its author, who had ventured to say, that if the sense of sight were sufficiently powerful, we should see Mercury and Venus exhibiting phases similar to those of the moon.

"The spots of the sun derived an interest from their contrast with the luminous disc over which they seemed to pass. They were found to have such regular periods of return as could be derived only from the motion of the disc itself; and thus the sun's revolution on his axis, and the time of that revolution, were clearly ascertained."

Such were the first results of the invention of the telescope,—a succession of discoveries the most splendid, probably, which it ever fell to the lot of one individual to make, and which, in a better age, would have entitled their author to the admiration and gratitude of the whole scientific world, though they were then viewed from many quarters with suspicion and jealousy.

The world had scarcely yet recovered from the wonder excited by these discoveries at the time when Milton thus referred to them, in one of his Homeric digressions—

"Like the moon, whose orb,
Through optic glass, the Tuscan artist views
At evening from the top of Fesole,
Or in Valdarno, to decry new lands,
Rivers, or mountains, in her spotty globe."

And again, when he describes Satan's appearance in the sun :—

"There lands the fiend, a spot like which, perhaps, Astronomer in the sun's lucent orb Through his glazed optic tube yet never saw."

The next great step in this march of discovery was made by Huygens forty years later. "Of the phenomena," we again quote from Playfair, "which the telescope, in the hands of Galileo, had made known, the most paradoxical were those exhibited by Saturn; sometimes attended by two globes, one on each side, without any relative motion, but which would, at stated times, disappear for a while, and leave the planet single, like the other heavenly bodies. Nearly forty years had elapsed, without any further insight into these mysterious appearances, when Huygens began to examine the heavens with telescopes of his own construction, better and more powerful than any which had yet been employed. The two globes that had appeared insulated, were now seen connected by a circular and luminous belt, going quite round the planet. At last it was found that all these appearances resulted from a broad ring surrounding Saturn, and seen obliquely from the earth." In the year 1655, Huygens also discovered a satellite of Saturn.

The instruments with which these discoveries were made, were telescopes of twelve and twenty-four Rhinland feet in focal length, made by Huygens' own hands. In prosecuting his improvements, so as to obtain instruments of still greater power, he met with mechanical difficulties which it required some ingenuity to surmount. The length of tube required for great focal distances, and the difficulty of placing such tubes when constructed, and elevating them so that they might be directed to the required part of the heavens, and of preventing such vibration as must disturb the image formed, suggested to him the possibility of dispensing with such long tubes altogether; which he did in this way. Having fixed his object glass in a short tube, he mounted it at the upper end of a very long pole like a mast, so that this little tube could be easily turned in every possible direction, upon a ball and socket joint. This was effected by a long silk string attached to the tube, by means of which he could bring its axis into the same line with the axis of the eye tube, which he held in his hand. The ball and socket which carried the object-glass tube were fixed upon a stage, which, by means of a pulley, could be raised, or lowered, in a groove, cut out of the upright pole. By this contrivance Huygens was enabled to use telescopes more than 120 feet long.

Telescopes of still greater power, on the refracting principle, were constructed by Campani and others in the course of the same century, by means of which many important discoveries were made. But the inconvenience and difficulty of constructing instruments of such length, and the imperfection of the image formed by refracting telescopes—that is, telescopes in which the object to be viewed is looked at directly through a magnifying object-glass,—arising from the different refrangibility of the different rays of light, in consequence of which they could not, in passing through a lens, be made to converge accurately into a single focus, suggested the adoption of reflectors instead of object-glasses in the construction of telescopes,—reflectors, if made of the proper form and material, having equally, with a lens, the power of forming an enlarged image of an object, and not being subject to any source of error similar to that which arises from the unequal refraction of different rays. This improvement was first suggested in 1663, by Gregory, then a young man, but of remarkable genius. He proposed to obviate the inconveniences of the refracting telescope by substituting for the object-glass a metallic speculum of a parabolic figure, to receive the image, and to reflect it towards a small speculum of the same metal placed opposite; this again was to return the image to

an eye-glass placed behind the great speculum, which for that purpose was to be perforated in its centre. But not possessing himself sufficient mechanical dexterity to make the specula he required, and not being able to find in the remote northern town in which he lived (Aberdeen) any workman capable of carrying out his invention, he was obliged, after some fruitless attempts, to give up the pursuit. But the splendid optical discoveries of Newton having led him, some years afterwards, into a similar train of thought in regard to the means of obviating the defects of refracting telescopes, and, as he chanced to be possessed, in addition to his matchless genius, of the natural aptitude for mechanical construction in which Gregory was deficient, he very soon succeeded in constructing a reflecting telescope, differing from that suggested by Gregory in this, that, by placing the eye-glass at the side, instead of the end, of his telescope, he was enabled to dispense with the smallest of the two reflectors altogether. The advantage of this was, that it was nearly equivalent to doubling the area of the speculum, as one-half of the incident light is lost by the second reflection. He thus describes in a letter to the Secretary of the Royal Society, dated in 1672, the train of thought by which he was led to the discovery :—"The different refrangibility of the rays of light made me take reflections into consideration; and, finding them regular, so that the angle of reflection of all sorts of rays was equal to the angle of incidence, I understood that, by their mediation, optic instruments might be brought to any degree of perfection imaginable, providing a reflecting substance could be found which would polish as finely as glass, and reflect as much light as glass transmits, and the art of communicating to it a parabolic figure be also obtained." The first reflecting telescope made by Newton was only six inches long, with a speculum of an inch in aperture; but it magnified forty times, and performed as well as a six foot refractor, showing the satellites of Jupiter, and the phases of Venus. In 1671 he completed another reflecting telescope with a speculum 23½ inches in diameter. This telescope is now in the library of the Royal Society, and bears the following inscription :—

THE FIRST REFLECTING TELESCOPE, INVENTED BY SIR ISAAC NEWTON, AND MADE WITH HIS OWN HANDS.

(To be continued.)

NATURAL HISTORY OF BIRDS.—No. VI.

THE HIRUNDINIDÆ, OR SWALLOW FAMILY.

NONE of the feathered tribes suggest more beautiful images than the swallows. Some birds usher in the approach of winter, and lead our thoughts to the departing splendours of autumn, forcing us to contemplate the invasion of snow, sleet, and tempest, and all the sharp severity of biting winter. Thus, the cry of the birds which rush to our shores in the months of October and November, reminds us of brightness and sunny beauty departing.

But the Hirundines gladden all hearts, and seem like heralds of spring's perfumed gales, as, in fantastic whirl and dart, they exult beneath the life-creating, life-rejoicing sun. At first, one skims the pool with an arrow's speed, as if fearing the touch of some icy blast; then others appear, darting over the gardens, and circling our houses, till at last we see whole colonies busy in their airy hunting-spaces, or flashing with snow-white breasts and purplish wings by meadows, lanes, and rivers. The peculiar life in which the swallow family delights, is another cause of the interest felt for these birds. They seem created for a more refined

existence than other birds; earth is not their home, but the bright blue sky, and the lofty pathways of the air. There do these happy birds sport and wheel, in their full felicity, for hours, floating without effort in that rare expanse, which others of the feathered tribes use chiefly as a highway, and not a home. No birds touch the earth so rarely as the swallows; and for this aerial life their structure is beautifully adapted. Look at one, as it comes sweeping along the village road, within a few inches of the ground, which it touches not, and passes close by your person, as if conscious of your inability to harm or seize it during that arrowy flight. Watch the bird with a keen eye, for there is little time for observation with such a winged machine. Did you mark the shape of its body? What work of human science does it most resemble? See how full the forepart of the animal is; mark how it tapers gradually towards the tail; and then remember that such is the principle upon which the fastest sailing ships are constructed. Thus the highest skill of the ship-builder only aims to develop the mechanical principle upon which every swallow is organized. The plumage is also peculiarly fitted to promote flight, being firmly compacted, and so not liable to be ruffled by the breezes encountered in these rapid and long voyages, which excite our wonder and admiration. The wings resemble oars of great power, and are moved by muscles of singular force; whilst the long forked tail supplies a never-failing rudder to guide this bird through those numerous windings in which it delights. The food is seized during flying, and this requires a peculiar construction of the mouth, and also the keenest powers of sight. We accordingly find that the swallow's mandibles open as far back as the eyes, thus producing a large gape, in which insects are caught as by a net.

There are five or six varieties of the swallow family; the most known in England being the Chimney Swallow, House Martin, Sand Martin, and Swift, all of which are familiar to us.

The Chimney Swallow. (*Hirundo Rustica*, or *Hirundo Domestica*.) This species arrives here in April, often during the early part of the month, and forms the van of the great swallow army, reaching England about twenty days before the Martins. The English name arose from its selection of chimneys for resting localities. These places are generally chosen by the bird, though it sometimes builds in the shafts of old coal mines, which the swallow may deem good substitutes for chimneys.

The Latin designation, *Hirundo Rustica*, (Rural Swallow,) given by Linnæus, is not well applied, as it will suit the rest of the Swallows quite as well. *Hirundo Domestica*, (House, or Tame Swallow,) given by Ray, would be more appropriate; but this would apply with a stricter truth to the martin. We must not, however, quarrel with these long-appropriated names, especially as no inconvenience can now attend their use. Whence come these swallows? From the sunny land of Africa: thither they have been traced, and thence their track has been observed, when spring calls them to the bright lanes and meads of England.

"The Swallow knows her time,
And on the vernal breezes wings her way
O'er mountain, plain, and far extending seas,
From Afric's torrid sands to Britain's shores."

It is probable that chimney, and other swallows, do not travel direct from England to Africa, but proceed through Spain, Italy, and Greece, to that continent. It is supposed that they penetrate far into Africa, as Bruce saw them in Abyssinia during winter. What a range for these beautiful birds! In winter sporting round the fountains of the Nile, sweeping over the pyramids, and uttering their happy twitter amid the ruins of Thebes; in summer skimming the waters of the Thames, and nestling in "Windsor's proud keep;" whilst autumn brings them to the walls of the Alhambra, and

the arches of the Colosseum. The chimney-swallows do not arrive in a compact body: certain small bands precede, and scatter themselves thinly over the country, appearing during the short intervals of calm and sunshine. From these scanty arrivals arose the proverb, "one swallow does not make summer;" which is found in most of the European languages. As Swallows moult in their terrid homes, before undertaking their great spring journey, they come to us clothed in the first brightness of their plumage, which is not tarnished by their rapid flight over sea and land. We can, therefore, easily distinguish the different varieties, by attending to certain diversities of colour, before the brilliancy becomes dimmed by their nesting labours. The chimney-swallow may be distinguished by three particulars—by the reddish mark on the throat, whereas the martin is snow-white in that part; the tail is also more forked than the house-swallow, which is caused by the great length of the outside tail feathers; and by the colour of its belly, which is a reddish white. This last circumstance, with the throat spot, will enable us to tell whether one of these birds on the wing is the chimney-swallow, or martin, as such peculiarities are more easily noticed during the numerous windings of the bird, than the comparative length of the tail.

The plumage of this swallow is somewhat dimmed by descending into sooty chimneys, which, with its naturally dusky colours, renders the *Hirundo Domestica* less beautiful than the martin. It exhibits, nevertheless, the most brilliant steel-blue tints on the back and wings, which are best observed when the bird is sweeping along the surface of a road or meadow, close to the ground: then we can easily discern the radiancy of each tint, as the little insect-hunter passes rapidly to and fro. The localities most prized by this swallow are buildings near water, over which they hunt for food.

"I delight to see
How suddenly he skims the glassy pool;
How quaintly dips; and with an arrow's speed
Whisks by."

In such places every chimney has a fair chance of being occupied by these busy tenants, to the no small discomfort of thrifty housewives on the approach of winter, when the accumulated mass of nests either prevents the kindling of a fire, or causes the destruction of the chimney by its combustion. It might be imagined the unpleasant circumstances of soot and smoke would deter so elegant a bird from building in such places; but warmth and security repay the swallow for those nuisances. This propensity to build in chimneys cannot be gratified by the bird in those districts uninhabited by Europeans, or where chimneys are unknown. In such countries this swallow recurs to its natural nesting places, the hollow trunks of old trees, in which thousands are often found roosting. This is the case in the unpeopled wastes of America, where certain time-worn trees have been for many generations named, "Swallow trees," being, in fact, the homes of countless hosts of these birds. In some parts this swallow is said to prefer barns and outhouses to chimneys, which is the case in Sweden and Scotland. Does this arise from the fuel used in such places producing a soot of an unpleasant and irritating nature? There is doubtless a law regulating the choice of the nest by a bird, which is not less founded on nature than the principles which originate the bird's existence. Hence, the selection of chimneys and hollow trees in some countries, and the avoidance of them in others, is not a result independent of ornithological laws. The nests of the chimney-swallow differ from the martin's house in one particular. It is open at the top, whereas the martin has a roof to its abode, and the entrance is in the side; a diversity of architecture required by the distinct habits of the two birds.

The chimney-swallow, in leaving its nest, must dart upwards to reach the top of the shaft; in descending,

the bird's object is to alight directly on the nest entrance. Both operations require the nest to be open at top. The martin launches horizontally from its nest, and sweeping back to the entrance finds its door exactly before it; a circumstance required by the frequent journeyings of the bird to and fro. The chimney-swallow does not often use again the nest of the previous year, preferring to construct a new residence, which it frequently raises on the old nest, thus piling tier upon tier, and in some chimneys forming a complete lining of its mud and straw work. The eggs are white, with brown or reddish spots, representing, by their diversified surfaces, the varied plumage of the blithe creature which in due time emerges from those little inclosures of bird-life.

The food of these swallows consists wholly of insects, which they catch whilst flying. The velocity of their movements prevents the observer from seeing the capture of the prey, but the event is notified by a peculiar sharp snap, which is easily heard, and arises from the rapid closing of the mandibles upon the insect.

Most persons accustomed to walk in the country have experienced the torment produced by insects flying into the eye, and the difficulty of extracting these little persecutors. Such insects are principally of one kind, and so small that we are unable to avoid their sudden darts, whilst their sharp spiky members lacerate the tender eyes. But these are just the insects most sought by the chimney-swallow, and by all this family of birds. Frequently this member of the Hirundinidæ may be seen high in the air pursuing a species of spider, which rises in fine weather to immense elevations.

When we look up into the clear blue sky, we may suppose that all is mere aerial space, that life moves not in these cloudless deeps. In this we are wrong, as great numbers of insects are as well fitted to live in these altitudes as fish to exist in the rivers beneath. In the pursuit of such high-soaring insects the swallow rises until our eyes are unable to detect its form. But when the storm is gathering, and murky clouds conceal the sun's brightness, the insect swarms descend, and the swallow likewise follows their descent. Hence, the low flight of these birds is supposed to indicate the approach of wet weather, or storms; and their higher ranges, the continuance of fine weather. This opinion is often true; but the swallow's low flight does not always precede lowering weather, being often caused by the little elevation at which some insects float. As the swallow is entirely insectivorous, it renders important services by destroying vast quantities of insects, which, if allowed to increase without check, would prove a source of most grievous annoyance to man. Thus, when swallows have been destroyed in the neighbourhood of hop-grounds and orchards, great injury has resulted to the crops from insect blights. There are myriads of small and active insects, which few birds can destroy, except the swallow, which is alone able to continue the pursuit, through the most rapid and serpentine windings. Some hundreds of insects are probably destroyed every day by a pair of these birds; the annual number consumed by all the swallows must therefore be incalculable. A year without swallows would bring upon our fields and gardens a plague like that of Egypt. Let us, therefore, rejoice in the appearance of these beautiful birds, the habits of which are so interesting, and full of advantage to mankind.

The many hours which these birds continue on the wing, and the rapidity of their flight, cause them to pass over immense spaces during their lives. Wilson makes a calculation, which gives eighty-nine times the circumference of the globe, as the space passed over by a swallow in ten years, to which period most of the birds live. He supposes the flight to equal one mile a minute, and that the swallow is on the wing for ten hours out of every twenty-four. This, in ten years, gives 2,190,000 miles, about eighty-nine times the circumference of the earth: a distance which, perhaps,

no creature except a Swallow ever passes over. Motion is a law of life in most of its forms, but such motion is peculiar to these bright and happy living things.

It is often remarked that nothing in the universe of life presents us with unalloyed ease; the swallow is no exception to this wide law. It might be imagined that those purplish-coloured, merry, and twittering creatures must be without the least degree of pain. We naturally connect such elasticity with joyousness of life. That such is the main character of the swallow's existence, cannot be denied. Where, then, is the pain? It is found in the multitudes of insects which cling to the close plumage of the swallow, and which its rapid and almost incessant flying cannot shake off. Beneath those beautifully-tinted feathers, glowing like rainbow hues in the sunlight, lurk the plagues of the swallow's life. Such insects are not found in the bird when it first reaches our island; but the warmth of the nest, and the close places in which the swallow often builds, soon develop the annoyance; and the chimney-swallow appears to suffer most. So grievous is the infliction, that the bird is reduced to an almost helpless state, and has then been caught by persons who have found the feathers laden with a large insect, called by some *Ocusterina Hirundinis*, or by others the *Hippoboscæ Hirundinis*. The long period during which the young continue in the nest before flight, may cause this evil, by rendering the nests foul, and so favouring the development of these troublesome insects.

After the nesting season is over, the bird lives more in the coolness of the open air, when the pest diminishes; and their long autumnal journey over the seas probably frees the poor birds from the annoyance altogether.

At the end of September the chimney-swallows prepare to seek more sunny homes than we can give them. They cling to the loved localities where their young have been reared as long as possible, as if willing to stay; but the low sighing of the equinoctial gales, and the diminishing brightness of the days, force these birds of summer to seek their loved sunny rays in southern lands. Sometimes the rustic sees their assembled thousands congregating on the village roofs, like some colony of old preparing to leave its ungenial home in the northern forests, for the attractive plains of the south.

But as such human migrations were met by enemies, and for a time repelled, so the swallows are often driven back by the tempests which strew the shores with wrecks. Sometimes, when far from land, the storm meets their hosts; in which case they rest awhile on the solitary sea rocks, or descend on the rigging of some vessel, tossed by the same tempests as themselves. Thus, this migration is one of great toil, and attended with many dangers, and often accompanied by the deaths of thousands in a migratory troop.

The Hirundines are not classed amongst song-birds; yet the chimney-swallow has a soft and melodious note, which may, without the least abuse of language, be called its song. It twitters this sound both perching and flying. A whole orchestra is often formed on a still summer's evening, when the effect of the soft melody is most pleasant. The reader who has heard this pianissimo music stealing from the curiously-adorned parapets of some quiet family mansion in the country, will remember with delight the soothing influence of the melody, as it softly harmonizes with the musical gush of the small fountain playing in its mossy basin.

EUDOSIA; OR, SELF-RESPECT.

A TALE FOR THE YOUNG.¹

MADAME DE RIVET, who was very kind, and anxious to promote the amusement of the young people, proposed that they should go to see a beautiful park, which

(1) Concluded from page 303.

lay four leagues from Romecourt. It was arranged that they should dine there and return in the evening.

Eudisia and her companions looked forward with much pleasure to this expedition; but, the day before, while making the final arrangements, it was found that Madame de Rivey's caleche held but four, and that thus, as Madame de Rivey must of course be in it, and as the four young people could not go alone, one of them was consequently obliged to go in Madame de Croissy's carriage with her and Madame d'Aubonne. This would make a great difference in the pleasure of the excursion.

Madame de Rivey, obliged to do the honours, decided that Julia should go in the carriage. Upon this Julia cried aloud, and said she would rather not go at all: she answered her mother as was her custom when anything displeased her, and said it was very easy for her, who was going in the caleche, to put her to be wearied to death in the carriage.

Madame de Rivey tried to make her daughter hear reason, but without success; however, as her over-indulgence for her was not so great as to make her wanting in consideration for others, she refused to listen to her complaints.

Madame de Croissy offered to take one of her grand-daughters with her, but feebly. She loved to see justice done, and would have been exceedingly annoyed, if, upon this occasion, Madame de Rivey had yielded to her daughter; Madame d'Aubonne said nothing, for she saw that it would be useless.

Julia pouted, and even wept, all the afternoon. So accustomed was she to be indulged in everything, that she found it impossible to endure the least contradiction. Out walking she was every moment wiping away her tears, while Madame de Rivey tried, but unsuccessfully, to console her. This grieved Eudisia so much, that she said in a low voice to her mother, "If I dared, I would beg of Madame de Rivey to give my place to Julia."

"That would be of no use," said her mother, "but if you choose, as you have a little cold, I will say to-morrow morning, that I would rather you did not go in the caleche; I think, indeed, it would be better."

"Oh! mamma," said Eudisia, eagerly, "I assure you the caleche will not do my cold the least harm."

"I agree with you, my child, that the danger is not so great that it need deprive you of the pleasure. I only proposed it because I thought you wished to give your place to Julia."

"So I do, mamma, but —"

"You wished perhaps to propose it in order that her mother might refuse?"

"Oh! no, I assure you."

"Or else you wish to have it known that you give it up to her?"

"But, mamma, is it not natural to wish that Julia may know that it is I that am the cause of her having this pleasure, and not my cold?"

"Even if that were possible, do you think that this way of obliging Julia would be the most agreeable to her? Suppose that you had shown yourself as childish as she has, and that a person of your own age came to give up her place to you, and thus prove how much more sensible she was than you, would you not feel very much humiliated by her generosity?"

"Yes, mamma, that is true."

"Yet it is this humiliation which you wish to cause Julia, as the price of the amusement which you would give her."

"I assure you, mamma, that I have no wish to humiliate her."

"No, but you wish to prove thus to every one that you are better than she, as if it were not sufficient for you to know it."

"But, mamma, can we not have self-respect, unless we detect from others what we do for them?"

"When it follows from what we do for them, that we shall be much more esteemed than they, and at their expense, we only exchange one advantage for another,

and then we should have no reason for self-respect, as we should have made no sacrifice."

"Mamma," said Eudisia, after a moment's reflection, "if you wish, say to Madame de Rivey that I have got a cold."

"As you please, my love," and they spoke of it no more. The next day the weather was beautiful. In the court, Eudisia saw the caleche drawn by a pair of beautiful and spirited horses.

"My cold is almost gone," said she.

"I do not think," said Madame d'Aubonne, "that the caleche will do it any harm."

"You know, mamma," said Eudisia, with a sigh, "that I am not going in it."

"You are still at liberty, my child! I have said nothing to Madame de Rivey. Nothing obliges you to this sacrifice, if it appear too painful to you."

"But, mamma, it would be right, I believe," said Eudisia, sorrowfully.

"My dear child, when we have once entertained the idea of doing a generous action, we run great risk of self-reproach afterwards, if we do not do it. It is possible that, when you are in the caleche, the idea that Julia was miserable in the carriage would very much lessen your enjoyment; that is all; for I repeat to you, no duty obliges you to yield your place to Julia."

"Except, mamma, that I think I should be better able to bear the disappointment than she."

"I agree with you, that, as we said before, there are particular duties imposed on those who feel themselves possessed of more strength and wisdom than others."

"Mamma, I will go in the carriage."

"Are you quite sure that you wish it, my love?"

"I am sure, mamma, that I wish that Julia should go in the caleche."

Madame d'Aubonne embraced her daughter tenderly, for she was much pleased with her.

They went into the parlour, and Madame d'Aubonne expressed her wish to keep Eudisia in the carriage, which was arranged without difficulty.

The good Madame de Rivey was delighted to be able to spare her daughter a disappointment, without failing in consideration to the others. Eudisia said nothing, but no one was surprised at that; they were accustomed to her quiet submission. Julia, though enchanted, could not help blushing a little, for it is very humiliating to have complained weakly of a misfortune which after all does not happen. There was no one dissatisfied but Madame de Croissy, who lost the pleasure of seeing a spoiled child contradicted, at least once in her life.

"I should have thought," said she ironically, "that Mademoiselle Eudisia's education would have made her more courageous against colds."

Madame d'Aubonne smiled as she look at her daughter, and this smile prevented Eudisia from feeling impatient.

In the carriage Madame de Croissy, finding it too warm, wished to let down the window, "provided," she said, in the same tone, "Mademoiselle Eudisia is not afraid of it."

Madame d'Aubonne and her daughter again exchanged an almost imperceptible smile, and Eudisia found that there is a great pleasure in feeling that one is better than others suppose. She enjoyed herself much in the park; in the evening she could not help regretting the return home in the caleche in the beautiful moonlight; but she went to rest, pleased with her day, with herself, and with the satisfaction she had given her mother, who was all day even more occupied with her than usual, calling her when she saw anything pretty, and appearing unable to enjoy anything without her.

The next morning, a painter, who knew Madame de Rivey, came to pay a visit at Romecourt; he was on his way to Paris, and had only half-an-hour to pass at the chateau. While breakfast was preparing, Madame de Rivey wished that he should see the young people's drawings, and Adèle was desired to show them to him.

She, as well as Eudisia, had undertaken to copy from the relieve a very pretty head of a vestal. Eudisia had finished hers, and Adèle, though, as usual, she had hardly worked at all at hers, had, also as usual, told her grandmother that hers was finished; and Madame de Croissy, who never looked at it, asked no more. However, as she could not show it to the painter, she decided to show him as her own the head Eudisia had drawn. The painter thought it admirable; it was, indeed, the best Eudisia had ever done. While he still held it in his hand, Madame de Croissy called Adèle into the garden; she went with her usual heedlessness, without putting by the drawing, and at the same moment Madame d'Aubonne and Eudisia entered by the other door.

"Look," said the painter to them, "at this beautiful head, drawn by Mademoiselle Adèle."

"By Adèle?" said Eudisia, colouring, and looking at her mother.

"I do not think it was done by Adèle," said Madame d'Aubonne.

"I beg your pardon," said the painter, "she told me so herself." And approaching the glass door which opened on the garden, where Adèle, standing on the top of the steps, was talking to her grandmother who was below, "Is not this drawing which you have just shown me, yours, Mademoiselle?" inquired he.

"Yes, Sir," said Adèle, hardly turning her head, lest her grandmother should observe her, and should ask to see the drawing.

Then the painter again began to praise it. Eudisia expected that her mother would speak, but she was silent, and Eudisia did not venture to say anything. The painter asked to see her drawings; she said she had none; but the painter, seeing a portfolio with her name upon it, drew from it an old head with which Eudisia was not satisfied, and which she had brought into the country to correct. He pointed out its faults, coldly praised the taste which it evinced, and then returned to the vestal's head. Eudisia's heart was very full; she looked at her mother as if to entreat of her to speak, but now they were called to breakfast.

The painter, questioned on the subject of the drawings, expressed himself politely in respect to the three other young persons, but said that Adèle possessed a real talent for the art.

"Ah! not so great as Mademoiselle Eudisia," said Madame de Croissy, casting upon Eudisia a look of ironical satisfaction.

"I assure you, madam," said the painter, "that the vestal's head, which Mademoiselle Adèle showed me, shows the greatest taste for drawing."

Adèle changed colour, and dared not raise her eyes.

"Nevertheless I can assure you," said Madame de Croissy, in the same tone, "that if you heard the advice which Mademoiselle Eudisia gives, you would suppose her to be more talented than any other young person of her age."

The painter looked at Eudisia with surprise. She was indignant; her mother who sat next her pressed her hand beneath the table to try and calm her. She could not eat; and, as soon as she could leave the table, she went into the garden, where her mother followed her; she found her crying with grief and vexation.

"What ails you, my Eudisia?" said she, pressing her tenderly in her arms.

"Indeed, mamma," said Eudisia, in great agitation, "it is very hard, and Madame de Croissy to —"

"What harm does Madame de Croissy's injustice do you? Which of us believes anything of what she said?"

"The painter believes it. Certainly I would not have said anything before her, but why was it necessary that the painter should think my drawing was done by Adèle? Mamma, you have countenanced Adèle's falsehood," added she, in a reproachful tone.

"Adèle's education does not concern me," replied Madame d'Aubonne, "but yours is intrusted to me; I am obliged to watch over your virtues as my own, and

to point out to you your own duty without thinking of that of others."

"It was not my duty," said Eudisia more gently, "to let it be thought that my drawing was Adèle's."

"It was not the duty, certainly, of a person who only aspires to being considered a good artist; but that of a person who wishes to have strength and virtue was to sacrifice her own self-love to preserve the character of her companion. Tell me, my child, if, to save yourself the slight annoyance of being considered the least talented, you had covered Adèle, before this painter, with the shame of a falsehood, would you not now have felt embarrassed before her?"

"Indeed, mamma, I believe I should."

"And you ought to be so; for you would not have had the courage to make a small sacrifice to save her a great humiliation."

"You are right, mamma; but there are sometimes very difficult things to be done, to deserve self-esteem."

"And if it were not very difficult, do you not think, my child, that every one would desire it as well as you?"

Although soothed by her conversation with her mother, Eudisia preserved a little rancour against Adèle, and was a part of the day without speaking to her. But she saw Adèle so confused, so occupied in endeavouring to please her, without daring to approach her or speak directly to her, that she could not help feeling the greatest compassion for her. She saw that the most painful feeling in the world is to have a grave fault to reproach oneself with; and felt that it was impossible to preserve resentment against one so unhappy. She spoke to her then as usual, and as soon as she had recovered her good humour she no longer felt any vexation.

But she had still a great trial to sustain. One day, Honorine, who stopped at nothing when once a whim had entered her head, finding one of the park gates open, chose to go out and run upon the road. Eudisia, who at the time was alone with her, feeling how unbecoming this was for a young lady, begged of her to return.

She saw at a distance some one coming from the house, and, trembling lest Honorine should be seen, she ventured to go herself outside the gate to call her, and keeping close to it, "Honorine!" cried she, "my dear Honorine! come back, I entreat you; oh! come back! come back!" At this moment, thinking she heard the voice of Madame de Croissy, she rushed forward to hasten Honorine who was coming very slowly; her gown, catching in the gate drew it after her, and, while the check threw her down, the gate shut closely, and she and Honorine were left on the outside without the power of re-entering. She tried in vain to open the gate by passing her hand through the bars; the lock was hard; perhaps there was even a secret spring; she could not succeed. In despair she would have called some one to open it, determined, without throwing the blame upon Honorine, to tell what had happened; but Honorine, who had as little courage to sustain a slight reproof, as to avoid deserving a great one, entreated her not to do so. She knew that her grandmother was walking in the garden, from whence she might hear them; she said it would be better to return to the château through the court, but to reach this they had to go a good distance round by the road. Eudisia was unwilling to leave the gate; she was at last, however, obliged to follow her cousin, who was resolved to go on, for, if she called her, Honorine's imprudent proceeding would have been discovered.

She went timidly, keeping close to the park walls, walking as fast as she could, terrified lest they should be seen, and continually calling back Honorine, who, on the contrary, was quite delighted with the adventure, and was running in the fields. They were still some distance from the château when a carriage passed them, filled with ladies who were going to dine at Romacourt.

Now Eudisia was in greater despair than ever, fearing that they had been recognised; she redoubled her speed, while Honorine, who began to be afraid, slackened hers to put off the dreaded moment.

Their fears were well-founded; they had been seen. As soon as the carriage had arrived at Romecourt, Eudisia and Honorine were sent for to assist Adèle and Julia to entertain a young girl who had come with her mother and two other ladies. They could not be found. "I think," said a gentleman who had accompanied the ladies on horseback, "that I saw them on the road."

"On the road! alone!" cried Madame de Croissy.

"It appeared to me very extraordinary," said one of the ladies, "nevertheless it was certainly they."

They were again searched for every where. Adèle knew not what had become of her sister, nor Madame d'Aubonne of her daughter; she went down stairs, and was beginning to feel very anxious, when a servant who saw them entering the court announced that they were coming.

Every one ran out upon the steps, and, from a distance, they saw this assembly waiting to receive them.

Eudisia, though ready to faint with fear and shame, was obliged to draw on Honorine, who was unwilling to come farther. From the middle of the court they heard Madame de Croissy's voice crying, "Is it possible, young ladies? Is it credible?"

Madame d'Aubonne ran to meet her daughter; "Eudisia," said she, "what has happened? How was it that —"

Eudisia could not explain, for Honorine was close behind her, but she pressed and kissed her mother's hand, looked at her and then at Honorine, so that Madame d'Aubonne easily perceived that her daughter was not to blame. They now arrived, amidst the reprimands and exclamations of Madame de Croissy, who, when they were ascending the steps, turned to the strangers and said, "I beg of you to believe that Honorine is not so ill brought up as to have imagined such an escapade by herself; Mademoiselle Eudisia took her, and almost by force; I witnessed it myself."

Eudisia was ready to exclaim.

"Yes, Mademoiselle," continued Madame de Croissy, in an impressive tone, "I was walking in the wood near the gate, and heard you say, 'Come, I entreat you; I did not know what you were asking, but I see now, though I could never have imagined it. Deny it, if you dare.'"

Madame de Croissy had indeed heard, and badly heard, what she had said to Honorine, to try and make her return. Eudisia said nothing; she looked down, and burst into tears.

Madame d'Aubonne looked at her with anxiety, drew her aside, and Eudisia, with many tears, told her all that had occurred.

"I do not know, niece, what story she may be telling you," cried Madame de Croissy, "but I heard it with my own ears, and I hope you will believe me as much as Mademoiselle Eudisia."

"Eudisia tells no stories, aunt," replied Madame d'Aubonne, firmly. "Pardon me, but if I am satisfied with her conduct, no other person has reason to complain of it."

"I shall certainly not take that liberty," replied Madame de Croissy, much irritated. "But let her have the goodness to keep apart from her cousins; for the future she may do whatever she chooses, I shall not trouble myself about it."

Eudisia could bear it no longer. Her mother led her away, embraced and consoled her.

"Mamma," said she, sobbing, "without you, I should never have had courage."

"I am sure that you would, my child; you would have borne all, rather than expose Honorine to her grandmother's anger. But we are friends, and we will support each other. Do you not think that they consider me as much in the wrong as you?"

Eudisia embraced her mother with transport. She was so proud, so happy, to be thus treated as her equal. "But, mamma," said she, "without saying anything to Madame de Croissy, we might tell the others the truth."

"You would let them know, then, that Honorine has had the cowardice to let you be accused of a fault, of which she alone was guilty? Would you be weak in your turn? You have only done right in not accusing Honorine; many others would have done the same; but if you are satisfied with that, you have no right to consider yourself generous, you will not be entitled to self-respect."

"Mamma, that is a pleasure, then, that I must buy very dear."

"My child, it is only permitted to those who have courage to sacrifice all for it."

Strengthened by her mother's words, Eudisia returned courageously with her into the drawing-room, where they had obtained pardon for Honorine, whom Madame de Croissy would have sent to dine in her room. Her modest and tranquil countenance, the unaffectedly tender manner of her mother towards her, prevented Madame de Croissy from saying more, and made the others suspect that Eudisia could not have been so much to blame. Madame de Rivoy, who knew her well, had already told them, that she considered it impossible. Julia, by dint of questioning, succeeded in gaining the truth from Honorine, and told it to her mother, on condition that she should say nothing to Madame de Croissy; but the rest heard it, and from that time treated Eudisia with a distinction which showed her that, although we must not count upon it, esteem almost always follows actions done solely from a sense of duty.

THE POPULAR YEAR-BOOK.

September 8 is set apart by the Anglican and Latin Churches in honour of the Nativity of the Blessed Virgin Mary. This festival was instituted by Pope Servius, A. D. 695.

September 12. On this day, 1823, the workmen employed in several of the glass-houses of Newcastle and Gateshead made a procession through the principal streets of the above localities, each bearing in his hand a specimen of the art, remarkable either for its curious construction, or its beauty and elegance. The morning was ushered in with the ringing of bells, and, notice of the intended procession having been previously circulated, numbers of persons crowded the streets. A little after twelve o'clock it moved forward along the Close, amid the cheers of the assembled multitude, the firing of cannon, &c. and preceded by the band of the Tyne Hussars. It was composed of the workmen of the Northumberland, the South Shields, the Wear, (Sunderland,) the Durham and British, (Gateshead,) the Stourbridge, (Gateshead,) and the North Shields Glass Companies, arranged according to the seniority of their respective houses, and each distinguished by appropriate flags. The sky was clear, and the rays of the sun, falling upon the glittering utensils and symbols, imparted richness and grandeur to their appearance. The hat of almost every person in the procession was decorated with a glass feather, whilst a glass star sparkled on the breast, and a chain or collar of variegated glass hung round the neck; some wore sashes round the waist. Each man carried in his hand a staff, with a cross piece on the top, displaying one or more curious or beautiful specimens of art—consisting of decanters, glasses, goblets, jugs, bowls, dishes, &c. the staple articles of the trade, in an endless variety of shape, and of exquisite workmanship; with some representations, remarkable for excellence of miniature, or for curious construction. A glass bugle, which sounded the halts, and played several marches, was much admired for its sweetness and correctness of tone. Several

X.

Then King Edward was an angry man, and his cheek it burned
for rage,
For never a hand of that stalwart band would lift the knightly
gaze:
And he looked upon his many peers, and he looked on his knights
so tall,
And he looked about on the yeomen stout that thronged the
lordly hall,
But churl, and knight, and noble, they were silent one and all.

XI.

And evermore in terror sore around the hall they stood,
More like dead images, I ween, than men of flesh and blood;
So he swore by the Rood that his henchmen good had mickle
cause of blame,
And he cursed the hour when the mountain boor came thither
to his shame.

XII.

Then up and spake Sir Tudor, and his voice was loud and clear,
"Sir King, of all thy merry men will none do battle here?
"Sure by some evil chance the lord hath lost his liegemen's love:—
"When did one hear that a knight should fear to touch an iron
glove?"

XIII.

Now these and other bitter words did bold Sir Tudor say,
But evermore upon the floor the idle gauntlet lay:
Much marvelled then the king, I wis, and his anger passed away
As when the coursing shadows pass athwart the mountain grey.

XIV.

And he spake unto Sir Tudor thus, with wonder in his eye,—
And he spake unto Sir Tudor,—but he spake right courteously:
"Now kneel thou down upon thy knee, and by our kingly word
"Knight shalt thou be full speedily by stroke of our good sword."

XV.

Then stout Sir Tudor answered him, "By good King Arthur made
"A knight I be; then what care I for the stroke of a Saxon
blade?" [knee,—
"I had higher to sit in the saddle than to sink on the bended
"But for the sword,—its flat or edge are both alike to me!"

XVI.

"Gramercy, fellow!" quoth the king, "thy wit is wondrous keen!
"Yet by my halidome I swear thou bear'st a lordly mien:—
"According to King Arthur's laws thou shalt be held a knight,
"For pity it were to lose a bold defender of our right.
"Nought hast thou done might ill beseem thy knighthood's fair
estate:
"In God's name and Saint David's go,—be bold and fortunate!"

Miscellaneous.

"I have here made only a nosegay of culled flowers, and
have brought nothing of my own, but the string that ties
them."—*Montaigne*.

RELICS.

THE *Journal des Débats*, speaking of the purchase
some time since made by Prince Albert, of the coat
worn by Nelson, when he received his death-wound, at
the battle of Trafalgar—for presentation to Greenwich
Hospital—takes occasion to bring together a number of
examples in illustration of the large sums paid under
the relic-and-rarity-mania; particularly by the rich en-
thusiasts of our own island—more especially, it seems,
subject to that species of influenza. Some of the cases
reported will require testimonials, a not likely to be
forthcoming, ere they will be inclined to admit these
amongst the statistics of the passion. The ivory chair
which Gustavus Vasa received from the town of Lubeck,
was sold, the *Journal des Débats* says, in 1823, for the
sum of 58,000 florins—not far short of 6,000*l*! This

is a startling anecdote to begin with; but such a one
was absolutely necessary to prepare the mind for the
reception of the following.—The coat worn by Charles
the Twelfth, of Sweden, at the battle of Pultawa—pre-
served by Colonel Rosen, who followed the adventurous
monarch to Bender—was sold, in 1825, at Edinburgh,
for the sum of 22,000*l* sterling! This anecdote, the
French paper, itself, thinks should have confirmation.
It makes the rest, however, easy of acceptance—though
there are some even of these which might be a little
difficult of digestion by a faculty less powerfully stimu-
lated. M. A. Lenoir, the founder of the French Mu-
seum, relates that, during the transport of the remains
of Abelard and Heloise to the Petits Augustins, an En-
glishman offered him 100,000 francs (4,000*l*.) for one of
the teeth of Heloise!—At that quotation of the price of
bone, Lord Shaftesbury had a great bargain of the tooth
of Sir Isaac Newton, for which he paid only 730*l*., in
1816! For want of an Englishman at Stockholm, in
1820, the head of Descartes (teeth and all) was absolutely
given away, as the phrase is, at the sale of Dr. Sourmon's
cabinet, for 99 francs.—The following cases fall within
the more mild and familiar examples of this affection—
though it will be seen that the English examples con-
tinue to be far more striking than the foreign pronun-
ciations. Voltaire's cane was sold, in Paris, for 500
francs (20*l*.); Rousseau's waistcoat for 949 francs, and
his copper watch for 500:—Kant's wig, in spite of all
the promise contained in the apophthegm, which sug-
gests the seat of a doctor's wisdom, brought only 200
francs; whereas, the wig of Sterne fetched, in London,
200 guineas—5,250 francs! Luckily, the inference,
against the philosophers, as to the relative value (ac-
cording to collectors' measure) of the good things
generally covered by the two latter articles, is escaped,
by virtue of the differences in the development of this
passion established in the previous cases. The hat worn
by Napoleon at Eylau, was, in 1835, carried off by
M. Lacroix, from thirty-two competitors, for the sum of
1,920 francs—about 77*l*.; while Sir Francis Burdett
paid 500*l*. for the two pens used in the signature of the
treaty of Amiens.—*Athenæum*.

COMMERCIAL VALUE OF INSECTS.

THE importance of insects, commercially speaking,
is scarcely ever thought of. Great Britain does not pay
less than 1,000,000 of dollars annually for the dried
carcasses of the tiny insect, the cochineal; and another
Indian insect, gum shellac, is scarcely less valuable.
More than 1,500,000 of human beings derive their sole
support from the culture and manufacture of silk; and
the silkworm alone creates an annual circulating medium
of nearly 200,000,000 of dollars. 500,000 dollars are
annually spent in England alone for foreign honey,—
at least 10,000 cwt. of wax is imported into that country
every year. Then, there are the gall-nuts of commerce,
used for dyeing and making ink, &c.; while the cantha-
rides, or Spanish fly, is an absolute indispensable in
materia medica.—*Boston Transcript*.

THERE will come a time when three words uttered
with charity and meekness, shall receive a far more
blessed reward, than three thousand volumes written
with disdainful sharpness of wit. But the manner of
men's writing must not alienate our hearts from the
truth, if it appear they have the truth.—HOOKER.

PUBLIC BATHS AND WASH-HOUSES.

AMIDST the practical social reforms of the day, one of the healthiest indications is the general desire to better the condition of the labouring classes. This has been, we know, the ostensible object of all the politicians of our time; but the subject is gradually becoming freed from the party character which it may at one time have borne; and measures for improving the sanitary condition of the people are now zealously taken up by all respecters of good order.

The "unhealthiness of towns, its causes and remedies," has for some time occupied the attention of Parliament, and that very numerous and influential class in this country who enjoy "the luxury of doing good." The health of the masses, and more especially of those whose labours contribute to the comforts and luxuries of society, is of very difficult preservation. Health, we know, is the basis of all social virtues; but we also know, that both are endangered by the yearly increasing tendency of society to concentrate into large and overgrown masses. A country life has, from very early times, been found more healthy, both in body and mind, than a town life. "A complete school of poetry has, indeed, (says Lord Ebrington,) formed the pastoral to celebrate the simple pleasures and occupations of rural life, and to contrast its health and happiness with the dangers and vexations of crowded cities. Nor have modern writers, either poets or philosophers, been wanting to perpetuate, with all the graces of imagery and eloquence, the same opinions and feelings among us." And yet, in spite of this, we find that cities have increased and are increasing. In vain were statutes passed in the reign of Queen Elizabeth, forbidding the erection of any new buildings, or the conversion of existing ones into more, or even underletting them to additional inmates, within three miles of London and Westminster. In vain did Cobbett denounce the metropolis as the *wen* of the country, an unnatural and pernicious excrescence, impoverishing the rest of the body politic. London is continually growing, and not London alone, but nearly all the great towns of the country at the same time; and we perfectly agree with the opinion of the eloquent Dr. Vaughan, that the present is "the age of great cities."

The sanitary measures to which we have alluded are too numerous for specification in this place; but that named at the head of this paper has a special claim to our present attention, from the plan just coming into operation in the metropolis. The measure must prove so conducive to individual health and domestic comfort, that it is surprising it had not been thought of before: it involves no costly or complicated apparatus; it has none of the uncertainty of a mere project, but great simplicity of arrangement; whilst Nature herself, from

"the crystal well," has most liberally supplied the main agent.

The experiment made for ascertaining whether our *very poor* would, if an opportunity were offered gratuitously, wash their clothes and bathe themselves, was made some years since at Liverpool with great success. The idea, if we are rightly informed, originated in the provision for the above purpose which was made at Liverpool during the frightful visitation of the Cholera in 1832. The Corporation very wisely encouraged the measure by a grant of money; and it has so far succeeded in that town, that another grant is contemplated for aiding to form a second Bathing and Washing Establishment. The Liverpool Baths, we should add, are used by merchants' clerks, tradesmen's apprentices, and working-men.

The first experiment of the kind made in London was in the Eastern Asylum of the Houseless Poor, in Glasshouse Yard, East Smithfield; where, between June and November, 1845, the number of Bathers or Washers amounted to 29,081, at the cost of somewhat less than three-halfpence for each operation. There was no public announcement of the existence of such an establishment; it was merely verbal; yet the bees soon found out the honey-pot, and were often heard to declare, "It is the best thing that has been done for the poor; for they feel stronger and better than when they were so dirty; much better able to go to seek for work, and much more likely to get it." In some cases, persons who entered exceedingly dirty, having no other clothes than scantily covered their persons, on being accommodated temporarily with a gown, washed, dried, and mended their rags, used the Bath, and went away clean, happy, and comfortable. Again, many of the inhabitants of the neighbourhood improved so much in their habits and appearance, that persons, ignorant of the existence of these Baths and Wash-houses, often remarked—"How much better the people in Wapping are looking, and how much cleaner they are, more especially on a Sunday."

Such was the success of the first attempt to learn the general disposition of the poor to practise cleanliness: the establishment in Glasshouse Yard was, indeed, but an impromptu one, but it decided the public mind in favour of a project mooted in the City some months previously—in October, 1844. On the 16th, a large and influential meeting was held at the Mansion House "for the purpose of forming an Association to furnish the Labouring Poor with Baths and Wash-houses;" the Lord Mayor in the Chair. The attendance of the Clergy was numerous; they, doubtless, feeling the truth of the homely maxim, that "Cleanliness is next to Godliness." The first resolution was moved by the Lord Bishop of London, who, in a speech altogether

characteristic of this large-minded prelate, drew a fearful picture of the moral evils of London, and a gratifying prospect of the means of averting them. "The crowds who lined the streets of this great metropolis," said his Lordship, "and who were surrounded on all sides by the evidences of its wealth and grandeur, were little aware of the fearful masses of human misery and wretchedness masked by the splendour of those streets. They were little aware that, within a few yards of the shops filled with the richest productions of the world, and of those counting-houses belonging to men whose fortunes were to be reckoned by millions,—that in that very 'city whose merchants were princes,'—there was a vast amount of human misery and wretchedness masked by the splendid front presented by her great streets. . . . A very great part of the prevailing misery arose from the crowded state of the habitations of the poor, which made it impossible for them, in many cases, to cultivate those habits of cleanliness which were equally essential to the physical comfort and the sound moral state of the population." The Bishop then referred to his visit to the Baths and Wash-houses which had been established in Liverpool two years. "As many," said his Lordship, "as two hundred and twenty labourers had bathed in them on the Saturday, though there were only eighteen Baths and a Vapour-bath. The superintendent overheard one labouring man say to another, after using a Tepid Bath, 'I feel as if I could do another week's work now I have been in the Bath.' Suppose that to take place on a Saturday, the results were not likely to be confined to agreeable sensations and the revival of physical strength; but the working man would be more fit, and probably more disposed, to the due observance of that holy day which immediately follows Saturday, to the health and prosperity of the soul. There was hardly any one cause which operated more to keep away the poorest classes from the Lord's house, on the Lord's day, than the habits of uncleanness in which they were, against their own inclination, compelled to live; and it was from such compulsory state of filthiness that this new Society was designed to rescue them." The Bishop then quoted a variety of evidence to prove the misery, dirt, and unhealthiness, caused by poor persons having to wash their linen in small, overcrowded rooms; in some of which cases, the linen, when washed, was more infectious than before. "Surely, then," added his Lordship, "if there were a work of charity upon earth, it was that of assisting the mothers of families to find the means of really and effectually washing the family linen, and of drying it well and quickly, without injury to the inhabitants of her humble dwelling."

We have thus glanced at the speech of the Bishop of London, because it detailed, with extraordinary minuteness and effect, the great advantages of the proposed system: though its objects are, to all appearance, of a trifling character, its results promise to be of the very first importance. At the Mansion House meeting, the Bishop of London was appointed President of the new Association; subscription lists were opened, and the meeting separated with the impression, that never had the Egyptian Hall been used for a better purpose.

The next step in the movement was the laying of the foundation-stone of a model Bath and Wash-house Establishment in Wentworth-street, Whitechapel, on December 16, 1845. The ceremony was performed by the Lord Mayor, accompanied by several "merchant-princes": there was no mahogany wheelbarrow or silver spade used on the occasion; but it was celebrated by a public dinner in the evening, at which Mr. B. Hawes stated, that, at the new Establishment, a Warm Bath for ablution, and sixty gallons of hot water, with soap and soda, for washing linen, &c, would be given to the poor for three-halfpence. The statistics of the subject were also enlivened by Archdeacon Hale stating that he had been asked if he was coming there to dine with the "tubs;" and Mr. Hawes "set the table in a roar," by declaring that

one-third of the population were unacquainted with the use of "the inestimable luxury" of soap; and that a philosophical writer had observed, "The consumption of soap increased in a country in proportion to its civilisation." There was, however, method in all this oddity; and about one thousand pounds were collected during the evening; the wine thus aiding the warmth of the incentive to good works.

We must now leave the citizens, and their establishment in the east, to chronicle the spread of the improvement to another quarter of the metropolis, viz. the north-west. In this district a Society was formed under the patronage of the Bishop of London, and the able presidency of the late venerable Vicar of St. Pancras; the Committee being chosen from among the most influential inhabitants of that large and wealthy parish. Towards the close of last year, they obtained, through the liberality of the Directors of the New River Company, at a nominal rent, an excellent site, both as to extent and locality, for the proposed Baths and Wash-houses, consisting of the greater part of the vacant ground at the base of the reservoir in the Hampstead Road. The Directors also generously offered the necessary supply of water, without charge for the first six months of the Society's operations, and afterwards at the lowest possible cost. A plan of the building was then decided upon by the Committee, and approved by Mr. Mylne, the Engineer to the Company; the work was commenced as soon as the subscription list warranted, and the buildings are now just ready for opening.

The site possesses some antiquarian interest. It was anciently a portion of the ground of the Manor-place of Totenhall, or Totnam Hall, whence Tottenham Court Road takes its name. The mansion was of the date of the reign of Henry III.; it was a house of entertainment in 1645, and upon its site was built the *Adams and Eve*, painted in Hogarth's *March to Finchley*; part of the old building was in existence a few years since, and a fine spring still remains there; but the public-house has been rebuilt. The Reservoir has been called the Heart of the New River. Pennant, in his *London*, says: "The element, essentially useful as the vital fluid, at first rushes through veins of vast diameter; divides into lesser; and again into thousands of ramifications, which support the life of this most populous city."

The space of ground occupied by the Bath and Wash-houses is about 10,000 square feet. The buildings average 12 feet in width, and 800 in extent, and form nearly three sides of a square; the entrance being by George Street, leading from the New Road to the Hampstead Road. As you enter, on the right is a Committee-room, thence you advance up a passage, parallel with which are ranged five Vapour Baths. At the end of the passage is a short flight of stairs leading into the Receiving-room. To the left is a range of compartments for men's Baths, cold, warm, or shower, at the option of the bather; and paralleled with these, reached by a separate passage, is a range of Baths superiorly fitted up; the total number of these Baths is twenty-two, and they are intended for men. To the right are sixteen Baths for women, of two grades, as to fittings, and arranged precisely as the men's Baths. The left side of the place is entirely occupied by two large Plunge Baths, one of which is 60 by 20 feet, and the other of smaller dimensions; and both are from 4 to 5 feet in depth. The water for the supply of these Baths will be raised from a spring 200 feet below the surface of the earth.

The charge for admission to the Baths will be, to the inferior 1d. cold, and 2d. warm or vapour; to the superior, 6d. cold, and 1s. warm; to the inferior Plunge Bath 1½d., superior 6d. The several Baths are of copper lined; and the rooms differ only in the quality of the fittings, those for the superior Baths being provided with "dressing" furniture. The Plunge Baths are furnished with separate boxes, or pew-like compartments for dressing; and each has the entire roof glazed. The Vapour Bath

rooms are very neatly finished, and are provided with reclining chairs, &c. In every case, fresh water and a clean towel will be supplied to each bather.

It will thus be seen that the Bath charges vary from 1d. to 1s. The latter charge may, at first, be thought high; but it must be remembered that the neighbourhood, although densely peopled, is not a very poor district; including, as it does, Camden Town, Somers Town, Hampstead Road and its divergent streets. And we do not hesitate to say that the superior Baths will, in every respect, equal those charged at double the price and upwards, at the several Bath Establishments in the metropolis.

We now proceed to describe the Wash-house department, which is, in many respects, the most novel portion of the design. This lies to the right of the women's Baths, is reached by a passage entirely separated from them, and occupies the right angle of the Plan. It consists of double lines of washing-tubs, with five coppers for boiling linen, at the extreme point of the angle, and about midway between the lines of tubs. Each tub is divided, the larger portion for washing in, and the smaller to be made to answer the purpose of a copper by a jet of steam, which will keep the water in a boiling state. The washing will be on "the separate system," or "silent system" if you will, for each woman will be separated from her neighbour by a wooden partition, and need not even turn round until her work is completed, as there is a ledge in front of the tub for placing the things on as they are washed.

The completeness of this arrangement is very striking: the room is well lighted and ventilated, so as to carry off the steam from the tubs, and these are a great improvement upon the rickety and aboriginal wash-tub and stand. It has been urged, perhaps jocosely, that the Washing-room will prove a revival of the "Tittle-tattle" at the conduits of the seventeenth century; but we suspect the orthodox gossips of the wash-tub to be the crones of another generation; or, as Sir Hugh Middleton broke up the gossip at the conduits, so "the schoolmaster" will keep order at the Public Baths and Wash-houses.

We left off, in our manipulatory details, at the ledge of the wash-tub. The "wringing" of the linen is likely to prove the least taciturn business, and it is proposed to shorten this by employing apparatus invented for the purpose; but against all machinery for washing, we suspect there yet remains a strong current of disinclination on the part of the washers.

The Washing-room being passed, we next reach the passage to the Drying and Ironing-room. First, however, we should describe, that parallel with this passage is the room for hot water and steam apparatus. Here is a boiler of 1,500 gallons capacity, and a steam-engine of three-horse power, both of which supply the entire Establishment.

You then cross a Waiting-room, in which there is an exit door for women into Charles Street, and enter the Drying and Ironing-room, lighted from above. Upon one side of the room is a range of closets, with poling, upon which is hung the linen to be dried. Each closet has a valve, and at one extremity of the line is a machine by means of which hot air is blown by fans through a tube underneath the closet; the valve is opened, the hot air enters, and it is then closed, so as to dry the clothes hung upon the poling in a very short time. They are then taken out, and ironed upon the range of board opposite the drying closets; the irons being heated at a large stove at the extremity of the room. Beyond this is another apartment, in which are provided four mangles for the heavier linen.

The Washing department, we are assured, is adapted for washing the linen of 8,000 persons, weekly. The use of a double washing-tub, with an ample supply of hot and cold water, of the coppers, drying closets, and ironing, or mangling apparatus, will be allowed at the rate of one penny for three hours.

Such is an outline of this new Establishment for the

physical and moral improvement of the people. Its cost will nearly reach 5,000*l.*, the greater portion of which has been contributed by philanthropic individuals, who anticipate from its results an important public benefit.

"Even from the body's purity, the mind
Receives a secret, sympathetic aid."

The subscriptions, as yet, fall short of the expenditure; and we shall be happy to find that the pains we have taken to explain the plan have induced the lengthening of the subscription list. The cost being thus once defrayed, it is calculated that the Establishment will, in about two years, support itself by the very moderate scale of charges we have already enumerated.

The Washing department will, unquestionably, add to the domestic comfort of the labouring classes. The "washing day" at home has long been proverbial as one of the greatest of family miseries, even setting aside the higher consideration of the unhealthiness of the practice of washing and drying clothes in the "living room."

The extension of bathing among the industrious classes, will, doubtless, be productive of great moral good. Cleanliness is a duty to society, as well as ourselves, and is the best security for the health of large communities. Hitherto, the Bath has been a costly luxury in this country, especially to the indwellers of towns, who rarely realize the vivid enjoyment which the poet of nature has so exquisitely described—

"Cheer'd by the setting beam, the sprightly youth
Speeds to the well-known pool, whose crystal depth
A sandy bottom shows. Awhile he stands,
Gazing the inverted landscape, half afraid
To meditate the blue profound below;
Then plunges headlong down the circling flood.
His ebon tresses, and his rosy cheek,
Instant emerge, and through the flexile wave,
At each short breathing by his lip repell'd,
With arms and legs according well, he makes
As humour leads, an easy-winding path;
While, from his polish'd sides, a dewy light
Effuses on the pleased spectators round."

Give but the artisans of our metropolis the requisite facilities for bathing, and it will be increased a thousand fold. The fondness of the Londoners for bathing is proved by the fact, that nearly 200,000 persons bathe annually in the Serpentine, in Hyde Park. Still, this takes place mostly in very hot seasons; the distance from the seat of metropolitan industry is considerable, and much time is lost in the journey from the other points to the west; whereas, bring but the means into the heart of the town, and bathing will become the regular habit instead of the occasional indulgence of the industrious classes.

It would be easy to assemble many instances of the fondness of the population of various countries for the use of the Bath. Perhaps, however, it is nowhere more striking than in Russia. "On the Saturday afternoon, in St. Petersburg," says Tietz, "are to be seen whole groupes of men, women, and children, hastening to the Baths, carrying in one hand a thick birch brush, and in the other a small bundle of clean linen. The love of cleanliness implied by this universal custom must be admitted to be extremely creditable to this northern people. There is no refreshment more acceptable to the senses, or more salutary to the system at large, than that of the Bath; it is wholesome, bracing, and purifying; yet it is by no means so commonly sought for as might hence be inferred. The inhabitants of the hotter climates generally use it most; but here, (in Russia,) the habit is to be witnessed among a people chained in almost continual frost."

Biographical Sketches of Eminent Painters.

TIZIANO VECELLI.

AUTHORS differ respecting the date of Titian's birth. Vasari and Sandrart¹ say, that it took place in the year 1480, whilst De Piles and other biographers state that he was born in 1477. All however are agreed as to the place of his nativity, namely, Cadore, or Pieve di Cadore, a town on the borders of the province of Friuli, in the Venetian territory. The Vecelli family was rather an ancient one, and the parents of Tiziano—better known in England by the name of Titian—gave him the advantage of a liberal education. At an early age he went to Venice, and resided with his uncle, a person of some distinction in that city.

The youth soon evinced a genius for painting, and his guardian, willing to indulge him in his choice of a profession, placed him with Giovanni Bellini, who at that time enjoyed a high reputation.

Titian imitated his master's style so accurately, that he astonished all who beheld his works; but, as Bellini had never studied the antique, and painted in a dry, stiff, and laboured manner, his pupil copied his faults as well as his beauties. Nevertheless, as he made nature his chief study, his pictures always possessed the attractive character of truth: but, having become acquainted with Giorgione, who was justly celebrated for his graceful and free pencil, the harmony of his colouring, and his knowledge of the *chiaro-scuro*,² Titian was struck with the superior style of this master, and, changing his own manner, adopted that of Giorgione, in which he was so successful, that some of his productions were supposed to be Giorgione's: this excited the jealousy of that artist, and caused him to discontinue his friendly connexion with Titian.

After painting some pictures for the Republic of Venice, Titian's reputation began to be established; and he then repaired to Padua, where he executed some admirable works.

Some years afterwards he painted the portrait of Francis I, King of France, who was then in Italy; and, subsequently, he was employed at the court of Alfonso I, Duke of Ferrara, for whom he painted several fine pictures. It was at this period that he formed a friendship with the poet Ariosto. Often did those gifted individuals converse together respecting the sister arts of poetry and painting, in which they both successfully strove to attain the highest rank. Ariosto mentions his friend Titian in his *Orlando Furioso*; and Titian painted the portrait of the celebrated poet.

Notwithstanding the great demand for his works,

(1) Vasari and Sandrart wrote "The Lives of the most famous Painters."

(2) *CHIARO-SCURO* is the art of advantageously distributing the lights and shadows which ought to appear in a picture; as well for the repose and satisfaction of the eye, as for the effect of the whole together. As to the meaning of the word *Chiaro*, (translated clear, or transparent,) it implies not only anything exposed to a direct light, but also all such colours as are in their nature luminous. *Scuro*, (translated dark, or darkness,) not only implies all the shadows directly caused by the privation of light, but likewise such colours as are naturally brown; such as, even when they are exposed to the light, maintain an obscurity, and are capable of grouping with the shades of other objects. By the *Chiaro-scuro*, objects receive more relief, truth, and roundness; and it particularly signifies the great lights, and great shades, which are collected with so much industry and judgment as to conceal the artifice.

which were now universally admired, Titian was far from being in easy circumstances, when, in 1530, the Emperor Charles V, having arrived at Bologna, in order to be crowned by Pope Clement VII, commanded him to paint his portrait; which he did so skilfully that the monarch loaded him with rewards and honours. From that period fortune seemed to smile upon this amiable artist.

Pope Paul III. sat twice to Titian for his portrait: the second time, at Rome, in 1548. Whilst he was employed at the Pope's palace of Belvedere, Michael Angelo Buonaroti visited him, and greatly admired a picture which he had just finished. Michael Angelo declared that the colouring was perfect, but he lamented that the Venetian artists attended so little to design, for he said that, if Titian had studied the antique as much as he had nature, he would have been absolutely inimitable.

Titian painted many historical subjects from sacred, profane, and fabulous history, whilst he was at Rome, and his works were highly prized by princes and other persons of rank.

At the end of the year 1548, he repaired to the court of the Emperor Charles V, to whom he presented several of his productions, and whose portrait he painted for the third time. One day, when he was working in the presence of the Emperor, Titian dropped his brush, and Charles picked it up and gave it to him. The artist was greatly confused at this circumstance, and said that he was unworthy of being thus waited upon; when the monarch replied, "Titian deserves to be attended on by an Emperor."

Charles V. granted Titian a considerable pension, ennobled him and all his descendants, and conferred on him the title of Count Palatine. In public the Emperor placed him on his right hand, and, when his courtiers murmured at this, Charles said, "I can easily create a Duke, but where could I find another Titian?"

The finest pictures of this celebrated painter are said to be in Spain, particularly one of the "Last Supper." But Rome, Venice, Bologna, and Florence, as well as England, Germany, and France, possess many of his beautiful compositions.

At Milan is that exquisite production, "Christ crowned with thorns." The subject is thus powerfully related in the twenty-seventh chapter of St. Matthew's Gospel.

"Then the soldiers of the governor took Jesus into the common hall, and gathered unto him the whole band of soldiers. And they stripped him, and put on him a scarlet robe. And when they had platted a crown of thorns, they put it upon his head, and a reed in his right hand: and they bowed the knee before him, and mocked him, saying, Hail, king of the Jews! And they spit upon him, and took the reed, and smote him on the head."

In no picture has Titian painted his characters with more animation and correctness. The figure and attitude of the Saviour are remarkable for dignity and grace; and there is in the countenance a divine expression, mingled with that of acute human suffering, endured with noble fortitude and patience. The gestures and features of the soldiers denote hatred, cruelty, and derision. The colouring is admirable: the ground is composed of the richest tints, and the draperies and accessories are treated in a superior manner.

Titian was accustomed to compare the manner in which the lights and shades should be disposed in a

picture, to a bunch of grapes, or many bodies combined, presenting only a general mass, although they preserve their particular forms. This precept has been practised in this fine composition with the happiest effect. The principal light falls on the figure of Christ, and spreads with much harmony over the other characters.

The drapery is of a bright red, according to the text of Scripture, and attracts the eye to the chief personage in the picture.

It is asserted that Titian altered his manner three different times. His first being, as already mentioned, like that of Bellini his master, stiff and dry, though in other respects developing much taste and genius. At a later period his style became bold and vigorous, resembling that of Giorgione; and ultimately he adopted a manner which was quite original, and the result of much experience, knowledge, and judgment, and exquisitely beautiful and natural.

His colouring approached as near perfection as possible, and though he did not equal the great masters of the Roman school in design, for he had not devoted himself sufficiently to the study of the antique, his figures are always disposed so as to display their chief beauties.

Titian's landscapes are beyond all praise. The grand ideas of nature which appear in the scenery, the well-delineated distances, and the beautiful tints harmonizing with each other,—all tend to produce an indescribable charm.

Most of his celebrated works have been engraved from his own designs. He continued to practise his art even when he had arrived at extreme old age, but not from any motives of self-interest; for, after his affairs were so prosperous as to give him no uneasiness regarding his worldly welfare, he painted only to gratify his own feelings, and to oblige his friends.

Titian lived in a style of magnificence suited to his station and means. No man was ever more respected and appreciated by sovereigns and other personages of high rank than he was, and most deservedly so; and, what was still more gratifying to an honest heart, he possessed the friendship of the most virtuous and the most learned of his contemporaries.

In 1576, the plague committed great ravages at Venice. Titian retired to his native place, Cadore, hoping to escape the contagion; but he was attacked by that dreadful malady, and died of it, at the age of ninety-nine,—supposing him to have been born in 1477.

Although there was a strict regulation that the bodies of all persons who had died of the plague should be destroyed, the Senate deviated from this rule with regard to Titian. His remains were publicly interred at Venice, with all the usual religious rites and ceremonies:—so much, and so justly, was he esteemed and beloved!

POPULAR YEAR BOOK.

September 14 is the festival of the *Exaltation of the Holy Cross*, celebrated in commemoration of the recovery of a large piece of the True Cross by the Emperor Heraclius, after it had been taken away, in the plundering of Jerusalem, by Cosroes, king of Persia, about A. D. 615. The sacred relic was subsequently solemnly deposited in the Great Church of the Twelve Apostles at Constantinople.

Nutting seems to have been usual on this Holiday. In the old play of "Grim, the Collier of Croydon," occur the following lines:—

"This day, they say, is called Holy-rood day,
And all the youth are now a nutting gone."

"It appears," says Hone, "from a curious manuscript, relating to Eton School, that, in the month of September, 'on a certain day,' most probably the fourteenth, the scholars there were to have a play-day, in order to go out and gather nuts, a portion of which, when they returned, they were to present to the different masters; but, before leave was granted for their excursion, they were required to write verses on the fruitfulness of autumn, and the deadly cold of the coming winter."

There is an annual fair for the sale of cattle held in the Broad-gate, at Lincoln, on the 14th of September, called *Fool's Fair*, for the following reason. William of Orange and his wife, having visited Lincoln while on their tour through the kingdom, made the citizens an offer to serve them in any manner they liked best. They asked for a fair, though it was harvest, when few people can attend it, and though the town had no trade, nor any manufacture. William smiled, and granted their request, observing that it was a humble one indeed.

September 18 is dedicated by the Western Church to St. Ferrol, a "tribune or colonel" at Vienna in France, where he suffered martyrdom, A. D. 304. The anniversary of this saint is celebrated at Marseilles with great pomp. The houses are decorated with streamers to the very tops, and the public way is crossed with cords, on which are suspended numberless flags of various colours. The ships are always ornamented with flags and streamers. A goodly procession is formed, and passes under several arches, hung with boughs, before it stops at the altars or resting-places, which are covered with flowers. "Everything," says a spectator, "conspires to give to this solemnity an air of cheerfulness. The eye dwells with pleasure on the garlands, the green boughs, and the emblems in the flags of the procession. The attendants are extremely numerous: every gardener carries his wax taper, ornamented with the most rare and beautiful flowers; he bears also samples of the vegetables and fruits with which Heaven has blessed his labour, and sometimes some nests of birds. The butchers, also, make a part of the procession. Clothed in long tunics, and with hats à la Henri IV, armed with hatchets or cleavers, they lead a fat ox, dressed with garlands and ribands, and with gilt horns, like the ox at the carnival. During the whole of the week which precedes the festival, the butchers lead about this animal: they first take him to the police, where they pay a duty, and then the collection begins, which is very productive. Every one wishes to have the animal in his house; and it is a prevailing superstition among the people, that they shall have good luck throughout the year, if this beast leave any trace of his visit, however dirty it may be. The ox is killed on the day after the festival. A number of young girls, clothed in white, their heads covered with veils and adorned with flowers, walk next in the procession. Children, habited in different guises, recall the ancient 'mysteries.' Several maidens are dressed as nuns, and represent St. Ursula, St. Rosalie, St. Agnes, St. Teresa, &c. The handsomest are clothed as Magdalenes; with their hair dishevelled on their lovely faces, they look with an air of contrition on a crucifix which each holds in her hand: others appear in the habit of the *Sœurs de la Charité*. Handsome boys fill other parts, such as angels, abbats, monks; among which may be distinguished St. Francis, St. Bruno, St. Anthony, &c. The streets are strewn with flowers, numerous choristers carry baskets full of roses and yellow broom. The sweet scents of the roses, the cassia, the jasmine, the orange, and the tuberose, mingled with the odour of the incense, almost overpower the senses. The procession proceeds to the port, and it is there that the ceremony assumes a sublime character: the people

fill the quays; all the decks are manned with seamen, dressed in their best blue jackets, their heads uncovered, and their red caps in their hands. All bend the knee. The seamen stretch out their hands towards the prelate, who, placed under a canopy, gives the benediction: silence the most profound reigns among the immense crowd. The blessing received, every one rises simultaneously; the bells begin to ring, the music plays, and the whole train return to the church from which they set out."

Dr. Johnson, the "Great Moralist," was born at Lichfield, in Staffordshire, on the 18th of September, 1709. He was the greatest literary character of his age. His principal works are the *Rambler*, the *Idler*, *Lives of the English Poets*, and an *English Dictionary*, which will last as long as the language it illustrates. Johnson departed this life at his house in Bolt Court, Fleet Street, December 13, 1784, and was interred in Westminster Abbey, near his friend Garrick. A statue, bearing an inscription by the learned Dr. Parr, has been erected to the memory of this illustrious "Leviathan of Literature," in St. Paul's Cathedral.

ROUND CHURCHES IN ENGLAND.

Among the memorials of ages long past, and of events far remote from our present experience, those which yet remain of the sufferings and achievements of pilgrims, and of a religious chivalry in the holy land, are eminent in interest and importance. Of these, four of our English churches, which still retain not merely an historical, but a visible connexion with those stirring scenes, deserve especial regard. The churches to which we allude are, the church of the Holy Sepulchre in Cambridge, the church of the same name and dedication at Northampton, the Temple Church in London, and the Church of Little Mapleston in Essex. We shall point out their very peculiar connexion with the great historical crisis to which we have referred them, and add such a slight description of each of them, as may be consistent with a very sparing use of technical language.

From the time of our Saviour's ascension, and of the descent of the Holy Ghost at Pentecost, the city of Jerusalem contained its Christian Church; and its succession of bishops, with whatever else is essential to the well being of a Church, was never interrupted, except during the short, though cruel intervals of siege and persecution, to which Jerusalem has been so frequently subjected. Nor were the sacred places of which the mother of all churches could boast, interesting to her more immediate children only. From all parts of Christendom pilgrims came to worship at the Holy Sepulchre, and in many other places within and around the Holy City, consecrated by our Saviour's presence. That the immediate disciples of our Lord should forget the spots so hallowed to their affections, would be impossible; and almost equally so, that they should neglect to point them out to their children, and their children's children. Among these, none received greater regard than the place of our Lord's burial; and, in this instance, the heathens, in their determination to rob the Christians of their spiritual title in the sacred spot, unwittingly assisted in perpetuating its remembrance. A temple of Venus was built over the Holy Sepulchre, and it was thenceforth a matter of history, no longer subjected to the less tangible evidence of tradition, that on that spot the tomb of our Saviour was to be found.

The piety of Constantine the first Christian emperor, and of his mother Helena, hastened, so soon as it was in their power, to cleanse the sacred spot from this pollution, and to crown the holy Mount with a better temple, open to the devout worshippers of Jesus Christ. The temple of Venus was destroyed; the ground was cleared; the Holy Sepulchre was found undestroyed, beneath many feet of soil, and soon a beautiful church was erected over it. This church, called the Church of the Resurrection, was circular, enshrining the Holy Sepulchre around which it was built; and from this circular form of Constantine's Church of the Resurrection, the round churches of which we are about to speak were imitated.

But the munificence of Constantine did not cease here. The death of our Lord, as well as His resurrection, was to be commemorated; and eastward of the round church already mentioned, but connected with it by a court open to the heavens, and surrounded by a corridor he built a much larger church, called the Martyrium; and of this also we shall find a counterpart in the four round churches in England.

The Church of the Resurrection, however, after having been visited by pilgrims for three centuries, was destroyed by fire at the sacking of Jerusalem by Chosroes II. The emperor Heraclius rescued the holy city from the Persians; and though it fell soon after into the hands of the Arabian followers of Mahomet, the resort of Christians to the Holy Sepulchre can scarcely be said to have been checked by the Moslem lords of Jerusalem. The Khalif Harun el Rashid even sent to Charlemagne the keys of the church, in token of the free admission which he granted to the Christians, "to that sacred and salutary place."

But the rule of the Egyptians was more adverse to Christian pilgrims. By the orders of Hakem, who commenced his reign in 996, the Church of the Resurrection was utterly destroyed, and even the cave itself was preserved only by the natural indestructibility of its materials. The church was again rebuilt by the patriarch Nicophorus, with funds from the imperial treasury of Constantine Monomachus; but the Christians still groaned under heavy burdens, which were rather increased than lightened when the Holy City again changed masters, and fell under the despotic rule of the Turks. Such was the state of the Christians until the voice of Peter the Hermit, at the very end of the eleventh century, aroused all Europe to the defence of pilgrims to the Holy Sepulchre, and to the recovery of the Holy City from the hands of infidels.

The church which the first crusaders found, was not, therefore, the same which Constantine the Great had erected, though on the same spot, and probably very much on the same plan: that is, there was a circle, or perhaps a double circle of columns, with their outer wall, surrounding the sacred cave; and eastward of this, the larger Church of the Martyrdom, connected with the Church of the Resurrection, by an uncovered court. Within these were many spots consecrated by various parts of our Saviour's sufferings or triumph. And this is all that we shall require by way of comparison with the English churches which we are about to describe; nor need we more than glance at the fact, that the present church, re-edified since its almost total destruction by fire in the beginning of this century, still presents evidences in its architectural features, of the work of the pilgrim Christians of the twelfth century, in the enlargement and adornment of the sacred edifice.

We may well believe that the Christians who returned from their devout pilgrimage would gladly erect memorials in their own country, of the glorious and spirit-stirring sights of the Holy City; and this natural wish

was expressed in the erection of churches, in some degree at least similar to that of the Resurrection. Of these, three have perished; Temple-Bruer; and Aislaby, in Lincolnshire, and the Old Temple in Holborn. Four yet remain, the first of which in order of time, and not the last in beauty, is THE CHURCH OF THE HOLY SEPULCHRE IN CAMBRIDGE.

The ancient and round portion of this church consists of an outer circular wall, with a rich Norman door-way, opening into an aisle, which embraces a central Round, resting on eight circular piers, and finished above with a clerestory, surrounded by an arcade, pierced with eight lights, and finished with a conical roof. The piers are low and massive, without bases, and with capitals of varied designs. The arches are all circular, and some of them adorned with the zigzag moulding, so characteristic of the Norman style. To this part of the church is added a chancel, and two aisles, of perpendicular character, with an octangular bell-turret at the north-west angle of the North aisle; and thus the present church consists of a circular nave and aisle, with the chancel and its north and south aisle, and bell-turret, extending eastward from the Round. In the interior the effect is greatly heightened by the introduction of rich painted glass, and an appropriate style of furniture and decoration throughout. The Round is, of course, the part of most interest, and here the windows bear, many of them, reference to the history of the Church. One represents the Resurrection, with an obvious allusion to the Church of the Resurrection, after which, as we have stated, this Church is designed. Another is of THE VENERABLE BEDE, the great historian of our early church, who is said, (but on the authority of a tradition which will not bear minute canvassing,) to have resided for a time between the site of St. Sepulchre, and that of St. John's College; and who happens to be the only person who has handed down to these times a description of the round churches existing in his day. Another window represents St. Etheldrida, whose history is connected with Ely, in which diocese the church is situated. The east window of the chancel, which appears to great advantage on immediately entering the church, is of beautiful painted glass, representing the crucifixion, with the figures of the ever blessed Virgin, and the beloved Apostle, as they are associated with the cross of Christ in medieval art, on the authority of the Holy Gospel.

This is a cursory description of the church as it now appears, after having been restored with great taste, and at a vast expense, by the Cambridge Camden Society. It is greatly to be regretted that a question very indirectly touching architectural proprieties should have occurred to take the work out of the Society's hands; and no one can approve of the taste and judgment displayed in the few alterations which have been made since they resigned their task of restoration. Into the polemical question of course we do not enter. The appearance of St. Sepulchre, before a fall of part of the round admitted the care of the Society in its restoration, was quite as indicative of the bad taste of comparatively recent generations, as of the piety and genius of the Crusaders. The round had been deformed by the insertion of most incongruous windows, both below and in the clerestory; while the latter had been made to bear the additional weight of another story, which was finished in all its details in a late perpendicular character. The chancel and north aisle were altogether unworthy of the fabric to which they were appended.

We have described this church before adverting to its history, because, as usual, the architectural character is as valuable in ascertaining its date and destination as any existing records. The character of the Round takes us back to the very beginning of the twelfth century, or rather, to the last few years of the eleventh; and it appears from a MS. in the Bodleian Library that it was consecrated in 1101. For the rest, we know nothing, except what its form and its dedication tell us. It was

certainly erected by some one interested in, or connected with, the Crusades, and, most probably, that prayers might be offered in it for the success of those religious expeditions. But it cannot owe its erection to the Templars, who did not exist till 1118, and who did not obtain possessions in England until 1134.

St. SEPULCHRE'S, Northampton, is the next in antiquity, but so far as regards its most ancient portion, and that which entitles it to a place in the present paper, it is far inferior to the former. Its erection is referred with some degree of probability to Simon St. Liz, second Earl of Northampton, and a Crusader, who died A.D. 1127. In size it much surpasses the Cambridge church of the same name, but in architectural beauty it is at least as much its inferior. Like that, it consists of a central portion, supported by eight Norman circular pillars; but the arches are pointed, though the plain flat soffits are far less elegant than the well-moulded semicircles of the older structure. The present roof, both to the round and to the outer portion, is of wood; and, as there are no vaulting shafts, or other indications of a better covering, it is probable that it was always so. The central portion becomes octagonal immediately above the piers. Of course, the original buttresses and windows throughout, are the shallow square buttresses, and narrow round-headed lights of the Norman period; but later windows are inserted everywhere; and walls of great thickness, and of a shape as little liable to disturbance as any, have been so shaken in the process, that the far-projecting buttresses of later styles have been rendered necessary. The present porch is to the south, and at the north is an ancient doorway, now blocked up. If there was ever a west porch, its place is occupied by a beautiful tower and spire, of which the composition cannot be too much commended. It is early perpendicular in character; the far-projecting diagonal corner buttresses of the tower bring down the line of the spire to the ground with great effect. The chancel and its two aisles, opening out of the Round eastward, do not, in their present state, harmonize at all with the Round; although the piers and arches between the chancel and the north aisle are of so early a character, that they form doubtless a part of the original plan, though not erected until the early English style had assumed its distinct character. The external aspect of these parts of the church would lead us to assign the north aisle to the close of the thirteenth century, the south aisle to the middle of the next, and the chancel to the fifteenth century; but more minute inspection shows that they have been rather altered than erected at those periods. In the interior of the chancel are some curious corbels supporting the roof, representing grotesques playing on musical instruments; among others, the organ, the fiddle, the lute, and the double drum; but there is little worthy of remark in this portion of the fabric.

We cannot leave this church without expressing very sore regret, that it does not find some sympathy in its extreme destitution from the inhabitants of the wealthy town in which it is situated. Even in its present condition, it is one of the most interesting objects* in the neighbourhood, and this it can never cease to be; but it is also one of the most melancholy objects, which it need not remain, nor can remain long, without becoming a reproach to the town. Will not the recent formation of an Architectural Society in Northamptonshire tend to rescue this curious fabric from its desolate state?

The two churches already described cannot, with absolute certainty, be assigned to their proper founders; only their very name, as well as what would, on any other hypothesis, be the mere accident of their form, connects

* Among the interesting architectural objects in and near Northampton, may be mentioned the Norman church of St. Peter's within the town; the Queen's cross, about a mile distant, on the London road, of which no description can convey an adequate notion; and the church of Brixworth, about six miles to the north of Northampton, a glorious specimen of Saxon art, which must be not only seen, but studied, to be appreciated.

them with the devotions of pilgrims to the original Round Church of the Resurrection. But THE TEMPLE CHURCH, London, and the church of Little Mapledsted, are more closely associated with the two great religious orders of chivalry, the Templars and the Hospitallers, who were bound by the most solemn vows to the defence of pilgrims to Jerusalem. The Templars had already a church in Old-bourne, now Holborn, before the erection of the present church was commenced; and the latter, when finished, was called the "New Temple," with reference to the more ancient foundation. The older edifice, like this, was round, and though not, in all probability, so sumptuous, had yet been built at great cost; for it was of Caen stone, as appeared when some of its remains were discovered at the beginning of the last century. The present church consists of a circular portion, and, eastward of this, of a chancel, with its two aisles, answering in relative position to the martyrrium, connected with the Church of the Resurrection, as built by Constantine, and perpetuated through all its changes to the present day. The Round, then called the New Temple, was consecrated in 1185 by Heraclius, Patriarch of Jerusalem, on his arrival in England to obtain succour from Henry II. against the Saladin—an event still commemorated by an inscription over the door leading to the cloisters, of which the following is a translation:—"ON THE 10TH OF FEBRUARY, IN THE YEAR FROM THE INCARNATION OF OUR LORD, 1185, THIS CHURCH WAS CONSECRATED IN HONOUR OF THE BLESSED MARY, BY THE LORD HERACLIUS, BY THE GRACE OF GOD PATRIARCH OF THE CHURCH OF THE RESURRECTION, WHO HAS REMITTED SIXTY DAYS OF ENJOINED PENANCE TO ALL WHO VISIT IT ANNUALLY." Whether this inscription was of the date of the church cannot be determined, for it was destroyed by the workmen employed in repairs after a fire by which it had been much injured, in 1695; but there can be no question that it rightly records the event of the dedication. The oblong portion of this church was consecrated on Ascension Day, 1240; and in this, as in the former case, the architectural features fully answer to the historical mention of the event. Like the church of St. Sepulchre, in Cambridge, the Temple church has been recently restored; but it is the highest praise of those who planned and executed the restoration, that it may still, in all essential features, be described according to the ancient appearance. We have, indeed, made a great advance in good taste and good feeling, when a learned body, but of a secular profession, have devoted upwards of 50,000*l.* to the legitimate restoration of a sacred edifice, which they have inherited from an age and order full of high and holy associations, and perfect in its style of ecclesiastical art.

The church is entered at the west by an elaborate Norman door-way, which formerly communicated with a cloister leading from the Hall of the Knights Templars. The Round, as in all other cases of the like kind, consists of a circle of columns, supporting a tower, and of an external circular wall, forming a kind of aisle to the central portion. In this instance the piers are six in number, each consisting of four columns springing from the same base, and again joined at the capitals, but disengaged through the whole height of the shafts, except where a fillet connects them at their mid-height. From these columns spring pointed arches, over which runs a triforium, behind an arcade of semicircular and intersecting arches; and over these again are six clerestory windows of the pure Norman character. The roof is groined, the ribs springing from vaulting shafts which rise from the capitals of the several pillars. The outer Round is also vaulted, and lighted by Norman circular-headed windows. Over the west door is a wheel-window of eight lights. The lower portion of the wall is relieved by shafts springing from a stone bench which is carried along the whole circumference, and supporting an arcade of pointed arches, the spandrils of which are decorated with grotesque heads.

Although this part of the church agrees perfectly

with its Norman date, an eye practised in distinguishing architectural features will at once detect intimations of the approach of the next style, especially in the pointed arcade and pier arches, and in the banding of the shafts. The square portion of the church, which opens into the Round by three lofty pointed arches, is of pure and highly developed Early English. The pillars, which are of a very elegant section, are light and lofty. The roofs are all groined. The windows are triple lancet throughout. More minute features it would be impossible to notice in so hasty a sketch.

The richness of the whole structure is in some respect due to the materials, as well as to the beauty of the design. The shafts throughout, both the greater shafts supporting the roof, and those purely ornamental in the arcades, are of Purbeck marble. The floor was of encaustic tiles, and has been restored after the same fashion. The roof was gorgeously painted, and it has been adorned once more with an equal profusion of colours. The windows were of stained glass, and they are again filled with the same gorgeous material; and in these, and the painting of the roof, both executed by Mr. Willement, (to whom the art of painting in glass owes so much,) great attention is paid to the suitableness of decoration, as regards both age and subject: the insignia of the Templars appearing every where in various forms, together with such theological emblems and devices as were commonly used at the time to which the erection of the church is referred. Although beautiful in themselves, perhaps the benches, in their design and arrangement, reflect less credit on the learned restorers of this ancient edifice than any other part. But every praise does not fall to the lot of one generation. To be first in action, and to profit by the experience of others, are incompatible; and when we have most heartily echoed the praise of munificence and a ready zeal, leading the way in a great work needed throughout the kingdom, we shall not seem to speak invidiously, if we express a conviction that had the work been undertaken now, it would in some respects have been done differently and better.

THE CHURCH OF LITTLE MAPLESTED is dedicated to St. John of Jerusalem, the Patron Saint of the Hospitallers, to whom it owes its erection. In 1186 the whole parish was given to this chivalrous order by Juliana, daughter and heir of Robert Dornelli, and wife of William Fitz Andelin, steward to Henry II. Here, therefore, a Commandery was erected. The church, still remaining, carries us back to the times at which the knights flourished in wealth, reputation, and true greatness.

In size, this church is inferior to either of the other three; but it is even more remarkable in some respects, for the whole, with the exception of the porch, is of the original design and execution; and the chancel with its semicircular apse still more closely resembles the Church of the Martyrium, so often before alluded to, than the same relative portions of the churches before mentioned.

It would be tedious to enter again into a description of details. We may observe, however, that in late notices of this church, its dilapidation has been much exaggerated. It is still, so far as substantial repair is concerned, in a tolerable condition; and it is more than probable that it may soon share the benefit of the present architectural movement, and receive full and appropriate restoration. Of the Commandery, once a part of the same Christian establishment, not a vestige remains; but the Knights of St. John of Jerusalem, if they retained their religious character, would not be the last to submit, cheerfully, to the decree of Providence, which has preserved the memorials of their faith to future ages, while the signs of their power and splendour are utterly swept away.

(1) We are indebted to Mr. Warwick, at Cambridge, for his kindness in allowing us to take a Copy from his Original Drawing of the Round Church.

Round Church at Cambridge.

THE TELESCOPE,

WITH SOME ACCOUNT OF THE EARL OF ROSSE'S REFLECTING TELESCOPE.¹

For a considerable time after Newton, no further progress was made in the construction of reflecting telescopes. The difficulty of finding a suitable material for the specula,—of giving the metal, when discovered, the proper polish, and grinding it into the proper form, probably deterred opticians from the attempt. But, in 1719, Hadley, the inventor of the quadrant which bears his name, constructed a reflecting telescope, six feet in length, with a magnifying power of nearly 200, by means of which he saw the transit of Jupiter's satellites, and their shadows on the disc of the planet. This instrument was found to represent objects as distinctly, though not altogether so clear and bright, as the famous aerial telescope of Huygens which we have already referred to.

There is little of interest to notice in the history of the telescope from this period till we come to the immense stride made in its improvement by Sir Wm. Herschel. This eminent philosopher was born in Hanover in 1738. Having settled in England, at Bath, he began to devote his leisure to the construction of telescopes, and the polishing of reflecting mirrors. Being well skilled in optics and mechanics, he succeeded in completing Newtonian telescopes of various sizes, from two feet to twenty feet in focal length, and Gregorian ones from eight inches to ten feet in focal length. Not being at this time in possession (although he afterwards discovered it) of a direct method of giving to specula the required parabolic form, he, in order to secure a good instrument, finished a number of specula, and selected the best. With this view he underwent the enormous labour, which none but those who have made such instruments can appreciate, of casting, grinding, and polishing two hundred specula of seven feet focus, one hundred and fifty of ten feet, and above eighty of twenty feet, besides many others on different principles.

The most splendid discoveries were the result of the increased magnitude thus given by Dr. Herschel to the apertures and focal lengths of his specula. When he directed these instruments to the heavens in 1776, almost every night which he devoted to observation presented him some new and interesting phenomenon. But his other discoveries have been almost lost in the blaze of that greatest one by which his name has been immortalised, and by which he added a planet to, and doubled the range of, our solar system. Being employed in making a review of the sky on the 13th of March, 1781, he perceived, near the feet of the constellation of Gemini, a star of the fifth magnitude, having a disc perfectly well defined, and differing in appearance from the other stars which afforded the same quantity of light. On observing it with a telescope, whose magnifying power was 932, he perceived its diameter was enlarged, while that of the stars underwent no change. These circumstances were sufficient to draw his attention to the star, and nothing more was requisite to enable him speedily to discover that it had a slow motion. He at first supposed it was a comet; but a more careful study of its motions proved it to be a planet of our own system, which revolved round the sun in 83½ years, in a path far beyond the orbit of Saturn, and at the distance of 1,800,000,000 miles from the sun, which is twice as far as the planet Saturn. To this planet he gave the name of *Georgium Sidus*, in honour of George III., who was a munificent encourager of his philosophical labours, but it is more generally known by the name of *Uranus*, a Greek word signifying Heaven.

The munificent patronage of George III. now enabled Herschel to devote his life to the study of the heavens; and, taking up his residence at Datchet, in the neighbourhood of Windsor, he entered upon a career of

discovery unparalleled in the history of science. On the 11th of January, 1787, he discovered two satellites revolving round the newly discovered planet of *Georgium Sidus*, and in 1790 and 1794 four others. Pursuing his examinations still further, he found that all the nebulae and clusters of stars which had been published by previous astronomers could be resolved into an infinite number of small stars; and in examining a portion of the Milky Way, looking with amazement at the glorious multitude of stars, of all possible sizes, that presented themselves to his view, he made the calculation that a belt 15° long and 2° broad, (by no means a large portion of the visible heavens,) contained no fewer than 50,000 stars capable of being distinctly counted. During these observations he discovered 466 new nebulae or luminous clouds composed of stars.

Not yet satisfied with the unprecedented power which he possessed of exploring the unfathomable secrets of the heavens, Sir W. Herschel resolved to attempt the construction of larger telescopes. Having accidentally failed in two attempts to construct a thirty feet aerial reflector, in the one case from the speculum, which was three feet in diameter, having cracked in the act of annealing,—and, in the other, from the speculum having been lost in the fire from a failure in the furnace, and his efforts being thus in danger of being altogether stopped by the expense of his experiments, he obtained from the king, through the mediation of Sir Joseph Banks, the offer of defraying the whole expense of the construction of one still larger, which was infinitely to surpass anything of the kind that had ever been attempted. He began, then, the construction of his great telescope towards the close of 1785. It was forty feet in length, with a speculum four feet in diameter. After trying two different kinds of metal without success, he at last succeeded in casting his speculum of a metal composed of 32 parts of copper and 10.7 of grain tin. The tube of the telescope was four feet ten inches wide. It was made of iron, and was thus 3000 lbs. lighter than if it had been made of wood. The observer was seated in a suspended moveable seat at the mouth of the tube, and viewed the image of the object with a magnifying lens or eye-piece. The focus of the speculum, or the place of the image, was within four inches of the lower side of the mouth of the tube, and came forward into the air, so that there was space for the part of the head above the eye to prevent it from intercepting many of the rays that go from the object to the mirror. The eye-piece moved in a tube carried by a slide directed to the centre of the speculum, and fixed on an adjustable foundation at the mouth of the tube. The first time this magnificent telescope (which used to be an object of wonder to all travellers who passed Slough) was used, it discovered a sixth satellite of Saturn, and in less than a month afterwards, a seventh.

While Herschel was thus carrying the reflecting telescope to such a pitch of perfection, a most important improvement was in progress in the construction of refracting telescopes. The great imperfection of these instruments had arisen from two causes of error, to which the names of spherical and chromatic aberration were given; the former, arising from the necessarily spherical figure of the surface of the lenses used, every portion of which, by a law of refraction, did not form the image of the object exactly in the same focus; and the latter arising from the different refrangibility of different rays of light,—an optical law first discovered by Newton, who established, by a series of very remarkable experiments, that each pencil of light consists of a number of differently coloured rays, of which, in passing through any refracting medium, some are more refracted, or bent out of the straight course, than others: in consequence of which law the image appeared distorted, and tinged with various colours, as objects do which we look at through a prism. The effect of both these sources of error combined is, that the

(1) Concluded from p. 312.

image of any object formed by a spherical lens, consists of a mass of images of different colours, and not coincident with each other. These imperfections, which Newton had declared to be incurable, have been in a great measure removed by a very simple contrivance, probably suggested by, at all events on the same principle with, the construction of the eye, in which, in order to form a perfect image at exactly the required spot, the rays of light are made to pass through media of varying consistency, and consequently of varying refracting power. This was effected by a combination of flint and crown glass, which by their different refracting power, together corrected the chromatic aberration, or confusion of colours in the image, and by the number and relative adjustment of several lenses, diminished the spherical aberration, or confusion arising from the figure of the lens. Telescopes of this construction are called Achromatic, from a Greek word signifying Colourless; the name implying that they correct the defect arising from the unequal refraction of different rays of light which caused objects to be seen tinged with various colours. But we cannot follow out the progress of this great improvement, which however has not been carried to the perfection of which, most probably, it is capable, in consequence of the great expense of forming object-glasses of a large size; nor attempt to detail any of the more recent discoveries to which the use of powerful telescopes led, (which, indeed, is no part of the object of this paper;) but must now proceed to some account of the last great achievement in the construction of telescopes—that of the Earl of Rosse.

The first improvement to which the Earl of Rosse directed his attention, in the construction of reflecting telescopes, to which his efforts seem to have been confined, was to correct the aberration arising from the spherical form of the speculum, the edge of a spherical speculum having necessarily a shorter focus than the centre. In lenses this may be diminished, or even removed, by the opposite aberration of lenses of an opposite form,—the aberration of a convex lens by that of a concave one, for example; but this remedy cannot be applied to specula. To diminish the spherical aberration in their case, he formed the speculum of three parts, a central speculum, a ring inclosing the central speculum, and an outer ring. These three portions were cemented together, and ground and polished as one speculum. They were then combined by an ingenious piece of mechanism, so that the first and second rings could be advanced each a small fraction of an inch, in order that their foci should accurately coincide with the focus of the central speculum. Lord Rosse's first attempt did not succeed to his wishes, owing to a defect in the mechanism, which required frequent adjustments, as the smallest shock displaced the images; but he was more successful in the combination of one ring with a central metal, the two forming a speculum of six inches aperture and two feet focal length.

The two great difficulties attending the making of specula, viz., the preparing a material capable of receiving and retaining the proper polish, and giving to the speculum the true parabolic form, have been overcome by Lord Rosse very successfully; but a description of the experiments by which he arrived at success in these respects, would lead us into matter much too technical to be interesting to general readers. In 1840 he completed a twenty-six foot telescope, from the observations made by means of which many important results have been obtained.

This telescope, on its completion, was characterised as the most powerful that had ever been made. But its properties are thrown into the shade by the magnificent proportions of a second and more wonderful instrument, which the Earl of Rosse has since succeeded in completing. We shall give the account of it in the words of the writer to whom we have been indebted for so much of the information contained in this paper. "The in-

strument was scarcely out of his hands before he resolved upon attempting the construction of another reflector, with a speculum six feet in diameter, and fifty feet long! This magnificent instrument was accordingly undertaken, and within the last month (this was written in autumn of 1844) has been brought to a successful termination. The speculum has six feet of clear aperture, and therefore an area four times greater than that of the three-foot speculum, and it weighs nearly four tons. The focal length is fifty-three feet. It was polished in six hours, in the same time as a small speculum, and with the same facility; and no particular care was taken in preparing the polisher, as Lord Rosse intended to repolish it as soon as the focal length was ascertained to be correct; but upon directing it to a nebula, the performance was better than he expected, and he therefore has suffered it to remain in the tube for the present.

The casting of a speculum of nearly four tons must have been an object of great interest, as well as of difficulty: but every difficulty was foreseen and provided against. In order to ensure uniformity of metal, the blocks from the first melting, which was effected in three furnaces, were broken up, and the pieces from each of the furnaces were placed in three separate casks. Then, in charging the crucibles for the final melting, successive portions from each cask were put into each of the furnaces.

In order to prevent the metal from bending or changing its form, Lord Rosse has introduced a very ingenious and effective support. The speculum rests upon a surface of twenty-seven pieces of cast iron of equal area, and strongly framed, so as to be stiff and light. There are twelve of these in the outer rim, nine in the next, and six sectors in the centre. Each of these pieces is supported at its centre of gravity on a hemispheric bearing, at the angle of a triangle of cast iron; these triangles being in their turn similarly supported at the angles of three primary triangles, which, again, are supported at their centres of gravity by three screws, which work in a strong iron frame, and serve for adjusting the mirrors. This frame carries also levers to give lateral support to the speculum in the same diffused manner. This frame, which contains the speculum, is attached to an immense joint, like that of a pair of compasses, moving round a pin in order to give the transverse motion for following the star in right ascension. This pin is fixed to the centre-piece between two trunnions, like those of an enormous mortar, lying east and west, and upon which the telescope has its motion in altitude. To the frame there is fastened a large cubical wooden box, about eight feet a side, in which there is a door through which two men go in to remove or to replace the cover of the mirror. To this box is fastened a tube, which is made of deal staves, hooped like a huge cask. It is about forty feet long, and eight feet diameter in the middle, and is furnished with internal diaphragms about six and a half feet in aperture. The Dean of Ely walked through the tube with an umbrella up!

This enormous tube is established between two lofty piers or walls, of castellated architecture, about sixty feet high, one of which carries an iron semicircle, against which the tube bears when in the meridian. The declinations will, therefore, be given in this case by a circle and level, as in Troughton's transit instruments. The celestial object is followed in right ascension by drawing the telescope from this plane through a range of fourteen feet, with a long screw, moved either by hand, or by a clock with a rate variable with the declination. The hour-angle will, in such cases, be obtained by another circle and level. The other pier carries the galleries for the observer, which, for fear of producing tremor, Lord Rosse was unwilling to attach to the tube. The galleries will consist of three stages, with some help from ladders, each stage being pushed forward in succession from the top of the piers.

This immense mass of matter, weighing about twelve

tons, requires to be counterpoised, and Lord Rosse's arrangements for this purpose are most ingeniously contrived. When in the zenith, the tendency of the telescope to fall is nothing, but on each side it gradually increases, and is a maximum at the horizon. The first plan of a counterpoise was this:—a chain attached to the upper end of the tube passes over a pulley, and carries the counterpoise which rolls on a curved railway, which can be so formed that the telescope may be in equilibrium through its whole range. The arrangements for this contrivance are already made, but Lord Rosse intends to try a much simpler method, (this, it will be recollected, was written in 1844,) in which the weight, in place of rolling, is kept attached to a fixed point by a guy, so that when the tube is low the weight acts to great mechanical advantage; and when high, with less advantage. Such is a brief description of the noble telescope completed by the Earl of Rosse—a telescope gigantic even among the giant instruments which preceded it.”¹

The mind dwells with much gratification upon the view of a man of wealth and high rank employed, with so much persevering labour, in pursuits so useful and so elevating as those to which the Earl of Rosse has devoted his energies. We recognise in it one of the true uses of wealth, and of the leisure which it enables its possessor to command: a just return for the exemption from daily toil which the rich man enjoys.

Looking to the astonishing progress which has been made, since Galileo first directed his glass to the heavens, in the construction of telescopes, and in obviating the difficulties arising from the imperfection or unmanageable character of the materials which have to be employed in forming them; looking also to the wonderful discoveries which, since that time, have so extended our knowledge of the worlds, and suns, and systems, by which the universe is peopled; it is difficult to prevent the mind from running riot in the anticipation of yet more wonderful discoveries still to be made, or to restrain our hopes within the sober bounds of reason. Dr. Robinson, speaking of the first of Lord Rosse's large telescopes, says, “It is scarcely possible to preserve the necessary sobriety of language, in speaking of the moon's appearance with this instrument, which discovers a multitude of new objects at every point of its surface. Among these may be named a mountainous tract near Ptolemy, every ridge of which is dotted with extremely minute craters, and two black parallel stripes in the bottom of Aristarchus.” And the same gentleman, on another occasion, in his address to the British Association, on the 24th of August, 1843, stated, that in this telescope a building the size of the one in which they were assembled would, under favourable circumstances, be easily visible on the moon's surface.” Another astronomer, Dr. Scoresby, gives the following still more wonderful account of the appearance of the moon, as seen by means of the largest telescope, which we have last described:—“With respect to the moon, every object on its surface, of the height of 100 feet, was distinctly to be seen; and no doubt that, under very favourable circumstances, it would be so with objects sixty feet in height. On its surface were craters of extinct volcanoes, rocks, and masses of stone almost innumerable. But there were no signs of habitations such as ours—no vestiges of architectural remains to show that the moon is, or ever was, inhabited by a race of mortals similar to ourselves. It presented no appearance which could lead to the supposition that it contained anything like the green fields and lovely verdure of this beautiful world of ours. There was no water visible—not a sea, or a river, or even the measure of a reservoir for supplying town or factory; all seemed desolate.” This quotation, if it gives us no good reason

for expecting that we shall ever ascertain anything with certainty on the points to which the writer refers, at least illustrates pretty clearly into what a wide field of speculation the minds even of men whose judgments are tamed down by the severity of mathematical investigation are driven, by the excitement of having so wide a portal opened for gazing into the boundless fields of space; and how wonderful, in fact, these discoveries must be, by which such men are so greatly excited.

TELESILE OF NANCI,

OR, FILIAL HEROISM.

THE celebrated and intrepid Duke of Burgundy, who by bravery obtained the surname of Charles the Bold, having greatly augmented his hereditary estates by his numerous conquests, undertook to erect them into a kingdom, under the immediate protection of Frederick IV., Emperor of Germany. He had already invaded Picardy and Normandy, where he had exercised with a furious barbarity the rights of a conqueror, and, by his cruelty in these provinces, had obtained from their unfortunate inhabitants the surname of the Terrible. Every town which resisted his arms was sacked and pillaged, without any regard to either age or sex. Every governor or magistrate who had refused to open the gates of their respective cities to his summons, was immediately slain by his infuriated troops. In a word, the actuating principle of this formidable general was to conquer his enemies by severity, in order to terrify others into submission. His victorious course was, however, checked by Louis XI. king of France, who was too wily and jealous of his power, to allow another to share it. Charles's ambition was then directed towards those provinces which promised him an easier conquest. He first subdued the dominions of Sigismund, Duke of Austria, who had ruined himself by foolish extravagances, and then the provinces of De Ferrotte and Alsace; the acquisition of the latter facilitating the invasion of Lorraine, which was then governed by the young Duke René II., grandson to the good king René, Count of Provence and Anjou. But this young prince was neither intimidated by the renowned valour, nor the too well known barbarity, of Charles the Bold; surrounded by the affection and fidelity of the people of Lorraine, who had freely chosen him for their sovereign, René II. knew how to resist with advantage the reiterated attacks of Charles. He proved to him that heroism is not confined to any age, and that often youth, directed by valour and resignation, can brave the most renowned warriors, and the best disciplined troops. Having formed and raised many sieges before the principal cities of Lorraine, Charles resolved to attack Nanci, A.D. 1476. The young Duke had at this time repaired to the court of France, to solicit assistance from Louis XI., but which this perfidious monarch refused to grant. Charles, profiting by his absence, commenced to blockade the town, which was defended by the fortifications which surrounded it, but still more by the devoted courage of its inhabitants. The defence of Nanci was carried on by the governor, whose name history does not record, but whose courage and firmness vigorously resisted Charles, and whose daughter afforded a noble and touching example of filial heroism. This governor had an only daughter, named Télésile, who was seventeen or eighteen years of age, and who, in order to watch over the declining years of her beloved father, had rejected many offers of marriage from the neighbouring noblemen, whom she had captivated by her beauty and virtues. Télésile's mother had expired in giving her birth; the deep affliction into which her father was plunged on the death of his beloved companion had, at the time, quite overpowered the mind of

(1) The expense incurred by the Earl of Rosse in the construction of this noble instrument, if we may rely upon an account lately published in the newspaper called the Pictorial Times, has not been less than twelve thousand pounds.

this sensible and worthy man, and it was to the affectionate care of his daughter that he owed the restoration of his health and mental faculties. But how often do we find brave men to be the possessors of tender and affectionate hearts! And so it was with the father of Télésile. Brought up in a camp, and equal in courage and abilities to the bravest warriors of the day, he concealed, under a countenance denoting firmness and severity, and a determined tone of voice, a most sensitive and amiable disposition, which was always exhibited in his domestic life. If commanding an army, he was an inexorable general, whose look alone would inspire with terror, and whose voice would make one tremble; but, sitting at a fireside, he resembled one of the fabled tutelar deities, whose eyes seemed to feast on the happiness of others, and whose gentle and endearing manners made him appear more disposed to obey than to command. Beloved by the people he governed, respected by the soldiers he commanded, and feared by the enemies of his country, he lived honoured by every one, and happy in his deserved title of "The people's Friend." As he had by his noble actions and unbounded influence over the people, contributed principally to the election of René to the dukedom of Lorraine, the young prince had placed unlimited confidence in him, and appointed him governor of Nanci. It was even remarked, that the young Duke had publicly evinced such a decided admiration for Télésile, that the people expected to see her become the wife of their prince, and Grand Duchess of Lorraine; and this expectation, instead of exciting their envy, only filled them with delight; a feeling so unusual, as bore ample testimony to the tender and respectful estimation in which this accomplished model of filial piety was held by all ranks of the people. It was at this time that Charles the Terrible, after having employed all the resources of his military genius in endeavouring to possess himself of the suburbs of Nanci, at last came to the resolution of besieging it.

Notwithstanding the scarcity of provisions, and the absence of their idolized young prince, the faithful Lorrainers repulsed for a long time with advantage the numerous attacks of Charles, so that he became furious, and determined to die rather than raise the siege. Every citizen of Nanci joined the troops of the garrison, to defend their hearths and families. The old men went through every part of the city, exciting, by their example, the women and children to carry every thing they could to the ramparts to throw down on their merciless besiegers. In one place, showers of stones were flying from the summit of the walls on the besiegers' heads; in another, torrents of boiling oil were poured on them by women of every age and rank—a whole family were united to repulse an enemy. And never did the love of home and country, and sworn fidelity to a prince, give birth to such prodigies of valour, or call forth such heroism. Charles, seeing that his efforts were useless, and that his brave opposers were neither intimidated by his powerful army, nor frightened by his threats, suspended for a few days the siege, and proposed a capitulation. He only required the surrender of Nanci, and promised to respect their firesides, and to protect them from pillage, protesting, at the same time, the high esteem which he felt for a people who had shown themselves so valiant and faithful to their sovereign, and concluded his address by declaring it to be his highest ambition to be allied to so worthy a people, and that his chief desire was a lasting peace. In this instance, the propositions of Charles were sincere; often in his cruel and ambitious career he had exhibited some sensibility; virtue was not totally foreign to his fiery spirit; but he was too often led astray by his thirst for power and military fame, and he now experienced what is sooner or later the just punishment of warriors, who are unfaithful to their promises, and who do not respect treaties, even at the risk of their lives. Picardy still smoked from the fire with which this warlike prince

had devastated that fine country, which he had sworn a hundred times to spare. Normandy groaned under the ashes with which he had covered its fertile fields, and he had but just returned from making the city of Liege the theatre of a most bloody persecution of its numerous inhabitants. With such fearful examples of his cruelty, the Lorrainers could only look upon the overtures of Charles as a cruel snare, which they resolved to avoid. The valiant governor of Nanci was the most incredulous, and, by his powerful eloquence, as well as by the veneration in which he was held by all ranks of the people, determined them not to accept his proffered treaty. All resolved to die rather than submit to a faithless warrior, and to resist him vigorously. Charles being informed of the positive refusal of the inhabitants of Nanci, and, above all, of the governor's address, who had painted him in the strongest and most insulting manner, swore to be revenged. He sent again, for the last time, a herald to announce to the Lorrainers, that, if they did not surrender the town that very day, and acknowledge him for their conqueror, he would commence an assault on Nanci, and slay all the inhabitants with the edge of the sword. This threat only served to irritate them still more against him, and to redouble their courage. The governor, assured that he would be the first victim, but choosing death rather than dishonour, walked through the town haranguing the people, collecting troops, and giving to each posts to defend, as appeared to him the best for repulsing the besiegers.

Télésile, who was as much in danger as her father, as she declared she would never forsake him, partook of his heroic enthusiasm, and, following his example, harangued the women and girls who surrounded her. She reminded them of the sublime patriotism of the women of Beauvais, who feared not to participate in the horrors of the fight, and who, with their fathers, husbands, and sons, braved every danger to prevent this same Charles the Terrible from penetrating into their city, and exercising his cruelty. "We have seen," cried Télésile, with the most fascinating tone of voice, "mothers of families and timid girls arm themselves with whatever first presented itself, carrying to one place immense loads, collecting broken lances into bundles, and tying them together with their hair, overwhelming by their united strength the soldiers of Charles, and compelling them to raise the siege; they were not more devoted than we are to a glorious death; they were not so many as we are,—why then do we not follow the example of those courageous women, whose actions will descend to the farthest posterity? Why then shall we not, like them, save our city and our hearths from the tyrant?" Télésile's discourse made a lively impression on them all; it was now, who should be her assistant in imitating the touching heroism of the women of Beauvais? Neither the fatigue of labour, nor the threats of their cruel and formidable enemy, nor the fearful prospect of an assault, could intimidate the wives and daughters of the faithful Lorrainers; all determined to second them by their efforts and courage, and the weakness of a sex so little accustomed to the dangers of battle seemed to vanish, as the moment approached which was to decide for them victory or defeat. Charles, still more enraged by their persevering resistance, exerted all his ingenuity: profiting by a very dark night to deceive the besieged, he made at first several unsuccessful attacks on different parts of the ramparts, and, as soon as it was day, collecting the best of his troops before one of the most defenceless bastions, he gave the assault with so much vigour and impetuosity, that in less than two hours he opened a breach in the walls, and penetrated into the heart of the city at the head of his soldiers, who, like their leader, were burning with fury and revenge. He was going immediately, while his rage was at its height, to order the massacre of all the inhabitants of Nanci.

"Barbarian!" said Télésile, whom they had brought

before him, "if we shall perish, over whom will you reign?"

Charles.—"Who art thou, that darest thus to speak to me?"

Télésile.—"Thy prisoner, who wishes to prevent thee from adding to the dark catalogue of thy crimes."

The expressive voice of *Télésile*, her beauty, and above all, the noble indignation which burned in her, suspended for a moment the fury of *Charles*; his first demand was, the surrender of the governor, who, yielding to the solicitations of his daughter, and to the unanimous wishes of the inhabitants, disguised himself under the dress of a simple citizen, and mingled amongst the crowd of Lorrainers, who all sought to shield him from the ferocity of the conqueror. It was impossible for *Charles* to forget his promised vengeance on this honourable victim, whom he ordered to be delivered up to him, promising a considerable reward to whoever should take him.

"You will not find one who will betray the governor," said he, without discovering himself. "Swear on the word of a soldier, to pardon every inhabitant of Nanci." "To pardon them!" said *Charles* furiously; "no, no; you all have despised my power; you have rejected my overtures with too much insolence for me to listen to your prayers for mercy. If fate spares for a time your governor, I know well how to discover him after the terrible manner I treat those who, like you all, have dared to brave me, and tried to oppose the course of my victories." Then, addressing the officers who surrounded him, he gave orders to decimate, instantly, the people of Nanci—and then what a melancholy sight presented itself! Men, women, old men and children, all assembled in a long row, which extended from the place where *Charles* had stationed himself, to the ramparts of the city. Every family was grouped together, young girls clinging to their mothers' arms; friends standing side by side, each resigned to the death which was to choose its victims, and each one hoping that fate would select him to die in place of the object that was dearest to him. At last, a herald, on a sign made by the conqueror, began to number the prisoners, and those to whom the number ten came, were to be slain by the sword; but at the first falling of the fatal decimal, a difficulty arose which suspended this barbarous execution. *Télésile*, at her father's side, who still was in disguise, followed with eagerness every movement of the herald, she heard him reckoning aloud every one, and, judging too accurately that the number ten would fall to her beloved parent, she glided gently behind him, and had the filial satisfaction of hearing the number *nine* fall to him, and to herself the fatal *ten*. The governor was so overcome by this magnanimous resignation of life, by one so lovely, admired and beloved, and for whom life had so many charms, that he could scarcely find words to express himself. He declared that it was he who ought to die, that fate had selected him for the victim, and that he could not allow another to die in his place. *Télésile*, without saying that he was her father, affirmed that it was only by chance she guessed his number, and as fate had decreed it so, she would die. The herald and his companions not knowing which to believe, brought them both before *Charles* for his decision. The touching scene which ensued, and the heart-rending debate of both father and child, as to which should die for the other, made the prince experience an emotion which he could not prevent. Undecided, confused, and not knowing which side to take, he preserved the most rigid silence. "Thou hesitatest, cruel man!" cried *Télésile*, with a coolness and dignity which rendered her still more interesting. "Cause me to perish, and prolong the days of this old man, who has crowned sixty years with his virtues." "Ah! do not agree to her wish," said the governor. "What are the virtues she speaks of compared to her noble self-devotion, which fills every heart with admiration, and at which thy own breast swells with emotion?"

Télésile.—"My life is less precious than that of this old man."

Governor.—"Each day of her existence is marked by her virtues."

Télésile.—"Behold these white hairs! they tell thee of a head of a family who is loved and revered by his children."

Governor.—"See the brightness of her youth and beauty! she would live long to be the ornament of her sex; and wilt thou sacrifice her, to lengthen the few days that I can call my own?"

"Ah!" cried *Télésile*, seeing the tender expression of countenance with which *Charles* regarded her. "Ah! cease to admire in me what is but my duty; it is but a daughter who would fain save the author of her days. Learn then, conqueror, he is my father!"

"Well," replied the governor, "I will now put an end to your indecision, and oblige you to grant life to this model of filial piety. I deliver to thee that enemy on whom thou desiredst to take vengeance; thou seest before thee the governor of Nanci, who would have given himself up to thee before, had thy barbarous fury not refused to save, at the price of his head, his faithful fellow citizens." At these words, all the inhabitants, whose affection for him was heightened by the heroism of *Télésile*, surrounded her and her father, and forming a rampart about them, demanded to be allowed to die in their place. Never had *Charles* beheld so touching a spectacle. The cries of a suppliant people, kneeling at his feet, ready to die to save their governor; the free and loyal resignation of the old man, who offered himself as a victim; the heart-rending cries of *Télésile*, who swore by heaven never to survive her father; the astonishment and admiration depicted in every countenance; the tears falling from every eye, produced on the conqueror, and even on his soldiers, a feeling they could not define. At last the governor, piercing the surrounding crowd with *Télésile* hanging on his arm, required *Charles* to pronounce their fate. "You shall neither of you die," said this formidable warrior, "it would be indeed too difficult to decide between you; you have penetrated my heart to its core, and, if it is, indeed, glorious to conquer, you have taught me it is still more glorious to forgive. Enjoy," cried he, "enjoy, lovely and noble *Télésile*, all the happiness which awaits you, and receive the reward of your filial heroism, which shall be immortalized by history. I grant you not only the life of your worthy father, but that of every inhabitant in the city. Do not thank me; I owe you much more than you owe to me, for without you, my soul, filled only with the desire of military glory, would never have known the sweets of clemency, which I confess, are superior to any." These words of the conqueror were received with transports of delight; all the inhabitants, overpowered with their expressions of gratitude, uttered cries of joy, in which they were joined by the soldiers of *Charles*, who partook of their master's emotion. This prince, having learned by experience the valour and fidelity of the Lorrainers, declared his intention of making Nanci the capital of his dominions. He restored to the governor his rank and prerogatives. *Télésile* became more dear than ever to her fellow countrywomen. There was no family, no individual, who was not indebted for the preservation of a cherished object, and perhaps for their own existence. Her name was always uttered with love and respect, and, while she lived, she experienced in her happy, honoured, and virtuous life, that we must raise our minds above every circumstance in which we are placed, and that the surest way of escaping danger is by putting our entire confidence in our God, who will enable us to meet it with courage, presence of mind, and resignation.

THE MARINER'S COMPASS.

THIS wonderful invention, or discovery, which enables us to bring around us the productions of the farthest corners of the globe, is generally referred to the beginning of the fourteenth century; but there is reason to suppose that the peculiar qualities of the magnet were known to the ancients. The long and difficult voyage, which we know they accomplished, seem almost impossible without the aid of the magnet. Even in their native hemisphere the stars were often clouded, and consequently useless as guides; and in the southern hemisphere, the strange aspect of the heavens must have bewildered, instead of aiding them. Yet we know that the ancients circumnavigated Africa; and if, in the spirit of modern incredulity and self-gratulation, we declare their voyages to Britain to be mere coasting expeditions, we must allow the voyage described by Herodotus to have been of a more important character. In fact, mention of the magnet has been traced by learned writers, through clouds and darkness, up to a very remote period. Homer writes:

"No pilot's aid Phœnician vessels need,
Themselves instinct with sense securely speed;
Endued with wondrous skill, untaught they share
The purpose and the will of those they bear;
To fertile realms and distant climates go,
And where each realm and city lies, they know;
Swiftly they fly, and thro' the pathless sea,
Though wrapt in clouds and darkness, find their way."

This quotation has been applied to steam, but we think weakly. Plutarch says that the loadstone was mentioned by Manetho. We cannot trace it in "Cory's Fragments," that precious gift to the unlearned inquirer.

Mr. Maurice, in his "Indian Antiquities," says, "The magnet is mentioned by the most ancient classical writers, under the name of *Lapis Hæraclius*, in allusion to its asserted inventor, Hercules; and Dr. Hyde enables me to affirm, that the Chaldeans and Arabians have immemorially made use of it to guide them over the vast deserts that overspread their respective countries. According to the Chinese records, also, the Emperor, Ching-Vang, about 1,000 years before Christ, presented the ambassadors of the King of Cochin-China with a species of magnetic index. The Chinese called this instrument Chinam, a name by which they at this day denominate the mariner's compass."

It does not appear that the Egyptians were acquainted with the use of the magnet; at least not in that very early age, when those structures were raised which are still the wonders of the world, as the position of the great pyramid stands perfect to the true north. And that nation, enlightened, skilful, rich, were never navigators; the ships sent out by Pharaoh-Neco were manned by Phœnician sailors. It is probable that the magnet was one of the inventions of their eastern ancestors, which was in some measure unnecessary to the Egyptians; but it has been attempted to be proved that this people possessed it. Plato calls it, "The stone which Euripides named the magnet; and some call the Hæraclian stone, which attracts iron rings."

By thus attempting to show that the magnet was known to the ancients, we do not at all endeavour to detract from the merit of modern discovery. How many valuable arts were buried, or lost, in the debris of ignorance which the flood of Gothic ambition spread over Europe? Some revived slowly and secretly, under the influence of monkish seclusion; and, at length, in the course of ages, again made their way to a more enlarged sphere of usefulness. Others were

totally and entirely lost, till the searching intellect of man, clouded, but not extinguished, gave them a new birth. Among the latter we may reckon telescopes, gunpowder, the magnet; and, at a much later period, gas.

The modern inventor of the subject of our remarks shares the fate of the authors of many of the noblest inventions. He cannot be precisely ascertained. Some call him Flavio Gioja, others Giri, a native of Amalfi in Naples; others say, that Marco Polo, who received it in China, and brought it to Europe about 1290 A.D., that is, twelve years before Gioja introduced it, was its first patron in the Western world. But the magnetic needle was known in Europe even before Marco Polo brought it from the East. Vitrianus, Bishop of Ptolemais, who died at Rome, 1244 A.D., says, that "the needle is necessary to ships;" and, from some verses by a French poet, in 1180 A.D., giving a plain description of the mariner's box, it seems that a contrivance similar to the compass, and called *marinette*, was at that period in use in France. The British first suspended the compass, so as to enable it to retain always a horizontal position, and the Dutch gave names to the divisions of the card.

The compass is composed essentially of a magnetic needle, suspended freely on a pivot, and containing a card, marked with the thirty-two points of direction, into which the horizon is divided, and which are thence called *points of the compass*. The needle always points to the north, (excepting slight variations,) and the direction which the ship is steering is therefore determined by a mere inspection of the card. This apparatus is enclosed in a brass box covered with glass, and again freely suspended within another box, in order to prevent the needle being affected by the motion of the vessel. The box, of whatever material it is made, must have no particle of iron in its construction. Upon the same principle as the above all compasses are made.

Poetry.

[In Original Poetry, the Name, real or assumed, of the Author, is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

THE GOVERNESS.

THIS, an orphan, and desolate!
Treat her then kindly;
Think of your little ones—
View her faults blindly.
What though a governess?
'Tis a title of honour!
Should you then love her less,
Or trample upon her?

Her blood, as your own,
Is as gentle and pure;
And, not long since, her home
Seem'd as certain and sure.
But death, in one day,
Claim'd her father and mother;
She is now the sole stay
Of a sister and brother.
Treat her not haughtily,
Speak to her kindly;
Think of your little ones—
View her faults blindly.

Would you tread on a flower,
To extract its perfume?
'Tis not when the clouds lower
That it shows its fair bloom.
The caged bird sings sweetly,
When tended with care;
But, handle it roughly,
It dies in despair.

Though the morning is bright,
And the sun darts his ray,
It may rain before night,
And be yet a dark day.
Thus, ere death, your own daughter,
All friendless may be,
As the poor girl who taught her
To lisp on your knee.
Should her robe be more coarse,
Is her skin the less fair?
Does her voice sound more hoarse
Than your own child's? Declare.
If her smile 's not so glad
As you'd have it to be;
Think, that countenance sad
Speaks the heart's misery.
Then cheer her, not chide her,
But speak to her tenderly,
Remember, your God above
Loves her not slenderly.

Like her now,—all motherless,
Your child may yet seek —
The place of a governess,
Humble and meek.
Hark! she's spoken to gruffly—
Your eyes fill with scorn;
"My child treated so roughly!
Gods! can it be borne?"
Treat HER then with courtesy,
Honour and gentleness,
Be affable to her,
Because she's a governess.
By Charles Piesse, Esq.

TO THE NAUTILUS.

WHERE Ausonian summers glowing
Warm the deep to life and joyance,
And gentle zephyrs nimbly blowing
Wanton with the waves, that flowing
By many a land of ancient glory,
And many an isle renown'd in story,
Leap along with gladsome buoyance,—
There, mariner,
Dost thou appear,
In fairy pinnace flashing,
Through the white foam proudly dashing,
The joyous playmate of the buxom breeze,
The fearless fondling of the mighty seas.
Thou the light sail boldly spreadest,
O'er the furrow'd waters gliding;
Thou nor wreck nor foeman dreadest,
Thou nor helm nor compass needest,
While the sun is bright above thee,
While the bounding surges love thee,
In their deepening bosoms hiding;
Thou canst not fear,
Small mariner;
For though the tides with restless motion
Bear thee to the desert ocean—
Far as the ocean stretches to the sky—
'Tis all thine own—'tis all thy empery.

Lame is art, and her endeavour
Follows Nature's course but slowly:
Guessing, toiling, seeking ever,
Still improving, perfect never.
Little Nautilus, thou showest
Deeper wisdom than thou knowest,
Lore, which man should study lowly:
Bold faith and cheer,
Small mariner,
Are thine within thy pearly dwelling,—
'Tis a law of life compelling
Obedience, perfect, simple, glad, and free,
To the Great Will that animates the sea.

Miscellaneous.

"I have here made only a nosegay of culled flowers,
and have brought nothing of my own, but the string that
ties them."—*Montaigne.*

THE QUEEN AT BONN.

JULES JANIN recounts, with great pleasure, that Queen Victoria and Prince Albert, after the *fête*, set off arm in arm through the streets, in despite of the bad weather, to visit his old tutor, his college, and his friends. This was truly entering into the spirit of the country, and recalling to us an anecdote of the late lamented Duke of Orleans. He called one morning to see Ary Scheffer, the artist. On asking the porter if Scheffer was at home, the *janitor* replied, "You'll find him on the third story; and since you are going up, will you be kind enough to take up, at the same time with yourself, this coat that I have been brushing for him?" The Prince walked up to Ary Scheffer, with the latter's coat upon his arm.—*Examiner of last year.*

THERE are thousands so extravagant in their ideas of contentment, as to imagine that it must consist in having every thing in this world turn out the way they wish—that they are to sit down in happiness, and feel themselves so at ease on all points, as to desire nothing better and nothing more. I own there are instances of some, who seem to pass through the world as if all their paths had been strewn with rose-buds of delight;—but a little experience will convince us, 'tis a fatal expectation to go upon. We are born to trouble: and we may depend upon it whilst we live in this world we shall have it, though with intermissions;—that is, in whatever state we are, we shall find a mixture of good and evil; and therefore the true way to contentment is to know how to receive these certain vicissitudes of life, —the returns of good and evil, so as neither to be exalted by the one, nor overthrown by the other, but to bear ourselves towards every thing which happens with such ease and indifference of mind, as to hazard as little as may be. This is the true temperate climate fitted for us by nature, and in which every wise man would wish to live.—*Sterne.*

HE that enlarges his curiosity after the works of Nature multiplies the inlets to happiness; and therefore I call upon the younger part of my readers to make use, at once, of the spring of the year, and the spring of life, to acquire, while their minds may yet be impressed with new images, a love of innocent pleasures, and an ardour for useful knowledge; and to remember that a blighted spring makes a barren year, and that the vernal flowers, however beautiful and gay, are only intended by Nature as preparatives to autumnal fruits.—*Dr. Johnson.*

NATURE has perfections, in order to show that she is the image of God; and defects, in order to show that she is *only* his image.—*Pascal.*

WHATEVER God himself has pleased to think worthy of his making, its fellow-creature, man, should not think unworthy of his knowing.—*Boyle.*

THE CINQUE PORTS.¹

No. II.

HISTORICAL SKETCH OF THE ISLE OF THANET.

"The Roman, next the Pict, the Saxon, then the Dane,
All landing at this Isle, each, like a horrid raine,
Deforming her." *Drayton.*

THE quaint but forcible lines we have selected for our motto, describe briefly and most accurately the hapless destinies of this much-abused island, a short sketch of which may naturally and appropriately precede our notices of the Cinque Ports. This island is regarded usually as a part of the continent of Kent; and, though now divided therefrom by only an insignificant river, was once separated from the main land by a broad estuary, in which that stream which now forms the sole division was hardly perceptible. The term Thanet has been derived from a Saxon word, signifying moist or

watery. Archdeacon Battely deduces the name from the British word Tân, a fire; and Lewis says that Thanet was called Tenet or Taned-lond, by our Saxon ancestors, from tene, a fire or beacon, on account of the number and frequency of the beacons lighted therein, to give notice of incursions of Danes or pirates. This seems to be the most generally received interpretation of the name, though a more romantic one was, that the term Thanaton, or Athanaton (first used by Julius Solinus) was applied to the island because no serpents or venomous creatures will live in it. Indeed it has been asserted that the soil carried elsewhere will destroy these reptiles; but modern scepticism classes this venerable adage with that which tells of St. Patrick charming away the snakes of the Emerald Isle.

Nothing remarkable seems to have attached to the destinies of the Isle of Thanet from the

(1) Continued from page 228.

departure of the Romans until the arrival of the Saxons, which was the hinge on which her subsequent bloody fortunes seemed to turn; for the reckless and profligate king, who sought the aid of the Saxon brothers against enemies he had not the manhood to repel, appointed to Hengist and Horsa and their followers the Isle of Thanet as a residence, besides other pay and payment, in requital of the aid he solicited. "With Hengist and Horsa, came nine thousand Saxons, with their wives and children, and were appointed the Isle of Thanet to inhabit. The assistance which they at first gave the British made them that *they accounted the Saxons as angels sent from heaven*; and then they allowed them Kent also for their inhabiting. Not long after Hengist obtained of King Vortigern the property of so much ground as he could enclose with a bull's hide; which, cutting into thongs, he there built the castle called 'Thong Castle.'"

Having obtained this footing, the wily savages never relinquished it; and though on some occasions, when they endeavoured to pursue their conquests further, they were routed by the brave and patriotic prince Vortimer, still they were never, even in his most successful rencounters, driven entirely from this stronghold, the Isle of Thanet, whither, on the slightest opening, additional swarms were perpetually pouring over from the Continent. They were formidable opponents. They were a finely formed race; their "yellow hair" flowed over their shoulders, and they wore close short coats, which displayed their tall symmetrical figures to the greatest advantage. They were armed with long spears, very small shields, and knives hanging at their breast; and thus accoutred, they braved the heavy seas in small rude boats; and withal were so perfectly at home and independent in them in the stormiest weather, that were we now to see them, the proverb would be apt to suggest itself, "Who's born to be hanged will never be drowned." It is said that they were so inured to the sea that they almost dreaded the land; but this must have been before they were acquainted with *Thanet-lande*.

Too soon—all too soon—the brave prince Vortimer died through the treachery of his stepmother Rowena; and, though he gave orders that he should be buried near the spot where the Saxons were wont to land, and should have a conspicuous monument placed over his remains, in order that his tomb might frighten the invaders away, it does not appear that this happy result ensued; but it is hinted by some that his injunctions were not obeyed.

The Saxon was not slow to avail himself of the advantages arising from his brave adversary's death. His wiles and his treachery were now unopposed; and, as the historian says, he must have been a terrible enemy. "If he took you unawares, he was gone in a moment; he despised opposition, and certainly worsted you, if you were not well provided. If he pursued, he undoubtedly caught you; if he flew, he always escaped."

Had the unworthy king Vortigern possessed the spirit of a man, he still was not gifted with shrewdness to counteract the subtlety of his treacherous friends. History recounts how Hengist slew 300 British nobility at a banquet, and forced the king, would he escape the same fate, to yield as a ransom not only Kent, but a large tract of land bordering thereupon, which was immediately peopled with Saxons, and divided into East Sexa, or Seaxe

(Essex); South Seaxe (Sussex); and Middle Seaxe (Middlesex).

Nor did this great concession suffice them. Excited perhaps—for they were a most superstitious people—by the auguries of their soothsayers, who prophesied that they should plunder the country 150 years, and possess it in quiet for twice that time, they put no limits to their encroachments, no restraint on their appetites; and, following the dictates of a bloody religion acting on untutored minds, no bounds to their cruelty. They ravaged the whole land with fire and sword; buildings, public and private, were razed to the ground; the Church—the ancient and then flourishing British Church—was a peculiar object of their enmity; the ministers of religion were tracked to their furthest retreats; the priests were slain at the altars; whole hecatombs were raised of slaughtered natives, men, women, and children, indiscriminately; paganism resumed its sway; and the Saxon lorded it over the bleeding isle.

But time not only reconciled the heart-burnings and jealousies of the Britons and their foes, but peace and quietude ameliorated the habits of the fierce intruders themselves; and when Saint Augustine came to the Isle of Thanet on his mission of peace, the Saxon king showed a heart ripe for Christianity, in his kind and courteous bearing towards the strangers. The mission was abundantly successful; and the good seed had happily taken deep root, and spread abroad in the land, ere the Isle of Thanet again became the seat of ruthless contention and pitiless strife, from the aggressions of the fierce and savage Danes. If all we read be true, the Saxons themselves, in their rudest days, must have been mild and merciful compared with those "barbarous wolves." The notices in the Saxon Chronicle regarding the irruptions of the Danish pirates, though very brief, and written with a simplicity almost severe, give one a forcible idea of the horrors of the period. These notices extend from A.D. 787 to A.D. 1011.

Though the Danes did not confine their aggressions to the Isle of Thanet, (for bloody are the deeds that other counties record,) still their irruptions here seem to have been more constant, general, and continuous than elsewhere, and fully to have justified the frequent remark of the Chronicles, that "Thanet also was not suffered to rest." We learn, that though they occasionally lived as quiet inmates with the inhabitants, these truces occurred but seldom; and they frequently and suddenly (even immediately after a peace had been bought at a high price) would summon farther aid from home, additional ships would speedily arrive on the coast of Kent, and they would spoil the country, "*especially the Isle of Thanet*." Their pride and insolence kept pace with their cruelty; the English, we are told, were toiling in the dust, whilst the Danes revelled in idleness, and in the luxuries of the land; and so marked, so habitual, was the contrast, that "Lord Dane" (for so were they called) became a popular reproachful synonym for "lazy lubber."

Were history silent or doubtful on the subject, popular tradition would even now suffice to point out the Isle of Thanet as the theatre of Danish contest. Every hillock almost is referred to as the site of a combat, or the place of the burial of Danes. The whole island is redolent of them.

There are several pillars of modern erection, and now expressly intended as beacons for mariners; but many, or most of these, are supposed originally to have been trophies erected over different fields of battle.

"Is there a river in the land
Can boast a clear and guiltless wave,
Pure from the life-blood of the brave,
Where no man wash'd his gory hand?
I fear me, no! Is there a plain
By shepherd's lonely footsteps trod,
Where some huge heap of native slain
Swells not the turfy sod?"

Most richly does the Isle of Thanet seem to have been endowed with religious edifices, owing, doubtless, to its near neighbourhood to the early seat of archiepiscopal empire, and, it may be, to some feelings of regard in St. Augustine and his followers for the place where they first found shelter in Britain. Indeed, tradition is not backward in ascribing the fertility and fruitfulness for which this island is so very remarkable, to the coming of Augustine, the "first doctor of the English;" and this may readily be allowed without assigning anything miraculous or magical to his operations. Like England at large, Thanet was thickly wooded; indeed, many names in the island, even now, bear testimony to that fact. Far from clearing them away, the natives looked upon them as their homes, their refuge; and, while these woods clogged the atmosphere with vapour, prevented a free circulation of air on the ground, and intercepted the rays of the sun, it is certain that the soil must have been damp, unwholesome, and unproductive. It is well understood that, in the early days of the Church, agriculture was studied and greatly encouraged by its members; and that, by their skill, science, and industry, the most unpromising tracts were converted into smiling and luxuriant gardens. Thus may it have been that the principles of agriculture were first introduced into Thanet by the Church, and the adage have originated that St. Augustine rendered it fertile. Fertile it is now, indeed,—most luxuriantly so. It is said that the Flemings first discovered its natural aptitude for the growth of esculent vegetables, which thrive here profusely; and it is also said that the first market garden in England was placed in the Isle of Thanet. The luxuriant appearance of the island is very much increased by the absence of the hedge-rows and small divisions which are seen in many other counties. The country is all undulating, and the sweeps of waving grain rising or sinking according to the variations of the land for many, many acres, without break or division, have certainly a very beautiful effect. The soil is peculiar, and, from that circumstance, a season so wet as to be considered unfavourable, generally is well suited to Thanet; whence the old saying—

"When England brings
The Island sings."

This adage presents a most courageous achievement in ellipsis; the full reading would be—

"When England wrings (her hands for grief)
The Island sings."

A FAREWELL VISIT TO THE CHINESE EXHIBITION.

ON paying a farewell visit to the Chinese Exhibition a few days since, (that exhibition being about to close for the purpose of removal from London,) we were led to review its interesting contents as suggestive of the following inquiry,—How is it that a people, possessing the marvellous skill and ingenuity here displayed, together with a degree of perseverance and industry almost beyond conception,—how is it that such a nation should have remained, age after age, in a condition nearly stationary, and without making those sensible advances which might be expected from the character of the people, and from the natural and physical advantages which arise out of the position of China among the nations of Asia?

A glance at the three colossal figures near the entrance door of the saloon was almost a sufficient reply. These figures, which are eleven feet high, and richly gilt, represent the Chinese god *Fo*, or *Budha*, whose disciples affirm that he is one person, but has three distinct forms. These images are therefore called the "three precious or pure Budhas, past, present, and to come." The gross superstitions of Buddhism, though disowned by the Chinese government, overspread great part of the nation, and are well calculated to enslave the minds of the people, and to repress the aspirations of the human intellect. Besides their principal deity, Buddhists have numerous minor divinities, whose number appears to be constantly liable to increase. They worship with much ceremony the idol *Tien-how*, "Queen of Heaven," (called also *Shing-moo*, "the Holy Mother,") supposed by many writers to have been adopted from the Roman Catholic worship of the Virgin; and, in one of their idol-temples, a missionary actually beheld the priests burning incense before a *bust of Napoleon*, which had by some means or other come into their possession.

The tendency of Buddhism is to repress the faculties of the mind, so as to reduce men to a state of total abstraction or quietism, without passions, and almost without human desires. The common sense of the Chinese people, and their fondness for the ordinary business of life, prevents their reception of all the absurdities of Buddhism; they are mostly content to leave these things to the priests, and to purchase their good offices for the supply of their own deficiencies. On the priests themselves the Buddhist creed appears to have a most debasing influence. "They have nearly all of them," says Davis, "an expression approaching to idiotcy, which is probably acquired in that dreamy state in which one of their most famous professors is said to have passed nine years, with his eyes fixed upon a wall!" The priests are associated together in monasteries attached to the temple of their god, and they encourage the formation of communities of female devotees. Between the priests of Budha and those of the Romish church, there are several strange coincidences, which greatly surprised the first Roman Catholic missionaries to China, and led them to suppose that the Chinese had, in some way or other, obtained a glimpse of the practices of Christian churches. On the other hand, those persons who are of opinion that many of the ceremonies and rites of the Romish church are

directly borrowed from paganism, are confirmed in that opinion by the fact of these coincidences.

The priests of Budha (one of whom is represented in full canonicals in Case II. of this Exhibition) shave the whole of the head, practise celibacy, fasting, and prayers for the dead; they have holy water, rosaries of beads, which they count with their prayers, the worship of relics, a monastic habit, resembling that of the Franciscans, prayers in a language unknown to the people, and finally, the worship of the "queen of heaven." Their temples are the nine-storied pagodas of China, though in some of the provinces of the interior, seven-storied pagodas are met with. Wherever these pagodas are in good repair, (for many are in ruins,) they are found connected with extensive establishments, deriving a portion of their revenue from the land adjoining. They are enriched by the gifts and bequests of their votaries, and most of them support a crowd of idle and ignorant priests, but the government has nothing to do with their maintenance. The doctrine taught by these priests is, that there is no First Cause, but that matter is eternal. Their gods are beings who have exalted themselves by their merit; among whom Boodh, the founder of the Buddhist religion, is said to have been a son of the king of Benares, who flourished about six hundred years before Christ, and to have had, in various ages, ten incarnations. The heaven of the Buddhists is a place of sensual enjoyment, to which the merit of the creature is to exalt him, even to a rank among the demi-gods. The hell of the Buddhists is a place of various degrees of torture, beginning with "the world of snakes." It is the duty of a Buddhist to keep a sort of debtor and creditor account of his merits and demerits, and wind up his accounts every year. If the merits prevail, they go over to the next year; if the demerits, then he has to perform a certain number of good deeds to set against the balance. Among the good deeds, presents to the priests and the temple hold a high rank. The transmigration of souls is a doctrine of the Buddhist religion, and this is supposed to be practically illustrated in the case of the Grand Lama of Thibet, who is the great high priest of the Buddhists, and whose soul, on quitting the body, is supposed instantly to animate that of an infant.

But it may be said that the religion of Budha, not being that of the state, nor in any measure supported by the Chinese government, cannot be the sole, or even the chief cause of the stationary position of the Chinese among the civilized nations of the earth. Let us then glance at the state religion of China, if we may so designate that which is rather a system of philosophy and political economy than of religion, having no priesthood but the emperor and his civil mandarins, and no regular religious worship. The whole system of Chinese government is based on the doctrines of Confucius, a philosopher and statesman, born about five hundred and fifty years before Christ. Moral and political science formed the study of Confucius, and these were illustrated by his teaching and his writings, the latter of which are reckoned as the sacred books of China, and contain precepts of acknowledged wisdom, and rules of conduct that are remarkable for their excellence. Yet the system of Confucius, like every other human system of philosophy, contains much that

is positively mischievous and wrong, while it encourages self-sufficiency and pride in its followers. In his political works the sage rightly commences with morals as the foundation of politics, and with the conduct of an individual father in his family as the prototype of a sovereign's sway over his people. And it has been the aim of Chinese statesmen and rulers to push to extremes the paternal authority among the people, as this must have a direct tendency to strengthen the authority of the emperor.

Dr. Morrison remarks, that even the ethics of Confucius dwell chiefly on those social duties which have a political bearing. "A family is the prototype of his nation or empire, and he lays at the bottom of his system, not the visionary notions, which have no existence in nature, of *independence* or *equality*, but principles of *dependence* and *subordination*, as of children to parents, the younger to the elder, and so on. These principles are perpetually inculcated in the Confucian writings, as well as embodied in solemn ceremonies, and in apparently trivial forms of etiquette. It is probably this feature of his doctrines which has made him such a favourite with all the governments of China for many centuries past, and down to this day. These principles and these forms are early instilled into young minds, and form the basis of their moral sentiment; the elucidation and enforcement of these principles and forms is the business of students who aspire to be magistrates or statesmen, and of the wealthy who desire nominal rank in the country; and it is, in all likelihood, owing chiefly to the influence of these principles on the national mind and conscience, that China holds together the largest associated population in the world."

It is rather difficult to gather out of the system of Confucius the true object of his religious belief. That philosopher had evidently no great respect for the gods, and did not profess to instruct his followers concerning them. His whole aim seems to have been to raise and purify the character of the people, to preach and to practise those virtues which form the stability of an empire, as well as the highest honour of the individuals composing it. And may we not suppose that in those earnest endeavours he was directed and enlightened from above, and was permitted to catch a glimpse of truths, for the reception of which his fellow-countrymen were, perhaps, not yet prepared? It appears evident that Confucius placed his trust in a Heavenly Power, which he believed would carry forward the work of reformation in the empire. But so dim were his views of the true nature of that power, that he placed it on an equality with the wisest of men, and with the earth itself. "The sage," he says, "is united with heaven and earth so as to form a triad. To be united to heaven and earth, means to stand equal with heaven and earth." Notwithstanding this assumption of equality with the higher powers, it is recorded of him that he was singularly modest as to his own pretensions, and ever exhibited the most unpretending humility. It must not, therefore, be laid to the charge of the philosopher himself, that his followers at the present day are remarkable for their high and self-sufficient bearing to all such as have not the honour to profess the state religion. Confucius is held in the highest respect by the Chinese, and in every city, even down to those of

the third rank, there is a temple dedicated to him. He is called "the most holy teacher of ancient time," and, as his system of philosophy and morality does not come into direct collision with other persuasions, so he is revered by the Chinese generally, whether of the state religion or not.

The creed of the Confucians of the present day must not be supposed to present the views and principles of the great philosopher without addition or perversion. The commentators on the sacred books have been many, and they have doubtless construed them on many occasions in a way quite different from the intentions of the author. The mode of worship in use at the present time among the Confucians consists, first, of the "great sacrifices" which are offered to "Heaven and Earth," but which are not allowed by the wiser among the worshippers to be an adoration of material things, but of an animating intelligence which presides over the world, rewarding virtue and punishing vice. The "medium sacrifices," and the "lesser sacrifices" are offered to a multitude of objects, such as the powers presiding over agriculture, manufactures, and the useful arts; spirits of deceased statesmen, eminent scholars, martyrs to virtue, &c. Thus the state religion is indeed one of "gods many and lords many."

The worship of "Heaven" is confined to the emperor and his court, and should one of the common people dare to assume the right of worshipping Heaven, he is punished with eighty blows, and even with strangulation. The power of the emperor in interceding for the people is supposed to be great. On the occasion of a great drought in the year 1832, the emperor prayed thus:—"I, the minister of Heaven, am placed over mankind, and made responsible for keeping the world in order, and tranquillizing the people. Unable as I am to sleep or eat with composure, scorched with grief, and trembling with anxiety, still no genial and copious showers have yet descended. . . I ask myself whether in sacrificial services I have been remiss—whether pride and prodigality have had a place in my heart, springing up there unobserved—whether, from length of time, I have become careless in the concerns of government—whether I have uttered irreverent words, and deserved reprehension—whether perfect equity has been attained in conferring rewards and inflicting punishments—whether, in raising mausoleums and laying out gardens, I have distressed the people, and wasted property—whether, in the appointment of officers, I have failed to obtain fit persons, and thereby rendered government vexatious to the people—whether the largesses conferred on the afflicted southern provinces were properly applied, or the people left to die in ditches. Prostrate I beg Imperial Heaven to pardon my ignorance and dullness, and to grant me self-renovation; for myriads of innocent people are involved by me, a single man. My sins are so numerous that it is hopeless to escape their consequences. Summer is passed, and autumn arrived; to wait longer is impossible. Prostrate, I implore Imperial Heaven to grant a gracious deliverance."

There is a third sect in China quite distinct from the Confucians, and the Buddhists. This is the *Taou* sect, so called from *Taou*, a philosopher, contemporary with Confucius. This sect is idolatrous and superstitious, like the rest, and its sacred books

are full of the most absurd and puerile legends. A priest of the *Taou* sect is represented in full dress in Case II.

Thus the state of the Chinese, as to spiritual and eternal things, is one of "gross darkness;" while the tendency of their various superstitions is to inflate the mind with pride and self-importance, and to hinder the reception of simple truth. The wise doctrines of Confucius, indeed, tend to earthly prosperity, and maintain a state of order and subordination among the people; but all progress in real knowledge is sadly encumbered by false and superstitious views on the subject of religion. The education and literature of the Celestial Empire has been much extolled, on account of its universality, as it regards the male sex, and the sure prospects of advancement to posts of honour which are held out to successful scholars. But the instruction itself is extremely limited, and none dare swerve from the prescribed track, or study other matters than those which are necessary to make them good subjects of the empire. All must be done exactly after the ancient manner, and there is no thirsting for new discoveries, or prying into the mysteries of nature. The dresses of literary men, and their method of keeping and arranging their books, are shown in Case III. of the collection.

The Chinese have few public holidays. There is, of course, no regular observance of a sabbath, but there are feasts dependent on the sun and moon. The greatest of these is that of the New Year. The people sit up the whole of the preceding night, letting off fireworks, performing sacred rites, and preparing their houses for the solemnities of the new year. No work that can possibly be omitted is done for the first three days, and public business is suspended for forty days, that the prescribed ceremonials may be duly observed. Tickets of congratulation are sent, and presents exchanged; crowds repair to the different temples, and visits are universally paid. The Feast of Lanterns, which occurs soon after this, is a general illumination throughout the empire. On this occasion a vast variety of lanterns are displayed, made of silk, varnish, horn, paper, and glass, some of them having figures of men and animals in full motion. The moving power is the heated air of the lamp, which turns a horizontal wheel; the lamp itself is simply a cotton wick, immersed in a cup of oil. This Feast of Lanterns is represented with considerable brilliancy and effect at the Exhibition.

An interesting festival is held by the Chinese in honour of the return of spring. Musicians, and children decked with flowers, escort a clay figure of the buffalo (the animal used to plough the flooded rice grounds) into the city. The Governor goes out at the eastern gate to meet it, and delivers an address, in his capacity of "Priest of Spring." About the same time of the year, after the performance of certain sacrifices, the emperor goes through the ceremony of ploughing a few furrows, in which he is followed and imitated by the princes and ministers of state, in token of the protection they are willing to afford to agriculture. The empress also appears in person in the silkworm districts; and, after sacrificing at the altar of the inventor of the silk manufacture, proceeds, with her principal ladies, to gather the mulberry leaves, feed the silkworms, heat the cocoons in water, wind off the silk, &c. The dresses of ladies of distinction, their

mode of arranging their hair, the cruel distortion of their feet, with specimens of their embroidery, are to be seen in Case IV. of the Collection.

In some branches of manufacture, the Chinese are very skilful. In metals, they have the art of casting iron into thin plates, and of repairing vessels thus constructed, by means of a small furnace and blow-pipe. But they are so prejudiced in favour of their own productions, that a better article, if it has a foreign fashion about it, will be hardly looked at. They also make a white copper, much resembling silver, which has a close grain, and takes a good polish. It is an alloy of copper, zinc, and iron, with a little silver, and occasionally some nickel. Several mechanics at work, with all their tools about them, are represented in Case VI. of the Collection. The patience and ingenuity of the Chinese are remarkably shown in their carvings of wood and ivory, many exquisite specimens of which adorn this Collection. "Those ivory balls," says Davis, "containing sometimes as many as seven or eight others in the interior, have long excited the surprise of Europeans, and even led to the supposition that some deception must be exercised in joining the exterior balls after the others have been inserted. They are, however, really cut out, one within the other, by means of sharp, crooked instruments, working through the numerous round holes with which the balls are perforated, and which enable the workmen to cut away the substance between, and thus to detach the balls from one another; after which the surfaces are carved. Their skill and industry are not less shown in cutting the hardest materials, as exemplified in their snuff-bottles of agate and rock-crystal, which are hollowed into perfect bottles of about two inches in length, through openings in the neck not a quarter of an inch in diameter! But more than this, the crystal bottles are inscribed on the *inside* with minute characters, so as to be read through the transparent substance!"

The great manufactures of the Chinese are silk and porcelain, the originality of which is undoubted. These are well illustrated by the magnificent specimens contained in this Collection, which cannot be viewed without giving high ideas of the skill and ability of the manufacturers. The specimens of lacquered ware are also exceedingly beautiful, as are likewise a vast number of miscellaneous articles, too diversified to allow of description. The specimens of the fine arts here exhibited far surpassed our expectations. The estimate of Chinese painting has hitherto been so low, that it was with difficulty we could persuade ourselves of the fact, that these portraits and landscapes are produced by native artists.

Altogether, a view of this Collection is calculated to excite admiration and respect for the character and abilities of the Chinese, and an earnest wish that the day may not be far distant, when their intercourse with Christian lands may have the happy effect of softening their prejudices, and preparing the way for the reception of a religion which shall bring all blessings in its train, and quickly put to flight the clouds of error which now obscure the spiritual horizon of China.

NATURAL HISTORY OF BIRDS,

(No. VI.—Continued.)

HIRUNDINIDÆ, OR SWALLOW FAMILY.

The House Martin (*Hirundo Urbica*). This species reaches England about three weeks after the chimney-swallow, with which it may have left Africa, but, being endowed with less power of wing, has been distanced on the journey; or the martins may be less able to face heavy gales, and therefore wait till the winter winds have spent their rage. It is a more elegant bird than the chimney-swallow, presenting to our admiration its beautiful snow-white breast, seeming as if formed to dwell in the purest regions of the air, where nought of taint could reach its delicate plumage. It also exhibits more of the rich purple on the back and wings than the first-mentioned bird, producing a most brilliant appearance when a flock of these beautiful birds is seen wheeling for hours together in the sunlight, which develops every tint of their richly-coloured wings. Some may deem its shape less graceful than the form of its kindred species, as the body is shorter and the tail less forked; the wings are also deficient in that sweep which contributes to form the beautiful movements of the chimney-swallow. On this point the *Hirundo Urbica* must yield to the *Hirundo Rustica*; but its pleasing colours will more than compensate for the inferiority of form and movement.

The appellation *Urbica*, given to this martin, designates one of its most interesting habits, that of building against the walls of our houses. This tendency brings the martin into the closest familiarity with man, whether the nest be raised under the weather-board of the cottage door, where the peasant children gaze with delight on the bright creature, as with gentle twitter it flies over their curly heads to its home, or against the windows of the scholar's library, who oft pauses a moment from thought to mark its happy movements.

It is an interesting sight to watch a pair of these birds whilst constructing the nest. At first there is evidently something like thought respecting the choice of a position. This being settled, the birds begin to work with untiring zeal. They do not build through the whole day, but principally in the morning; and thus the work of one morning becomes dry and hardened by the ensuing. If the nest were raised without such intervals, the mass would become too heavy for the moist clay to support, and fall down; this is prevented by allowing one layer to dry before adding another. Just upon this principle do the cotters in Devonshire raise those walls of earth which are often seen in that part of England. After a stratum of earth is laid, no further progress is made until the whole part already formed is thoroughly dry, when a fresh stratum is formed; after which there is another delay, and so is the work continued until the building is completed. But how does the martin produce that adhesiveness in the clay, which causes every part to cling together so firmly and so long? Let the most skilful mechanist try to form a piece of earth-work resembling the martin's nest, and placed, like it, against a perpendicular wall; he will soon find the attempt hopeless. We will watch the bird's operations in building. As soon as a fit place is selected, we hear at the earliest dawn a constant twittering about the spot, as if the birds, like merry contented workmen, lightened their labours by pleasant carols. Approaching, we see first one bit of earth, then another, added to the tiny house. The martin does not merely place the bit of earth upon the previously collected matter, but works for some time kneading the fresh bit with its beak and chin into the substance of the old work. After some troweling of this nature, it flies away for more materials, which are again incorporated into the pre-

ceding deposit. The clay seems to be moistened in some way by a secretion from the bird's mouth-glands, and thus to acquire that glue-like property which renders the nest firm and durable. When well placed, they will resist for years both summer and winter storms, with all the alternations of heat and cold, drought and wet; after which time it requires some powerful blows of a stick to effect their destruction. So viscid is the substance of the nest, that the marks of its adhesion cannot be obliterated from the wood-work of a house without the application of mop and brush.

"It wins my admiration
To view the structure of that little work,
Yon bird's nest. Mark it well, within, without,
No tool had he that wrought, no knife to cut;
No nail to fix; no bodkin to insert;
No glue to join; his little beak was all:
And yet, how neatly finished! What nice hand,
With every implement, and means of art,
And twenty years' apprenticeship to boot,
Could make me such another?"

The martins are sometimes exceedingly unfortunate in the choice of a place for the nest, raising it where its destruction is inevitable; an illustration of the oft-repeated remark, that a little *reason* would avoid dangers which the finest *instinct* rushes into.

A pair began this year to build on the top frame of a window, opening outside in the manner of a door. As this window was shut every evening, the whole work of each day was constantly swept off the ledge by its closing. The writer hoped the birds would desist from building in that spot after one or two instances of destruction had occurred; instead of which, they pertinaciously repaired every morning the ruins of the previous evening, till after repeated disappointments the hopeless attempt was relinquished. One circumstance, rendering this pertinacity more remarkable, was the late hour at which the window was opened in the morning, thus forcing the birds to delay their labours some hours after their usual time of work had commenced. I was sorry to disturb or incommode the little things, but their instinct-illogicalness had led them to a place whence their dislodgement was unavoidable.

These nests are fully occupied during a season, as the martin has generally two broods in a summer, which sport round the houses honoured by their choice, till the autumnal gales sound the alarm of winter. As the martins do not appear to increase in numbers, such numerous families are clearly designed to replace the losses caused by their migrations to warmer homes. Thousands and tens of thousands of these snow-bosomed birds perish during their long journeyings, in which they are necessarily exposed to the fierce winds of the tropics, so prevalent during spring and autumn. The martins probably suffer more than the other swallows, in consequence of their less vigorous powers of flight, and this waste is repaired by the large families raised in a year by each pair. Perhaps no birds leave such numbers of their companions dead in the ocean waters as the martins. Thus, after a gay life, amid the pastures, and along the banks of the fair winding rivers, of England, hosts of the Hirundines perish in the cold blue waves of the Mediterranean.

Their autumnal migration, which is generally towards the end of October, is performed in vast armies, which gather their companies together in our villages and hamlets, as if forming their battalions for some grand struggle with the elements of nature. The villages on the banks of gentle rivers, and especially those on the willow-fringed margins of the Thames, swarm with the gathering arrays, which send forth in still evening the not unmusical sounds from a thousand fluttering wings. None would willingly believe harsh things of these birds of beauty, but truth-loving philosophy will not hide the revelations of nature behind flimsy veils of fancy, nor substitute the gorgeousness of fable for the

pure and starry brightness of reality. An astronomer would gain little by wilfully closing his eyes to the spots on the sun or the moon; nor will the true naturalist degrade his pursuit to a collection of childish babblings, seeking no end but the excitement of a weak admiration. What then must truth declare of the martin? No less than this, that these apparently gentle birds often leave their young to perish in the nest, when hatched late in the year, and provide for their own safety by joining in the general migration.

Their nests have often been examined, and great numbers found to contain dead birds, or eggs which have been abandoned when on the point of hatching. These deserted nests are only found late in the year, when an irresistible passion impels the parent birds to abandon objects which, at other times, they would most fondly have cherished. These desertions appear, in some seasons, to be numerous, as out of thirty-six nests examined in one autumn, fifteen contained dead birds. Such abandonments of the young by a bird are singular exceptions to the general law which prompts the feathered tribes to nurture and protect, with a fond assiduity, their nestlings. But these cases of apparent cruelty in the martin arise from the strong influence of another law, that of migration in due time, upon obedience to which the existence of the swallow family depends. When the approach of winter stirs within the swallow the workings of this principle, all others yield for a time to its overpowering force; even a long-tried affection for the young then submits to another impulse. To the last the martin watches and tends its nestlings. At length it sees its fellows congregate, hears their signal for departure, and, seized by the wild impulse, springs aloft, and joins the migrating host, whilst its young are necessarily left to perish. Our house-martin is not found in America, where its place is probably supplied by the green martin, (*Hirundo Berides*), which is beautifully marked on the back and wings by tints of green and blue; or by the purple martin, (*Hirundo Purpurea*), distinguished by the purplish hues of its breast and belly. This last bird is sometimes seen in flocks of two miles in length, by half a mile in width, and receives protection and shelter from the people, who build compact bird-houses to attract this martin to nestle in their gardens.

The Sand Martin, (*Hirundo Riparia*.) This species resembles, in its general habits, the other members of the Swallow family, and is here noticed on account of its peculiar tendency to form its nest in deep hollows of river banks, or such like localities. From this habit it has been characterised by the term, "*riparia*," which the English reader may translate by the word "*bank*;" the full name, "*Hirundo riparia*," signifying the *bank swallow*. This habit was noted ages ago; and Pliny the Elder, in his great work on natural history and science, applies the term "*riparia*" to the sand-martin. Thus, for nearly 1800 years, this bird has enjoyed the honour of an unchanged appellation. It is the smallest of the swallow family, and comparatively rare in the south of England, though more frequently seen than some imagine. These martins have not the bold and long-sweeping flight of the other swallows, but fly in a series of oscillations, somewhat resembling the motions of a butterfly, from which, perhaps, they are called, in some parts of Spain, *Papilion di Montagna*, or *Mountain Butterfly*.

The nests are usually formed in the banks of rivers, but are sometimes found in sand, at some distance from water. The active bird bores a winding opening into the bank, of more than two feet in length, at the extremity of which it forms a comfortable little home for its young. Some banks appear to have an especial attraction for these birds, and are completely riddled for some distance; 400 holes having been counted within a space of eighty yards, in such banks. The solitary shores of the great American rivers swarm with these birds, and the traveller is often startled by

the clouds which suddenly dart across the stream from their sandy hiding places.

By what means does the sand-martin pierce through the solid materials of a bank? The slender beak is the sole instrument, joined to perseverance; and this delicate agency accomplishes in time the object of the little feathered miner. The labour required in driving such a tunnel is of course great, but the work is finished in a few days, the roof with its arch-form constructed, and the chamber at the extremity formed, with that instinct-skill which so often appears in the works of the feathered engineers.

The Swift. (*Hirundo Apus*.) This species might be called a large swallow by the general observer, as its habits do not much differ from those of the other Hirundines. It is not classed by all naturalists amongst the Hirundinidae, receiving a distinct appellation, (*Cypselus Apus*), which is supposed to characterise the habit and appearance of the bird. This name signifies the *footless hive-builder*; *cypselus* expressing its habits of building in holes of walls, and *apus* referring to the shortness of the feet. The former name has been given to this swallow since the days of Aristotle, but the Linnean name, *Hirundo Apus*, seems not very unsuitable, as there can be little doubt respecting the claim of the swift to rank with the swallows. Linnaeus classed it amongst the Hirundines, but he applied the term *apus*, or footless, to the bird, which is, of course, inaccurate, and so far objectionable. *Cypselus Murarius* has been thought a fitter designation by Temminck, as *murarius* denotes the Swift's habit of frequenting ancient walls, and the hollows of grey ruins. But surely *Hirundo Murarius* is sufficiently exact, avoiding the error implied by the word *apus*, and the fault of needlessly increasing the number of genera, to which objection the use of *cypselus* does certainly seem liable. The feet of the swift are so short as to unfit it for motion on the ground, on which it rarely alights. The toes are all in *front of the foot*, and so much curved, as to resemble the claws of the falcon. This structure enables the swift to cling firmly to the sides of perpendicular walls and rocks, which are its principal resting-places; and the feet are not designed for locomotion, but for a grasping apparatus. The long and powerful wings enable this bird of the airy realms to keep on the wing for sixteen hours through the long days of summer, when it may be seen disporting at immense heights, as if delighted to live beyond the many-voiced din of earth. Not till the last crimson rays have faded from the western clouds, do the swifts descend from their high paths to roost in some ivy-clad tower, or ruined castle wall. Should sultry thunder-clouds gather along the horizon, the swifts are seen to dart to and fro, with exulting glee, as if eager to mingle in the strife of the tempest. Probably such weather brings within its easy reach myriads of insects, and hence the bird's delight at such times can be explained on the most approved principles of utilitarianism.

The swift does not remain in England longer than three months, arriving about the middle of May, and leaving in August; it therefore has but one brood in the season, which being reared, the warm regions of the South are again sought. But, though the stay is short, the bird retains its summer home in memory, returning year after year to the same places. Dr. Jenner tested this habit of the swift, by taking from each of twelve birds two of their claws, by which mark he was able to recognise at the end of seven years one of the maimed birds in its former haunt.

The colour of the swift is a bright black, except the chin, which is white. Their hues become much dimmed by the nesting labours, and they consequently leave us in worn and soiled apparel.

This bird is not much of an architect, satisfying itself by a rude nest of dry vegetable matter and feathers.

The Java Swallow. (*Hirundo Esculenta*.) Our li-

imited space prevents more than a brief notice of this bird, which indeed offers little to attract attention, if its nests are excepted. Some birds gain ornithological distinction by their modes of life; this derives its importance from its house. The term *esculenta* (eatable) applies of course to the *nest*, not to the bird, and is therefore a clumsy epithet when connected with the word *Hirundo*. Asiatic, Indian, or Java Swallow would be a more correct designation. The nests of this bird are formed from certain portions of its food, and are collected with the utmost care by the natives of the Chinese seas, who risk their lives to procure from precipitous rocks these prized specimens of bird-manufacture. The matter of which these nests are composed is sold in the Chinese markets, at a cost equal to thirty shillings of our money for a pound's weight, and is used for soup. The nests are reduced to a substance resembling isinglass, after twenty-four hours' boiling. More than 2,500lbs weight of these nests are collected yearly in Java, and, as each nest weighs about half an ounce, the number taken must be immense. Men have thus laid a swallow under contribution to increase their luxuries, and from the substance of a bird's nest extracted piquancy for their dishes. Some have imagined these singular nests to be formed from the scum floating on the sea, or from sea-plants, but this supposition appears unfounded.

Goldsmith is a little irritated when writing of this eastern food, exclaiming sarcastically, "What a pity this luxury hath not been introduced among us, and then our great feasters might be enabled to eat a little more!"

Here must terminate this account of the swallows, which are now in tens of thousands rejoicing amongst us, and enlivening by their beautiful forms the banks of our gentle streams, and broad rivers, whilst over tangled copses, and across flowery meads, these birds of brightness wheel in their fulness of delight.

ASCENT OF THE PETER BOTTE MOUNTAIN.

THE following interesting account of the Ascent of the Peter Botte Mountain, Mauritius, on the 7th September, 1832, extracted from a private letter from Lieutenant Taylor, R. A., is taken from the Transactions of the Royal Geographical Society, for 1832.

"You are no doubt aware from my former letter that the Peter Botte has always been considered inaccessible, and, although a tradition exists of a man of that name having ascended it and losing his life in returning, it is seldom believed, no authentic account remaining of the fact. A Frenchman, forty-two years ago, declared that he had got on the top by himself, and made a hole in the rock for a flagstaff, and his countrymen naturally believed him; but the value of this assertion may be also judged of by the present narrative. The ascent has been frequently attempted, and by several people, of late years; once by the officers of His Majesty's ship Samarang, who lost their way, and found themselves separated from the Peter Botte itself by a deep cleft in the rock, and in consequence were compelled to return. Captain Lloyd, chief civil engineer, and your old friend Dawkins, made the attempt last year, and succeeded in reaching a point between the shoulder and the neck, where they planted a ladder, which did not, however, reach half-way up a perpendicular face of rock that arrested their progress. This was the last attempt. Captain Lloyd was then, however, so convinced of the practicability of the undertaking that he determined to repeat the experiment this year, and accordingly made all his preparations by the beginning of this month. On the 6th

Peter Botte Mountain.

he started from town, accompanied by Lieutenant Philpotts, of the 29th Regiment, Lieutenant Keppel, R.N. (my 'old messmate'), and myself, whom he asked to join him. He had previously sent out two of his overseers, with about twenty-five negroes and Sepoy convicts, to make all the necessary preparations. They carried with them a sort of tent, and ropes, crowbars, a portable ladder, provisions, and everything we could possibly want for three or four days, as we intended to remain on the shoulder of the mountain, close to the base of Peter Botte, until we either succeeded or were convinced of its impossibility. These men had worked hard, and on our arriving at the foot of the mountain, we found the tent and all our tools, &c., safely lodged on the shoulder of the Peter Botte. I may as well describe here the appearance of the mountain. From most points of view it seems to rise out of the range, which runs nearly parallel to that part of the sea-coast which forms the bay of Port Louis, but on arriving at its base you find that it is actually separated from the rest of the range by a ravine or cleft of a tremendous depth. Seen from the town (as you will perceive by the sketch) it appears a cone with a large overhanging rock at its summit, but so extraordinarily sharp and knife-like is this, in common with all the rocks in the Island, that when seen end on, as the sailors say, it appears nearly quite perpendicular. In fact, I have seen it in fifty different points of view, and cannot yet assign to it any one precise form.—But to my tale:—

"We dined that evening and slept at the house of a Frenchman in the plains below, and rose early next morning, much exhausted by the attacks of bugs. All our preparations being made, we started, and a more

picturesque line of march I have seldom seen. Our van was composed of about fifteen or twenty Sepoys in every variety of costume, together with a few negroes carrying our food, dry clothes, &c. Our path lay up a very steep ravine, formed by the rains in the wet season, which having loosened all the stones, made it anything but pleasant; those below were obliged to keep a bright look-out for tumbling rocks, and one of these missed Keppel and myself by a miracle.

"From the head of the gorge we turned off along the other face of the mountain; and it would have been a fine subject for a picture, to look up from the ravine below, and see the long string slowly picking their 'kittle' footsteps along a ledge not anywhere a foot broad; yet these monkeys carried their loads full four hundred yards along this face, holding by the shrubs above, while below there was nothing but the tops of the forest for more than nine hundred feet down the slope.

"On rising to the shoulder, a view burst upon us which quite defies my descriptive powers. We stood on a little narrow ledge or neck of land, about twenty yards in length. On the side which we mounted, we looked back into the deep wooded gorge we had passed up; while, on the opposite side of the neck, which was between six and seven feet broad, the precipice went sheer down fifteen hundred feet to the plain. One extremity of the neck was equally precipitous, and the other was bounded by what to me was the most magnificent sight I ever saw. A narrow, knife-like edge of rock, broken here and there by precipitous faces, ran up in a conical form to about three hundred or three hundred and fifty feet above us; and on the very pinnacle old 'Peter Botte'

frowned in all his glory. I have done several sketches of him, one of which, from this point, I send by the same ship as this letter.

"After a short rest we proceeded to work. The ladder had been left by Lloyd and Dawkins last year. It was about twelve feet high, and reached, as you may perceive, about half-way up a face of perpendicular rock. The foot, which was spiked, rested on a ledge, not quite visible in the sketch, with barely three inches on each side. A grapnel line had been also left last year, but was not used. A negro of Lloyd's clambered from the top of the ladder by the cleft in the face of the rock, not trusting his weight to the old and rotten line. He carried a small cord round his middle; and it was fearful to see the cool, steady way in which he climbed, where a single loose stone or false hold must have sent him down into the abyss. However, he fearlessly scrambled away, till at length we heard him halloo from under the neck, 'All right.' These negroes use their feet exactly like monkeys, grasping with them every projection almost as firmly as with their hands. The line carried up he made fast above, and up it we all four *shinned* in succession. It was, joking apart, awful work. In several places the ridge ran to an edge, not a foot broad; and I could as I held on, half sitting, half kneeling, across the ridge, have kicked my right shoe down to the plain on one side, and my left into the bottom of the ravine on the other. The only thing which surprised me was my own steadiness and freedom from all giddiness. I had been nervous in mounting the ravine in the morning, but gradually I got so excited and determined to succeed, that I could look down that dizzy height without the smallest sensation of swimming in the head: nevertheless, I held on *uncommonly hard*, and felt very well satisfied when I was under the neck. And a more extraordinary situation I never was in. The head, which is an enormous mass of rock, about thirty-five feet in height, overhangs its base many feet on every side. A ledge of tolerably level rock runs round three sides of the base, about six feet in width, bounded everywhere by the abrupt edge of the precipice, except in the spot where it is joined by the ridge up which we climbed. In one spot the head, though overhanging its base several feet, reaches only perpendicularly over the edge of the precipice; and, most fortunately, it was at the very spot where we mounted. Here it was that we reckoned on getting up. A communication being established with the shoulder by a double line of ropes, we proceeded to get up the necessary *matériel*, Lloyd's portable ladder, additional coils of rope, crowbars, &c. But now the question, and a puzzler too, was, how to get the ladder up against the rock. Lloyd had prepared some iron arrows, with thongs, to fire over; and having got up a gun, he made a line fast round his body, which we all held on, and going over the edge of the precipice on the opposite side, he leaned back against the line, and fired over the least projecting part. Had the line broke, he would have fallen eighteen hundred feet. Twice this failed; and then he had recourse to a large stone with a lead-line, which swung diagonally, and seemed to be a feasible plan: several times he made beautiful heaves, but the provoking line would not catch, and away went the stone far down below, till at length *Æolus*, pleased, I suppose, with his perseverance, gave us a shift of wind for about a minute, and over went the stone, and was eagerly seized on the opposite side. 'Hurrah my lads! steady's the word.' Three lengths of the ladder were put together on the ledge, a large line was attached to the one which was over the head, and carefully drawn up, and finally, a two-inch rope, to the extremity of which we lashed the top of our ladder, then lowered it gently over the precipice till it hung perpendicularly, and was steadied by two negroes on the ridge below. 'All right; now hoist away!' and up went the ladder, till the foot came to the edge of our ledge, where it was lashed in firmly to the neck. We

then hauled away on the guy to steady it, and made it fast; a line was passed over by the lead-line to hold on by, and up went Lloyd, screeching and hallooing, and we all three scrambled after him. The union-jack and a boat-hook were passed up, and Old England's flag waved freely and gallantly on the redoubted Peter Botte. No sooner was it seen flying, than the Undaunted frigate saluted in the harbour, and the guns of our saluting battery replied; for though our expedition had been kept secret till we started, it was made known the morning of our ascent, and all hands were on the lookout, as we afterwards learned. We then got a bottle of wine to the top of the rock, christened it King William's Peak, and drank his Majesty's health, hands round the jack, and then, 'Hip, hip, hip, hurrah!'

"I certainly never felt anything like the excitement of that moment; even the negroes down on the shoulder took up our hurrahs, and we could hear far below the faint shouts of the astonished inhabitants of the plain. We were determined to do nothing by halves, and accordingly made preparations for sleeping under the neck, by hauling up blankets, pea-jackets, brandy, cigars, &c. Meanwhile our dinner was preparing on the shoulder below, and about 4 p.m. we descended our ticklish path to partake of the portable soup, preserved salmon, &c. Our party was now increased by Dawkins and his cousin, a lieutenant of the Talbot, to whom we had written, informing them of our hopes of success, but their heads would not allow them to mount to the head or neck. After dinner, as it was getting dark, I screwed up my nerves and climbed up to our queer little nest at the top, followed by Tom Keppel and a negro, who carried some dry wood, and made a fire in a cleft under the rocks. Lloyd and Philpotts soon came up, and we began to arrange ourselves for the night, each taking a glass of brandy to begin with. I had on two pair of trousers, a shooting waistcoat, jacket, and a huge flushing jacket over that, a thick woollen sailor's cap, and two blankets, and each of us lighted a cigar as we seated ourselves to wait for the appointed hour for our signal of success. It was a glorious sight to look down from that giddy pinnacle over the whole island, lying so calm and beautiful in the moonlight, except where the broad black shadows of the other mountains intercepted the light. Here and there we could see a light twinkling in the plains, or the fire of some sugar manufactory, but not a sound of any sort reached us, except an occasional shout from the party down on the shoulder (we four being the only ones above). At length, in the direction of Port Louis, a bright flash was seen, and after a long interval, the sullen boom of the evening gun. We then prepared our pre-arranged signal, and whizz went a rocket from our nest, lighting up for an instant the peaks of the hills below us, and then leaving us in darkness. We next burnt a blue light, and nothing can be conceived more perfectly beautiful than the broad glare against the overhanging rock. The wild-looking group we made in our uncouth habiliments, and the narrow ledge on which we stood, were all distinctly shown, while many of the tropical birds, frightened at our vagaries, came glancing by in the light, and then swooped away screeching into the gloom below, for the gorge on our left was dark as Erebus. We burnt another blue light and threw up two more rockets, when our laboratory being exhausted, the patient-looking insulted moon had it all her own way again. We now rolled ourselves up in our blankets, and having lashed Philpotts, who is a determined sleep-walker, to Keppel's leg, we tried to sleep, but it blew strong before the morning and was very cold. We drank all our brandy, and kept tucking in the blankets the whole night without success. At daybreak we rose, stiff, cold, and hungry, and I shall conclude briefly by saying, that after about four or five hours' hard work, we got a hole mined in the rock, and sunk the foot of our twelve-foot ladder deep in this, lashing a water-barrel as a landmark at the top, and above all a long staff with the union-jack flying. We then in turn mounted to the top of the

ladder, to take a last look at a view such as we might never see again, and bidding adieu to the scene of our toil and triumph, descended the ladder to the neck, and casting off the guys and hauling lines, cut off all communication with the top.

"In order to save time and avoid danger, we now made fast a line from the neck to the shoulder as tight as possible, and hanging on our traps by means of rings, launched them one by one from the top, and down they flew, making the line smoke again. All were thus conveyed safely to the shoulder, except one unlucky bag, containing a lot of blankets, my spy-glass, and sundry other articles, which not being firmly fixed, broke the preventer-line and took its departure down to Pamplemousses. We at length descended, and reached the shoulder without any accident, except that of the blankets, not a rope line being left to show where we got up. We then breakfasted, and after a long and somewhat troublesome descent, got to the low country, and drove in Lloyd's carriage to town, where we were most cordially welcomed by all our countrymen, though, I believe, we were not quite so warmly greeted by the French inhabitants, who are now constrained to believe that their countryman alone did not achieve the feat, and that the British ensign has been the first to wave over the redoubtable Peter Botte."

POPULAR YEAR-BOOK.

September 21.—Feast of St. Matthew.

ST. MATTHEW suffered martyrdom at Nadabar, about the year 60. His festival was instituted 1090, and is celebrated in the Church of England. On this day the lord mayor, aldermen, sheriffs, and governors of the several royal hospitals in London, attend divine service, and hear a sermon preached at Christ Church, Newgate Street; they then repair to the great hall in Christ's Hospital, where two orations are delivered, one in Latin and the other in English, by the two senior scholars of the grammar-school, and afterwards partake of an elegant dinner.

September 23 has obtained, in Sherborne, Dorset, the name of "tolling day," in commemoration of the death of John, Lord Digby, baron Digby, of Sherborne, and earl of Bristol, in the year 1698, and in conformity with the following wish expressed in a codicil annexed to his lordship's will. "Item, I give and bequeath out of my said estate, to the parish church, the yearly sum of ten pounds, to be paid by my successors, lords of the said manor for the time being, at and upon, or within forty days after, the feast days of St. Michael the Archangel, and of the Annunciation of our Blessed Lady St. Mary the Virgin, by equal portions, yearly and for ever, and to be employed and bestowed by the churchwardens of the said parish for the time being, with the consent of the lord of the said manor for the time being, in keeping in good repair the chancel, and towards the reparations of the rest of the said church, yearly and for ever; provided that . . . the said churchwardens for the time being shall cause the largest bell in the tower of the said church to be tolled six full hours, that is to say, from five to nine of the clock in the forenoon, and from twelve o'clock till two in the afternoon, on that day of the said month whereon it shall be my lot to depart this life, every year and for ever: otherwise this gift of ten pounds per annum shall determine and be void." This custom is annually observed, but not to the extent above directed; the tolling of the bell being limited to two hours instead of six. It begins to toll at six o'clock, and continues till seven in the morning, when six men, who toll the bell for church service, repair to the mansion of the present Earl Digby, with two large stone jars, which are there filled with some of his lordship's strong beer, and are taken, with a quantity of bread and

cheese, to the church by the tollers, and equally divided amongst them, together with a small remuneration in money, paid by the churchwardens, as a compensation for their labour. At twelve o'clock the bell is again tolled till one, and in the evening divine service is solemnized at the church, and a lecture suited to the occasion delivered, for which sermon the vicar is paid thirty pounds, provided by the will of the above donor.

September 29.—Feast of St. Michael and all Angels.

Michaelmas-day is, in England, one of the four quarterly terms, or quarter days, on which rents are paid. "It has long been," remarks Brand, "and still continues the custom at this time of the year, or thereabouts, to elect the governors of towns and cities, the civil guardians of the peace of men, perhaps, as Bourne supposes, because the feast of angels naturally enough brings to our minds the old opinion of tutelar spirits, who have, or are thought to have, the particular charge of certain bodies of men, or districts of country, and also that every man has his guardian angel, who attends him from the cradle to the grave, from the moment of his coming in, to his going out of life."

In connexion with the above practice, a singular usage exists at Kidderminster. On the election of a bailiff, the inhabitants assemble in the principal streets to throw cabbage-stalks at each other. The town-house bell gives signal for the affray. This is called "lawless hour." This done, the bailiff-elect and corporation, in their robes, preceded by drums and fifes, visit the old and new bailiffs, constables, &c., attended by the mob. In the mean time the most respectable families in the neighbourhood are invited, to meet and fling apples at them on their entrance. The foregoing account is taken from the "Gentleman's Magazine" for 1790. That the above mirthful ceremony, with some alterations, is still retained at Kidderminster, we learn from a correspondent to Hone's "Every Day Book," who states that the magistrates and other officers of the town are annually chosen, and the first Monday after the Feast of St. Michael is the day of their inauguration; in celebration of which, they each of them cause to be thrown to the populace, (who assemble to the amount of some thousands,) from the windows of their houses, or sometimes from the town-hall, a large quantity of apples, in the whole often amounting to from twenty to thirty pots, (baskets containing five pecks each.) This practice, (the writer goes on to observe) occasions, of course, a kind of prescriptive holiday in the town, and any one having the temerity to refuse his apprentice or servant leave to attend the "apple throwing," would most probably have cause to repent such an invasion of right. A rude concourse, therefore, fills the streets which are the scenes of action, and recourse is had by the crowd to the flinging about of old shoes, cabbage stalks, and almost every accessible kind of missile; till at length the sashes are raised, and the "gifts of Pomona" begin to shower down upon the heads of the multitude. Wee be to the unlucky wight who may chance to ride through the town during the introductory part of this custom! No sooner does he appear, than a thousand aims are taken at him and his horse, or carriage, and the poor traveller "sees, or dreams he sees," (if ignorant of the practice,) the inhabitants of the whole town raised to oppose his single progress, without being able to form the most distant idea of their motive for so doing.

The old custom of eating goose on Michaelmas-day has much exercised the ingenuity of antiquaries. Brady remarks that this festival "is no longer peculiar for that hospitality which we are taught to believe formerly existed, when the landlords used to entertain their tenants in their great halls upon *geese*: then only kept by persons of opulence, and of course considered as a peculiar treat, as was before the case at Martinmas, which was the old regular quarterly-day; though, as geese are esteemed to be in their greatest perfection in the

autumnal season, there are but few families who totally neglect the ancient fashion of making that bird a part of their repast on the festival of St. Michael." There is a current, but erroneous tale, assigning to Queen Elizabeth the introduction of this custom of the day. Being on her way to Tilbury Fort, on the 29th September, 1588, she is alleged to have dined with Sir Nevill Humfreville, at his seat near that place, and to have partaken of a goose, which the knight, knowing her taste for high-seasoned dishes, had provided; that after dinner, she drank a half-pint bumper of Burgundy to the destruction of the Spanish Armada; soon after which she received the joyful tidings that her wishes had been fulfilled;—that, being delighted with the event, she commemorated the day annually by having a goose for dinner, in imitation of Sir Nevill's entertainment;—and that, consequently, the court adopted the like practice, which soon became general throughout the kingdom. This anecdote is a strong proof that the usage was sanctioned by royalty in the days of Queen Bess, but there is evidence that it was practised long anterior to the destruction of the Spanish Armada. Among other services John de la Hay was bound to render to William Barnaby, lord of Lastres, in the county of Hereford, for a parcel of the demesne lands, one goose fit for the lord's dinner on the feast of St. Michael the Archangel. And this, as early as the tenth year of King Edward the Fourth. The custom may have originated in a habit, among the rural tenantry, of bringing a good stubble goose with their rent to the landlord at Michaelmas, in the hope of making him lenient. In the "Posies" of George Gascoigne, 1575, are the following stanzas :—

"And when the tenants come to pay their quarter's rent,
They bring some fowl at Midsummer, a dish of fish in Lent,
At Christmas a capon, at Michaelmas a goose;
And somewhat else at New-year's tide, for fear their lease
[fly loose]."

"We may suppose," observes a writer before quoted, "that the selection of a goose for a present to the landlord at Michaelmas, would be ruled by the bird being then at its perfection, in consequence of the benefit derived from stubble feeding. It is easy to see how a general custom of having a goose for dinner on Michaelmas day might arise from the multitude of these presents, as landlords would of course, in most cases, have a few to spare for their friends." In Poor Robin's Almanac for 1695, under September, are these quaint lines :—

"Geese now in their prime season are,
Which, if well roasted, are good fare.
Yet, however, friends take heed,
How too much on them you feed,
Lest, when as your tongues run loose,
Your discourse do smell of goose."

An amusing contributor to "The World" remarks, that "when the reformation of the Kalendar was in agitation, to the great disgust of many worthy persons, who urged how great the harmony was in the old establishment between the holidays and their attributes, (if I may call them so,) and what confusion would follow if MICHAELMAS DAY, for instance, was not to be celebrated when stubble-geese are in their highest perfection; it was replied, that such a propriety was merely imaginary, and would be lost of itself, even without any alteration of the kalendar by authority: for if the errors in it were suffered to go on, they would, in a certain number of years, produce such a variation, that we should be mourning for good King Charles on a false thirtieth of January, at a time of year when our ancestors used to be tumbling over head and heels in Greenwich-park in honour of Whitsuntide; and at length be choosing king and queen for Twelfth Night, when we ought be admiring the London Prentice at Bartholomew Fair."

September 30.—On this day, or if it fall on a Sunday, on the Monday following, the lord mayor and aldermen of London proceed from Guildhall, and the two sheriffs

with their companies from their respective halls, and embark on the Thames in their state barges, and thus go, in aquatic state, up the river to Palace-yard. They land there, and repair to the court of Exchequer. Here they are received by the Cursitor Baron, and having arranged themselves upon the tiers and benches, and duly saluted the Bench, the Recorder presents the new sheriffs to the Court. The several writs and appearances are then read by the Recorder and clerk, and ordered by the Court to be recorded and filed, and the sheriffs, and the senior under-sheriff, take the usual oaths. The crier of the court then steps forward, and makes the proclamation for the one who does homage for the sheriffs of London, to "stand forth and do his duty;" when the senior alderman below the chair rises, and an officer (the usher) of the court hands to him a bill-hook; the officer then takes a small bundle of sticks, which he holds in both hands, about a foot and a half above the table, while the alderman strikes it and cuts it asunder. The bill-hook is then exchanged for a small hatchet, and a similar bundle of sticks severed in like manner. The sticks provided for the occasion are about twice the length of an ordinary black-lead pencil, and half the thickness. Each bundle consists of about eight or ten sticks, tied together, at both ends, with red tape; and so thin are the peeled twigs, that a very slight blow suffices for their separation. In the above ceremony the senior alderman does suit and service for the corporation of London, as tenant of a manor in Shropshire, in token of its having been customary for the tenants of that manor to supply their lord with fuel. Similar proclamation is then made for the sheriff of Middlesex; and the alderman, in the presence of the Cursitor Baron, (who on this particular occasion is the immediate representative of his sovereign,) counts and declares the number of six horse-shoes placed upon a table. A tray is then handed to him, containing sixty-one hob-nails, which he also counts, and in answer to two interrogations, twice declares their number. The counting of the shoes and hob-nails is another suit and service of the owners of a forge in the parish of St. Clement, which stood in the high road from the Temple to Westminster, but now no longer exists. The origin of this latter usage is a grant in 1235, from Henry III. to Walter de Bruin, a farrier, of a piece of ground whereon to erect the said forge, he rendering annually to the Exchequer, for the same, a quit rent of six horse-shoes, with the nails belonging to them. In process of time the ground vested in the city, and though now lost to it, the city still renders the quit rent. After these ceremonies the civic authorities return to Blackfriars-bridge by water, and the new sheriffs usually give a grand banquet, in honour of their inauguration, in the evening.

THE WENHAM ICE-LAKE.

THAT "luxury is the sweetener of life," was a truism established long before the application of ice-bound Nature to enlarge the enjoyments of recreant man, in the adaptation of extreme cold to his epicurean palate.

The custom is, certainly, of extreme antiquity. Iced liquors were among the luxuries of the Greeks, who had several methods of preserving ice throughout the summer. When Alexander the Great besieged the Judæan city of Petra, he filled thirty dishes with ice, which, being covered with oaken boughs, remained a long time entire. This is, probably, the first *ice-house*, (*frigidarium*), on record.

(1) There is a good representation of them in the "Illustrated London News," No. 127. vol. v. p. 216.

The custom of preserving ice was so common among the Romans, that they had shops for its sale; and Pliny describes an elegant method of cooling liquors, which came into vogue during the reign of Nero, to whom the invention was ascribed; viz. by placing water, which had been previously boiled, in thin vessels, surrounded with snow, so that it might be frozen without its purity being impaired: a stretch of luxury which equals any of the refinements of modern science. Poor Haydon, the painter, appears to have forgotten this ingenuity of Nero; for, in his picture of Rome burning, he has painted the truculent emperor with a huge vase of ice beside his chair, possibly to keep off the heat of the burning city before the imperial incendiary!

Our present purpose is not, however, to deal with the "Curiosities of Cold," and its applications; but to instance the demands of this class having created a regular supply, or, rather, means of supply—an ICE-TRADE; for this Commerce of Cold is now as well established as any branch of tropical enterprise.

Thus, the good people of North America have, for some time past, been actively engaged in this species of commerce, which has proved to be extremely profitable. The exportation is thus managed: they substitute for ballast large blocks of ice, carefully cut to fit the hold of the ship; they then cover them with saw-dust, straw, and charcoal-dust; and are thus enabled to send ice, entire, to South America and the East and West India Islands, where they are sure to find a good market for their cargoes.

A Correspondent of the *Illustrated London News* has well observed, in connexion with the details of this new trade, "The progress of civilization, and the artificial wants which it has created, have originated a strange and endless variety of trades and professions. Immense establishments are erected, and vast numbers of persons employed, to produce articles which, a few generations since, had no existence, but which have now become absolute necessities of every-day life."

The seat of this new trade lies in North America, a country in which the supply is admirably fitted to the wants. Here the extreme cold of the winter furnishes the ice in great abundance and perfection, and the excessive heat of summer renders the necessity for its use proportionally great. Hence the trade in it has acquired an importance, which, not long since, would have seemed impossible. In different districts of the country, extensive and pure Lakes have almost the value which here attaches to Mines; and Companies with large capitals are formed, who purchase them as one might purchase a coal-mine, to rob them periodically of their crystal treasures, for the summer supply of the public.

The principal depôt of the Ice-trade of the United States is at Boston, whence it is computed sixty thousand tons of ice are annually sent to the Southern States, the East and West Indies, &c.; and as saw-dust is largely used in packing, a large trade is also carried on in that article. The market is chiefly supplied from the Wenham Lake, eighteen miles from Boston, in the State of Massachusetts. The climate here is much colder in winter, and warmer in summer, than the southern districts of Great Britain, though the difference of latitude amounts but to about nine degrees. The mean temperature seems to be 48°, or about two degrees

less than that of London. The winter commences about the middle of December, and terminates about the middle of March. In this season, the thermometer commonly ranges between 43° and 10°, and sometimes descends below Zero of Fahrenheit; when the rivers are frozen hard enough to bear loaded waggons.

The Wenham Lake is situated so near seaboard, as to be a most advantageous site for export trade: the water is likewise very pure; it has no inlet whatever, but is fed solely by the springs which issue from the rocks at its bottom, a depth of two hundred feet from its surface. It occupies a very elevated position, and lies embosomed in hills of majestic height, and bold rugged character.

The ice is remarkably solid, a fact explained by the great depth of the Lake; for ice, frozen upon very deep water, is more hard and solid than ice of the same thickness obtained from shallow water; and, even when an equal surface is exposed, the former melts more slowly.

Within the last two years, the Company in possession of the Wenham Lake have extended their Ice-trade to this country; and transport hither thousands of tons of ice annually. Many of our London readers may have seen the huge specimen block of Wenham Lake Ice in a shop-window in the Strand, but comparatively few are aware of the vast extent of this Ice-trade, and the numbers of persons engaged in it. One surprising circumstance connected with it is, that the ice, though brought to Great Britain in the heat of summer, is not reduced in bulk. Those engaged in the trade account for this by the fact, that the masses of ice are so large, that they expose a very small surface to atmospheric action in proportion to their weight; and therefore do not suffer from exposure to it, as the smaller and thinner fragments do, which are obtained in our own or other warmer climates.

In England, the collection of ice is but an occasional and unimportant occupation: it depends, both as to time and quantity, upon the accidental occurrence of severe frost. Indeed, it is altogether a peddling affair; as those who have seen the ranges of little cart-loads of ice at the door of a London confectioner can testify. In America, on the other hand, this labour can be regularly carried on through the whole winter; while the adjuncts of cutting and storing, and steam for transporting it, are brought extensively into action. The details of the traffic are so novel and interesting, that we are persuaded our readers will be gratified with them.

On the verge of the Wenham Lake are the Ice Company's storehouses, covered by four roofs, occupying an area of 100 square feet, and capable of storing 20,000 tons of ice. The Ice-House is built of wood, with double walls, two feet apart all round; and the space between is filled with saw-dust, a non-conductor, making a thick and solid wall, impervious to heat and air; so that the ice is entirely unaffected by any condition or temperature of the external atmosphere, and can be preserved without waste for an almost indefinite time.

The machinery employed for cutting the ice is very ingenious, and invented for the purpose: it is worked by men and horses as follows:—

From the time when the ice first forms, it is carefully kept clear of snow, as soon as it is sufficiently thick to bear the weight of the men and

horses to be employed, which it will do at six inches; and the snow is kept scraped from it until it is strong enough to cut, that is, one foot thick. A surface of some two acres of ice is then selected, which, at the above thickness, will yield about 2,000 tons. By keeping it clear of snow, it freezes faster, as the cold then penetrates more freely.

When the time for cutting has arrived, the men commence upon one of these areas by scoring a straight line through the centre each way; with a small hand-plough they form a groove about three inches deep, and a quarter of an inch in width, into which the marker is introduced. This implement is drawn by two horses, and makes two new grooves parallel with the first, twenty-one inches apart; the gauge remaining in the original groove. The marker is then shifted to the outside groove, and makes two more. The same operation is proceeded with, in parallel rectangular lines, until the ice is all marked out into squares of twenty-one inches.

In the meantime, the plough, drawn by a single horse, driven by a man, follows in these grooves, and cuts the ice to the depth of six inches. The outer blocks are then sawn out, and the remainder are split off towards the opening, with an iron wedge-shaped bar, with a handle like a spade; and this being dropped into the groove, a slight blow is sufficient to detach the blocks, though they split easily or hardly, according to the weather: in a sharp frost, it is very brittle. Near the opening made in the ice are placed platforms, or low tables of framework, with iron slides reaching from them into the water. On each side of a slide stands a man armed with an ice-hook, much like a boat-hook, but made of steel, with fine sharp points. With this hook, the men catch up the ice, and suddenly jerk it up the slide on to the platform. On a cold day, every thing is speedily covered with ice, by the water freezing on the platforms, slides, &c.; and the large blocks of ice, some weighing more than two cwt., are shot along the slippery surfaces, as if they weighed but a pound!

Beside each platform stands a "sled," of the same height, capable of containing about three tons; the surface being lattice-work, to allow the ice to drain. This sled, being loaded, is drawn upon the ice to the front of the storehouse, where the load is discharged upon a large stationary platform. It is then hoisted, block by block, into the house, by a horse, who also takes up the ice. The frame which receives the block of ice to be hoisted, is sunk into a square opening cut into the stationary platform; the block of ice is pushed into it; the horse starts, and the frame rises with the ice, until it reaches the opening in the side of the storehouse ready for its admission, when, by an ingenious piece of mechanism, it discharges itself into the building, and the horse is led back to repeat the routine.

Forty men and two horses will thus cut and stow away 400 tons of ice in a day. In favourable weather, 100 men are sometimes employed at once; and in three weeks, the *Ice-crop*, about 200,000 tons, is secured. In some seasons, however, it is very difficult to insure; as rain or thaw may destroy the labour of weeks, and render the ice unfit for market. Occasionally, snow is immediately followed by rain, and that again by frost, thus forming *snow-ice*, which is valueless, and must be removed.

This is done by planing, somewhat similar to the operation of cutting. The plane is gauged to

run in the groove made by the marker; and, when drawn by one horse, it will shave or plane the ice to a depth of three inches at one stroke, until the whole area is thus planed over. The chips or shavings so produced are then removed, and if the clear ice be not reached, the operation is repeated. If this makes the ice too thin for cutting, it is left for a time; since a few nights' hard frost will make it as thick below, inch for inch, for that which has been taken off above.

Besides filling their store-houses at the Lake, and in large towns, the Company fill private ice-houses, during the winter, direct from the Lake. All this transit is effected by railway. Each of the ice-houses has a branch from the main line, and the ice is conveyed in properly constructed box-waggons to Boston, a distance of 10 or 18 miles, as the locality may be. The tools and machinery employed, building the store-houses, and constructing and working the railway, are, of course, expensive items; yet the traffic is so extensive, and the management of the trade so good, that the ice can be furnished, even in England, at a very trifling cost.

The English people, however, have yet to learn many of the uses to which ice may be advantageously applied, as well as the best means of preserving it. In America, almost every family has a "Refrigerator," or portable ice-house, for cooling wines, and preserving fruit and provisions: this consists of a chest, constructed with double sides, filled with a non-conductor of heat, like the walls of the store-houses at Wenham Lake. The interior is *zinc'd*, as are its sliding and perforated shelves, beneath which is placed the ice, the articles being set upon them. In this situation, a block of ice, weighing a few pounds, will last several days, unless it be broken off for table use, or mixing with drinks. The chest is also inclosed in a wooden case, mahogany or imitation wood, so as to render it an ornamental article of furniture.

There is one merit of the Wenham Lake ice which cannot be too strongly urged,—its extreme purity. On this account, it may be mixed with water or milk for drinking; wines or spirits may be diluted with it; and butter or jelly placed in direct contact with it. Its crystalline brilliancy is, likewise, very inviting, especially in contrast with the dull, not to say dirty, ice of our country. In the newly introduced American drinks, "Sherry Cobbler," and "Mint Julep," the ice itself is employed. A small piece of ice let fall into a glass of porter is a luxurious addition, which has only to be more extensively known to be generally adopted.

NEW LOCOMOTIVE AGENCY.¹

A LETTER from Philadelphia, published in the *Mémoires de Rouen*, has the following:—"William Evans has resolved a problem, which must overturn our present system of railway and steam-boat propulsion. By means of enormous compression, he has succeeded in liquefying atmospheric air; and then, a few drops only of some chemical composition, poured into it, suffice to make it resume its original volume with an elastic force quite prodigious. An experiment, on a large scale, has just

(1) From a late Number of the *Athenæum*.

been made. A train of twenty loaded waggons was transmitted a distance of sixty miles in less than an hour and a quarter—the whole motive power being the liquid air inclosed in a vessel of two gallons and a half measure; into which fell, drop by drop, and from minute to minute, the chemical composition in question. Already subscriptions are abundant, and a society is in course of formation. The inventor declares, that an ordinary packet-boat may make the passage from Philadelphia to Havre in eight days, carrying a ton of hi liquid air. A steam-engine, of six-horse power, will produce that quantity in eight hours."—According, then, to this project, we are to correspond with America in an hour, and reach it in a week! On this new solution of the theory of motion by expansion, the *Journal des Débats* has some remarks, which we will adopt:—"This account of the liquefaction of atmospheric air, given in a private letter, the source of which is but vaguely indicated, seems to need the authentic confirmation of the American journals,—and at any rate of details somewhat more circumstantial. Not that the fact is theoretically impossible; all known experiments on the compression of air tending to establish the probability of its liquefaction: but one cannot help asking under what intensity of force it has been produced—whether the agent be a steam-engine or any other propelling power? Carbonic gas has been liquefied, under the pressure of thirty atmospheres, and solidated in the form of ice, under the pressure of forty. But that gas is denser and heavier than air,—its constituent atoms more close, and consequently more easy of condensation. Already, both in England and France, conclusive experiments have been made as to the possibility of propelling trains by the expansive force of compressed air;—the objection and difficulty consists in the necessity of establishing steam, or other engines, at repeated distances, to fill with compressed or liquefied air the recipients destined to be placed on the locomotives instead of the steam-cylinder. That cost and difficulty have hitherto prevented the application of the system of compressed air. It is greatly to be desired, then, that the problem in question may have been solved in America; but we must have more full and sure particulars before the scientific or manufacturing world can venture to believe it. What seems more extraordinary than the liquefaction itself, is the assertion that this air can be contained in a cask, like any other liquid,—knowing as we do that it can only be maintained in that state in recipients of extraordinary resistance. Our readers will remember the accident which happened in Paris, at the School of Pharmacy, on the occasion of the liquefaction of carbonic gas. A metallic cylinder of great thickness, which had, two or three times previously, resisted the same experiment, suddenly exploded; when one of the operators was killed, and several of the assistants were wounded. Now, air has a resisting and elastic force far greater than that of carbonic acid. Neither is the necessity intelligible for that drop of a nameless chemical agent for the purpose of restoring to the air its expansive action; since, for that purpose, it will suffice to open it an issue,—unless, indeed, it is pretended to reduce the air to the condition of a permanent liquid—and *that* no natural philosopher will believe, till he has seen it."

Poetry.

[In Original Poetry, the Name, real or assumed, of the Author is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

THE FLIGHT OF MARY QUEEN OF SCOTS INTO ENGLAND.¹

BY T.

[Mary, escaped from the Castle of Loch-leven, was on her way to Dumbarton, when she was met by Murray and the lords opposed to her, on an eminence called Langside. Standing on the hill, the disconsolate queen saw her faithful adherents utterly routed. Attended by a small retinue, she took to flight, and reached the Abbey of Dundrennan, a distance of sixty miles, before nightfall. Next morning, in spite of the earnest entreaties of the Archbishop of St. Andrew's and others, she determined to throw herself on the generosity of Elizabeth, and crossed the fatal Solway Firth.]

On, gently streams the pale moonbeam on grey Dundrennan's pile,
And bathes with genial light chancel, and nave, and holy aisle,
And slowly hath the lady risen who hath been pouring there,
With folded palms across her breast, to God her lowly prayer.

But who is she, that gentle ladye, so sad, yet passing fair?
Adown her pale face falls dishevel'd all her beauteous hair;
But yet, all way-worn though she be, her mien is proud and high,
And queenly is the thrilling glance and kindling of her eye;
And lowly they have knelt to her—that way-worn band, I ween,
As lowly they should ever kneel, who bow before their queen.

Then spake St. Andrew's prelate; "Here within this holy fane,
"Oh, Ladye! rest thee through the hours till day return again;
"For since the morning sun uprose upon the far-off vale,
"And startled hamlets heard thy war-cries borne upon the gale,
"O'er many a rugged mountain-path, through many a changing scene

"Of stream and vale, and forest dark, thy headlong flight hath been."

The ladye yields; and gentle sleep, throughout the midnight hours,
Came o'er her sorrow-laden eyes, beneath those hallow'd towers;
Till morning woke the bright green earth to life and light again,
And gentle breezes, wooingly, came breathing o'er the main;
Then they have bid her trust in God, and seek across the wave
In sunny France a happier home than her own kingdom gave.
Where, far from treach'rous Murray's hate, and England's
crafty queen,

From false and hollow-hearted free, her days might glide serene.
Oh! then her eye it lighted up, as mem'ry thronged once more
With shadowy forms her childhood loved, that distant sunny shore.
But evermore there seem'd to come low murmurings of wrath
From far-off waves that chafed and roar'd across the ocean's path;
Then wistfully she gazed beyond the Solway's silver stream,
Where England's hills and valleys lay, spread out as in a dream;
"Oh! surely *she* will welcome me—the queen of England's throne,
"And meet me with a sister's love, so long to me unknown;
"For she of all my kin alone remains to me on earth,
"And, way-worn exile though I be, I am of queenly birth."

No gallant host, no faithful throng of gentle hearts and true
Have come to breathe a parting prayer, or wave a last adieu;
A lowly crew, with one frail bark, have borne the ladye o'er
The rolling might of Solway's tide, from her own troubled shore.
Oh! little knew that hapless queen, how yet should round her
throng

The deep despair of weary years, and all their bitter wrong;
How, scorn'd, insulted and betray'd, her sun should set in gloom,
And Mary Stuart no refuge find but in a martyr's tomb!

LETTER FROM MISS S. TO HER NIECE, KATE S.

BY F. S.

AND are you then caught, my dear Kitty?
You—always resolved to be free!
And by a young spark from the City?
What whimsical creatures are we!
I would not, my love, wish to shame you,
But sympathy rather to show;
His attentions, no doubt, overcame you;
'Tis hard to resist, I well know:
Yet, if not too late to recover,
Think, ere you for ever decide,
How much better to forfeit a lover,
Than wish you had not been a bride!
No cure is so good as prevention,
So take my advice in good part;
If he's one of the *ifs* that I mention,
Dismiss him at once from your heart.
If he gives a loose rein to his passions;
If his compliments prove him untrue;
If he's always at war with the fashions;
If eager for everything new.
If he lies in bed late of a morning;
If he nurses pot whiskers or curls;
If he's free in his manners, or fawning;
If he likes talking nonsense to girls.
If he's constantly joking and punning;
If he's touchy, and soon takes offence;
If he won't pay his bills without dunning,
And always takes off the odd pence.
If he wears a blue satin cravat;
If he's anxious his calling to hide;
If he sports a particular hat;
If he cocks it the least on one side.
If you've caught him out talking at random;
If he cries, "Bless my soul!" or "My stars!"
If you've heard of his driving a tandem;
If addicted to snuff and cigars.
(Oh, that terrible habit of smoking,
With excellence rarely combined,
So often with drinking and joking,
Destructive of morals, and mind!)
If he's rude to his father or mother;
If to children he never unbends;
If he's not an affectionate brother;
If careless in choosing his friends.
If he knows every dainty that's eaten;
If he thinks nought of words in a song;
If at chess he will never be beaten,
Nor in argument own himself wrong.
If he carries a spy-glass or glasses;
If a little thing makes him complain;
If he looks round when ladies he passes;
If he's often too late for the train.
If he argues with great politicians;
If a promise he fails to fulfil;
If he rails against all the physicians,
And doctors himself when he's ill.
Some girls seem to think, my dear Kitty,
That marriage will comfort ensure;
But never foresee (more's the pity,)
The trials they'll have to endure.
My counsel I offer you gratis,
Fear not to be single for life;
For surely more wretched no state is
Than that of a desolate wife.

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne*.

MOTHER OF LORD BACON.

THE mother of Lord Bacon was one of the daughters of Sir Anthony Cooke, tutor to King Edward VI.

(1) See vol. i. p. 238.

Like several other extraordinary men, he is supposed to have inherited his genius from his mother; and he certainly was indebted to her for the early culture of his mind, and the love of books, for which during life he was distinguished. Young Francis was sickly, and unable to join in the rough sports suited for boys of robust constitution. The Lord Keeper was too much occupied with his official duties to be able to do more than kiss him, and hear him occasionally recite a little piece he had learned by heart, and give him his blessing. But Lady Bacon, who was not only a tender mother, but a woman of highly cultivated mind, after the manner of her age, devoted herself assiduously to her youngest child, who, along with bodily weakness, exhibited from early infancy the dawns of extraordinary intellect. She and her sisters had received a regular classical education, and had kept up her familiarity with the poets, historians, and philosophers of antiquity. She was likewise well acquainted with modern languages, and with the theology and literature of her own times. She corresponded in Greek with Bishop Jewel respecting the then fashionable controversies, and she translated his "Apologia" from the Latin so correctly, that neither he nor Archbishop Parker could suggest a single alteration. She also translated admirably a volume of sermons on "Fate and Free-will," from the Italian of Bernardo Ochino. Under his mother's care, assisted by a domestic tutor, Francis Bacon continued till his thirteenth year.—*From Lord Campbell's Lives of the Chancellors.*

PARENTAGE OF THOMAS A BECKET.

GILBERT BECK, or BECKET, the father of this most extraordinary man, was of Saxon descent, a merchant in London, who, though only of moderate wealth, had served the office of sheriff of that city. His mother, whose name was Matilda, was certainly of the same race, and born in the same condition of life as her husband; although, after her son had become chancellor, and archbishop, a martyr, and a saint,—a romantic story was invented that she was the daughter of an Emir in Palestine; that Gilbert, her future consort, having joined a crusade, and being taken prisoner by her father, she fell in love with him; that when he escaped and returned to his native country, she followed him, knowing no words of any western tongue except "London" and "Gilbert;" that by the use of these she at last found him in Cheapside; and that, being converted to Christianity, and baptized, she became his wife. Becket himself, in an epistle, in which he gives an account of his origin, is entirely silent about his Syrian blood; and Fitzstephen, his secretary, says expressly that he was born of parents who were citizens of London.—*Lord Campbell's Lives of the Chancellors.*

THERE is scarce any lot so low, but there is something in it to satisfy the man whom it has befallen; Providence having so ordered things, that in every man's cup, how bitter so ever, there are some cordial drops—some good circumstances, which, if wisely extracted, are sufficient for the purpose he wants them—that is, to make him contented, and, if not happy, at least resigned.—*Sterne.*

The West Bow, Edinburgh.

(See next page.)

THE WEST BOW, EDINBURGH.¹

IMPROVEMENT, in the rapid strides it has made over the whole town of Edinburgh, has laid a heavy foot upon the West Bow; causing it to be numbered among those things which once were in existence, but now are no more.

This ancient street was built on the steep slope or the southern side of the ridge upon which the principal part of the city is built, leading from the Castle-hill to the Grassmarket.

Every one who has been in Edinburgh knows that, from the Castle to Holyrood Palace, being the whole extent of this ridge, which slopes pretty steeply from the Castle downwards, there is a close succession of these alleys (or closes as they are termed) running down on each side of the ridge to the hollows on the north and south. These are almost all dark and dismal looking places, narrow and confined, ruinous and filthy. They are inhabited entirely by the lowest class of the people, many of whom are allowed to retain possession of their miserable abodes, free of any expense, without molestation from the proprietors. This, however, was not always the case. It is not long since these very houses were inhabited by people in the highest class of society, and not until a comparatively recent period, when they had secured for themselves residences of a more modern build, in a healthier and more pleasant situation, to the north of the Old Town, did they make a sudden adjournment from the venerable piles which their forefathers had reared and inhabited many centuries before them.

This movement, while it was one of the greatest advantage to the city at large, drew down with it the glory, and in many cases, caused the entire ruin, of the streets of the Old Town; and among those which suffered, was that one on which we are endeavouring to offer a few remarks, and of which, as it possessed an additional advantage over all the others, in size and circumstances, the loss was consequently more regretted. Of all the closes, the West Bow was the most considerable, being at that time the principal avenue by which wheeled carriages reached the more elevated part of the city. It was by it that Anne of Denmark, James I. and Charles I. Oliver Cromwell, Charles II. and James II. passed in formal procession into the city. Its ancient buildings presented a most picturesque appearance, and it is a matter of deep regret to all the lovers of the antique, that they have been almost entirely destroyed.

But, independently of these, its locality was regarded with an interest which failed not to produce a mingled feeling of melancholy awe upon all. This was owing to its being the road leading to the Grassmarket, or, as it has not inappropriately been called, The Valley of the Shadow of Death, where criminals were made to suffer the severe penalties of the law. And it was impossible for any one to pass up or down this way, without picturing to himself one of those heart-rending scenes, of which it was so often the witness, and to imagine the poor criminal's look, when with pale visage and throbbing heart, he was hurried down the narrow road to meet his final doom; and how the tears would gush from his swollen eyes when he should venture to cast a glance at those venerable walls, between which he passed, and from the balconies and windows of which many had come, some with sullen scowl and some with heartfelt pity, to mark the last moments of his life. But how his heart would bleed within him, and how excruciatingly painful would be the anguish of his soul, when at one of these windows he descried the face of a brother

or a sister, who should, with solemn voice and faltering tongue, bid him his last farewell!

Many such scenes might have been witnessed in the West Bow; and we shall perhaps be allowed to recall to our readers' memory, the story of Captain Porteous, who figures so eminently in Sir Walter Scott's novel of the Heart of Midlothian, and who was also one of those unfortunate men, who, in order to satisfy the cravings of public justice, had to be dragged down this narrow road to suffer the penalty of his guilt.

John Porteous was the son of a tailor in Edinburgh; his father intended to bring him up to his own trade, but the youthful profligacy of the son defeated the parent's prudent intention, and he enlisted into the Scotch corps at that time in the service of the States of Holland. Here he learned military discipline, and, upon returning to his own country in 1715, his services were engaged by the magistrates of Edinburgh to discipline the city guard. For such a task he was eminently qualified, not only by his military education, but by his natural activity and resolution; and, in spite of the profligacy of his character, he received a captain's commission in the corps.

The duty of the Edinburgh City Guard was to preserve the public peace when any tumult was apprehended. They consisted principally of discharged veterans, who, when off duty, worked at their respective trades. To the rabble they were objects of mingled derision and dislike, and the numerous indignities they suffered, rendered them somewhat morose and austere in temper. At public executions they generally surrounded the scaffold, and it was on an occasion of this kind that Porteous their captain committed the outrage for which he paid the penalty of his life.

The criminal, on the occasion in question, had excited the commiseration of the populace by the disinterested courage he displayed in achieving the escape of his accomplice. At this time it was customary to conduct prisoners under sentence of death to attend divine service in the Tolbooth Church. Wilson, the criminal above alluded to, and Robertson, his companion in crime, had reached the church, guarded by four soldiers, when Wilson suddenly seized one of the guards in each hand, and a third with his teeth, and shouted to his accomplice to fly for his life. Robertson immediately fled, and effected his escape. This circumstance naturally excited a strong feeling of sympathy for Wilson, and the magistrates, fearing an attempt at rescue, had requested the presence of a detachment of infantry in a street adjoining to that where the execution was to take place, for the purpose of intimidating the populace. The introduction of another military force than his own into a quarter of the city where no drums but his own were ever heard, highly incensed Captain Porteous, and aggravated the ferocity of a temper naturally surly and brutal. Contrary to the apprehension of the authorities, the execution was allowed to pass undisturbed, but the dead body had hung only a short time upon the gibbet when a tumult arose among the multitude; stones and other missiles were thrown at Porteous and his men, and one of the populace, more adventurous than the rest, sprang upon the scaffold, and cut the rope by which the criminal was suspended.

Porteous was exasperated to frenzy by this outrage on his authority, and, leaping from the scaffold, he seized the musket of one of the guards, gave the word to fire, and, discharging his piece, shot the man dead upon the spot. Several of his soldiers also having obeyed his order to fire, six or seven persons were killed, and many others wounded. The mob still continuing their attack, another volley was fired upon them, by which several others fell, and the scene of violence only closed when Porteous and his soldiers reached the guard-house in the High Street. For his reckless and sanguinary conduct in this affair, Captain Porteous was arraigned before the High Court of Justiciary, and sentence of death was passed upon him. His execution was

(1) See Illustration, page 353.

appointed to take place on the 8th of September 1736.

The day of doom at length arrived, and the ample area of the Grassmarket was crowded in every part with a countless multitude, drawn together to gratify their revenge or satisfy their sense of justice by the spectacle of the execution. But their vengeance met with a temporary disappointment. The hour of execution was already past, without the appearance of the criminal, and the expectant multitude began to interchange suspicions that a reprieve might have arrived. Deep and universal was the groan of indignation which arose from the crowd, when they learned that such was indeed the fact. The case having been represented to her Majesty Queen Caroline, she intimated her royal pleasure that the prisoner should be reprieved for six weeks. The shout of disappointed revenge was followed by suppressed mutterings and communings among the crowd, but no act of violence was committed; they saw the gallows taken down, and then gradually dispersed to their homes and occupations.

Night ushered in another scene; a drum was heard beating to arms, and the populace promptly answered its summons by turning out into the streets. Their numbers rapidly increased, and, separating into different parties, they took possession of the city gates, posting sentinels for their security. They then disarmed the City Guard, and, having thus possessed themselves of weapons, they were the uncontrolled masters of the city. During the progress of the riot, various efforts were made to communicate with the Castle, but the vigilance of the insurgents defeated all such attempts.

The Tolbooth was now invested, and, a strong party of the rioters having surrounded it, another party proceeded to break up the doors. For a considerable time the great strength of the place rendered their efforts fruitless, but, having brought fire to their aid, they burned the door, and rushed into the prison.

Porteous, elated with his escape from the sentence he so richly merited, was regaling a party of his boon companions within the building, when the assault was made upon its gates. The wretched man well knew the hatred with which he was regarded by the populace, and was at no loss to comprehend the motive for their violence. Escape seemed impossible. The chimney was the only place of concealment that occurred to him, and, scrambling into it, he supported himself by laying hold of the bars of iron with which the chimnies of a prison-house are crossed to prevent the escape of criminals. But his enemies soon dragged him from his hiding-place, and, hurrying him along the streets, they brought him to the very spot, where, that morning, he was to have paid the forfeit of his life. The want of a rope was now the sole obstacle to the accomplishment of their purpose, and this want was soon supplied by breaking open a shop where the article was sold; a dyer's pole served in the room of a gallows, and from it they suspended the unhappy man. Having thus propitiated the spirit of offended justice, they threw down the weapons of which they had possessed themselves, and quietly dispersed to their respective homes.

It has been justly observed, that the murder of Porteous has more the character of a conspiracy than of a riot. The whole proceedings of the insurgents were marked by a cool and deliberate intrepidity, quite at variance with the accustomed conduct of rioters. No violence was perpetrated either upon person or property, save the single act of vengeance executed upon Porteous. So studious were the insurgents to avoid every appearance of prædial outrage, that a guinea was left upon the counter of the shop from which they took the rope to hang their victim. None of the offenders were ever discovered, although government made the most strenuous exertions, and offered large rewards for their apprehension. There can be little doubt, however, that many of the participators in that night's transactions

were of a class unaccustomed to mingle in scenes of vulgar tumult.

Before concluding, we may mention that the famous Major Weir, and his sister, who were both burned alive on being convicted of practising the arts of witchcraft, had their abode in one of the projecting houses at the head of this alley. Sir Walter Scott, in his *History of Demonology and Witchcraft*, in giving the particulars of his life, mentions, that no story of witchcraft, or necromancy, so many of which occurred near, and in Edinburgh, made such a lasting impression on the public mind as that of Major Weir; that the remains of the house in which he and his sister lived, were still shown in his own day, and that it had a very gloomy aspect, well suited for a necromancer; and that, while at different times it had served the purposes of a brazier's shop, and a magazine for lint, no family would inhabit the walls as a residence; and that that urchin from the High School was accounted bold, who dared approach the gloomy ruins, at the risk of seeing the Major's enchanted staff parading through the old apartments, or hearing the hum of the necromantic wheel, which procured for his sister such a character as a spinner.

THE CHURCH IN THE CATACOMBS.

THE Church in the Catacombs! Reader! this is not a matter of curious antiquarian lore, which you may pass lightly by, as a thing in which you have no concern. It is a solemn and touching subject, affecting every one who would give "a reason for the hope that is in him;" appealing to the sympathies of every member of our holy Church; calling upon him to show something of that zeal in his Master's service, which stirred up the blessed martyrs and saints of old to renounce every thing that the world holds dear and precious, for the sake of a pure and undefiled religion.

The Church in the Catacombs! A chosen band of Christians, of various ranks and ages; father and son; mother and child; husband and wife; friends and kindred; the slave and the free; assembled in gloomy vaults to worship God, indifferent alike to the bribes and persecutions of paganism; mindful only of the Cross upon which their beloved Master offered up the one great atoning sacrifice; struggling on during three centuries, but increasing in numbers and in influence, until at length they emerged from their dark retreats, and the unclouded light of Christianity burst upon the world.

It is this glorious light which shines upon and gladdens the heart of every true Christian now; but, like the air we breathe, we enjoy it so freely, that we are apt to forget how dearly it was purchased; we know but little of the enduring sufferings of those who kept this precious inheritance for us; we derive small benefit from their bright example; we vainly imagine that because our Church has no open persecutors, it is safe from the wiles of concealed enemies; who, though they have not—God be praised!—the powers of oppression possessed by the Pagans of old, nevertheless succeed in winning many from their faith. Let us then cherish the great lesson conveyed by the Church in the Catacombs, a slight sketch of whose history we have gathered from a most interesting work, recently published, and which we earnestly recommend to the perusal of our readers.¹

(1) "The Church in the Catacombs;" a description of the primitive Church of Rome, illustrated by its sepulchral remains. By Charles Maitland, M.D. London, 1846.

During the later times of the Roman republic, the enlargement of the ancient city, the mistress of the world, led to the formation of quarries in the immediate neighbourhood, from which were obtained the materials necessary for building. These consisted of *tufa* and *puzzolana*, a volcanic sandy rock, which, from its texture was well adapted to the excavation of long galleries. The sand obtained from these subterranean works was much used in making cement, and, the demand for it being large, the whole subsoil on one side of Rome became, in the course of time, perforated by a network of excavations, spreading ultimately to a distance of fifteen miles. But, while this was going on, the original quarries, exhausted of their stores, were used as burying places by the lowest orders of the people, who were not able to procure the honours of a funeral pile for burning their dead. There also were thrown the bodies of persons who had perished by their own hands, or by the hand of the law.

The persons engaged in procuring sand from these Catacombs were called *arenarii*, or sand-diggers; they were persons of the lowest grade, and, from the nature of their occupation, probably formed a distinct class. "There is reason to suppose that Christianity spread very early among them, for, in time of persecution, the converts employed in the subterranean passages not only took refuge there themselves, but also put the whole Church in possession of these otherwise inaccessible retreats. When we reflect upon the trials which awaited the Church, and the combined powers of earth and hell which menaced its earliest years, it is impossible not to recognise the fostering care of a heavenly hand, in thus providing a cradle for the infant community. Perhaps, to the protection afforded by the Catacombs, as an impregnable fortress from which persecution always failed to dislodge it, the Church of Rome owed much of the rapidity of its triumph; and to the preservation of its earliest sanctuaries, its ancient superiority in discipline and manners. The customs of the first ages, stamped indelibly on the walls of the Catacombs, must have contributed to check the spirit of innovation, soon observable throughout Christendom: the elements of a pure faith were written 'with an iron pen, in the rock, for ever;' and if the Church of after-times had looked back to her subterranean home, 'to the hole of the pit whence she was digged,' she would there have sought in vain for traces of forced celibacy, the invocation of saints, and the representation of the Deity in painting or sculpture."

It appears from various testimonies, that these sand-pits or catacombs were places of punishment, as well as of refuge, to the early Christians. We are told that the Emperor Maximian "condemned all the Roman soldiers who were Christians, to hard labour; and in various places set them to work, some to dig stones, others sand." There is also a tradition in Rome, that the baths of Diocletian were built from the materials procured by the Christians. "That the Catacombs were throughout well known to them is evident; for every part was completely taken possession of by them, and furnished with tombs or chapels. Paintings and inscriptions belonging to our religion are to be seen every where; and, for three hundred years, the entire Christian population of Rome found sepulture in those recesses."

The security of the Catacombs as an asylum, was due to their great extent and intricate windings. The entrances to them were also numerous, and scattered over the Campagna for miles; and the labyrinth below was so occupied by the Christians, and so blocked up in various places by them, that pursuit must have been almost useless. "The Acts of the Martyrs relate some attempts made to overwhelm the galleries with mounds of earth, in order to destroy those who were concealed within; but setting aside these legends, we are credibly informed, that not only did the Christians take refuge there, but that they were also occasionally overtaken by

their pursuers. The Catacombs have become illustrious by the actual martyrdom of some noble witnesses to the truth. Xystus, Bishop of Rome, together with Quartus, one of his clergy, suffered below ground, in the time of Cyprian. Stephen the First, another Bishop of Rome, was traced by heathen soldiers to his subterranean chapel, and, on the conclusion of Divine service, he was thrust back into his episcopal chair, and beheaded. The letters of Christians then living, refer to such scenes with a simplicity that dispels all idea of exaggeration; while their expectation of sharing the same fate affords a vivid picture of those dreadful times."

"The discovery of wells and springs in various parts of the corridors, assists us in understanding how life could be supported in those dismal regions; although there is no evidence to prove that the wells were sunk for that purpose. One of them has been named the font of St. Peter; and, however apocryphal may be the tradition which refers it to apostolic times, the fact of its having been long used for baptism, is not to be disputed. Some of the wells are supposed to have been dug with the intention of draining parts of the Catacombs."

The general habit of taking refuge in the Catacombs, is proved by individual examples, given in the work before us. "On the outbreak of a persecution, the elders of the Church, heads of families, and others particularly obnoxious to the Pagans, would be the first to suffer; perhaps the only individuals whose death or exile was intended by the imperial officers. Aware of their danger, and probably well versed in the signs of impending persecution, they might easily betake themselves to the Catacombs, where they could be supported by those whose obscure condition left them at liberty." The importance of such a retreat was not unknown to the heathen; every effort was made at the beginning of a persecution to prevent the Christians from escaping by a subterranean flight; and several edicts begin with a prohibition against entering the cemeteries. Death was decreed as a punishment of disobedience. The laws were almost equally severe against the custom of worshipping in them. "It is a well-known fact that, before the time of Constantine, there were in Rome many rooms, or halls, employed for Divine worship, though perhaps no edifices built expressly for that purpose. Besides this, the extreme smallness of the Catacomb chapels, and their distance from the usual dwellings of the Christians, oppose serious objections to the supposition that they served for regular meetings. Yet nothing is better attested in history, than the fact, that, throughout the fourth century, the Church met there for the celebration of the eucharist; for prayer at the graves of the martyrs; and for the love-feasts, or *agapæ*. Prudentius affirms that he had often prayed before the tomb of Hippolytus, and describes at length the subterranean sepulchre of that saint. After narrating the care of the Church, shown in gathering the mangled remains of the martyr, he proceeds to a minute description of the Catacomb in which they were deposited: 'Among the cultivated grounds, not far outside the walls, lies a deep cavern, with dark recesses. A descending path, with winding steps, leads through the dim turnings; and the daylight, entering by the mouth of the cavern, somewhat illumines the first part of the way. But the darkness grows deeper as we advance, till we meet with openings, cut in the roof of the passages, admitting light from above. There have I often prayed, prostrate, sick with the corruptions of soul and body, and obtained relief.' The discovery of chapels, altars, episcopal chairs, and fonts, indicates the existence of a subterranean worship at some time or other; but it is difficult to prove, that all the religious ceremonies were performed in the Catacombs at a very early period." The Latin inscription, of which the following is a translation, was found over one of the graves in the cemetery of Callistus, and shows that prayers were offered below ground:—

IN CHRIST. ALEXANDER IS NOT DEAD, BUT LIVES BEYOND THE STARS, AND HIS BODY RESTS IN THIS TOMB. HE LIVED UNDER THE EMPEROR ANTONINE, WHO, FORESEEING THAT GREAT BENEFIT WOULD RESULT FROM HIS SERVICES, RETURNED EVIL FOR GOOD; FOR, WHILE ON HIS KNEES, AND ABOUT TO SACRIFICE TO THE TRUE GOD, HE WAS LED AWAY TO EXECUTION. O, SAD TIMES! IN WHICH SACRED RITES AND PRAYERS, EVEN IN CAVERNS, AFFORD NO PROTECTION TO US. WHAT CAN BE MORE WRETCHED THAN SUCH A LIFE! AND WHAT THAN SUCH A DEATH WHEN THEY COULD NOT BE BURIED BY THEIR FRIENDS AND RELATIONS!—AT LENGTH THEY SPARKLE IN HEAVEN. HE HAS SCARCELY LIVED, WHO HAS LIVED IN CHRISTIAN TIMES.

It is inferred from these words, that Alexander was praying in the catacombs when discovered by the emissaries of the second Antonine, the first emperor of that name having been friendly to the Christians. This event belongs to the fifth persecution, which began in the year 161. "A number of circumstances in this inscription are worthy of notice. The beginning, in which the first two words, (Alexander mortuus,) after leading us to expect a lamentation, break out into an assurance of glory and immortality; the description of the temporal insecurity in which the believers of that time lived; the difficulty of procuring Christian burial for the martyrs; the certainty of their heavenly reward; and, lastly, the concluding sentence, forcibly recalling the words of St. Paul, 'as dying, yet behold we live;' and again, 'I die daily.'"

In addition to the older galleries, dug for the purpose of extracting sand and puzzolana, the Christians continued to excavate fresh passages for their own convenience. These additions, distinguished by their superior height and regularity, were called *new crypts*. The earth taken out of them was generally thrown into old branches of the galleries, some of them filled with graves; a circumstance which has given rise to many conjectures. Our author suggests that the fugitives may have cast up these mounds as obstacles to the pursuit of their enemies, since, by blocking up the principal passages, and leaving open only those known to themselves, they might render the galleries beyond quite inaccessible to their persecutors. Some of these new crypts are supposed to belong to more peaceful times, when the custom of burying in the catacombs had become so completely established, that, even after it was no longer a necessary precaution, this sort of sepulture was preferred. Vicinity to the tombs of saints and martyrs, so highly valued in that age, was also an inducement to the continuance of the practice. One of the inscriptions is translated as follows:—

IN THE NEW CRYPT, BEHIND THE SAINTS,
(*retro sanctos*;) VALERIA AND SABINA
BOUGHT IT FOR THEMSELVES WHILE LIVING.
THEY BOUGHT A BISOMUM FOR APRO AND
VIATOR.

The word *bisomum* (compounded of Greek and Latin) signifies a place for two bodies: the words *trisomum* and *quadrisomum* apply to graves capable of containing three and four bodies. "If we look back through the history of the world, we find every where the disposition to build tombs for the exclusive use of individual families. The mummy pits of Egypt are constructed upon this principle. 'He was buried with his fathers,' is a common conclusion to the history of a Jewish patriarch. It was reserved for Christianity first to deposit side by side the bodies of persons unconnected with each other,—an arrangement which prevails throughout the whole of Christendom, from the Catacombs of ancient Rome to the modern churchyards of our own country."

In many of the inscriptions on the tombs of the Catacombs occurs the word *cemetery*, which is derived from the Greek, and signifies a *sleeping-place*. "In this

auspicious word, now for the first time applied to the tomb, there is manifest a sense of hope and immortality, the result of a new religion. A star had risen on the borders of the grave, dispelling the horror of darkness which had hitherto reigned there; the prospect beyond was now cleared up, and so dazzling was the view of an eternal city 'sculptured in the sky,' that numbers were found eager to rush through the gate of martyrdom, for the hope of entering its starry portals."

The appearance of these Catacombs about the middle of the fourth century, has been described by St. Jerome. He says:—"When I was at Rome, still a youth, and employed in literary pursuits, I was accustomed, in company with others of my own age, and actuated by the same feelings, to visit, on Sundays, the sepulchres of the apostles and martyrs; and often to go down into the crypts dug in the heart of the earth, where the walls on either side are lined with the dead; and so intense is the darkness, that we almost realise the words of the prophet,—'They go down alive into hell' (or Hades); and here and there a scanty aperture, ill deserving the name of window, admits scarcely light enough to mitigate the gloom which reigns below; and, as we advance through the shades with cautious steps, we are forcibly reminded of the words of Virgil,—'Horror on all sides; even the silence terrifies the mind.'"

These subterranean galleries were nearly lost sight of during the disorder occasioned by barbarian invasions. "As the knowledge of their windings could be preserved only by constant use, the principal entrances alone remained accessible; and even these were gradually neglected, and blocked up by rubbish, with the exception of two or three, which were still resorted to, and decorated afresh from time to time. In the sixteenth century the whole range of Catacombs was re-opened, and the entire contents, which had remained absolutely untouched during more than a thousand years, were restored to the world at a time when the recent revival of letters enabled the learned to profit by the discovery."

* * * It is difficult now to realise the impression which must have been made upon the first explorers of this subterranean city. A vast metropolis, rich in the bones of saints and martyrs; a stupendous testimony to the truth of Christian history, and consequently to that of Christianity itself; a faithful record of the trials of a persecuted Church; such were the objects presented to their view. * * * From the removal of everything portable to a place of greater security and more easy access, as well as from the difficulty of personally examining these dangerous galleries, beyond the mere entrance left open to general inspection, we are no longer able to share the feelings of those who beheld the cemeteries and chapels of a past age, completely furnished with their proper contents."

Before we proceed to notice the contents of the Catacombs, it may be well to add a few more details respecting them. In the greater number of galleries, the height is about eight or ten feet, and the width from four to six. The graves are cut in the walls, either in a straggling line, or in tiers, occasionally amounting to six in height. The galleries often run in stories, two or three deep, communicating with each other by flights of steps. Many of the perpendicular shafts, noticed by Jerome and others, by which the vaults were lighted, appear to be of a more recent date than the times of persecution, and would have been fatal to the safety of the refugees. Many of these holes still exist in the Campagna, near Rome, and prove dangerous to the incautious rider. "The number of graves contained in the Catacombs is very great. In order to form a general estimate of them, we must remember that from the year 98 A.D. to some time after the year 400 (of both which periods consular dates have been found in the cemeteries), the whole Christian population of Rome was interred there. As this time includes nearly a century after the establishment of Christianity under Constantine, the numbers latterly must have been very con-

siderable. A city peopled by more than a million of inhabitants, so far Christianised as to give rise to a general complaint that the altars and temples of the gods were deserted, must have required cemeteries of no ordinary dimensions. The number of Christians in the time of Decius has been estimated by historians at between forty and fifty thousand. Added to this, a horror of disturbing the graves already occupied, would effectually prevent the custom, common in our own country, of employing the same ground for fresh interments, after the lapse of a few years."

The treasures of the Catacombs, we have said, were removed to museums and places where they could be seen and studied to advantage. The richest collection is in the Vatican. There is, first, the Christian Museum, properly so called, containing a number of sarcophagi, bas-reliefs, inscriptions, and medals; besides this, at the entrance to the Vatican Museum is a long corridor, the sides of which are completely lined with inscriptions, plastered into the wall. On the right hand are arranged the epitaphs of Pagans, votive tablets, dedications of altars, fragments of edicts and public documents, collected from the neighbourhood of the city; and, opposite to them, classed under the heads of Greek, Latin, and Consular monuments, appear the inscriptions of the ancient Christians. These have been collected indiscriminately from the Catacombs round Rome, and have hitherto remained unpublished. This is called the Lapidarian Gallery. In the year 1841, our author obtained permission to make a few drawings, and to copy some of the inscriptions in this gallery; but he had not long availed himself of the licence, when an application was made by the Jesuits to the Custode of the gallery, to prevent the use of its contents by a Protestant. He was, therefore, not allowed to proceed, but was even requested to give up the copies he had made; this, of course, was refused; and with the understanding that no more inscriptions should be copied, and that those copied should not be published in Rome, the matter terminated.

Ever since the discovery of these inestimable monuments in the sixteenth century, "Romanist writers have been suffered to claim identity in discipline and doctrine with the Church that occupied the Catacombs; while an attempt has scarcely been made to show from these remains the more striking resemblance existing between our Reformed Church and that of primitive Rome." To supply in some degree this deficiency, is the object of the work before us, as will be more particularly shown in another article.

(To be continued.)

THE WORLDS AROUND US.

ARE the planets and their satellites inhabited, or habitable? A question, it may well seem, more easily asked than answered. And so, in truth, it is, so far as the fact is concerned; but to those who speculate upon possibilities and probabilities, we may offer a very satisfactory solution of it in the words of Laplace.

"Such, then, beyond all doubt," says that greatest of modern astronomers, "will be a summary outline of the solar system. The principal focus of its movements is the sun, an immense globe, revolving upon itself in a period of twenty-five days and a half, and superficially overspread with an ocean of luminous matter. About this focus move the planets, with their satellites, in orbits nearly circular, and in planes but little inclined to that of the sun's equator. Innumerable comets from time to time approach the sun closely, and are then again borne away, to distances which prove that his attractive power reaches far beyond the limits of any known planetary orbits. And not only does this central

body act upon all these globes by its attraction, forcing them thus to revolve about it; but to all of them also it is a continual source of light and heat. Fostered by its benignant influence, plants and animals spring into being throughout our earth; and analogy leads us to suppose that similar effects take place upon the other planets; for we naturally infer that the prolific power with which matter develops itself under so many forms before our eyes is not idle upon the vast orb of Jupiter, where day alternates with night, and year succeeds to year, just as upon our own globe; and which, to an attentive observer, presents changes of appearance only to be accounted for by causes of great activity and power. True it is, that, in all likelihood, mankind, as at present constituted, could not exist under a temperature so different from that in which we live, and to which our frame is adapted: but why should there not subsist for each several planet of this universe a corresponding scheme of organization, in accordance with its particular temperature? If mere differences of climate, and of meteorological conditions, are sufficient to call forth the infinite variety which we behold in the productions of this our earth, how much greater must not be the diversity in those of the planets and their satellites! It transcends all power of the imagination to form any definite idea upon the subject, but that there do exist all these varied forms of being is at least highly probable."

But, indeed, apart from considerations of antecedent probability, and, without our having to pass entirely beyond the limits of our own immediate sphere, we may easily find, upon this very globe that we inhabit, the most sufficient indications that organized nature does, in fact, vary with the circumstances under which it is intended to exist, and accommodates itself to them. In the present state of geological science, it is impossible to make question but that this earth of ours has undergone very considerable changes, both in the physical condition of its surface, and in the zoological or botanical character of its inhabitants and productions. Now, in very numerous instances, it appears upon investigation, that the indications derived from these different sources exactly coincide; that is to say, we find the plants and animals of a given period to have been precisely such as we might have expected to find existing under physical conditions such as we are led to suppose those of that period to have been. For instance, various considerations of natural philosophy lead us to assume that the temperature of the earth's surface must, at a remote period, have been very much higher than that which now prevails there; and, accordingly, we have likewise the best reasons for believing that, at some indefinite distance of time, the polar regions were inhabited by animals, and clothed with a vegetation, such as now can exist only in the tropical latitudes. Again; there can be but little doubt that, at an early period of the earth's progress to the existing state of things, a very considerable portion of its surface must have presented the appearance of an ocean, studded with a multitude of islands, and the more so the farther we go back; a supposition which may be justified upon grounds perfectly independent of botanical science, while, at the same time, the study of fossil botany teaches us that the earlier the period, the more nearly does the character of its vegetation approximate to that which we find prevailing in the island clusters of the South Seas, and the archipelagos of the East and West Indies. But yet again; the enormous masses of chalk, evidently deposited by subsidence from water, which form so considerable a portion of the earth's crust, point to a period when the waters of our globe must have been highly charged with carbonic acid gas, by means of which the chalk was holden in solution. The same causes by which the waters became so generally thus impregnated would probably, or rather certainly, operate in respect of the atmosphere, which would thus, during this period, contain a very large proportion of

the same gas; a circumstance highly favourable to vegetable development, and doubtless forming a primary item in the conditions under which were called forth into being the gigantic forests of the ancient world. Now, this very state of things would be one in which neither man nor any animal of similar respiratory organization,—none, in fact, in whose nostrils is the breath of life,—could for a moment exist, much less increase and multiply. In such an atmosphere neither beast nor bird could have lived. Yet was not that world without its living denizens. To such a period it is that we must refer the extinct saurian races, the monstrous fish lizards and lizard-fishes, which, from the frequency of their fossil remains, must have been, at some time, exceedingly numerous upon the globe, and in its waters; and which would be adapted, by the mechanism of their respiration, to subsist in such an atmosphere; while the difference of temperature, and the change in the distribution of land and water, would probably disqualify them as tenants of the earth in its present state.

Thus, then, we find the speculative likelihood of the other planets being inhabited confirmed and supported by what we know of the past condition of that one among them upon which we ourselves live; while it will appear from the very same considerations, both of fact and probability, that under physical conditions so vastly different, the structure and organization of such inhabitants as they may possess, must equally vary from our own. A few words upon some of those differences of circumstance which are likely to be attended with this result in a very marked degree, may not prove uninteresting.

To begin, then, with the most obvious. It does not require much observation to teach us how powerfully organization is affected by habitual influences of temperature, nor much consideration to show us how widely in this respect the several planets must vary from our earth and from one another. In order, however, to giving some accurate idea on the subject, it may be as well to premise, that the effective power of radiant heat varies inversely as the square of the distance from the source of heat; that is to say, at a distance of two feet from a mass of red hot iron, from which heat will of course be radiating in every direction, the effect of that heat upon the temperature of a given object will be the fourth part of what it is at one foot; at a distance of three feet that effect will be diminished to a ninth; at four, to one sixteenth; and so on continually. And now, to apply this to the temperature of the planets respectively, as compared with that of our globe. The earth's distance from the sun is about 95,000,000 of miles, that of Mercury about 36,000,000, which is nearly in the ratio of eight to three; so that the power of the solar rays, at the distance of Mercury, will be greater than it is at the distance of our earth, about in the ratio of sixty-four to nine, or, in simpler numbers, seven to one. The distance of Venus from the sun is about 68,000,000 of miles, and by a similar process we shall find that the intensity of the sun's radiation at that distance will be more than double of what it is here. It would be tedious to apply a similar calculation to the planetary system in detail. Let it suffice, therefore, to propound the general result, that the intensity of solar radiation, which on Mercury is about seven times greater than on the earth, is some 330 times less on Uranus; the proportion between the two extremes being upwards of 2,000 to one. Let any one figure to himself our condition were the sun's effect to be septupled, to say nothing of the greater ratio! or were it diminished to a seventh, or to a three-hundredth of what it now is!

It must, however, be observed, that a greater intensity of solar radiation does not necessarily imply a proportionally higher temperature at the surface of any given planet, which might possibly be provided with an atmosphere so constituted as in some degree to reflect or absorb the rays, and so to mitigate the glare and heat. Indeed, we have some reason to believe that both with Mer-

cury and Venus such is in fact the case; and, in all the planets, we notice diversities of appearance which we are strongly led to attribute to atmospheric peculiarities. Indeed, unless there is some provision of the kind, it must be impossible for water to exist upon Mercury in any other form than that of steam; and many of our metals would be in a constant state of fusion—would, in fact, present much the same appearance that mercury does to us, until converted into powder by the greater facility of oxidation. In Saturn, on the contrary, all the water would be in a perpetual state of ice. The same law of variation also holds good for light; itself a powerful chemical agent, which plays no undistinguished part among the influences which tend to modify organization.

Moreover, the wide inequality of the planets as to superficial extent, their different periods of diurnal rotation and annual revolution, must occasion no inconsiderable diversity in the circumstances and habits of any creatures that may exist upon them. The area of Jupiter is, in round numbers, one hundred and twenty fold that of our globe; of Saturn not much less than that of Jupiter. The area of Mercury's surface, on the other hand, is less than one fourth of that of our globe; while that of the lesser planets, Juno, Vesta, Ceres, and Pallas is very far smaller still. Again, while the diurnal rotation of Mercury, Venus, and Mars is not very different from our own, that of Saturn takes place in something less than ten hours and a half; that of Jupiter in a few minutes short of ten hours. While Mercury revolves about the sun in eighty-seven days, or in less than one fourth of our own year, and Venus in 244 days, the year of Jupiter extends to twelve, and that of Saturn to thirty, of this earth's annual revolutions. And if we combine these latter data with the length of Jupiter's and Saturn's days, as already given, we shall find, on a rough and round calculation, the year of the former consisting of about 10,000 of his own days; while for the inhabitants of Saturn the sun must rise and set some 24,000 times, ere the seasons recommence their round. On Saturn, indeed, the course of the seasons will be materially modified by the effect of his rings, which, to a large proportion of his surface must entirely eclipse the sun for half the period of his revolution.

Another leading source of diversity must lie in the exceeding difference of the force of gravity, as exerting itself on the surfaces of the several planets. Supposing the velocity of rotation and the density of the material to be the same for one of the small ultra-zodiacal planets—Pallas, for instance—as on this earth, a man placed on one of them would spring with ease to a height of sixty feet, and sustain no greater shock in his descent than here from a leap of a single yard. In Jupiter, on the other hand, upon the same suppositions, the force of gravitation would be more than tenfold what it is with us. On the last-mentioned planet, however, the tendency to the centre is in a considerable degree contracted by the increased centrifugal force, corresponding to the greater velocity of rotation—perhaps also by other circumstances—so that in fact, the gravitation force is not quite threefold of that which operates at the earth's surface. Saturn, however, though in bulk not much inferior to Jupiter, is composed of materials so much less massive than those of our planet, his velocity of rotation being at the same time nearly equal to that of Jupiter, that the force of gravity at his surface will be less than that which we experience. In truth, the mere density of Saturn does not much exceed one-eighth of that of the earth, so that he is composed upon an average of materials not much heavier than cork; a fact which may serve at once as an illustration of the manner in which variations of condition so frequently balance one another, and as a proof that the combinations of elements must be exceedingly different upon the several planets.

So here we shall pause, praying our readers to remember that we did not set out to solve a question, but

merely to cull a few materials for speculation, from a field which we are far from having attempted to exhaust. It will hardly be necessary to remind them that the convenience of round numbers is always more regarded than mathematical accuracy, where the object is to present proportions to the mind in a definite manner.

Biographical Sketches of Eminent Painters.

RAFFAELLO SANZIO DA URBINO.

RAFFAELLO SANZIO was born on Good Friday, in the year 1483, at Urbino, a city about 150 miles from Rome. His father, Giovanni Sanzio, was an artist, and though not very eminent, in his profession, he was considered to possess superior judgment. He instructed his son in the rudiments of his art, even in his childhood; and so wonderful was the boy's genius, and so rapid his progress, that in a few years he was able to assist his father in some of the works in which he was engaged at Urbino.

Giovanni, being anxious to give his son the best opportunity of improving his talents, placed him under the tuition of Perugino, who then enjoyed a distinguished reputation, but whose highest claim to renown was afterwards derived from his having been the instructor of the inimitable Raphael.

The pupil soon perceived that he should never attain the perfection to which he aspired, if he contented himself with copying the manner of his master. He therefore devoted his attention to the study of the antiques,¹ and made himself thoroughly acquainted with their beauties.

The great fame of Michael Angelo Buonaroti, and Leonardo da Vinci, induced him to visit Florence; and the careful examination of the works of those eminent artists enlarged his ideas, and enabled him to improve his style. Their discussions afforded opportunities for the display of their superior talents, which Raphael admired with enthusiasm. Indeed, he appreciated the merit of Michael Angelo so highly, that he was wont to say, "I thank heaven that I was born in the same age with that illustrious man!" It is right to add, that Buonaroti, although he did sometimes evince a feeling of jealousy with regard to Raphael, always acknowledged the superiority of his genius, and rendered ample justice to his great skill.

Raphael's celebrity now became general throughout Italy, and, after enriching his native city, Urbino, with several of his works, and residing four years at Florence, his uncle Bramante, the great architect of that period, persuaded Julius II. to employ Raphael to adorn the Vatican with his paintings. He was now in his twenty-fifth year; and, when we consider the difficult position of the young painter—who, when he commenced this grand undertaking, was surrounded by many eminent and aspiring artists, who having been already employed by the pope, must have considered the

choice of Raphael as a great injustice to themselves, and whose interest it was that he should fail—we may form some idea of that superior genius which enabled him to vanquish every obstacle, to surpass the opinion which had been formed of him, and to leave every rival far behind him.

As Sir Joshua Reynolds justly observes, "it is probable that we are indebted to the remarkable and critical situation in which Raphael was placed, for the magnificent *chefs-d'œuvre* which he has left us."

It is said that the most superior fresco-paintings of Raphael, in the Vatican, do not immediately strike the beholder with that surprise which might be expected from the works of so illustrious a master. This circumstance has been accounted for by Montesquieu, who observes, that Raphael imitates nature so well, that the spectator is no more surprised than were he to see the object itself, which would excite no degree of surprise at all; but that an uncommon expression, strong colouring, or odd and singular attitudes, in the productions of inferior artists, strike us at first sight, because we have not been accustomed to see them elsewhere.

The success of Raphael was complete; and his incomparable works prove that poetry, history, and the sciences, were as familiar to him as painting. He continued to study the antique with ardour, and the magnificent collection of works of art in the Sistine chapel, into which he was admitted by Bramante, in spite of the prohibition of Michael Angelo Buonaroti, increased his ambition to exceed his former efforts.

Riches and honours were now heaped upon him, and the great number of pictures which he was engaged to paint obliged him to avail himself of the assistance of young artists in the execution of his designs, and thus many superior painters were formed under his direction. But he was so particularly careful, that he corrected with his own hand whatever he found imperfectly performed by his disciples, and gave those finishing touches to the whole, which have rendered those works the admiration of the world.

Raphael was quite free from jealousy or envy. He was generous to his brother artists, and administered to the wants of those who needed assistance. He made no concealment of his skill, and imparted his advice to his pupils conscientiously and liberally, often interrupting his own work to advance their progress. In his walks he was always surrounded by his favourite scholars. His most celebrated disciples were Julio Romano, Francesco Penni, Polidoro da Caravaggio, and Perini del Vaga.

The works of Raphael are so varied and so extensive that the enumeration of them would require a volume, and to do them justice would demand talents and knowledge equal to his own. It would, nevertheless, be a pleasant task to attempt to describe some of his most famous productions, but the limits of this paper will not admit of more than a brief notice of one beautiful picture by this great master. It is called *La Madonna del Pesce*—The Madonna of the Fish—and was formerly in the Escorial in Spain, but is now in the Musée at Madrid.

It is supposed that Raphael was ordered to paint a picture in which the following personages were

(1) *ANTIQUE*. By this term are implied and understood, such paintings and sculptures as were executed at that period of time when those arts were in their greatest perfection among the ancient Greeks and Romans; from the age of Alexander the Great to the irruption of the Goths into Italy, under Alaric, in the year of our Lord 400.

The term *Antique* is more particularly applied to the sculptures of the period before mentioned; such as statues, basso-relievos, medals, intaglios, or engraved stones.

to concur: our Saviour, when an infant, the Virgin Mary, St. Jerome, the archangel Raphael, and young Tobit; leaving the artist to contrive, as he might best be able, how to join in one picture personages who lived at periods so distant from each other; and it may not be going too far to say, that perhaps no one but Raphael could have formed so beautiful a picture from a subject so difficult and unconnected.

The Virgin is supposed to be sitting in a chair, with the child Jesus on her lap, whilst St. Jerome is reading the prophecies of the Old Testament relative to the birth, preaching, and miracles of the Messiah.

The archangel introduces young Tobit, who is come to implore the favour of God for the restoration of sight to his father. The blessed Infant bends gently towards the suppliant, and seems anxious to examine the fish, which hangs to a string in Tobit's right hand. Meanwhile, St. Jerome, who seems to have finished the page he was reading, is ready to turn over the leaf, and appears to be waiting only till the Divine child lifts its little arm from the book, on which it carelessly rests.

The countenance of the Virgin is full of compassion, and her attitude perfectly graceful. Without taking her eyes off Tobit, or interrupting the angel, she gently supports the holy Infant, whose head almost touches the left cheek of his affectionate mother, which adds to her beautiful face a tenderness of expression impossible to describe.

The head of the angel is noble; his air easy and natural; whilst innocence and gentleness are depicted in his countenance. The figure of Tobit is likewise very attractive. He raises his eyes with reverential awe to the Infant Saviour, and his attitude denotes timidity and diffidence.

This picture is painted on wood, and is about eight feet high. The subject is certainly replete with difficulties and incongruities, but all these defects are forgotten in the contemplation of its beauties.

The colouring is in the last and best manner of Raphael.

The celebrated picture of "The Transfiguration" was intended by the illustrious painter to be sent as a mark of his respect and gratitude to Francis I. King of France. That monarch had invited Raphael to his Court, and there is little doubt that the artist would have gladly accepted the royal invitation, had it not been for the intreaties of his uncle Bramante, and the liberality of Leo X.

He sent, however, his picture of St. Michael to the French king, who paid him for it so generously, that he considered it incumbent on him to present the munificent monarch with another of his works, his celebrated Holy Family: but Francis insisted on Raphael's acceptance of a still more liberal remuneration for this admirable production; and in a letter which his Majesty wrote to Raphael, in allusion to this generous struggle, he asserted "that all men of superior talent were upon an equal rank with sovereigns." Raphael was deeply affected by so much condescension, and he then conceived his first idea of "The Transfiguration," which, as before stated, he intended to present to his royal and generous patron. His premature death, however, prevented the completion of this sublime picture; but, unfinished as it was, it was considered to be the master-piece of this great

painter, and therefore it was not thought right to deprive Rome of the finest work he ever produced.

It was on the anniversary of his birth—Good Friday—in the year 1520, that Raphael expired, at the early age of thirty-seven. His death occasioned universal grief in Rome. His picture of "The Transfiguration" was exhibited in its then imperfect state, in his studio, above the couch on which his body was laid previously to interment: this was an affecting and appropriate tribute to his memory. He was buried, according to his own desire, in the church of the Rotunda, and his funeral was attended by many illustrious persons.

To use the words of Mengs, who is the least enthusiastic of the admirers of Raphael, the latter "undoubtedly deserves the first rank amongst painters. He possessed a sublimity of thought, a fruitful and rich invention, remarkable correctness of drawing and design, and a wonderful expression. His attitudes are noble, natural, and graceful; and to the elegance and grandeur of the antique he added the simplicity of nature. He blended the boldness of Michael Angelo Buonaroti with his own graceful ideas, and struck out a manner peculiar to himself and superior to all others."

The Cartoons of Raphael are considered as admirable evidences of his genius, and England is happy in possessing several of these interesting works.

CURIOSITIES OF COLD.

In a paper in our last journal, detailing the peculiarities of the Wenham Ice-Lake, we glanced at what may be termed the Luxuries of Cold. The contrivances resorted to for enjoying them are of ancient date; they involve much ingenuity, and, in later times, knowledge of scientific principles, so that a few of their details will be both interesting and instructive.

The source of cold to which we specially refer, is that resulting from evaporation: this Sir John Leslie has illustrated by all those contrivances, which, under the name of *coolers*, diminish the temperature of liquids by evaporation. Galen relates that he witnessed the mode of cooling water, which was practised in his time, not only at Alexandria, but all over Egypt. The water having been previously boiled, was poured at sunset into shallow pans, which were carried to the house tops, and there exposed during the whole night to the wind; and to preserve the cold thus acquired, the pans were removed at daybreak, and placed on the shaded ground, surrounded by leaves of trees, prunings of vines, lettuce, or other slowly conducting substances. The water-bags of the Bedouin Arabs allow a small quantity of water to exude from them, which being evaporated, cools the rest of the contained water. The gourds and calabashes of the Africans,—the alcarazas of the Moors,—the wetted, matted curtains of oriental nations, &c,—are all instances of the operation of the same law.

It has been supposed that ice cannot be obtained by artificial means in the East Indies. This is not precisely the case, as we learn from the following account, in Miss Roberts's *Scenes and Characteristics of Hindostan*:

"At the principal stations in the Mofussil there are regular *Ice-harvests*; the night frosts, during a

certain number of weeks, being always sufficiently strong to congeal water under their influence, if of an inconsiderable depth. A piece of ground, commensurate with the number of persons who subscribe to the concern, is laid out for the purpose of collecting a sufficient quantity of ice to last through the hot season; shallow pans are provided, of convenient dimensions, and these are placed in rows, close to each other. After sunset they are filled with water by superintendents, whose business it is to remove the cake when sufficiently frozen, and to replenish the pans, an operation which is performed several times in the course of each night. The cakes of ice are deposited in excavations made according to the principles observed in England, and with proper care may be preserved during the rains; the least neglect, however, is fatal in the damp season; the ice melts in an instant, and the unfortunate subscribers, instead of having the stipulated quantity to cool butter, cream, jellies, water, and wine, are compelled to do as well as they can with the only substitute, saltpetre. At Chinsurah, where the frosts are not so severe as in the upper country, a small quantity of saltpetre is placed in the pans." With these aids, Miss Roberts thinks, that should the season prove favourable, the necessity for importing ice from America will no longer exist.

In France, when the winters are mild, the quantity of ice collected is, necessarily, very small. The consumers have, accordingly, sought to supply this deficiency by artificial means, somewhat similar to those employed in India. With this intention they have organized a large *manufactory* at L'Ouen, in which evaporation is the agent employed. The water is brought to the summit of a series of wooden falls, and dropping gently "*en cascades*," runs slowly into large tanks, isolated from the soil, and finishes by becoming congealed. In this manner, masses of ice are obtained, even when the temperature of the surrounding atmosphere is several degrees above zero. This freezing power is considerably augmented by the addition of chemical agents, such as saltpetre and bay salt.

The consumption of ice in Paris is very considerable. It is there not only employed in the composition of various refreshments, but also to preserve a quantity of viands, which heat tends to deteriorate; and it is sometimes used as a therapeutic agent in illness. The number of confectioners who use or sell ice in Paris, is estimated at 450, without reckoning those private houses in which ice is consumed by the family. The annual consumption in Paris is calculated to be from twenty-five to thirty millions of pounds weight. Independently of the ice wells in the different establishments of lemonade merchants, confectioners, &c., there are several large ones in the environs of Paris: the most remarkable, both from its size and the quantity it produces, is *La Glacière* at L'Ouen, Saint Denis; the depth of this well is about thirty-three feet, and its diameter upwards of one hundred feet; it supplies the Parisian population yearly with twelve millions of pounds of ice, at the average price of from 1½d. to 2d per lb.

It is a very singular phenomenon, that cold, far exceeding that of winter, can be produced, even in the middle of summer; and, what adds to the singularity is, that this production of cold does not take place unless the ingredients employed become liquid.

This production of *artificial cold* at will was known to our chemists two centuries since. Thus Sir Thomas Browne, in his "*Enquiries into vulgar and common Errors*," originally published in 1646, speaking of the old notion "that crystal is nothing else but ice strongly congealed," says, "Whether this coagulation be simply made by cold, or also by cooperation of any nitrous coagulum, or spirit of salt, the principle of concretion, whereby we observe that ice may be made with salt and snow by the fireside, as is also observable from ice made by saltpetre and water duly mixed, and strongly agitated, at any time of the year, were a very considerable enquiry." Upon this, Mr. Brayley, the chemist, notes: "The doubt here expressed, whether the coagulation of water is simply owing to cold, or whether the operation of cold may not be aided by saltpetre, or some analogous principle, is a remnant of the notions entertained of that salt by the alchemists, and the older operators in true chemistry, who immediately succeeded them, of both whose ideas on such subjects, our author, (Sir T. Browne) retained a few, though, considering the state of science in his time, very few indeed, and those of minor importance only. The arguments which he adduces in favour of this doubt are as fallacious as the supposition itself which it involves. 'That ice may be made with salt and snow by the fireside,' arises not from any peculiar congealing virtue in the salt, but merely from the circumstance that the affinity it has for water produces a rapid liquefaction of the snow, which, robbing the surrounding bodies of their heat, in order to assume the liquid form, (their *sensible* heat thus becoming *latent* in the resulting water,) produces the cold. The case is similar with respect to the ice made by saltpetre and water; for here the water subjected to experiment is reduced to the solid form by the abstraction of its sensible heat, consequent upon the liquefaction of the salt, in the solution of which it becomes latent." (*Browne's Works*, Wilkins' Edit. vol. ii. p. 282.)

We can only detail a few of the beautiful applications of chemical science employed in producing artificial congelation.

In 1782, Mr. Walker of Oxford, produced ice in summer by means of chemical mixtures which have been popularly termed *freezing powders*: they have been more recently applied to domestic purposes, in three distinct kinds of apparatus; one for *freezing water* in the hottest weather; another for *icing wine*; and the third for *freezing cream*. Mr. Walker's apparatus for wine is very simple: he merely proposes to add the following proportion of freezing powder to each pint of water, in which the decanter of wine is to be placed up to the neck, within a cup or can surrounded with water, in a tin covered pail. The freezing powder is as follows: for each pint of water take 3 oz. of powdered nitre, 3 oz. powdered sal ammoniac, and 4½ oz. Glauber's salts. When these are dissolved in the water, place in it the decanter of wine, taking care that the surface of the wine be rather below that of the freezing mixture.

A mixture of 4 oz. of nitrate of ammonia, 4 oz. of sub-carbonate of soda, and 4 oz. of water, in a tin pail, has been found to produce 10 oz. of ice in three hours.

In employing either of these powders to cool a bottle of champagne, place it to the neck in a vessel of the coldest pump water that can be procured;

sprinkle about 4 oz. of either of the above powders upon the shoulder of the bottle, so that, as it gradually dissolves, it shall fall or run down the sides; in the meantime, gently turn the bottle in the mixture, and keep it in about twenty minutes, or half an hour.

The late Dr. Dalton succeeded in cooling water 5° below its freezing point, 32° , without rendering it ice. In this case, it is necessary to keep the water in a state of the most complete quiescence; for the least agitation either prevents it from falling lower than 32° ; or, if it be brought down below this point, it instantly begins to freeze, and the fluid part rises to 32° .

In these cases, for producing artificial cold, the conversion of apparent into latent heat in the process of liquefaction is taken advantage of. All these instances depend for their efficacy upon the liquefaction of solid substances without the aid of heat; the degree of cold depends upon the amount of the heat of fluidity which disappears; and this also depends upon the amount of solid matter which is liquefied, and the rapidity of the liquefaction.

A very common method of obtaining a low temperature is, by mixing snow and salt together. The salt causes the melting of the snow by reason of its attraction for water, and the water thus formed melts the salt; so that both are liquefied. This process will sink the thermometer to 0° . Hence, it is a dangerous practice to sprinkle salt on the snow on the street pavement, for the purpose of liquefying it, unless it be swept away as soon as possible.

Sprinklings of salt are sometimes added to ice when it is put into the house, with the view of preserving it; but this is an erroneous notion, unless it be supposed that, by the abstraction of the latent heat from some of the ice dissolved by the salt, a greater degree of cold is produced to solidify the remainder. Confectioners use salt to dissolve, not to preserve ice, because a much more intense degree of cold is generated during the solution than if the pieces of ice remained undissolved.

A very remarkable cold may be produced by mixing three parts by weight of crystallized chloride of calcium with two parts of dry snow; this will sink the mercury in the thermometer from 32° to -50° , thus producing a degree of cold equal to 82° below freezing. This is considerably lower than any point recorded by Captain Back, in his Arctic Land Expedition in 1833-4-5, where he relates some very interesting experiments on the effect and intensity of the cold. With the thermometer at -62° , a closely-stopped bottle of sulphuric ether was exposed immediately below the registering thermometer on the snow, when, in fifteen minutes, the interior upper surface of the sides of the bottle was coated with ice, and a thick efflorescent sediment covered the bottom, while the ether generally appeared viscous and opaque.

A small bottle of pyroligneous acid froze in less than thirty minutes, at a temperature of -57° : as did also the same quantity of 1 part of rectified spirit and 2 of water, 1 part of the same, and 1 of water. Leeward Island rum became thick in a few minutes, but did not freeze.

A mixture of 2 parts pure spirit and 1 water froze into ice in three hours, with a temperature from -65° to 61° .

A bottle of nitric ether, having been out all night, was thick, and the bubbles of air rose slowly and with difficulty; the mean temperature at 6, a.m. Jan. 17, being -70° .

A surface of 4 inches of mercury, exposed in a common saucer, became solid in two hours, with a temperature of -57° .

Captain Back relates, that on the 4th of February, the temperature was -60° , and there being at the same time a fresh breeze, was nearly insupportable. Such, indeed, was the abstraction of heat, that with 8 large logs of dry wood in the fire-place of a small room, the Captain could not get the thermometer higher than 12° . Ink and paint froze; the sextant cases, and boxes of seasoned wood, principally fir, all split. The skin of the hands became dry, cracked, and opened into unsightly gashes. On one occasion, after Captain Back had washed his face, within three feet of the fire, his hair was actually clotted with ice before he had time to dry it.

To return to artificial congelation. By judicious management, frigorific mixtures, with the aid of snow or pounded ice, have been made to freeze quicksilver into a solid mass. A very remarkable experiment of this kind was performed by Messrs. Pepys and Allen. Into a mixture of equal parts of muriate of lime, at 33° , and snow at 32° , a bladder, containing 56 pounds of mercury, was immersed, after the mixture had been liquefied by stirring, and when its temperature was found to be -42° : as soon as the cold mixture had deprived the mercury of so much of its heat that its own temperature was raised from -42° to 5° , the mercury was taken from it, and put into a fresh mixture, the same in every respect as the first. In the meantime, the muriate of lime was kept cooling, by immersing the vessel which contained it into a mixture of the same ingredients: 5 pounds of the muriate were, by this means, reduced to -15° . A mixture being made of this muriate and snow, at the temperature of 32° , in the course of three minutes it gave a temperature of -62° , or 9.1° below the freezing point of water.

The mercury reduced to -30° by immersion in the second mixture, and suspended in a net, was put into the newly-made mixture, and the whole was covered with a cloth, to impede the passage of heat from the surrounding atmosphere. After an hour and forty minutes, the 56 pounds of mercury were found solid and fixed. The temperature of the mixture, at this time, was -46° ; that is, 16° higher than when the mercury was put into it. A painful sensation, like that produced by a burn, or scald, or wound with a rough-edged instrument, was experienced on handling the frozen mercury; the parts of the hand which were in contact with the metal lost all sensation, and became white, and, to all appearance, dead; but, by friction, they soon resumed their usual sensation and colour.

Evaporation is, as we have already stated, the process by which cold is obtained for domestic purposes. The porous wine-coolers being dipped in water, they imbibe a quantity of it, which gradually evaporates; and, as a part of the heat necessary to convert the water into vapour, will be taken from a bottle of wine placed in it, the wine is considerably cooled. This is but a modification of the *alcarrazas* used in the East; these being filled with water and hung up in the air, the fluid penetrating slowly to the outside of the vessel, is converted

into vapour by robbing the interior water of a portion of its heat; and thus the cooling effect is produced. If the wine-bottle be placed in the cooler, its temperature will be lowered with the water.

Or, wine may be cooled by wrapping a wet towel round the bottle, and exposing it to the sun, when the evaporation of the water cools the contents. In the East Indies, this method is much employed: the wet cloths, however, are covered with a kind of petticoat. Port, claret, and Burgundy, are characteristically attired in crimson, with white flounces; and sherry and madeira appear in bridal costume. A more simple mode is to fold the wet cloth around the decanter of wine or water, and place it in a current of air, as by hanging it up in a doorway.

We remember a remarkable effect of cold in the maturation of wine. Thus, it is customary with some cunning wine-merchants to throw water daily over a bin of port, which will "bring it forward" in a very short time: the wine must then be drunk, or in this forced state it will soon spoil.

In India, the bed-curtains are sprinkled with water, by the evaporation of which the air within is cooled. The London brewers have taken a hint from this expedient: in very hot weather, dray-loads of beer in barrels may be seen in the streets, protected from the sun by a kind of canvass awning, which, being wetted, in drying cools the air over the beer, and renders it less liable to ferment.

Evaporation also increases with the temperature. Ice and snow are constantly giving out vapour; so that, in a cold dry atmosphere, they rapidly diminish in bulk. *In vacuo*, the evaporation is accelerated, especially if any substance be present (such as sulphuric acid,) which will absorb the vapour as fast as it is formed. In this way, two or three ounces of ice, at a temperature considerably below 32°, will disappear in the course of twenty-four hours.—*Tomlinson's Student's Manual of Natural Philosophy*.

The air-pump has frequently been made an agent in producing artificial cold. So copious is the discharge of vapour *in vacuo*, from some bodies whose boiling points are low, that they boil with great rapidity, at temperatures far below that of freezing water. If water be placed in a flat dish, and ether be poured upon its surface, and the whole be covered with a glass receiver on the table of an air-pump; as the air is being rarefied, the ether will begin to boil; and so much heat is abstracted from the water to form vapour, that the water will be converted into a solid lump of ice. Thus, we have the singular spectacle of two liquids, one upon the other, the upper one boiling and the lower freezing at the same time!

The late Professor Leslie devised an elegant method of reducing the temperature sufficiently low to freeze water in any climate, and at any season of the year. His method is briefly this: he placed under the receiver of an air-pump a broad flat vessel of sulphuric acid, and water at the ordinary temperature in another vessel above the first; he then extracted the air from the receiver; vapour speedily arose from the water, which vapour was absorbed by the sulphuric acid as fast as it was formed, and the water was speedily frozen.

A saucer of porous earthenware is best adapted for holding the water; and instead of sulphuric acid, other absorbents may be used, such as parched oatmeal, or dried and powdered pipe-clay.

Professor Leslie placed a hemispherical vessel of porous earthenware, containing a pound and a quarter of water, over a body of parched oatmeal, one foot in diameter and one inch deep; and by working the pump for some time, the whole of the water was frozen.

Leslie also succeeded in freezing mercury by similar means. In this state, it was solid, and its temperature—120°.

But science is often too costly for every-day life; and such it has been found in making artificial ice by the air-pump in India. Upon its first introduction into Bengal, the novelty proved very attractive; and Miss Roberts states a rich and luxurious native to have expended seven hundred pounds in the single article of ice, at an entertainment given to an European party!

GAUTIER DE LA SALLE.

A LEGEND OF GUERNSEY.

" 'Tis not impossible
But one, the wicked'st cuttiff on the ground,
May seem as shy, as grave, as just, as absolute,
As Angelo; even so may Angelo,
In all his dressings, characts, titles, forms,
Be an arch-villain; believe it, Royal Prince,
If he be less he's nothing; but he's more,
Had I more names for badness."

MEASURE FOR MEASURE.

HAST ever been in Guernsey, gentle reader? I trow not. That beautiful and interesting cluster of islands, situated in the Bay of St. Michael, or La Manche, are no doubt considered too English, too near thine own door, "thou wandering knight so far!" to be deemed worthy of a visit. Indeed, the generality of English people are only acquainted with them from the name of the three principal ones, Guernsey, Jersey, and Alderney; and they are scarcely visited by any but persons engaged in commerce, whilst the travelling aristocracy and squirearchy of England are totally unknown, or considered by them as barren rocks, or the haunts of smugglers and outlaws, unworthy, therefore, the trouble of a visit; but, in many instances, the Isle of Wight even must yield in comparison with some beauties of landscape of which Guernsey can boast. Where, in the former island, will anything be found to rival, nay, to equal, the Bay of Petit-Bo? or that of Moulin-Huette, with its tapering needle rocks? and where, in the Isle of Wight, can anything surpass in rural beauty the village of the "King's Mills," embosomed in hills, and with the deep valley leading from it to St. Andrew's Church? or what spot can compare with Guernsey in the spring, when the whole face of the country is clad in the richest verdure? Primroses, violets, periwinkles, and blue-bells, cover the verdant banks, whilst the apple-blossom of the numerous orchards add to the charm of the landscape, and render it picturesque and enchanting beyond description.

Independent of the beautiful scenery of the island, the manners and customs of its inhabitants are so totally different from those of their fellow subjects in England, that they are well worthy our observation. The population of Guernsey have altered less in their manners and habits, during a period of many centuries, than, perhaps, any people in Europe; as they were centuries ago, so they continue to the present day. In their lives the people exhibit the most industrious habits, combined with a character for *mesquinerie*, which closely borders on the most sordid avarice. Neither food nor raiment tempt them to extravagance. Secluded as they have hitherto been from the world, they are neither allured by its attractions, nor assailed by its cares. Although their means are ample, a mediocrity, border-

ing on poverty, seems to prevail throughout the country. The old Norman French is the language still spoken by the rural population; many, indeed, are totally unacquainted with English. The French language is also used in the law courts and in the churches, except those parishes where they have an especial service for the English residents. The instruments of husbandry, and most of the domestic utensils, found in the country, are French, and clumsy and unwieldy in the extreme. Their dress, as well as mode of living, is poor and parsimonious: a worse than Spartan broth, denominated *soupe à la graisse*, compounded of cabbage, boiled with a lump of grease, or fat, with, perhaps, the addition of a small piece of bacon, supplies the one, and neither pride nor fashion imposes any unnecessary expense on the other.

Amongst their other peculiarities, too, their decided belief in *wizards* and *witchcraft*, and the influence of the *evil eye*, must not be forgotten. It is melancholy to think such things should be in these days; and it is extraordinary that education has not the effect of eradicating this feeling from the rising generation, but they are, in this nineteenth century, as firm believers (and such a belief is not confined exclusively to the rural population) in the power of necromancers and conjurors, as their forefathers. To this hour, there are a certain race in the island who are supposed to be endowed with the power of bestowing good and evil; and it is a fact, that, at many shops in St. Peter's Port, the shopkeeper is afraid to make any demand for the pound of sugar or coffee, or whatever the *sorcière* might ask for; or, if he pleases to pay, the terror-stricken merchant would not dare refuse whatever sum, however inadequate, the cunning man or woman might condescend to offer.

These remarks on the rural population of the island of course do not apply to those in a more exalted sphere. Education, and a more constant and regular communication with the mother country and France, are beginning to show their effects on the rising generation of the aristocracy, though the cares of business are seldom relaxed, and the desire of gain burns as keenly in the breast of the merchant as in the bosom of the rustic. But Guernsey has given birth to, and still contains, men of the most enlightened understandings, and the kindest hearts; of extensive hospitality and liberal principles. It has produced too soldiers and sailors, of whom their native country might well be proud, and whom their English fellow subjects have delighted to honour.

The only historical interest connected with the Channel Islands is, that they are the remains of our ancient Norman possessions, the only portions which have invariably followed the fortunes of England in all changes of religion and government; and the inhabitants have always proved themselves a loyal, contented, and happy people. And we recommend those who are disposed to wander abroad in search of scenes of natural beauty, to visit the Channel Islands, and we venture to predict they will not be disappointed. Of antiquities, properly speaking, Guernsey can boast but little; it is scanty, too, in tales and legends, a proof that, even in former days, the islanders were, what they still are, the votaries of gain and commerce.

The only tale of "legendary lore" a pretty long residence in that island has made me acquainted with, is that of the wicked bailiff, Gautier de la Salle, and from which "Guernsey legend," perhaps, the above remarks have too long detained the reader.

The office of bailiff, or chief civil governor, of the island of Guernsey is of great antiquity; and, according to the best information we can procure, seems to have been first separated from that of the military authority in the reign of King Edward the First. The governors were appointed by the king as Duke of Normandy, and the bailiffs by the governors, till the latter end of the reign of Charles the Second, when that power was taken from them, and the bailiffs since have patents under the great seal of England.

On the death of the bailiff, Peter le Marchant, in the year 1304, Otto de Grandison, the then governor, found himself somewhat embarrassed in appointing a successor. In England, nay, amongst his own retainers even, he could have found, without difficulty, many fully equal to the charge; but he was desirous, if possible, that the civil governor should be chosen from amongst the native inhabitants, and, at that period, it was difficult to find one with abilities above mediocrity sufficiently qualified to fill the arduous post of bailiff.

At a house in the parish of St. Martin's, then called La Petite Ville, dwelt Gautier de la Salle, one of the largest *propriétaires* in the island. With a mind more cultivated than his neighbours, for he had been educated at the college at Caen, and certainly with an understanding far superior to those around him, he was considered by the governor as the most proper person to succeed to the chair thus unhappily become vacant by the death of the good Peter le Marchant. At the time of his election, Gautier was between thirty and forty years of age; he was of rustic origin, and his ancestors had for years occupied the house which he now inhabited; but, though known to be rich, and looked upon by all as a man of superior abilities, his election to the civil government of the island was not hailed with enthusiasm by the generality of his countrymen; he was thought to be of a deceitful and hypocritical disposition, mean and servile in his behaviour to his superiors, haughty and overbearing to those of a more humble station. His occupation was farming, and accumulating money his delight.

He was a bachelor, and with him the direct line of the De la Salles became extinct. In the event of his dying childless, the lands and dwelling of La Petite Ville would pass to his kinsman, Hugh de Massey, who, with his widowed mother, inhabited a small cottage, and was possessed of a few vergées of land immediately adjoining the house of his rich relation, and from the well on whose premises he had a right to draw water, which his forefathers had enjoyed from time immemorial. This right of entering his premises at all hours was, it appears, exceedingly annoying to Gautier de la Salle, who had often tempted Hugh to sell him his birthright, by the offer of a large sum of money, far beyond its real value; but Dame Catharine Massey was furious at the idea of such a thing happening, and threatened not only to entail her curse upon her son if ever he parted with the patrimony of his fathers for money, but to implore the *Bête-la-twa* to torment him with all his power. Such a threat was quite enough to deter a stouter heart than Hugh's from all thoughts of parting with his farm; and some time after, on her death-bed, he renewed his promise to his mother, come what would, not to sell the land. It was this promise alone which prevented his patrimony from falling into the hands of his rapacious kinsman, who renewed his offers to Hugh some time after the death of his mother, and which Hugh found more difficult to resist than formerly, for he had been unfortunate in his farm lately—his crops had failed, and his cattle were suffering under the influence of the "*evil-eye*," some unknown enemy having cast a spell around them; nay, he himself was suffering from the same fatal charm; and, depressed in mind, and weak from bodily disease, he felt strongly inclined to accept his kinsman's offer, and then leave the island, and seek his fortunes in England or France. He was the more induced to adopt this plan, too, from the coldness he experienced from his near neighbour, Simon le Moyne, who, since his embarrassments, had almost entirely withdrawn himself from poor Hugh, and had forbidden his daughter Collette any longer to think of him as her future husband. The fact was,

(1) The *Bête-la-twa*, or *Bête-de-la-tour*, is a supernatural visitor, who is supposed to make its appearance at Christmas; and woe to the unhappy wight against whom its aid had been invoked! The festivities of the season, in which the islanders indulge to excess, would be considerably damped by the beast's proceedings.

Simon, as well as his wife Rachel, had lately seen with delight that the charms of their daughter had made a deep impression upon the bailiff; and, although Hugh's suit had been encouraged by them both formerly, they now evidently wished he should give place to his richer and more powerful rival, and he was, consequently, banished from Le Moyne's cottage, and Collette not only forbidden to hold any communication with him, but desired to look with kindly eyes upon "Messier la Baillie," who had now become a constant visitor at Simon le Moyne's; and amongst the gossips of the island it was confidently affirmed he would shortly become his son-in-law.

These accumulations of evils would certainly have had the effect of driving Hugh from the island, and made him forgetful of his promise to his mother, had he not one day, whilst deeply revolving in his mind his present unhappy situation and blighted hopes, accidentally met Collette as he was returning through the pass which leads from Petit-Bo to the castle of Beauregard. Collette was much struck at poor Hugh's altered appearance, as she observed his sunken eye and careworn look; Hugh, too, thought his mistress looked less happy and paler than usual. It was impossible to pass without speaking; and, though the conversation at first was constrained and common-place, for Hugh had heard his mistress was not indifferent to the bailiff's addresses, yet, by degrees, they both fell into their usual tone of friendly communication. Collette had not much difficulty in persuading her lover that he was much mistaken if he imagined the bailiff's addresses were agreeable to her; on the contrary, she assured him, it was only in compliance with the positive commands of her father that she listened to them for an instant; that it was impossible she could ever love him; and that, if forced to marry him, such an event would soon put an end to her life. Hugh, she added, knew well her whole heart was his, and she would rather share his poverty and work with him for her daily bread, than live in all the ease and splendour which her parents assured her would be the case when she married Gautier de la Salle.

Hugh warmly thanked his dear Collette for the feelings she continued to express towards him, and for the sacrifice she was ready to make for his sake; and expatiated upon his own unhappy situation, and the state of almost poverty into which, by an inexplicable train of misfortune, he had fallen; that he could not be such a barbarian as to reduce any one, and more especially his beloved Collette, to share such a fate with him; that he had been thinking he ought to accept his kinsman's offer, sell his farm, and at once leave the island; that, when he was gone, she would think better, and acquiesce in her parents' wishes; that she deserved to be raised to the highest rank for her many excellent qualities, and in acquiring station and wealth she would only receive the reward of her virtues.

"And do you think, Hugh," cried the weeping Collette, "I can put riches and rank in competition with happiness? Do you really think so meanly of me, Hugh? But, if such is your advice, now hear my determination. You know to you I have plighted my troth; or have you forgotten our solemn betrothment to each other at the Cromlech? Did I not then swear by Our Ladye and Holy St. Michael to wed none other but thee, Hugh de Massey? and is it manly, is it kind, now, in my hour of need, to threaten to forsake me, and force me into the arms of a man I detest? No!" cried the excited girl, "I here solemnly renew my oath, by our Ladye and St. Michael, to be the bride of no other man, or end my days in the Priory of Lichou! And would you be so false; so perjured to your word pledged to your mother, as to sell the inheritance of your fathers to Gautier de la Salle? Shake off the sloth that overwhelms you: rouse yourself, Hugh, and let not your noble spirit be cast down because your body has been afflicted. Let us hope there are happier times in store for us. Renew to

me the pledge you gave your mother, not to sell your farm; and promise me, Hugh, not to leave the island and—forsake me."

For an instant Hugh was overcome by the earnestness of Collette, as he looked at her with wonder and admiration, till, snatching her to his breast, he solemnly renewed the pledges she demanded; invoking blessings upon her, and the direfullest curses upon himself if he ever forsook her or left the island without her consent. He then said, that, when he met her, he had just returned from Beauregard; that the noble Drouet le Marchant had been endeavouring to persuade him to take service under his pennon, and accompany him to France, where he shortly expected to be ordered to join the army the king was assembling in the Duchy of Normandy—"Thanks to our Ladye and St. Michael that I met thee, beloved Collette, or I know not how far his proposals might have carried me; the Sieur Drouet is a noble and a gallant leader, and, were I to take service, it should be most assuredly under his banner; nay, dearest, look not so doubtfully, or think I have so soon forgotten my promise; nothing but compulsion, or thine own commands, shall now force me from thee. Oh! Collette, you have removed a burthen from my heart, and I already feel myself a new man."

Shortly after this it was remarked that Hugh's former prosperity was returning; that his cattle had recovered from the murrain which had for so long a time afflicted them; and that his own health was perfectly restored. Of course it was well understood that by some means the malice of the evil one had been defeated, or that the secret enemy, whose malicious influence had so long tortured the unhappy De Massey, had been accidentally named or guessed at, and from that moment, as every rustic in the island well knew, all its power of doing him further injury was at an end. But the greater the prosperity of Hugh, the less chance was there of Gaultier becoming master of his coveted farm, or the husband of Collette: other means must be attempted, for Collette had positively refused to accept De la Salle for her husband. She informed her parents of her reconciliation with, and renewal of her pledge to Hugh, and her firm determination to abide by it, should she be compelled even to appeal to the *Clameur de Haro*¹ for protection from force. The removal, therefore, of Hugh de Massey must be effected by any means; and if in such a manner as to disgrace and blacken his character in her estimation, and the eyes of his neighbours, the greater probability, the bailiff thought, there would be of his success.

(To be continued.)

POPULAR YEAR-BOOK.

October.

THIS was the eighth month of the Alban year, and in that of Romulus, whence originates the name it now bears, which is derived from *Octo*, eight; and *imber*, a shower of rain. It is the tenth in our present Kalendar, as it was also in those of Numa Pompilius, Julius, and Augustus Caesar. The ancients placed it under the protection of Mars. October was called by the Saxons *Wyn-monat*, (*wyn* signifying wine,) because it was the month in which they pressed grapes and made wine; also, *Winter-fulleth*, from the winter approaching with the full-moon of this month. In some of the very old Saxon kalendars October is characterised by the figure of a husbandman carrying a sack on his shoulders and sowing of corn. In others, less ancient, hawking is the emblem of the month; and in yet more modern times it has been represented as a man clothed in a garment of the colour of decaying leaves, with a coronal of oak

(1) The famous *Clameur de Haro* is peculiar to Guernsey; it is a summary remedy in all cases of encroachment on landed property—but I am not quite certain whether, in the island, it extended to cases of personal injury, or only restricted to houses and lands. In the Duchy of Normandy there is no doubt it extended to protection from personal violence or oppression.

branches and acorns on his head, holding in his left hand a basket of chestnuts, medlars, &c., and in his right, *Scorpio*, i. e. the sign of the zodiac which the sun enters on the twenty-third of October. "The Scorpion," says Brady, "is alleged to have been allusive to the growing power of the cold over the before presumed influence of the heat, typified by the balance in September; that reptile being of a destructive character, as cold also is over nature." The following is Spenser's portrait of October:—

"Then came October, full of merry glee;
For yet his noule ¹ was totty ² of the must
Which he was treading, in the wine-fat's see, ³
And of the joyous oil, whose gentle gust
Made him so frolick, and so full of lust:
Upon a dreadful scorpion he did ride,
The same which by Diana's doom unjust
Slew great Orion; and eke by his side
He had his ploughing-share, and coulter ready tied."

The weather about this time is sometimes extremely misty, with a perfect calm. Hoar-frosts are common, and the mornings and evenings are chilly and foggy, though the middle of the day is often very fine. Now "the year," to cite a pleasant author, "has reached its grand climacteric, and is fast falling 'into the sere and yellow leaf.' Every day a flower drops from out the wreath that binds its brow—not to be renewed. Every hour the sun looks more and more askance upon it; and the winds—those summer flatterers—come to it less fawningly. Every breath shakes down showers of its leafy attire, leaving it gradually barer and barer, for the blasts of winter to blow through it. Every morning and evening takes away from it a portion of that light which gives beauty to its life, and chills it more and more into that torpor which at length constitutes its temporary death." And yet October is lovely still, no less "for what it gives than what it takes away;" and even for what it gives during the very act of taking away. The whole year cannot produce a sight fraught with more rich and harmonious beauty than that which the woods and groves present during this month, notwithstanding, or rather in consequence of, the daily decay of their summer attire. We need not say that we allude to the changing leaves, with all their lights and shades of green, amber, red, light red, light and dark green, white, brown, russet and yellow:—

"Those virgin leaves, of purest vivid green,
Which charm'd ere yet they trembled on the trees,
Now cheer the sober landscape in decay;
The lime fast fading; and the golden birch,
With bark of silver hue; the moss-grown oak,
Tenacious of its leaves of russet-brown;
The ensanguined dogwood; and a thousand tints
Which Flora, dressed in all her pride of bloom,
Could scarcely equal, decorate the groves."

To these temporary colours are added the more lasting ones of ripened berries, a variety of which now enrich the hedges. The most conspicuous are the red hips of the wild rose; the dark purple bunches of the luxuriant blackberry; the brilliant scarlet and green berries of the nightshade; the fruit of the hawthorn; the blue sloes, covered with their soft tempting-looking bloom; the dull bunches of the woodbine; and the sparkling holly-berries. These are a providential supply for the birds during the winter season; and it is said that they are most plentiful when the ensuing winter is to be most severe. The shedding and scattering abroad of the seeds of wild plants takes place chiefly in October: some have wings, others are carried away by currents, others planted by birds; many acorns are sown by squirrels, and cucumbers set by bees.

On the first of this month pheasant-shooting begins, and fox and hare-hunting towards its close. The temperature of the weather is peculiarly favourable to the latter sport; and, as the fruits of the earth are all got in, little damage is done by the horsemen in pursuing

their chase across the fields. October is chosen for the brewing of such malt liquor as is designed for keeping. It is also the chief month for the vintage. Bee-hives are now usually robbed of their honey. The farmer ploughs, and sows wheat, beans, and acorns, and plants and fells timber trees. The gardener gathers carrots, beetroot, potatoes, and Swedish turnips; plants bulbs and fruit trees, removes decayed leaves and plants, and takes in others in pots for shelter.

October 4, in the current year, is the first Sunday in October, on which, by an Act of Convocation, A. D. 1536, the Wake (so called because the evening before it was originally spent in prayer and *watching*) or Feast of the Dedication of every Church was ordered to be held. This Feast was held at first by the inhabitants of each parish on the day of the saint under whose invocation their church was dedicated, in joyful remembrance of its completion and solemn consecration to Almighty God.

The Feasts of Dedication were not put down at the Reformation; and they continued to be religiously observed till the Great Rebellion. When at the Restoration the Dedication Feasts came again to be celebrated, they too generally lost their ecclesiastical character. "Many villages," remarks Mr. Hope, "in the more northern parts of our land, perhaps also in the south, still celebrate their annual wake or feast, as it is termed; that is, the anniversary of the consecration of their beloved and antique church: once one of the gladdest, holiest days in the year's long course, now too often degenerated into a season of mere irreligious debauchery, but yet containing within itself the seeds of better things; the dim memorials of old feelings, which if tenderly nursed, may yet spring up into an abundant harvest of holy thoughts." Even in its present degraded state—shorn of its beams of sanctity, unhallowed by sacred rite and sanction of Holy Church,—the village wake furnishes a certain point in every year, in every individual parish, to which the rural people can look forward as a season of rest and mutual rejoicing, of pleasant exchange of hospitalities and renewals of simple friendships. It is a time which leads them to clean up their houses, to look forward and prepare for a replenishing of their wardrobe; and which cheers the spirit of many an otherwise solitary and labouring person with the prospect of a short period of relaxation, a short pause in the otherwise ever-going machinery of servitude.

The time arrives. The church bells are ringing merrily; and, to borrow the language of a popular writer, "simple and glad creatures, young maidens, and youths, and comely pairs surrounded with a troop of children, hear them, as they come over hill and dale, approaching from all quarters the place of their nativity, and the place of their ancestors: the one place, however small, and however obscure, tinged all over with the memories of childhood, and filled with the stories and legends that were interwoven with the very grain of their minds by their parents' recitals in early life. The one place, therefore, which seems the most important in the universe. Over hill and dale they are coming, all in their holiday array; and in many a bright little cottage, basking in the sunshine of morning, are eager hearts looking out for them; wondering how Grace and Thomas will look; whether they are much altered; and whether the children of the married ones will be grown. Out of doors there are stalls of toys and sweetmeats, and whirligigs for the children; within, there are, for once, plum-pudding and roast beef, and an infinity of such talk as best pleases the tastes of the merry-makers. Old notes of by-gone years are compared. Many are recalled to remembrance who have not been thought of for a long time. The hearts of the old are warmed by retracing their early days, early exploits, and early acquaintances, with all the pleasant exaggerations of memory; and the young listen, and think with wonder on those good old times.

Poetry.

In Original Poetry, the Name, real or assumed, of the Author, is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

THE PAST.

BY THE REV. HENRY THOMPSON, M.A. CANTAB.

"Der Augenblick ist Ewigkeit."—GOETHE.

The [present] moment is eternity.

SAY not, "It is gone by!"

The past alone is present: joy and grief,
Each in its being brief,

Live, like the soul they fill, immortal when they die.

Emotions of the child,
Loves, joys, illusions, yearnings, from the well
Of faithful memory swell,
In ceaseless freshening flow thro' manhood's burning wild.

Words, e'en in utterance past,
Live through all life, to torture or balm,—
Breathe o'er our woes in balm,
Or scorch our scarce-born joys with desolating blast.

Small deeds of patient love,
And momentary, wrought by hands long cold
And mingled with the mould,
Live thro' dark deadening years and softening influence prove.

Grim forms of Wrong and Pain
Are no mere shadows; in their rigid grasp
Our struggling spirits gasp,
And battle to be free; but strive and gasp in vain.

Say not, "Twill soon go by!"
No present cloud can pass: but thou hast power
To light each clouded hour
From founts exhaustless still when stars and suns shall die.

For vigil, alms, and prayer,
Vice and inaction,—thoughts of inmost breast,
Or holy, or unblest,—
Are past but to Heaven's page, and must confront thee there.

Seas of repentant tears
Obliterate no accusing syllable;
All power in earth and hell
Vainly would cloud one gem the crown that waits thee bears.

One only living flood,
Paschal and Pentecostal, can outblot
Transgression's dragon spot;
The Spirit, and the water, and the blood.

Then plead baptismal grace;
Seek Eucharistic strength; and in the dust
(Laying thy hand and trust
On the great sacrifice) thy secret self abase.

Haste! hold the present fast,
Ere it become immortal! write it thine
In love and deeds divine!
So bind thy future bliss firm in the changeless past.

*Rectory, Wrington,
New Year's Eve, 1845.*

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne.*

It is truly a most Christian exercise to extract a sentiment of piety from the works and appearances of Nature. Our Saviour expatiates on a flower, and draws from it the delightful argument of confidence in God. He gives us to see that taste may be combined with piety, and that the same heart may be occupied with all that is serious in the contemplations of religion, and be, at the same time, alive to the charms and loveliness of Nature.—*Dr. Chalmers.*

THE philosophy of Sadi, the Persian poet, enabled him to support all the ills of life with patience and fortitude; and one of his remarks, arising from the destitute condition in which he once found himself, is deserving preservation: "I never complained of my condition but once, *when my feet were bare, and I had not money to buy shoes*; but I met a man *without feet*, and became contented with my lot."—When a boy, he confesses to have been religious over-much; and mentions a judicious reproof of his father, on his ridiculing some friends who fell asleep while the Koran was being read:—"You had better," said he, "have been asleep yourself, than occupied in discovering faults in your neighbours."—*Rose Garden of Persia.*

THERE is a something in the pleasures of the country that reaches much beyond the gratification of the eye—a something that invigorates the mind, that erects its hopes, that allays its perturbations, that mellows its affections; and it will generally be found, that our happiest schemes, and wisest resolutions, are formed under the mild influence of a country scene, and the soft obscurities of rural retirement.—*Wm. Roberts.*

! Among the manifold creatures of God, that have all, in all ages, diversely entertained many excellent wits, and drawn them to the contemplation of the Divine wisdom, none have provoked men's studies more, or satisfied their desires so much, as plants have done, and that upon just and worthy causes; for what greater delight is there than to behold the earth apparelled with plants as with a robe of embroidered worke, set with orient pearles, and garnished with great diversity of rare and costly jewels. But the principal delight is in the minde, singularly enriched with the knowledge of these visible things, setting forth to us the invisible wisdom and admirable workmanship of Almighty God!—*Gerard. 1597.*

THERE are studies which have a tendency to deaden the feelings; but by fixing the mind on living objects, in which wisdom and goodness are strikingly exhibited, and by raising it through them to the Creator, in whom centre all perfection and happiness, the study of natural objects excites a continual train of ideas most friendly to whatever is pure, benevolent, and grateful. And next to the devout exercises of religion, perhaps nothing will more completely remove sadness and disquietude than the silent eloquence of flowers, and the vocal music of birds.—*The Naturalist's Poetical Companion.*

FROM partial consideration of things, we are very apt to criticise what we ought to admire; to look upon as useless, what perhaps we should own to be of infinite advantage to us, did we see a little farther; to be pcevious where we ought to give thanks; and at the same time to ridicule those who employ their time and thoughts in examining what we were (that is, some of us, most assuredly were,) created and appointed to study.—*Stillington.*

An injury unanswered, in course grows weary of itself, and dies away in a voluntary remorse. In bad dispositions, capable of no restraint but fear, it has a different effect—the silent digestion of one wrong provokes a second.—*Sterne.*

HISTORICAL SKETCH OF THE ISLE OF THANET.—PART II.

"How beautiful his presence, how benign,
Servant of God!—

—happy are the eyes that meet
The Apparition; evil thoughts are stayed
At his approach, and low-bowed necks entreat
A benediction from his voice or hand."

WORDSWORTH.

THE crowds of visitors who migrate annually to the agreeable and heretofore fashionable watering places in, or adjoining, the Isle of Thanet,—Margate, Ramsgate, Broadstairs, Dover, &c. have, generally speaking, little idea of the classic and sacred ground on which they tread; or those who are aware of the circumstance find, naturally, little leisure, amid

the gay attractions of these favourite spots, to ponder on the occurrences of eighteen hundred years ago. Yet were those events momentous in their consequences to ourselves. We are even now reaping the results of political changes, and national convulsions, of which this coast was the arena.

For here were the wild and warlike Britons subjugated by the Romans, from whom they imbibed principles which have influenced the entire country, but especially this part of it; and, when from tyrants the assailants became protectors, and finally withdrew their forces from the island, here was their parting fleet drawn up in sight of the now civilized and sorrowing natives; and from hence were wafted those "groans of the Britons," which pleaded so earnestly, yet ineffectually, with their

late masters, for help against the ravages of the Picts and Scots. Here landed Hengist and Horsa, easily subjugating their credulous neighbours, and they were the precursors of those hordes of Saxons who subverted the destiny of the country. Here, not less than elsewhere, came also the ruthless Danes, who turned our crystal streams to blood.

Here, perhaps, did one of the holy Apostles bring his "Gospel of peace:"—here were the first words of Christianity spoken—here her peaceful voice was first heard—here her hallowing blessing first breathed—here her sacred spirit first infused—here her holy inspiration first felt—here her gentle dictates first obeyed—here her pure precepts first practised. Surely, the very soil may be still deemed holy that is fraught with such memories.

It is, and perhaps ever must remain, a matter of uncertainty, by whom the glad tidings of salvation were first brought hither; but it has been supposed, and apparently on good grounds, that the Christian faith was preached here about the middle of the first century, and it has been surmised that St. Paul himself was the preacher. As this opinion has been supported by men of Christian principles and profound learning, there can at least be no presumption in dwelling a little on the supposition.

Of the fact itself, of Christianity being introduced about that period, there can hardly be a doubt; the intercourse then between Rome and Britain, was constant and quick; the Romans were fast spreading over our island, and Britons were, both on civil and military matters, perpetually passing to the Seven-hilled city. Many too of high rank were taken thither as prisoners, and often speedily released. St. Paul was now in Rome. Is it probable that the eloquence which was, even then, shaking the foundations of the Eternal City, should not be noted, or afterwards named, by the intelligent British who, from various causes, were sojourning there? St. Paul himself, in his Epistles, mentions two persons, Lucius and Claudia, both supposed to be British converts. Moreover, there was residing in Britain at least one Roman Christian of high note and great influence. This was Pomponia Græcina, the wife of Aulus Plautius, Roman Governor of Britain.

This lady was accused of "foreign superstition," and her life was endangered therefrom. She was, however, acquitted, and lived for many years, but in "perpetual sadness;" and, remarks a learned commentator, "If Tacitus were to describe the *primitive Christians*, he would have done it just after this manner, charging their religion with superstition, and the severity of their lives (abstaining from all the feasts and jollities of the Romans), as a continual solitude."

The same writer, and others who support the opinion of St. Paul's visit to Britain, observe that the Apostle was released from his confinement at Rome, A. D. 58, and that he was martyred in the year 67. Where then did he pass the intervening years? for he had long ago told his disciples at Ephesus, they should "see his face no more," and he had spoken of going to the "islands in the far west."

On these grounds, supported by long tradition, (which, as correlative testimony, has surely some weight,) it is assumed that St. Paul visited these shores; and it is conceived not improbable, that the noble Pomponia might have implored his presence, and ministered to his wants.

Let us, for a short space, suppose it to have been so. The universal landing-place then from Gaul was at the Roman station, Richborough, or a little northward, at Ebbsflete, which, though now an inland farm, was at that time a little creek on the edge of the bay or estuary which stretched from Ramsgate to Walmer, a great proportion of which is now pasture and inhabited land.

Here, as less exposed to observation than at the ever-bustling port at Richborough, St. Paul would land, and bring hope to the desponding, and peace to the repentant. But foes are on the watch: Pagans, both Roman and British, are eager to extirpate the "new superstition," and hardly is the good seed sown in a few hearts, ere the inspired husbandman is compelled to flee.

It is scarcely dawn: stars are yet glimmering in the grey sky; thick mist clothes the hills, and heavy dew weighs down the blades of grass, and the as yet unopening flowers; the drowsy birds are not yet twittering; no sound is heard from the pastures; and the heaving waters are scarcely distinguishable beneath the first lonely gleam that throws a quivering ray athwart them, when several persons advance with hasty, yet timid, steps to the shore, where there is barely light sufficient to betray a rude skiff moored by the creek. Frequently the party turn, as if apprehensive of pursuit; and ever and anon one of them advances a few paces, and peers cautiously around, ere his companions join him. Shortly the strand is reached, and then a lady of lofty mien and foreign attire kneels meekly on the ground; others in various costume, some Roman, some British, follow her example; and one there is with the shaggy hair, wild aspect, and rude dress of the inland Briton, having no garment but the rough skin of a wolf across his loins, who kneels reverently with the rest, while he with the lofty mien and flashing eye stretches forth his arms in benediction over them. In Roman accent, and scholar-like phrase, was the blessing bestowed, yet, ere it concluded, the noble tones were faltering, and the eagle glance was dimmed.

Slowly he entered the boat, attended by his faithful companions; but that noble lady, and that rude serf still knelt, side by side, on the wet sands, straining their eager glance after the boat till it appeared but a speck upon the waves; and then they turned away towards Richborough, conversing sadly as they went, "and sorrowing most of all for the words which he spake, that they should see his face no more."

And after some centuries had passed away, and the once Christian land had relapsed into the grossest idolatry and barbarism, under the rule of the Saxons (as referred to in the preceding sketch), it was in the Isle of Thanet, within a very few miles of our fashionable watering places, that he who has been called "her second Apostle" landed.

It was in the year A.D. 596 or 597, that Augustine, attended by forty monks, landed in the Isle of Thanet, and sent messengers to Ethelbert, king of Kent, then resident at Canterbury, to explain the object of his mission. The king desired the strangers to remain in the island till he could come to converse with them; and we are told that Augustine retired further inland, to an elevated spot, where he pitched his tent. The king, however, paid all regard to the summons, and gave audience to the missionary under an oak tree, not daring, as

the Venerable Bede tells us, to meet him in an house for fear of enchantment.

The mission was crowned with success; for, though the king himself was not an immediate convert, he placed every facility in the way of Augustine and his companions, inviting them at once to Canterbury, appointing them a suitable residence, and permitting them freely to converse with his subjects.

The sacred company immediately departed thitherward, in solemn procession, a lofty silver cross being borne before Augustine, and also a picture of our Saviour; the attendant priests and deacons following reverently two and two, chaunting as they passed along, "We beseech Thee, O Lord! of thy mercy let Thy wrath and anger be turned away from this city, and from Thy holy place; for we have sinned." Hallelujah."

Thus, 1200 years ago, did the uncouth inhabitants of the Isle of Thanet witness a solemn spectacle, familiar, perhaps, to the eyes of their ancestors, but unaccustomed to them; thus, after an interval of darkness and idolatry, did the boom of the waves chime to the sacred song of praise,—the lone valley echo the voice of thanksgiving. For, through the rich and fertile vale of Minster, which now is bright with pastures and foliage, rich in flocks and herds, but which for ages lay buried beneath a rolling sea, and was, even then the bed of a wide river,—along the edge of this valley did St. Augustine and his companions wend their gladsome way to that ancient city, which thence became the "nursing mother" of religion throughout the land. And so they entered pagan Canterbury,

The Metanies singing in Jesus hys name.

The churches, with which the Isle of Thanet was once so thickly covered, and of many of which not even a vestige now remains, were the result, at various intervals, of this mission of St. Augustine. The glory of the island formerly, and its great ornament now, is the church at Minster, the romantic origin of which we may, on some future occasion, find space to record. But, as we intimated at the commencement of this sketch, the general attractions to the Isle of Thanet are its watering-places, once fashionable, and still fully frequented.

THE CHURCH IN THE CATACOMBS.¹

THE walls of the Lapidarian Gallery at Rome, (as noticed in a former article,) being covered with inscriptions belonging to professors of the rival religions, "we may trace a contrast between the Pagan, and that of Christian society, in the ancient metropolis. The funeral lamentation expressed in neatly engraved hexameters, the tersely worded sentiments of stoicism, and the proud titles of Roman citizenship, attest the security and resources of the old religion. Further on, the whole heaven of Paganism is glorified by innumerable altars, where the epithets, Unconquered, Greatest, and Best, are lavished upon the worthless shadows that peopled Olympus. Here and there are traces of complicated political orders; tablets containing the names of individuals composing a legion or cohort; legal documents relating to property, and whatever belongs to a

State, such as the Roman empire in its best times is known to have been. The first glance at the opposite wall is enough to show that, as St. Paul himself expressed it, 'not many mighty, not many noble,' were numbered among those whose epitaphs are there displayed: some few indeed are scarcely to be distinguished from those of the Pagans opposite, but the greater part betray by their execution haste and ignorance. An incoherent sentence, or a straggling misspelt scrawl, inscribed upon a rough slab destined to close a niche in caverns where daylight could never penetrate, tells of a persecuted, or at least, oppressed community. There is also a simplicity in many of these slight records not without its charm; as in the annexed:—

BIRGINIVS PARVM STETIT AP.N.

'Virginus remained but a short time with us.'

"The slabs of stone used for closing Christian graves average from one to three feet in length. In this they differ remarkably from the sepulchral tablets of the Pagans, who, being accustomed to burn their dead, required a much smaller covering for the cinerary urn. The letters on Christian monuments are from half an inch to four inches in height, and coloured in the incision with a pigment resembling Venetian red: Whether this pigment originally belonged to all the letters, is uncertain: many are now found without it. * * * The orthography of these epitaphs is generally faulty, the letters irregular, and the sense not always obvious.

* * * Another difference between the inscriptions belonging to the Pagans and Christians of the early centuries is too remarkable to be passed by unnoticed. While the heathen name consisted of several essential parts, all of which were necessary to distinguish its owner, the Christians in general confined themselves to that which they had received in baptism. Thus the names of Felix, Sevas, Philemon, and Agape, are found on tombs, unaccompanied by any of the other designations which belonged to those individuals as members of a Roman family. Occasionally we meet with two, and perhaps even three, names on their monuments, as Aurelia Agapetilla Largia Agape; but these are not common. The first believers, when not forced by the multiplicity of persons christened alike, to add a further distinction, appear to have regarded their Christian name as the only one worthy of preservation on their sepulchres."

The merely classical student will not find much to repay his perusal of these simple records; but they serve a higher purpose than he has in view, inasmuch as they express the feelings of a body of Christians, whose leaders alone are known to us in history. "The Fathers of the Church live in their voluminous works; the lower orders are only represented by these simple records, from which, with scarcely an exception, sorrow and complaint are banished; the boast of suffering, or an appeal to the revengeful passions, is nowhere to be found. One expresses faith, another hope, a third charity. The genius of primitive Christianity, 'to believe, to love, and to suffer,' has never been better illustrated. These 'sermons in stones,' are addressed to the heart, and not to the head—to the feelings rather than to the taste; and possess additional value from being the work of the purest and most influential portion of the 'Catholic and Apostolic Church' then in existence.

"The student of Christian archæology must never lose sight of the distinction between the actual relics of a persecuted church, and the subsequent labours of a superstitious age. When Christianity, on the cessation of its troubles, emerged from these recesses, and walked boldly on the soil beneath which it had been glad to seek concealment, the humble cradle of its infancy became a principal object of veneration, almost of worship. To decorate the chapels, adorn by monuments the labyrinth of sepulchres, and pay an excessive regard to all that belonged to martyrs and martyrdom, was the

(1) Concluded from p. 358.

constant labour of succeeding centuries. Hence arises a chronological confusion, which calls for caution in deciding upon the value of any inference that may be drawn from these sources, respecting points of doctrine. Yet it may not be amiss to premise generally, that, in the inscriptions contained in the Lapidarian Gallery, selected and managed under Papal superintendence, there are no prayers for the dead, (unless the forms, 'may you live,' 'may God refresh you,' be so construed,) no addresses to the Virgin Mary, nor to the Apostles or earlier Saints; and, with the exception of 'eternal sleep,' 'eternal home,' &c. no expressions contrary to the plain sense of Scripture. And, if the bones of the martyrs were more honoured, and the privilege of being interred near them more valued, than the simplicity of our religion would warrant; there is in this outbreak of enthusiastic feeling towards the heroic defenders of the faith, no precedent for the adoration paid to them by a corrupt age.

"Perhaps it may safely be asserted, that the ancient Church appears in the Lapidarian Gallery, in a somewhat more favourable light, than in the writings of the Fathers and historians. It may be that the sepulchral tablet is more congenial to the display of pious feeling than the controversial epistle, or even the much-needed episcopal rebuke. Besides the gentle and amiable spirit every where breathed, the distinctive character of these remains is essentially *Christian*; the name of Christ is repeated in an endless variety of forms, and the actions of His life are figured in every degree of rudeness of execution. The second Person of the Trinity is neither viewed in the Jewish light of a temporal Messiah, nor degraded to the Socinian estimate of a mere example, but is invested with all the honours of a Redeemer. On this subject there is no reserve, no heathenish suppression of the distinguishing feature of our religion. On stones innumerable appears the Good Shepherd, bearing on his shoulders the recovered sheep, by which many an illiterate believer expressed his sense of personal salvation. One, according to his epitaph, 'Sleeps in Christ;' another is buried with a prayer that 'She may live in the Lord Jesus.' But, most of all, the cross, in its simplest form, is employed to testify the faith of the deceased: and, whatever ignorance may have prevailed regarding the letter of Holy Writ, or the more mysterious doctrines contained in it, there seems to have been no want of apprehension of that sacrifice whereby alone we obtain remission of our sins, and are made partakers of the kingdom of heaven."

We have already alluded to the "hope beyond the grave," expressed in many of the inscriptions by the use of the word *cemetery*, or *sleeping-place*, or some of its derivations. In one, we read the simple epitaph,

VICTORINA DORMIT,
"VICTORINA SLEEPS."

In another—

"ZOTICUS, LAID HERE TO SLEEP;"

and, in a third—

"GEMELLA SLEEPS IN PEACE;"

but there is one peculiarly affecting, for many reasons which will suggest themselves to the reader. It is as follows:—

"PEACE."

"THIS GRIEF WILL ALWAYS WEIGH UPON ME: MAY IT BE GRANTED ME TO BEHOLD IN SLEEP YOUR REVERED COUNTEenance. MY WIFE ALBANA, ALWAYS CHASTE AND MODEST, I GRIEVE, DEPRIVED OF YOUR SUPPORT, FOR OUR DIVINE AUTHOR GAVE YOU TO ME AS A SACRED (BOON). YOU, WELL-DESERVING ONE, HAVING LEFT YOUR (RELATIONS), LIE IN PEACE—IN SLEEP—YOU WILL ARISE—A TEMPORARY REST IS GRANTED YOU. SHE LIVED FORTY-FIVE YEARS, FIVE MONTHS, AND THIRTEEN DAYS: BURIED IN PEACE. PLACUS, HER HUSBAND, MADE THIS."

"Nor was the hope of the Christians confined to their

own bosoms. They published it abroad to all the world, in a manner which, while it provoked the scorn and malice of many, proved also a powerful inducement to others to join their community. The dismal annihilation of the soul taught by the Pagans, or the uncertain Elysium which, though received by the uneducated, was looked upon as mere matter of superstition by the learned, had in it something so utterly unsuited to the wants and longings of mankind, that the spectacle of a Christian, thoroughly assured of a future state, so blessed and so certain as to have power to draw him irresistibly towards it through the extremest tortures, must have awakened in the heart of many a wishing, doubting Pagan, a feeling in favour of Christianity not easily suppressed."

It is singularly remarkable how few are the epitaphs actually inscribed on the grave of a martyr, specifying him to be such. Those who suffered were doubtless sustained by the purest motives; they were noted for their modesty and humility, and, whatever of earthly renown attaches to them, arose from the mistaken zeal of the Church in the *fifth* century, when the necessity for having some relic of a martyr as a palladium to a Church was generally felt. It is to be lamented that the strong reproof of Cyprian was not received with better effect, when he exclaimed, "It is not martyrs that make the Gospel, but the Gospel that makes martyrs." Bearing in mind, then, how contrary to the principles and practice of the early Christians is the martyr-worship of the modern Church of Rome, the following inscriptions will be read with interest:—

"PRIMITIUS IN PEACE: A MOST VALIANT MARTYR AFTER MANY TORMENTS. AGED 38. HIS WIFE RAISED THIS TO HER DEAREST WELL-DESERVING HUSBAND."

"IN CHRIST. IN THE TIME OF THE EMPEROR ADRIAN, MARIUS, A YOUNG MILITARY OFFICER, WHO HAD LIVED LONG ENOUGH, WHEN WITH HIS BLOOD HE GAVE UP HIS LIFE FOR CHRIST. AT LENGTH HE RESTED IN PEACE. THE WELL-DESERVING SET UP THIS WITH TEARS, AND IN FEAR. ON THE 6TH IDES OF DECEMBER."

The concluding sentence shows this monument to have been erected during a time of actual persecution.

By the following inscription, it will be seen that the practice of the early Christian priests, with respect to marriage, did not agree with the discipline of the modern Church of Rome:—

"PETRONIA, A PRIEST'S WIFE, THE TYPE OF MODESTY.—IN THIS PLACE I LAY MY BONES; SPARE YOUR TEARS, DEAR HUSBAND AND DAUGHTERS, AND BELIEVE THAT IT IS FORBIDDEN TO WEEP FOR ONE WHO LIVES IN GOD. BURIED IN PEACE ON THE 3D NONES OF OCTOBER, IN THE CONSULATE OF FESTUS. (i.e. in 472.)

It may also be stated, that those dangerous innovations of the Church of Rome, the doctrine of the supremacy of the Pope, and the worship of the Virgin, meet with no sanction from the Church in the Catacombs. The doctrine of the primitive Church respecting the departed souls of believers may also be gathered from the inscriptions; they are not said to be in heaven, nor in purgatory, but in a state of refreshing by means of God's presence. The expression, "May God refresh thee," occurs several times, thus:—

"BOLOSA, MAY GOD REFRESH THEE. SHE LIVED THIRTY-ONE YEARS. SHE DEPARTED ON THE THIRTEENTH KALENDS OF OCTOBER."

"AMERINUS TO RUFINA, MY DEAREST WIFE, THE WELL-DESERVING. MAY GOD REFRESH THY SPIRIT."

"NICEPHORUS, A SWEET SOUL, IN THE PLACE OF REFRESHMENT."

The expression in the next example, "borne away by angels," applied by our Lord to Lazarus, can scarcely be supposed to imply a conveyance to expiatory flames:

"LAURENTIUS TO HIS SWEETEST SON SEVERUS,
BORNE AWAY BY ANGELS ON THE SEVENTH IDES OF
JANUARY," &c.

There are many symbols employed in the Catacombs, some of which are supposed to represent instruments of torture, indicating that the deceased had died a martyr; but the greater number of these symbols refer to the profession of Christianity, its doctrines, and its graces. Another class, of a purely secular description, only indicate the trade of the deceased, and the remainder represent proper names. The cross, as an emblem of our faith, is constantly used; "How soon it began to be used as a symbol of Christianity, it is difficult to say; the gradual change to a crucifix, is much more easily traced; but, in undergoing this change, the original intention of the symbol is entirely lost; from being a token of joy, an object worthy of being crowned with flowers, a sign in which to conquer,—it became a thing of tears and agony,—a stock subject with the artist, anxious to display his power of representing anguish."

We cannot follow our author further in his interesting and valuable researches, but must refer the reader to the volume itself. We must, however, pause to select a few inscriptions, which appeal touchingly to the sympathies of humanity, and belong to all places and all time. Let not the reader smile if in the following inscriptions he recognises the superlatives of the modern tombstone. The strongest language is weak and poor for the utterance of affection.

TO ADSURTOR, OUR SON, DEAR, SWEET, MOST INNOCENT, AND INCOMPARABLE, WHO LIVED SEVENTEEN YEARS, SIX MONTHS, AND EIGHT DAYS. HIS FATHER AND MOTHER SET UP THIS.

TO THE HOLY SOUL, INNOCENS, WHO LIVED THREE YEARS, MORE OR LESS. (*Plus Minus.*)

TO CLAUDIUS, THE WELL-DESERVING AND AFFECTIONATE, WHO LOVED ME. HE LIVED TWENTY-FIVE YEARS, MORE OR LESS. IN PEACE.

CECILIUS, THE HUSBAND, TO CECILIA PLACIDINA, MY WIFE, OF EXCELLENT MEMORY, WITH WHOM I LIVED WELL TEN YEARS, WITHOUT ANY QUARREL. IN CHRIST.

SWEET FAUSTINA, MAY YOU LIVE IN GOD.

"The principal events which affected the Church of the third and fourth centuries are, as might be expected, scarcely noticed in the Christian cemeteries. If the persecutions have been left unmentioned by the survivors of martyrs, so also has the most striking incident of secular history, the sudden and universal establishment of Christianity over the Roman world. No record of this circumstance can be found in the Catacombs, where the church appears as little elated by triumph, as before depressed by adversity. The increased number of epitaphs, after the conversion of Constantine, indicates a sudden spread of Christianity in the metropolis, although the worship of the gods lingered in the *pagt*, or smaller villages; hence is generally derived the term Paganism. Every means, short of actual persecution, was adopted to erase the ancient superstition; and, as the character of the augurs had sunk extremely low, they were summarily abolished by law. Divination was made a capital crime; and the use of lights, frankincense, and garlands in worship, was forbidden. The civil privileges of heathen priests was abolished, and corresponding immunities conferred upon the regular clergy. But the religion of the Cross, in its first plenitude of worldly power, did not forget its heavenly character: the manu-

mission of slaves, as an act of mercy, was the only business permitted on Sundays; and the crime of cursing the Emperor was treated with magnanimous indifference. 'If the curse be uttered in levity,' decreed Theodosius, 'it is to be despised; if in madness, to be pitied; if in malice, to be forgiven.'

NATURAL HISTORY OF BIRDS.—No. VII.

THE GOATSUCKERS; OR CAPRIMULGIDÆ.

"THE goatsucker!" exclaims the reader, "where do such birds live? and what kind of goats allow themselves to be robbed of their milk by birds?" These are questions to the point; but thou must know, O reader, that, as names do not always answer to the real nature of human things, so neither do they at all times suit the properties of animals. An epithet once attached, whether to a man or an empire, clings for ages, and is applied long after the discovery of its inappropriateness; so it is in Natural History.

Men deem old names consecrated things, and are jealous of interference with the venerable word, which they have read in "the ancient books," and heard from the lips of fathers and grandfathers.

This reverence for olden things is right, for it is a just respect for the thinkers by whose thoughts we nourish our intellectual life; let it not, however, lead us to consecrate error. Antiquity has a venerable form, but truth is more holy than age, and brighter than the brightest lights in the hands of erring sages. Therefore we must pronounce the name of goatsucker, and its Latin equivalent, *caprimulgus*, a gross blunder. There are no known birds which suck the teats of goats, nor is it likely that such will ever be discovered. But, it may be said, the term goatsucker has long been applied to a certain bird: here is an *effect*,—surely there must have been a *cause*. Most certainly there was a cause, but of what nature?

It was formerly *supposed* that goats, when left on lonely heaths in summer, were sucked by a certain migratory bird; the supposition grew, and such suppositions have a wondrous power of growth, into a *fixed belief*, and from this belief arose the bird's unfortunate name. But whence this notion itself? During the dry months of summer, it often happened that the goats yielded little milk; this result was natural enough; but a bird was then frequently seen, in the faint twilight, flitting with a singular motion over the lonely moors, and even amongst the browsing goats themselves. What could that bird want, thought the suspicious goatherd, in such a place? Ignorance and suspicion, two potent marvel-workers, soon found a reply, and "goatsucker" became for ages the name of a most harmless bird. Learning sanctioned the delusion, and wrote, with demure face, '*caprimulgus*,' in her authoritative records.

This ancient judgment has been reversed; the bird is no longer indictable for milk-stealing; but the old name still stands, and the ridiculous term *caprimulgus* peers out insolently from the pages of scientific works. But why have we employed this title at the head of our article? With the same object for which the pillory was used of old—to expose, not to exalt wrong. Another reason may have influenced us; we mean the long prevalence of the absurd appellation, which it was necessary to retain in an article intended for general use, that none might be puzzled by a new or unknown name.

The bird of which we speak has a variety of names; none so bad as that of goatsucker, but all partly incorrect. Some call it the *night-hawk*; but this is wrong, for the bird has no hawk-like propensities, and has never

been known to kill another bird for prey. Some eminent naturalists apply the name of *fern-owl*, which is a decided misnomer, the bird bearing no relation to the owl family. It certainly makes its home among patches of fern, and might therefore be called the *fern-bird*, but why add the epithet owl? Is this because the bird flies abroad in the grey-twilight? then, for the same reason, the bat might be called an owl.

Jenyns and the enthusiastic Gould¹ think *night-jar* a more appropriate designation for so singular a bird, and they are right, as this name does really express the peculiar habits of the bird. It comes abroad after sunset, and utters a singular *jarring* or *buzzing* sound, which may be said to *jar* or grate upon the ear, in the evening stillness.

Thus the name of night-jar is not altogether inappropriate, though "jar" is not the word which truly expresses the musical hum uttered by this bird.

Whilst flying, a sound resembling the hum of a spinning-wheel is given out, from which circumstance come the names, night-jar, night-churn, churn-owl, and wheel-bird, all of which appellatives refer to the beetle-like hum uttered by the bird. The sound does not arise, as some suppose, from the resistance of the air against the wide open mouth of the bird as it flies, for this peculiar note is most frequently heard when the night-jar is sitting quietly on a branch. It is most probably produced by some peculiar organization of the mouth, and may be called the bird's song. The usual sound during flight is a sharp squeak, the deep musical hum being reserved for its solace, when, shrouded in a mass of foliage, the night-jar sees the quiet approach of eve. The bird appears to wait for the dip of the sun below the horizon, as attentively as the flag-keeper of a royal castle, who watches the moment for lowering the standard of his prince.

White says, "This bird is most punctual in beginning its song exactly at the close of day; so exactly, that I have known it strike up more than once or twice just at the report of the Portsmouth evening gun." This song sounds pleasantly in the stillness of a summer's night, when it is often heard rising from a copse, and arresting the traveller's attention by its strange vibratory notes.

But to what family of birds does the night-jar, or, if you will so name it, the fern-owl belong? It is, strictly speaking, a *swallow*, differing from the rest of the Hirundinidæ, by coming abroad at night instead of the day, and is the only nocturnal bird of this large family. It might therefore be properly called the *night-swallow*. Like the swallows it is an insect feeder, like them visits us during summer, comes from the same region, Africa, and returns thither on the approach of winter.

The middle of May witnesses the arrival of this interesting bird; and, before the end of August, it has left the woods and moors of England, for the valleys of Egypt and the rocky wilds of Abyssinia. It is the only nocturnal bird amongst all our summer feathered visitors, which usually love the brightness and cheerfulness of daylight. Thus, whilst the day-swallows check the too rapid increase of those insects which appear by day, this night-swallow diminishes the number of those which fly abroad at night. Therefore the night-jar holds the same relation to the swallow tribes that the owls do to the Falconidæ. For, as the owl begins to prey when the hawk and eagle retire to their homes, so this bird continues the work of the martin, swift, and swallows, during the time when such feathered hunters are inactive. Hence no class of insects is without a check, and man may be thankful that it is so ordered, as there are myriads of insects which only fly during the faint glimmer of twilight. These would increase until every heath and copse swarmed with hosts of stinging and fierce little tormentors. The night-jar prevents this; and is the only bird, save the bat, which contributes to this end. The chafers and beetles, with

many insects injurious to man's works, form the food of the night-jar; which is thus not only a harmless, but an actively useful visitant.

This bird measures about ten inches in length, and is therefore easily seen in the twilight, as it flits to and fro round some old tree.

The flight is generally low, as the insects it pursues are usually found at a low elevation; the motion is soft and gentle, resembling that of the owls; and the sight is acute, enabling the bird to detect the smallest insect in the faintest light, whilst their rapid flight, and sudden evolutions, render the capture of the most swift-winged flies and moths easy. But the most remarkable peculiarities of the bird are its mouth and feet. The upper part of the beak is furnished with nine or ten stiff bristles along its edge, which increase its power of capturing insects, as these bristles hang like a net over the open mouth, preventing the escape of the prey. Their power is further increased by a glutinous substance attached to these bristles, which trammels the captured insects in their attempts to escape. The mouth is thus a kind of living trap, fit both for seizing and holding the prey.

The owl, though a nocturnal bird, is not provided with such a capturing apparatus; for the owl does not, like the night-jar, prey on insects, but on larger animals, which such a network of bristles would be of little use in taking. A nocturnal insect-hunter can, however, make most effective use of such a mouth-net. The day-swallows do not need this addition to their powers, as the full light during which they fly enables them to strike the insect with the greatest certainty.

Another peculiarity of the night-jar is the toothed claw on the centre of each foot, the use of which is, to this day, a mystery among naturalists. Wilson thinks it is given as a means of clearing the bird's feathers from vermin, thus regarding it as a *comb*; other eminent ornithologists take the same view, and contend that the whole structure of the leg and claw are specially adapted for cleansing the plumage. But others suppose this toothed claw designed to assist the bird in seizing its prey.

White makes the following statement in reference to the night-jar:—"I saw it distinctly, more than once, put out its short leg while on the wing, and by a bend of its head, deliver somewhat into its mouth. If it takes any part of its prey with its foot, as I have now the greatest reason to suppose it does these chafers, I no longer wonder at the use of its middle toe, which is curiously furnished with a serrated claw."

Amidst such conflicting testimonies, most will be ready to praise the philosophical hesitation of Audubon, who says, "I wish I could have discovered the peculiar use of the pectinated claw which this bird has on each foot, but, reader, this remains one of the many desiderata in ornithology, and I fear, with me at least, it will continue so."

The young of the night-jar are often mistaken for cuckoos, and a similarity has been detected in the structure of the two birds by anatomists; in both, the crop, instead of being in front of the breast bone, lies behind, which produces a peculiar fulness in the lower part of the bird's body. This circumstance has been used to disprove some assertions respecting the cuckoo, which has been supposed incapable of sitting on its eggs, in consequence of the fulness of the crop over the intestines. But, as the night-jar is formed in the same manner, and is proved to hatch its own eggs, the above argument respecting the incubation of the cuckoo fails in conclusiveness.

Some writers have made the night-jar resemble the cuckoo in the habit of not hatching its own eggs, and we find this asserted by a gentleman of considerable standing as a naturalist, who actually gives a case of a night-jar reared in the nest of a hedge-sparrow; all the facts are minutely detailed, the visits of a large bird to the sparrow's nest, the size, colour, and appearance of

(1) Those who are acquainted with this persevering ornithologist, will understand the application of the term enthusiastic.

the strange egg, the habits of the intruding young bird, and its growth, are noted: whilst, in the end, we are told that it was placed in a cage as a cuckoo, but turned out a night-jar. Certainly, if this were the case, the circumstances would demand the consideration of naturalists; but there cannot be much doubt that the above account refers to a young cuckoo, which has been repeatedly mistaken for the night-jar by experienced ornithologists. We must remember that the cuckoo does not attain its proper colours till the third year; having, previously, many of the markings peculiar to the night-jar.

Hence it is not surprising to find this bird mistaken for the cuckoo; but we cannot admit that the fern-owl deposits eggs in the nests of other birds. It does not, certainly, take much pains with its nest, being content with a hole in the ground amongst fern roots; or at the foot of some dwarf shrub. The eggs are often found, in July, in such places, though a person must look closely to detect them, in consequence of their markings giving them the appearance of the oblong rounded stones found on commons.

The night-jar is rarely seen perching in the daytime, as the deep foliage in which it rests conceals the bird from observation. When seen, it is generally sitting on the bough with its body in a line with the branch, the head towards the trunk, and tail pointing to the extremity of the branch, of which it almost appears a part. All the habits of the night-jar are useful to the agriculturist, the food consisting wholly of insects; but it has been charged by some with inflicting a disease called "puckeridge," on cattle. This is a swelling along the backs of animals, which becomes infested with maggots, and sometimes destroys calves and cows. The night-jar is supposed to produce this malady by piercing the skin of beasts with its beak; but the real author of the evil is an insect which lays its eggs in the skin of animals, where the worms breed and eat into the flesh. With this offence the night-jar is no more chargeable than the Lord Chancellor of England with the tricks of Joseph Ady. It was formerly supposed that only one species of this bird existed in Europe, but a distinct species is said to have been discovered in Spain, in 1817, which the people call the lamala, but Remminck has named it the *Caprimulgus ruficollis*, or red-necked goat-sucker. If this be really a distinct species, it is exceedingly rare, as specimens are not found in any of the European museums, except that of Vienna. If Europe present but one or two species of the night-jar, the other parts of the globe exhibit nineteen or twenty, of which fifteen are American, two limited to India, one to Africa, and one to Australia. Of the American species, only three are found in the United States, two of which are known by the odd names of "Whip-poor-will," and "Chuck-will's-widow." These syllables are said to resemble the notes uttered by the birds; and if so, the appellations are as appropriate as singular. A brief description of the three species existing in the United States will close the present article.

The *Whip-poor-Will*—(*Caprimulgus vociferus*.) Both Wilson and Audubon describe this bird, which assembles in flocks of hundreds, making the woods resound with their prolonged booming song, which, when uttered by hundreds at once, sounds gloomily in the stillness of night, and requires long usage ere the woodman can compose himself to sleep, with such melancholy notes ringing around his solitary hut. The bird is regarded with much dread by the superstitious Indians, probably on account of its voice, which may seem to the wandering red man like the cries of his forefathers' ghosts, lamenting over the lost glory of their ancient hunting grounds.

The same peculiarity of the mouth and claw which distinguishes the European night-jar, belongs to this American species, in which the bristles of the upper mandible are half an inch in length.

Chuck-Will's-Widow—(*Caprimulgus Carolinensis*).

The name is derived, as we have said, from the resemblance between the bird's notes and the above syllables; but the Latin appellation refers to its locality, the bird being chiefly found in Carolina, and is, therefore, properly designated the Carolina night-jar. Each syllable of the singular name is distinctly heard proceeding from the bird; the sound resembling the distinct slow utterance of the words, "chuck Will," with the part "widow," more emphatically pronounced. These notes may often be heard at the distance of a mile, when the evening is still, and the forest silence undisturbed by any of the thousand cries and screams of nocturnal animals, which come with such startling effect from the depths of solemn woods.

The third species is the *American Night Hawk*—(*Caprimulgus Americanus*)—which differs from the proper night-jars in wanting the network of bristles along the bill, but resembles them in its habits of feeding and mode of flight. The sound uttered by this bird is compared to that produced by blowing into the bung-hole of an empty cask; and, as this cannot be represented by any diagram, or by the most ingenious collocation of syllables, the curious reader had better try with the first empty cask he sees what kind of sound such a feat will produce.

A more prolonged notice of the *Caprimulgidae* is not required; and we can but recommend our country readers to watch for these birds, during those beautiful walks which they are able to enjoy in the calm evenings of summer. Such as reside near heaths, woodlands, or parks, cannot fail to find the night-jar in their neighbourhood; and, frequently, when the swallow has retired to his nest, and the owl sails silently over the fields, will this night-swallow be seen sweeping, with powerful flight, round bushes or trees where insect colonies dwell.

No bird will better repay our attention than this singular member of the feathered kingdom, and its nocturnal habits bring it distinctly before us, when other birds have retired from sight.

BOTHWELL CASTLE.

"Where Bothwell's towers in ruin piled
O'erlook the verdant glade."—SCOTT.

THE stately ruins of this ancient fortress are beautifully situated on the banks of the river Clyde, near Hamilton.

Surrounded on all sides by waving trees, its massive towers, as if sensible of their own strength and importance, seem to frown with an air of majestic contempt on the beautiful softness of the surrounding scenery.

It is built of red sandstone, and consists of a large oblong quadrangle, flanked towards the south by two circular towers, while to the north there seem to have been many exterior fortifications, now crumbled into ruins by the lapse of ages. Its origin, like that of many places of the same kind, sleeps undisturbed in the dark oblivion of time beyond the memory of man. The first mention made of it in history is during the memorable period when Sir William Wallace was attempting to shake off the yoke so unjustly imposed upon his countrymen by Edward I. At this time it belonged to Sir Andrew Moray, the brother of the Steward of Scotland, both of whom, along with other noblemen, had joined the Scottish hero in the assertion of the independence of their country. The consequence of this patriotic measure on the part of Sir Andrew Moray and his associates was the forfeiture of their estates. That of Bothwell was granted by King Edward to Aylmer de Valence, (Earl of Pembroke,) who at that time commanded the

Bothwell Castle.

English forces. It remained in the hands of the English until after the battle of Bannockburn, when it was restored to Sir Andrew Moray, who had married Bruce's sister. After the demise of this brave hero, who cannot be sufficiently commended for his staunch adherence to the cause of liberty during a life of trials and vicissitudes, unhappily the consequence of his disaffection to a powerful usurper, his estate of Bothwell came into the possession of Archibald the Grim, Earl of Douglas, who had married Moray's granddaughter. In this noble family it remained until the year 1451, when Douglas, whose immense estates in Scotland, and foreign wealth and influence as Duke of Touraine, had rendered him by far the most powerful baron in the country, was foolish enough to display a spirit of haughtiness to his sovereign, whose commands he had even dared to defy. James II. in order to curb the arrogance of the potent chief, gradually withdrew from him his countenance and employment, so that Douglas, finding his consequence decreasing, and his power on the wane, retired for a while from Scotland. On his return, Douglas, who was naturally rash and fearless, consented, under a safe conduct bearing the royal signature, to visit James in the Castle of Stirling. After the royal feast, the king remonstrated with his guest; disclosed to him the proofs he possessed of his combinations against the government; reproached him for the frequent murders of his subjects committed by his order; and condescended to entreat him to forsake such dangerous courses, assuring him of his pardon and favour. Douglas, instead of embracing the offer, replied to it with insolence; and James, thus braved to his face, losing all command of himself, drew his dagger and stabbed him to the heart. This atrocious murder was followed by a struggle between the royal party and the friends and vassals of the unfortunate baron, whose brother, Sir James Douglas, having succeeded in the earldom, renounced the allegiance of his monarch, and threw himself into the arms of England. But at length, in a fruitless effort to regain his lost power by invading the Merse along with the Earl of Northumberland, he was totally routed by the Earl of Angus, and driven a landless fugitive into England. After this sudden fall of the house of Douglas, Bothwell Castle was possessed successively by the Crichtons, John

Ramsay, a favourite of James III., and the Hepburns, styled the earls of Bothwell. But the infamous baron of that name having forfeited the estate by his wicked and profligate conduct, it passed through several hands, until at length it reverted to the rightful proprietors of the noble family of Douglas, in whose possession it now is. When it fell into its present ruinous state has not been exactly ascertained; although we may say, with some degree of certainty, that it was not till the time of the civil wars in the reign of Charles I., as we know that the Marquis of Montrose dated from it a manifesto, prohibiting his officers and soldiers from molesting the tenantry on the lands of the accomplished Drummond of Hawthornden.

Such is the brief history of this noble castle, whose magnificent ruins still remain to testify to its former grandeur.

It now remains for us to give a short description of the beautiful scenery which surrounds it, and which is dear to every Scotsman from the poetical associations it calls forth. As we have already mentioned, the castle is situated on a beautiful bank, which has been rendered the subject of the following old plaintive ditty, entitled, "Bothwell Bank," the chanting of which is said to have beguiled and softened the mind of Mungo Park, while travelling through the deserts of Africa.

" On the blythe Beltane, as I went
By mysell attour the green bent,
Whereby the glancin' waves of Clyde
Through sauchs and hangin' hazels glide;
'There, sadly sittin' on a brae,
I heard a damsel speak her wae:—

" Oh, Bothwell Bank, thou blumest fair,
But, oh, thou maks my heart fu' sair!
For a' beneth thy holts sae grene
My luve and I wad sit at e'en;
While primroses and daisies, mixt
Wi' blue bells, in my locks be fixt.

" But he left me ae drearie day,
And haply now lies in the clay;
Without ae sich his death to roun,
Without ae flowir his grave to croun!
Oh, Bothwell Bank, thou blumest fair,
But, oh, thou maks my heart fu' sair."

In proof of the antiquity of at least the air to which this song is sung, and of its beautiful overword or bur-

den, Chambers, in his edition of *Scottish Songs*, relates the following anecdote, quoted from a work entitled "*Verstegan's Restitution of Decayed Intelligence*," printed at Amsterdam in the year 1605 :—

"In journeying through Palestine, at some period even then remote, a Scotsman saw a female at the door of a house lulling her child to the air of Bothwell Bank.

"Surprise and rapture took simultaneous possession of his breast, and he immediately accosted the fair singer. She turned out to be a native of Scotland, who, having wandered thither, was married to a Turk of rank, and who still, though far removed from her native land, frequently reverted to it in thought, and occasionally called up its image, by chanting the ditties in which its banks and braes, its woods and streams, were so freshly and so endearingly delineated. She introduced the traveller to her husband, whose influence in the country was eventually of much service to him; an advantage which he could never have enjoyed, had not Bothwell Bank bloomed fair to a poet's eye, and been the scene of some passion not less tender than fortunate.

"The bank itself," he continues, "which has thus attracted so much honourable notice, is a beautifully wooded piece of ground, descending in a steep semi-circular sweep from the foundations of the castle to the brink of the Clyde, which is there a river of noble breadth."

The present Lord Douglas has a handsome modern edifice, built of reddish sandstone, close by the ruin; and immediately opposite, on the other side of the river, are the ruins of Blantyre Priory, supposed to have been founded before the end of the thirteenth century, and to have been tenanted by a colony from the monastery of Jedburgh.

Having thus given the reader a short history and description of Bothwell Castle and the surrounding scenery, we now hurry down the valley of the Clyde in silence until we reach the Falls of the Clyde;

A stern and lone, yet lovely road,
As e'er the foot of minstrel trod!
Where he who winds, 'twixt rock and wave,
May hear the headlong torrent rave.
And like a steed in frantic fit,
That flings the froth from curb and bit,
May view her chafe her waves to spray
O'er every rock that bars her way,

Till foam-globes on her eddies ride,
Thick as the schemes of human pride
That down life's current drive amain,
As frail, as frothy, and as vain!

Mr. Leitch Ritchie, in his "*Scott and Scotland*," has given so excellent a description of the Falls of the Clyde, that, with the reader's permission, we shall here transcribe it.

"The smallest of the three celebrated falls is that of Bonnyton. The Clyde above it rolls along, in a magnificent and unbroken volume, through groves of forest trees, till all on a sudden it plunges roaring into the abyss.

"Its agitation does not diminish; it seems to be aware that its terrors have only commenced: and on it goes rushing and groaning over rock and precipice towards the fall of *Corra Linn*. The banks now assume the character of immense walls, except where they overhang the river; and their summits are clothed with large trees which bend their branches over to the flood. The river, when it reaches the fall, plunges first in a comparatively narrow strait, which, shelving downwards, opens at the same time, and the torrent rushes headlong, in a broad and magnificent sheet, to the bottom of the gulph. Sometimes, however, when the river is full, the division in the stream is not perceptible, and the grand and awful spectacle is beheld of a single torrent plunging down a precipice of eighty-four feet. At a considerable distance above the second division of the fall stands the ancient castle of Corra, formerly belonging to a branch of the Sommerville family. A more frightful, and at the same time grotesque, situation for a human dwelling can hardly be conceived. It is said that the building trembles, or rather shudders, so strongly at the shock of the fall, as to spill water from a glass! The Fall of Stonebyres is considerably broader, although not so lofty as that of Corra Linn.

"Pennant remarks that it has more of the horrible in it than any of the other two. Like that of Corra Linn, it consists of three divisions in ordinary weather, which unite into one when the river is full, and thunder down a height of fifty-eight feet. The torrent is here considerably broader than elsewhere; and the vapour rising from it in a thick cloud, gives a very peculiar character to the scene viewed through its medium."

Corra Linn.

ROADSIDE SKETCHES OF GERMANY AND THE GERMANS.

No. III.

TRAVELLING on the Rhine is a very different thing to travelling in any other part of Germany, or, so far as I know, of Europe. You find yourself so continually in the same steamers, in the same hotels, and visiting the same lions, with exactly the same people, that the journey is not like a mere tour, with a party of one or two, as the case may be, but rather resembles some vast pilgrimage, or crusade of a large body with the same common object; and no doubt, in one sense, it is a sort of crusade they are all engaged in, except that, instead of visiting holy shrines and sepulchres, the pilgrims pay their adorations to ruined towers and renowned views, and do fierce battle with innkeepers and douaniers, instead of Turks and Saracens. Then, again, so much the greater part of your fellow-travellers are English, that you cannot help thinking yourself in some strangely transmogrified part of Britain, rather than in a foreign land. Of course, there are also many of the natives of other countries,—French, and Russian, and German,—but the vast majority are English. Take, for instance, the common scene on board a Rhine steamer during the season. The captain is certainly English, and one-half of the crew most likely English also: the passengers form a somewhat motley group, but the majority are English.

First in honour as in place is Sir Theodosius Limkins: that is he, the tall, stoutish gentleman, with large white whiskers, and an incipient double chin. The father of Sir Theodosius made a large fortune on 'Change, and, at his death, left his son a landed estate and a baronetcy. The large rawboned lady beside him is Lady Henrietta Limkins, the daughter of an Irish peer, and a descendant of Brian Boroo. She, as well as the two harsh-featured young ladies with amazingly thick ancles, her daughters, are dressed as if going to a royal drawing-room, or a drive in Hyde Park, at least, instead of a pleasure voyage in a steamer. None of this party, of course, can condescend to take any notice of the vulgar crowd around. Sir Theodosius occasionally takes a short walk up and down the deck, throwing out his faultlessly white shirt-frill, and pointing the toes of his patent-leather boots, as if still under the eye of his dancing-master, but the three ladies remain standing or sitting together, now and then taking a sniff at their smelling-bottles, or glancing at the handsome, though dissipated-looking young man, who is leaning against the side of the vessel, and appears to be the only object worthy of their attention. He is Lord Eustace Fitzgudgeon, the same whom we saw the other night at Aix-la-Chapelle, laying down his five and ten Napoleons at every turn of the roulette-table. He has been obliged to leave London for a short time, and is now going, half rook, half pigeon, to try his fortune at the gaming tables of Baden. He does not pay the slightest attention to the fascinations of the Misses Limkins, but is doing his best to enter into a flirtation with their pretty French lady's-maid, who is sitting in the carriage with the valet and courier, and would give the world to reply to the advances of the young nobleman, but, not daring to do so for fear of her mistress, she puts on an air of supernatural demureness, which is most edifying to behold.

Close beside the Limkins, with his hands thrust into his breeches pockets, and his countenance expressing the most intense scorn and indignation, stands our old friend Waddilove. He knew the Baronet's father well, and even himself during the old gentleman's lifetime, and is brimful of wrath at the airs of superiority displayed by his quondam acquaintance. He contents

himself, however, with cursing the rascal's impudence, and determining to show that he can spend as much as any baronet in the kingdom. With this laudable view, he makes up by bluster what the other takes out in arrogance, lives as expensively, and throws about at least as much money as the Limkinses: and the necessary consequence of this sensible contest is, that every one who is not a fool is abused as if he were a pickpocket, and the ludicrous charges on the English are rendered, for the time, still more insanely exorbitant.

These are the principal figures, but there are plenty of others. There is an equity barrister, in large practice, who, having just married, is taking a week's tour with his wife—his first holiday for many a year;—but so novel is his position in having something to look after besides briefs, that he has no eyes or ears for any one object but his pretty little lady. The two young men in green spectacles, gazing on him with respectful admiration, are Chancery pupils, released for a few weeks from their exhilarating studies. Then there are several more families of the Waddiloves and Gumbs, but of a lower stamp. There are half a dozen collections of dashing, but a little *passée*, young ladies, with their still showy mamas, going to try if the air of the German watering-places is more favourable to matrimony than that of the English ones. There is a fat man, in a huge shooting-coat of indescribable make and colour, cursing himself that he ever left home, and came on board a filthy steamer, where there is not even good brandy to be had, to look at scenery which he could see much better in his sisters' Annuals; and a lean one, in a French cut-away of light cloth, in which he looks something between Don Quixote and a rustic dancing-master. Lastly, there are five or six young men with knapsacks, who are on a pedestrian tour up the Rhine and through Switzerland. There is a little Frenchman skipping about as if he were being horsewhipped, in his ecstasies of delight at the scenery, but who, in his heart, thinks the view of the Palais Royal far superior to any rocks and trees out of Paris; and there are also two or three Russians, hugging themselves in secret, at being able to speak, for once in their lives, without considering whether their first sentence may not be a passport to Siberia. In the fore part of the vessel is a miscellaneous assemblage of curious valets and ladies' maids, unshaven students, with long hair and romantic coats, peasants in blouses and broad-brimmed hats, and country girls, with uncommonly ugly features, and uncommonly beautiful hair, prettily plaited and stuck through with a thing like a large silver meat-skewer. The most interesting of these passengers, however, are some boys going home for their holidays from a neighbouring military academy, under charge of a patient mild-looking usher; they are nice little fellows, with all the intelligence and gaiety of English boys, and, added thereto, an expression of docility and quiet good nature somewhat uncommon among us; clever enough, too, if you take the trouble to speak to them, two or three having a very fair knowledge of English, which they have not learned by means of grammar and dictionary carefully flogged into them, but have casually picked up for themselves, from some English boys who happened to be at school with them.

Such is a fair description of the average company on board any one of the Rhine steamers, and in every one of them, as I have said, the English element greatly preponderates. The natural consequence of this preponderance is, of course, that every thing is made to suit their convenience, and their peculiarities, as much as possible. The hotels are laid out with a view to their accommodation; the beds are made as roomy as a German imagination can stretch with regard to a bed; smoking is prohibited in the common room; many of the floors are carpeted; the commissioners and waiters almost all speak some English, or at any rate villanously bad French; and, above all, the charges are made high enough to suit the dignity of a free-born Briton.

When you get off the Rhine, however, everything undergoes an immediate change; you no longer feel yourself under the influence of English gold and English punctiliousness; you are in another land, amongst other people; you are really in Germany, and no longer monarch of all you survey. It is from this very circumstance, that the rest of Germany is not sufficiently Anglicised, that so many of our countrymen, (I mean, of course, those who have not some distinct object in view,) when they have traversed the Rhine, turn homewards again without venturing further. One might suppose that the fact, that the country on which they were about to enter was less contaminated by foreign manners, would be the very thing which would induce them to traverse it; and so this is an inducement; but, the truth is, they are afraid; they dare not enter on the dangers of a perfectly foreign region, after all they have undergone in their journey up the partially civilized Rhine. It is, no doubt, to every mind, however strongly constituted, a startling thought, that one is in a land where bottled stout is unknown, where such a thing as a glass of sherry is not to be had for love or money, where you are obliged to sleep under instead of on feather-beds, and to eat your fish after instead of before your meat. Nevertheless the strong-minded man will be able, by a powerful effort, to shake off and subdue the terror caused by these considerations, but to those of less moral courage it is quite invincible; they are appalled by the prospect before them, and return home affrighted and disgusted. Seriously, there are many who can cheerfully undergo considerable hardships and inconvenience at home, while abroad every little *contre-temps* puts them out of humour, because it is out of their way; they have not been accustomed to that sort of thing; and there are people who, I verily believe, would make less noise about being run over in the Strand, than the not having a carpet to their bed-room at Baden-Baden.

My friend Miffler is an excellent specimen of this class. Miffler was brought up from his boyhood with true old English sentiments; he firmly believed that the French lived on nothing but frogs and *soupe-maigre*, and that any one Briton could singly annihilate any three individuals of any other nation. By degrees, however, these ideas wore off; he declared that he could recognise merit in any country, and proclaimed himself a citizen of the world. Now I do not know a more pleasant companion than Miffler within the four seas, nor one who more thoroughly enjoys himself over a beefsteak, or a leg of mutton, with a glass of port; but I was, I own, a little daunted, when he came to me one morning, and proposed to be my companion on the Continent. I trembled for his sake, foreseeing that he was utterly unfitted for travelling out of his own country. However, he declared that he anticipated such enjoyment from the proposed tour, and that he could so perfectly adapt himself to circumstances, that it was impossible to make any objection. He started then a few days before me, and I joined him at Aix, when he had been about a week abroad.

I found him looking somewhat pale and haggard, and by no means so sprightly as usual, though he declared he had been greatly pleased with his tour, and with all he had seen; still there was something in his air and manner which belied the assertion. Our hotel happened to be a very good one, and having looked over the bill of fare, I ordered what I liked best for supper, and then handed the card to Miffler. He hummed and hawed over it for some time with a lugubrious air, and then with an expression of extreme disgust ordered a veal cutlet.

"Dear me," said I, innocently, "you don't seem pleased with your entertainment!"

He assured me that he was so, but, on my asking his opinion of the wine, professed himself unable to

give me any advice as to which we should order. I was perplexed at this, and still more at the moody silence in which he devoured his supper, and the increasing gloom with which he swallowed glass after glass of the bottle brought us,—a very fair flask of Rhine wine, by the way. My difficulties, however, were soon cleared up; for the waiter, on lighting us to our beds, ejected his saliva into one corner of the room, with a skill and precision which would have done credit to a Yankee. Miffler, quite unable to contain himself, now broke out into a storm of anathemas in English and French, and the waiter, who only spoke German, aware that they were directed against him, though unable to divine the cause of them, speedily retired, whilst my friend threw himself into a chair, declaring, that if things went on in this way, his continental tour would be the death of him.

"Why," said I, "I thought you had enjoyed yourself so much while abroad!"

"So I have," replied he, "but the fact is, one would require a total change in one's whole ideas not to be put out by some things one meets with. Now, for instance, I declare I have not eaten a single comfortable meal since I left England!"

"That is, indeed, extraordinary," returned I, "for the eating in Brussels, where you have been for three or four days, is said to be as good as at Paris."

"Is it?" said he; "then I can only reply that I don't envy the epicures of France. For my part, I can't manage those abominable dinners of a dozen little kickshaw dishes, the half of which one is afraid to taste lest they should contain some abomination. And, what's worse, they call their confounded mixtures by such names, that the appellation does not give one the least idea of what the article is. Why, what do you think happened to me at Brussels?—I had dined for a couple of days at the table d'hôte, without being able to get anything eatable, and so at last I determined to take my meals by myself, and order my own dinner. So I got the bill of fare, and read over a long string of names, which didn't convey any meaning to me, till at last I came to 'Haricots.'—'Come,' thinks I to myself, 'I know what haricot mutton is, at all events; I'll have that for dinner.' So I ordered 'Haricots,' giving particular directions to make it very plain, and when I came in with a monstrous appetite, what do you think they set before me?—not haricot mutton—but beans, sir—little white beans, swimming in an odious mixture of oil and pepper. Of course I could not taste it, and was obliged to order it away at once; the rascal of a waiter assuring me all the time that they were excellent 'Haricots.' Faugh! the very thought of them makes me sick."

"Why," said I, laughing, "I thought you knew enough of the language to be aware that Haricots is the French for beans."

"And so I did," replied he, "but who could have ever imagined that such a dish as that could be set down to a Christian man?—I thought only of haricot mutton. Then again, the people in these places have no idea of what breakfast should be; either they give you a cup of coffee and a crust of bread, or else a dish of meat with a bottle of wine."

"Well," interrupted I, "at any rate you cannot complain of the wine; you get the best hock and French claret as cheap as sherry at home."

"Indeed," returned Miffler, "I wouldn't give a bottle of good port for all the wine I have had since I left London. I don't see the difference between their wine and white or red vinegar. Upon my word the first time I took a bottle of it, I thought I had got an attack of Asiatic cholera, and that my bones, instead of being decently interred in the family sepulchre, would whiten under a foreign sun. I protest if I had not one day got a beefsteak and a glass of Schiedam at Antwerp, I should never have made out at all."

I could not help laughing at this terrible list of

grievances, but my mirth only made Miffler more angry.

"You may laugh as you like," said he, "and no doubt these are all matters of no great importance, but they destroy one's comfort, and in truth these people seem to have no idea of comfort whatsoever."

In this latter observation I assured him I quite agreed, but added that, in travelling, we must make up our minds to undergo some hardships. He gave a dolorous assent to my proposition, and, after a good deal of argumentation, we retired to rest, and next day proceeded on our journey. But it was in vain that Miffler attempted to keep up his spirits. It was not his fault, he had no wish to grumble—on the contrary, he did his best to be pleased, but he could not succeed; all those little inconveniences, which to some would have been mere laughing matters, and which he himself admitted to be such, yet worked upon him, and kept him in a perpetual worry. The continual smoking disgusted him, the commissioners harassed him; he was bothered to death by the police regulations, and could not bear to meet at every corner a fierce-looking man with mustachios and musket, who looked as if he longed for a reasonable pretext to plant a bayonet in his viscera: finally, he was eternally losing his passport, and got into a phrenzy whenever it was demanded.

We travelled on pretty well as far as Bonn, but the hotel there being very much crowded, Miffler was, by mistake, put into a distant chamber, arranged for a German and not an English occupant. The consequence was, that after being about an hour asleep, I was awoken by the entrance of my friend in high dudgeon. He had been unable, he said, to get any one to attend to him, or at least to make any of the servants understand his necessities; he had been put into a room, the bed of which was not made, and which had neither blankets nor sheets; finding it hopeless to get this remedied, he had attempted sleeping on the feather-bed in his clothes; but as this was impossible, he had come to me for assistance. I accompanied him to his room, and soon found that he had mistaken the cushion usually placed on the bed, for the feather-bed itself, and on pushing this aside, and showing him the blankets and sheets beneath, his surprise and disgust were unbounded. However, he got over this adventure pretty well, but the whole of the rest of our journey was one series of similar mishaps, till at length, on reaching Frankfort, and glancing with his mind's eye at the gloomy vista beyond, his courage began to give way. My friend, however, was not fated to encounter these perils, for an adventure occurred here which put a stop to his continental tour.

We were out one evening strolling through the town, and, feeling desirous of some supper, entered a café and demanded the carte. Miffler looked over the contents in gloomy despondency, as I explained the various items to him, and the waiter stood by, extolling the merits of each succeeding dish. At length we came to the item *Pfannkuchen*, which means in fact, pancakes or omelettes. This the waiter affirmed to be a most exquisite composition, and "thoroughly English." The last words struck my friend's ears; he immediately decided for it, and sat during the preparation, pleasing himself with the idea that he should at length make an English meal. It came; the pancake was solemnly uncovered, and in the plate beside it, lay three or four round suspicious-looking articles of a dark greenish hue. The waiter seeing Miffler's dubious look, reiterated that it was a "thoroughly English" dish. Thus reassured, the traveller mashed the two together, and proceeded to take a mouthful. A spasmodic contraction of his whole face ensued—

"What is it?" cried I, affrighted—

"What is it?" replied he, sputtering with indignation, as he attempted to swallow the abomination—"why, it's a pancake with pickled plums, that's what it is; and they call that an English dish. I like their impudence—if that isn't adding insult to injury, I don't

know what is. Here, Kellner, waiter, or whatever they call you, what is to pay for this beastly mess?" And, in spite of all my remonstrances, he left the place, went off to our hotel, packed up, and started for England the next morning at six o'clock. I saw him off, and his last words were—"An English dish, indeed!" He wrote me subsequently that his first act on reaching London was, to eat a beefsteak with a pint of porter, at the Cock, at Temple-bar, after which meal he offered up a fervent thanksgiving, that he had at length got back to a Christian country, where they did not eat pickled plums with their pancakes.

Such was the termination of my friend Miffler's continental tour, and some such feelings and occurrences have been the cause of many a thorough-bred Englishman bringing his projected journey to an untimely close. My account may be considered an extravagant burlesque, but it is not so—it is quite impossible for those who have not seen our countrymen abroad, to imagine how completely a man, who has been brought up surrounded by "all the comforts of the Sautmarket," is put about by a change in a variety of little matters, which, at home, he could never conceive to be essential to his happiness.

Miffler's departure reduced our party to two, and on the same morning that he left, my friend Glance and myself started in the diligence, or, as they call it here, the "*Eilwagen*," for Hiedelberg, which is a ride of about eight hours.

GAUTIER DE LA SALLE.¹

It was reported amongst the neighbours of La Petite Ville, that the bailiff had lately, in a very unaccountable manner, had various sums of money stolen from him; that at different times he had missed trifling things from his premises, but that, of late, the depredations were become serious. The domestics were examined, but no discoveries were made tending to throw any light upon the disappearance of the missing articles. At length, one day after a feast at the bailiff's house, where he had entertained the nobles of the island, a large silver bowl, and two goblets of the same metal, were missed. Now, indeed, it was his duty to make a closer and stricter search, and, if possible, discover the thief; no one had been seen on the premises of the bailiff that day, except Hugh de Massey, who, it had been remarked, had himself been two or three times to the well for water.

The missing articles had been placed upon a sort of low stone-bench or wall, which surrounded the well, and where they had been cleaned; the person whose duty it was to do this had been suddenly called away for some other purpose, before the operation in which she was engaged was completed, and afterwards, upon collecting the various articles to deposit in the house, the above were missing.

This was a most outrageous proceeding, and certainly demanded a most searching inquiry, which the bailiff was resolved at once to institute. The domestics were all closely examined, but they easily exculpated themselves; and neither could they remember any stranger being seen on the premises that day; indeed, none but the servants and Hugh had any right to come on that part of the premises where the well was. But neither servants nor neighbours, for a single moment, suspected De Massey as being the depredator. The bailiff, however, was of a different opinion. He did not know what temptation might have induced even Hugh de Massey to have done. He consulted many of his friends, expressing his unwillingness to prosecute his kinsman, and even to believe him guilty of such an act; but he was peculiarly situ-

(1) Concluded from page 366.

ated, and, as chief magistrate, it would be expected from him that he should perform his duty with impartiality; he considered he was compelled to sacrifice private feeling for the public good; and, dreadful as was the alternative, he must, he considered, for the sake of justice, bring the affair before the Court. He should be the happiest person in the island, if his kinsman could clear himself, but at present the finger of suspicion pointed so strongly at him as the purloiner of the plate, that, for his part, he repeated, he thought it his duty to prosecute him for the theft. Nevertheless, if he had, in a moment of weakness, taken the missing articles, and would acknowledge his crime, and restore them, he, the bailiff, would in that case, and upon condition of his immediately and for ever leaving the island, save him from certain exposure, and the last dreadful penalty of the law, as death must inevitably be his doom, if found guilty of the crime. All applauded the merciful sentiments uttered by their worthy chief magistrate, and unanimously agreed, that, if Hugh refused the terms proposed by the bailiff, it was the duty of the latter, no less as bailiff than as the loser of the articles in question, to prosecute one against whom there certainly was a very strong presumption of guilt.

Hugh, upon being interrogated, indignantly denied the charge, and sternly refused the proposal of the bailiff to leave the island; on the contrary, he demanded to be brought face to face with his accusers, and that the strictest investigation into his conduct and character should be made. In consequence, he was committed to the custody of the warder of Castle Cornet, in those days used as the common prison, on the charge of stealing the property of Gautier de la Salle.

At first De Massey could scarcely credit the fact, that he was actually a prisoner, and that his kinsman had any serious intention of prosecuting him for a crime of which he knew he was incapable; a little reflection, however, convinced him that it was the determination of De la Salle to destroy him; he had now got him completely in his power, and felt certain that he would exert it and his authority to the utmost to accomplish his purpose. To Jean de St. George, the superior of the monastery of Benedictines, in the parish of Our Ladye of the C  tel, he opened his whole heart, and asserted his conviction of the malicious intentions of his rival. The good father, who had never for an instant doubted Hugh's innocence, and had come to visit him as soon as he heard of his being sent to the Castle, listened to all he had to say, but could not agree with Hugh, that jealousy could drive such a man as Gautier de la Salle to devise such a devilish plot against his kinsman's life and honour. He promised to see Collette, and console her under this cruel stroke of fortune, and also to be present at Hugh's trial, which he was entitled to be from his situation in the island as delegate of the Bishop of Coutances, and where he promised to afford the unhappy prisoner all the assistance in his power.

The day appointed for the trial at length arrived; and Hugh de Massey was arraigned at the bar of the Royal Court for the crime of theft. No one who knew him previously—no unprejudiced person who looked upon him as he entered the Court and took possession of the place appointed for a prisoner, and beheld his noble bearing, his modest, but firm behaviour—could believe him guilty. Walter de Blondel, lieutenant-bailiff, occupied the chair; the prosecutor being bailiff, having of course ceded his place upon this occasion.

De la Salle told a plain unvarnished tale, merely stating his loss, and that nothing but a sense of public duty could have induced him to appear there as the prosecutor of his kinsman, of whose honesty, till the moment when suspicion fell so strongly upon him, he had always had the highest opinion; that it was, perhaps, from the relationship which existed between them, that he felt more compelled than he otherwise might have done to come forward against De Massey, as he, De la Salle, wished to prove to his countrymen, that

his sense of justice was very superior to any other feeling by which he might be supposed to be actuated. That the character of those domestics immediately about him was impugned by this transaction; and, though most reluctant, still from a feeling of justice to all, he felt bound to appear as the prosecutor of De Massey. It was proved most clearly, that none but De Massey, with the exception of the servants, had been seen on the bailiff's premises that day; that he could with the greatest ease have taken the plate and conveyed it to his own house, which had been searched as well as all the other premises, but no traces of the lost articles discovered; that no doubt, on many previous occasions, he had opportunities of taking the utensils now lost, if he had been inclined to do so. The whole of the evidence against the prisoner was entirely circumstantial, but it was strong, and skilfully woven together. Jean de St. George, superior of the Benedictines, that brave and noble soldier, Drouet la Marchant, Captain of the Castle of Beauregard, Nicholas de Beauvoir, Jean de la Land, Walter de Blondel, Jurats of the Royal Court, spoke highly in his favour, and expressed their conviction of his innocence; but in vain! The majority of the Court were of opinion that the crime had been proved, and Hugh de Massey was declared guilty, and sentenced to suffer death, and his property confiscated to the Crown.

It was the duty of the bailiff himself to pass sentence upon the unhappy prisoner, and, although he in vain endeavoured to conceal his satisfaction, it was evident he was pleased with the result of the trial. The prisoner upon being asked by the *Greffier d'Etats*, why sentence of death should not be passed on him, replied:—

“When I say that I am innocent, and have been unjustly condemned, God knows I speak the truth; and to His dispensation I commit myself, trusting to His mercy, in His own good time, to clear my name from the foul blot, which, through the malice of the Evil One, has been attached to it. My judges I forgive, but they have this day condemned an innocent man. Gautier de la Salle! speak forth the sentence to which your jealousy and malice have doomed me; but remember there is One above all, to whom the secrets of all hearts are open, and before whose tribunal kings and judges will one day have to give an account of their works!”

De la Salle was observed to quail under the stern glance of De Massey, but, making an effort, he simply passed the sentence of the law upon the prisoner without further observation. The sentence was to be carried into execution on the third day from the present one.

We will draw a veil over the sufferings of Collette, as well as of her parents, who accused themselves as being in a great measure the cause of their daughter's misery. The good prior assured Hugh that her love for him was far too sincere to allow her to doubt his innocence for a moment; that, as it was fated they were not to be wedded on earth, she had resolved to enter the convent of the White Penitents, in the small island of Lihou; and St. George had promised to use his influence with the prioress to receive her. He added, that, though she was not allowed, by orders of the Court and bailiff, to visit him, she had resolved to see and take her final leave of him on the fatal morning he was to die; and, finally, she conjured him to be of good courage, and put his trust in God and our Ladye.

The rock upon which Castle Cornet is built, which was formerly the jail of the island, as well as the place where the States, or Local Parliament, were accustomed to assemble, and where all the important business was conducted, is accessible from the mainland of Guernsey at low water; but, when the tide is up, it is entirely surrounded by the sea, and only to be approached by a boat. It was formerly the custom—and, indeed, till within these very few years—to remove any prisoner, left for execution, from the dungeons of the castle to the mainland, the night previous to the morning fixed for his doom on earth, lest any impediment should arise

the following day from the effect of sudden storms, (for it is a wild and breaker-beaten coast,) which might prevent the removal of the captive, and thus prove the cause of some embarrassment to the Court. In accordance with this custom, Hugh was removed, the night preceding his intended execution, to a place called *La Plaiderie*, which was a small building in the town of St. Peter Port, containing the office of the *Greffier d'Etat*, and a room where the ordinary Court assembled for the daily despatch of public business, together with some cells for the confinement of prisoners. Here, after a conference with the good prior de St. George, and an earnest prayer for mercy and support in his approaching hour of trial, he threw himself upon a heap of straw provided for his bed, and, conscious of his innocence, soon in balmy sleep forgot all his persecutions, and that yet but a few short hours, and he would "sleep the sleep that knows no waking."

Collette, as we observed, had been refused admission to her lover during his confinement in Castle Cornet, but had been informed that she might see him at an early hour on the morning of his execution. How slowly did the hours of that miserable night pass to the wretched girl! and yet, when the first dawn of morning broke upon her aching eyes—when she remembered it was the last sun her beloved De Massey, her affianced husband, would ever behold—she chid them for having too quickly sped, and brought to light the day which was to separate them for ever. And, as her eye wandered to the spot where she had last sat and talked with Hugh upon their approaching union, and when she called to mind all the plans they had formed, all the schemes they had proposed for their future guidance—and now, with the certainty that this cup of happiness, which they had pictured to themselves might be theirs, was dashed from her lips for ever—all these delightful visions of the future destroyed, and every hope in this world for ever blighted—oh! what a groan of agony burst from her almost breaking heart! Throwing herself on her bed, she lay for a time unconscious of her wretched fate. Remembering at length, however, that the hours of him she adored on earth were numbered, she shook off this weakness, and hastened to dress herself, and prepare for her departure from her home, to which she never intended to return; and for this purpose selected a robe of white, which, in happier days, was intended for her bridal dress. But this was to be her bridal day; for from it she meant to dedicate herself as the bride of heaven, the prioress of the convent at Lihou having consented to receive her.

Accompanied by her father and mother, who were also overwhelmed with grief, they took their sad route by way of the *Vauquedor* to the town, arriving at the *Plaiderie* some time before the hour for admitting strangers to the prisoner had struck. They were kindly permitted by the clerk to repose themselves in the *Greffier's* office.

Hugh de Massey had been the object of universal commiseration. No one would believe him guilty of the crime for which he was about to suffer, for all were well aware of the cause of Gautier's hatred to him; and the appearance of Collette, who was known to be his affianced bride, added to the feeling which seemed to pervade the crowd; and their indignation against the bailiff, and the majority of the Court by whom he had been condemned, and who were looked upon as the tools of their more subtle leader, soon manifested itself in curses both loud and deep. The arrival of *Drouet le Marchant* with the Sheriff's guard soon awed the tumult of the crowd; and, shortly after, the excellent Jean de St. George came to conduct Collette to her unhappy lover. What pen can describe their meeting? "This is indeed the bitterness of death," exclaimed De Massey, as Collette threw herself into his arms, her whole frame convulsed with the sobs which issued from her bursting heart. But why attempt to describe what is beyond description?—let us leave the sad pair with the good

father, and turn our looks to Gautier de la Salle. He had not left his house at *La Petite Ville* since the trial, but was now preparing, in accordance with his duty, to attend the execution of the prisoner, or, we should rather say, the sacrifice of his victim.

"And so none of you mean to go to *Hogue à la Perse* this morning?" he asked in a tone of surprise, from his servant, Peter Robin, who was waiting with his horse.

"No, *Messire le Baillie*," said the honest fellow, "I have no stomach to go and see my friend and your cousin, *Messire le Baillie*, hanged for a crime I don't think him guilty of."

"Then leave it alone," said his master, sulkily, riding out of the yard; "and mind, I expect to find the whole of that rick," pointing to one of two wheat-ricks which stood in the yard, "removed into the barn by the evening—you have been idle of late, my masters."

Shortly after the arrival of the bailiff at the *Plaiderie*, where the whole Court were assembled, orders were given to form the procession, to proceed to the place of execution at *Hogue à la Perse*, to which the prisoner was to walk barefooted. It was the law, however, that, previous to their setting forth upon this melancholy expedition, the prisoner should be placed at the bar, and the crime and sentence read to him by the *Greffier d'Etat*; and for this purpose an officer came to conduct Hugh to the room where the Court were assembled.

"And now, beloved Collette! all I hold dear on earth—one last embrace, and then——"

"Oh, no! I leave you not here, Hugh; I will be calm, father, quite calm; but it is my duty not to leave him till the last." And she clung to him with such force, that she could not be removed without violence, which the heart of the officer would not allow him to employ; and Hugh entered the room, with the unhappy Collette hanging on him, her white dress, and face paler than monumental marble, giving her more the appearance of a walking statue than a living being; indeed her whole soul was so completely engrossed with her lover, that she scarcely appeared conscious of the presence she was in.

"Why is this woman permitted here?" said the bailiff; "remove her." She heard the order, and essayed to speak; but only the words "*duty!*" "*my husband, sir!*" were intelligible.

"Allow her to remain, *Messire le Baillie*," said *Walter de Blondell*; "I will be surety for her conduct; and let us proceed quickly, for this is too painful a business for any of us to endure much longer."

It was afterwards remarked that, at this stage of the proceedings, the eyes and countenance of the miserable Collette exhibited a most unwonted expression of rage and fierceness, resembling the ferocity of the tigress when expecting to be deprived of her offspring. At the slightest movement of the officers who stood behind Hugh, she darted a savage glance at them, as if she defied their power, at the same time clinging closer to her lover with one arm, whilst with the other she appeared to menace any one who would dare to separate her from him; the dreadful situation in which she was placed seemed to have overwhelmed her reason. Amongst that assembled audience there was but one heart that did not bleed for the wretched pair, or anticipate with horror the scene which must in a few minutes ensue, as it was evident nothing but force could separate the unhappy girl from the side of De Massey. In the mean time, the *Greffier d'Etats* proceeded, with a faltering voice, and tearful eye, to read over the crime of which the prisoner had been convicted, as well as the sentence about to be carried into execution; but Hugh's whole attention was fixed upon Collette, who clung to him in an agony of despair, and he heeded not these forms.

The bailiff, upon the *Greffier's* concluding with the usual "*God save the King*," made an intimation to the Court that now all the forms of the law had been complied with, and was on the point of rising from his seat,

when a slight movement among the assembled multitude without caused a momentary hesitation within the Court, and at that instant Peter Robin, the bailiff's servant, bursting into the apartment, exclaimed, "We have found the plate! and Hugh de Massey is—"

"Then you have removed the wrong rick," cried the bailiff, starting from his chair; "*I put it—*" But instantly perceiving he had committed himself—"May the curse of—" Before, however, he could finish his execration, he fell back in his seat in a fit, the blood gushing in torrents from his mouth!

There was now as much noise and consternation in the Court, as a few minutes before there had been grief and silence. Collette had swooned almost ere Robin had completed the tale of his discovery, and was carried out by her parents. The bailiff was lying lifeless in the arms of some of the officers of the Court, a most ghastly spectacle; whilst the friends and neighbours of De Massey were pressing round and congratulating him on this timely discovery, and happy termination of his troubles; at the same time expressing, in loud tones, their indignation at the villanous and malicious conduct of his persecutor, and which was inwardly responded to by every bosom in the Court. After the confusion had in some measure subsided, the leech declared the bailiff was not dead, but would not speak with confidence that he would survive the shock; and, as it was impossible to convey him to his own house, he was placed in a boat, and carried over to Castle Cornet.

It was proposed that Hugh de Massey should be set at liberty, upon his giving sureties that he would not leave the island for one month, which were instantly forthcoming, every Jurat in the court offering his bail; and it was ordered that a full account of this affair should be drawn up by the Greffier, and immediately transmitted to the governor, then in London, to be by him laid before the King.

The shock which Collette had undergone, and the sudden transition from death to life, from the depth of misery to a prospect of that happiness which, a few minutes before, she had thought was fled for ever, was too much for her, already weakened and exhausted in mind and body, and she was for a long time confined to her bed by a severe illness, which threatened not so much her life as the destruction of her reason. By the blessing of God, however, she was restored to health almost from the very threshold of existence, and soon after united to her beloved Hugh; but, before this happy event, Gautier de la Salle had passed to his long account. To the everlasting honour and credit of the justice of the island be it said, he was, as soon as his health was sufficiently restored, tried, and found guilty of conspiring against the life of Hugh de Massey, and deservedly sentenced to the same kind of death he had intended for an innocent man. The orders of the King to the Court were, that he should be taken from the place of confinement to his own house, and executed upon the spot where the rick stood in which he had concealed the plate. Accordingly, upon the appointed morning, he was taken from the Plaiderie to a place a short distance from his own house, called the Vauquedor, where an altar had been erected, and where he received the sacrament, and the last consolations of religion, from the Prior St. George, and where he again confessed his crime, and acknowledged the justice of his sentence, earnestly beseeching the pardon of Hugh de Massey, and the prayers of all. From thence he was conducted, bare-footed, to his own farm yard, and there hanged,—and his house and estate, which became forfeited to the crown, has, from thenceforth, been called *La Ville au Roi*. Whether his body was buried at the Vauquedor is uncertain, though tradition asserts that it was; but to this day a stone is pointed out in which a rude cross is deeply cut, and in memory of this event, the spot bears the name of "*The Bailiff's Cross*."

POPULAR YEAR-BOOK.

October 5.

On this day, 1635, died Thomas Parr, or Old Parr, a remarkable Englishman, who lived in the reigns of ten kings and queens, viz. Edward IV., Edward V., Richard III., Henry VII., Henry VIII., Edward VI., Queen Mary, Elizabeth, James I. and Charles I. He was born in 1483, at Winnington, eight miles from Shrewsbury, in Shropshire. Though he attained the vast age of 152 years and nine months, yet the tenor of his life admitted but of little variety. He was a husbandman, laboured hard, partook of coarse fare, and enjoyed good health, till he was sent for to London by the Earl of Arandel. His journey thither proved fatal to him; for, owing, probably, to the alteration in his diet, the change of air, and his new mode of life, he lived but a short time after his arrival and presentation to Charles I. He was buried in Westminster Abbey. The simple inscription of "Old Parr" is on his grave.

October 10.—At Sherborne, Dorsetshire, a fair called "Pack Monday Fair," is annually held on this day, on a spacious parade, in a street not far from the church. It is a mart for the sale of horses, cows, fat and lean oxen, sheep, lambs, and pigs; cloth, earthenware, apples, toys, gingerbread, sweetmeats, drapery, hats, bonnets, caps, ribands, &c. &c. Tradition relates that this fair originated at the termination of the building of the church in the sixth century, when the people who had been employed about it packed up their tools, and held a wake in the churchyard, blowing cows' horns in their rejoicing, which at that time was perhaps the most common music in use. To the present time, Pack Monday Fair is always announced three or four weeks previously by all the little urchins who can procure and blow a cow's horn, and who parade the streets in the evening and send forth the different tones of their horny bugles, sometimes beating an old saucopan for a drum, and playing on a whistle or fife. The clock's striking twelve on the Sunday night preceding, is the summons for ushering in the fair, when the boys assemble with their "rough music," and parade the town with a noisy shout, and prepare to forage for fuel to light a bonfire. In this way the youths enjoy themselves in boisterous merriment, to the annoyance of the drowsy part of the inhabitants, till four o'clock, when the great bell is rung for a quarter of an hour. From this time the bustle commences by the preparations for the coming scene: stalls are erected, windows cleaned and decorated, shepherds and drovers go forth for their flocks and herds, which are depastured for the night in the neighbouring fields, and every individual seems on the alert. The business of the sheep and cattle fair is generally concluded by twelve o'clock, when what is called the in-fair begins to wear the appearance of great activity, and, from this hour till three or four o'clock, more business is transacted in the shop, counting-house, parlour, hall, and kitchen, than at any other part of the day, it being customary with the tradespeople to have their yearly accounts settled about this time; and scarcely a draper, grocer, hatter, ironmonger, bookseller, or other respectable tradesman, but is provided with an ample store of beef and home-brewed October for the welcome of their numerous customers, few of whom depart without replenishing themselves with the old English fare placed before them. The shows and stalls are crowded from four till dusk: by which time the country people begin to separate. Vehicles and horses of every description are shortly after on the move, and the bustle is nearly over, with the exception of what is to be met with at the inns, where the lads and lasses so disposed finish on the "light fantastic toe," assisted by the fiddler's merry scraping, the fun, frolic, and pastime of "Pack Monday Fair."

Poetry.

In Original Poetry, the Name, real or assumed, of the Author, is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

THE DEATH OF BRUCE.¹

THERE is darkness in the chamber,
There is silence by the hearth,
For pale, and cold, and dying,
Lies a great one of the earth;
That eye's dim ray is faint and grey,
Those lips have lost their red,
And powerless is a people's love
To lift that languid head.

A tearful group was gathered
Around that bed of death:
There stood undaunted Randolph,
Knight of the Perfect Wreath;
And Campbell, strong and steadfast
Through danger and despair;
And valiant Grey, and stern La Haye,
And loyal Lennox there;
There, last in name, but first in fame,
And faithful to the end,
All weeping stood Lord James the Good,
True knight and constant friend;
And there, with eyes of grave surprise,
Fast rooted to the place,
The monarch's son, scarce four years old,
Gazed in his father's face!
But the stillness of that solemn room
Was stirred by scarce a breath—
Silent were all, and silently
THE BRUCE encountered Death.

To the face of the dying monarch
Came a sudden glow, and proud,
But brief as the tinge of sunset
Plung on a wandering cloud;
But see—his lips are parting,
Though scarce a sound he heard,—
Down stoops the noble Douglas
To catch each feeble word;
And all the knights and warriors,
Holding their tightened breath,
Close in a narrower circle
Around the couch of death.

"O Douglas, O my brother!
My heart is ill at ease;
Unceasingly mine aching eye
One haunting vision sees;
It sees the lengthened arches,
The solemn aisles of prayer,
And the death of the traitor Comyn²
Upon the altar-stair.
Woe's me! that deed unholy
Lies like a heavy weight,
Crushing my wearied conscience
Before heaven's open gate.
Fain would I wend a pilgrim
Forth over land and sea,

Where God's dear Son for sinners died—
Alas, it must not be!
But if thy love be steadfast
As it was proved of yore,—
When these few struggling pulses
Are stilled, and all is o'er,
Unclose this lifeless bosom,
Take thence this heart of mine,
And bear it safely for my sake
To holy Palestine:
Well pleased my heart shall tarry
In thy fair company;
For it was wont, while yet in life,
Ever to dwell with thee."

The dying king was silent;
And down the Douglas kneeled—
A kiss upon his sovereign's hand
His ready promise sealed;
Never a word he answered,
In sorrow strong and deep,
But he wept, that iron soldier,
Tears such as women weep.
The Bruce hath prest him to his breast
With faint but eager grasp,
And the strong man's arm was tremulous
As that weak dying clasp!

That last embrace unloosing,
The monarch feebly cried,
"Oh, lift me up, my comrades dear,
And let me look on Clyde!"
Widely they flung the casement,
And there in beauty lay
That broad and rolling river
All sparkling to the day.
The Bruce beheld its waters
With fixed and wistful eye,
Where calm regret was blending
With bright expectancy;
And then, with sudden effort,
Somewhat his arms he raised,
As one that would have fain embraced
The things on which he gazed.
And then on those who held him
There fell a strange deep thrill—
For the lifted arms dropped heavily,
The mighty heart was still!

Hushed was the voice of weeping—
Mutely did Douglas close
The eyes of the illustrious dead
For their last, long repose;
And backwards from the couch they drew
Softly and reverently;
For solemn is the face of death,
Though full of hope it be!

A RAMBLE UPON RAILWAYS.

"Thus form'd for speed, he challenges the wind,
And leaves the Scythian arrow far behind."

Dryden's Virgil.

THERE are few turnings in the "wheels of vicissitude" more remarkable than the rapidity with which men become familiar with the marvels of their own times. The Railway, for example, the most stupendous invention of our scientific age, has already almost ceased to be a wonder; and persons are whirled along at the rate of

thirty or forty miles an hour, without caring to know anything of the mighty means by which such a result is obtained. We have sometimes thought that the ubiquity of invention has led to this low estimate of one of its greatest triumphs. The Railway, it is true, is but one of a host of gigantic strides of civilization; it is but a single line in the vast problem of modern science, which, Sir David Brewster has well observed, "may be regarded as one vast miracle, whether we view it in relation to the Almighty Being by whom its objects and its laws

were formed, or to the feeble intellect of man, by which its depths have been sounded, and its mysteries explored."

Although not a score of years have elapsed since the first great line of Railway communication was opened in England, the curiosity of the public as to the principles of its construction has in great measure subsided; or they have been left to form part of the technical education of engineering schools. Who that witnessed the opening of the Liverpool and Manchester Railway in 1830, can forget the wonder-struck spectators of that great national event, when

"You would have thought the very windows spake,
So many greedy looks of young and old
Through casements darted their desiring eyes?"

Yet this feeling we hardly take to be the spirit in which the youth of the present day regard the Railway. They have been, as it were, born to the invention; whereas the man of mid-age has watched its germ, and gathered his knowledge of its importance with its growth, which has, perhaps, done more than the progress of any other discovery on record to disprove the common fallacy that great inventions are due to accident. It likewise shows, very strikingly, how completely each is connected with a number of other inventions which are necessary to make it useful. "It is probable," says an able contemporary writer, "that there has never been a period in the world's history, before the present, in which the locomotive engine could have been invented, or, being invented, could have been generally used. It is only of late years that the properties of steam have been at all thoroughly understood, or that the method of raising a large quantity in a small space has been devised. Fifty years ago, there were but very few manufacturers able to bore a cylinder perfectly true and smooth; and it is only very recently indeed, that the application of the turning-lathe and the planing-machine to the working of iron has rendered it an easy matter to construct a well put together and cheap engine. But even had the engine been invented and executed, it could not have been advantageously used unless placed upon a railway. Railways, however, can scarcely be constructed without the employment of iron in large quantities. Iron was not manufactured to any great extent in any part of the world until half a century ago. To manufacture or reduce iron from its ore a large quantity of fuel is necessary: until 1840, the fuel employed was charcoal; and the proceeds of all the timber in England could not have smelted iron enough to supply half-a-dozen great railways. It was then discovered that coal might be used instead of charcoal; and, owing to this discovery, iron has come into very general use."¹

We perfectly agree with the same writer that a work of mechanical art, such as is the Railway, represents the united efforts of many generations, each working from the step gained by those who went before. "Those glistening lines of iron that now traverse England in every direction, are, with the white cloud that hovers over them, the representatives of much patient labour, much steady perseverance, of frequent disappointments suffered, of heavy losses incurred, before they became the well known symbol of commercial activity and wealth."

The Railway itself is by no means a recent invention. It is believed to have been first introduced into this country at the beginning of the seventeenth century, when it was employed in some of the Newcastle collieries. The rails at that time were of wood; and a description of them, as constructed in the year 1676, is thus given in the Life of Lord Keeper North: "The manner of the carriage is by laying rails of timber from the colliery to the river, exactly straight and parallel; and bulky carts are made, with four rollers, fitting those rails, whereby the carriage is so easy that one horse

will draw four or five chaldrons of coals, and is an immense benefit to the coal-merchants."

These railways appear to have been confined to the use of collieries, and to have been employed for the conveyance of heavy loads from a higher to a lower level. They were, as we have stated, made of wood; next they were faced with thin plates of malleable iron; but it was long before this contrivance suggested a further improvement, and that iron was substituted for wood. Mr. Stephen, son, who has been called the father of modern railroads, tells us, on the authority of the books of the Colebrook-dale Iron Company, that, in November 1761, between five and six tons of cast-iron rails were made at those works, but only as "an experiment on the suggestion of one of the partners." Mr. Carr, who published a volume in 1797, called "The Coal Viewer and Engine Builder," claims the making and use of cast-iron railroads as amongst his inventions, and states that they were first introduced at the colliery of the Duke of Norfolk, near Sheffield, in 1776.

Thus we see that Railways have been employed in this country for nearly two centuries; but their use has been confined, until recently, to the transfer of coal from the pit-mouth to the water-side, and the method of their construction has been extremely rude. Nor were Railways, for nearly two centuries after their first adoption, employed otherwise than as a means for economizing animal labour. The trains of carriages were drawn upon them by horses; and the locomotive engine—"the blatant beast"—remained to be invented.

Nevertheless, so early as 1759, the idea of employing steam-power for propelling carriages was thrown out by Dr. Robinson, then a student in Glasgow. Watt began his important experiments on the production and employment of steam in 1763; and in 1764, stated, in the specification of one of his numerous patents, that it was intended to use his steam-engine for the same purpose; but neither of these philosophers made any effort for reducing their suggestions to practice. Oliver Evans, an American mechanic, is stated to have originated, and, by his own powers, accomplished, the application of elemental power to the facilities of locomotion. His idea was, however, laughed at, and the legislature of Pennsylvania voted him insane for the suggestion; but, in 1787, he obtained a patent for his invention from the state of Maryland. In the same year, Mr. Symington exhibited the model of a steam-carriage in Edinburgh; but it was not until 1804, that Trevethick invented and brought to use a machine of this kind, on a railroad of Merthyr Tydvil, in South Wales. He had previously tried his carriage on a rough road, now the site of Euston Square, and the most magnificent railway edifice in the kingdom—the terminus of the London and Birmingham line.

Another difficulty, though an imaginary one, now arose to impede the use of locomotive carriages on railways. They assumed that, the adhesion of the smooth wheels of the carriage, upon the equally smooth iron rail, must necessarily be so slight, that, if it should be attempted to drag any considerable weight, the wheels might, indeed, be driven round, but that the carriage would fail to advance, because of the continued slipping of the wheels; or that, at best, a considerable part of the impelling power would be lost through their partial slipping. As a remedy for this supposed evil, Trevethick provided, for the rims or tyres of his wheels, projections similar to the heads of nails, or otherwise made their surfaces uneven, by cutting in them transverse grooves. Following up this provision, he further proposed, that wherever, as in ascending elevations, any greater amount of the evil was to be apprehended, additional claws or nails should be projected from the rims of the wheels, in order more effectually to take hold of the road.

In 1811, a more elaborate invention was patented by Mr. Blenkinsop. This consisted of a rack placed on the outer side of the rail, into which a toothed wheel

(1) History and Description of the Great Western Railway.

worked, and thus secured the progressive motion of the carriage. Another contrivance for this purpose was a chain placed along the road between the two rails, and passed over a wheel under the centre of the carriage, provided with upright forks to catch the links. The friction of the chain caused a great waste of power, and this contrivance was soon abandoned.

The more ingenious idea of machinery which by its motions should imitate the hind-legs of the horse, and thus secure the progress caused by the engine, was taken up by several clever men, and for some years was the object of their inventive powers. One gentleman, of considerable engineering talent, who had succeeded, to his own satisfaction, in providing substitutes for the hind-legs of a horse, carried his design of imitating nature so far, that he tasked himself to the production of a pair of fore-legs also; and he had already made great progress in the composition of his factitious horse, when the discovery was made that all these contrivances were needless, and that nature in this case required not any imitation, having herself provided, by an immutable law, that the adhesion of the wheels with the surface of the rails upon which they are moved, is amply sufficient to secure the advance, not only of a heavy engine, but of an enormous load dragged after it. The honour of having discovered this law is due to Mr. Blckett, of Wylaw Colliery, who, as early as 1813, put to use upon his railway a locomotive engine, which worked by the adhesion of the wheels upon the rails. This example was partially followed by Mr. Stephenson, in 1815, at the Killingworth Colliery; but the idea of the want of adhesion had taken such firm hold of the public mind, that no further improvement was effected until 1829, when the attention of scientific men was forcibly drawn to the subject by an advertisement of the directors of the Liverpool and Manchester Railway Company, offering a premium of 500*l.* to the inventor of the best locomotive steam-engine, to run upon their line of road.

In the meantime, it may be interesting to revert to the Surrey horse-railway, the Act of Parliament for constructing which was obtained in 1801. Among the workmen employed in its formation was the late Sir Edward Banks, who subsequently built three of the noblest bridges in the world—Waterloo, Southwark, and London—besides many other public works. While working on the railway line, Banks, to use a common phrase, "took a fancy" to the retired and picturesque churchyard of Chipstead, chose it for the depository of his ashes, and was buried there in the year 1835.

The Surrey iron main-road, or railway, was projected to open a direct communication between Merstham and the Thames at Wandsworth. The undertaking was completed in 1805: large quantities of chalk and lime from the Surrey hills were thereby conveyed to the vicinity of the metropolis; and proportionate quantities of manure returned to the country. Horses were the only power employed. It failed as a speculation, and only small detached portions of the line remain. We remember a portion of it to have crossed the Brighton road; while whirling along which, at the rate of twelve miles an hour, in the best appointed coaches in the kingdom, we little dreamed that their glory was so soon to be eclipsed by the locomotive on the iron railway! Of five-and-thirty coaches which, a few years since, journeyed between Brighton and the metropolis daily, only one remains—a sort of spectre of four-horse locomotion!

It is true, then, the Surrey iron tramway, and its train of horse-drawn waggons, crossing the coach-road, suggested the further and more complete application of the railway; but the perfecting link of the *magnum opus* of invention was wanting, though it was delayed but for a score of years. A striking suggestion for the extension of the railway into a system, as connecting lines are now called, will be found in a work published in 1813. Sir Richard Phillips, in his *Morning's Walk from London to Kew*, speaking of the Surrey Iron Railway

at Wandsworth, records: "I found renewed delight on witnessing at this place the economy of horse-labour on the iron railway. Yet a heavy sigh escaped me as I thought of the inconceivable millions which have been spent about Malta, four or five of which might have been the means of extending *double lines of iron railways* from London to Edinburgh, Glasgow, Holyhead, Milford, Falmouth, Yarmouth, Dover, and Portsmouth! A reward of a single thousand would have supplied coaches and other vehicles of various degrees of speed, with the best tackle for readily turning out; and we might, ere this, have witnessed our mail-coaches running at the rate of ten miles an hour, drawn by a single horse, or impelled fifteen miles by Blenkinsop's steam-engine! Such would have been a legitimate motive for overstepping the income of a nation, and the completion of so great and useful a work would have afforded rational ground for public triumph in general jubilees!"¹

About a dozen years from the date of this passage, the ingenious author's suggestions, or we may almost call them predictions, were brought into realization. In 1825 was opened the Stockton and Darlington Railway, the first constructed public line in England upon which locomotive steam-engines were used as the motive power. The greater importance, in a commercial point of view, presented by the Liverpool and Manchester Railway, had the effect of calling away, in a great degree, the public attention from the earlier projected Stockton and Darlington line: still, one of its effects gave powerful presage of the great results of the railway system. Thus, Middlesburgh, where the extension line terminates at the Tees' mouth, which, six years before the railway reached it, was an obscure fishing village, within that period became a considerable sea-port town, and the merchants were building an Exchange. On this line, too, in 1828, a one-horse stage-coach plied regularly at the rate of ten miles and a quarter an hour, carrying twenty-two passengers.

It is worthy of remark, that the railway, as a speculation, seems to have been almost unthought of in 1825, that day of showy anticipations. That delusion was reserved for twenty years later, 1845, the effects of which, together with the subsequent healthier state of railway speculation, was emphatically foreshadowed by a writer in the *Quarterly Review* in 1837: "It is true, that the railway itself has been made the subject of speculations, nine-tenths of which must be productive of ruin. But the invention will last—the results will be permanent;—and England and mankind will yet acknowledge it as the great discovery of the century of mechanism."

Reverting to the year 1825, we find the speed and power of the railway to have been scarcely dreamt of. The earliest historian of the invention, Mr. Nicholas Wood, in his account of the line at Killingworth, while he contended for its vast importance, never contemplated its maximum speed; but, if we remember rightly, deemed it altogether an impossibility. Five years more elapsed before the power of the railway was first developed: then it outstripped every speed that had before been heard of, and *this it did at once*. "The day before the opening of the Liverpool and Manchester Railway, (in 1830,) no one had ever travelled between those towns at a speed exceeding from ten to fourteen miles in the hour; but, upon the day of the opening, the train that conveyed a surgeon to Mr. Huskisson travelled at a rate of thirty-five miles in the hour. Five years ago, no man had ever travelled from London to Bristol, even by the mail, in much less than twelve hours: upon the opening of the Great Western Railway, the distance was performed in four hours; and, more recently, parts of the road have been travelled over at a speed of fifty and sixty miles in the hour."

(1) The writer of these penetrative remarks lived until 1840, so that he had the gratification of witnessing a triumph akin to his long-cherished hope.

The success of the Liverpool and Manchester Railway, in 1825, was "confirmation strong" of the success of the invention; and men became instantly struck alike with the physical and moral grandeur of the triumph of human intellect, which it at once presented almost to the unreflective mind; whilst there was a vastness in the creative skill of this wonder of our age, in contemplating which other minds became almost as giddy.

That time is the true criterion of distance is well proved in the relative position of Liverpool and Manchester since their junction by railway: for these towns are, considering the time occupied in journeying from one to the other, but as the east and west end of London by olden conveyance, so that the railway may be said to have made Manchester a port, as well as the seat of the great manufacturing greatness and glory of England; and it would be impossible to point to any two towns on the map of the kingdom, whose relative position is so fitted to develop the importance of the railway system to our commercial prosperity as Manchester and Liverpool.

We can only glance at the immediate results of this success. During the last ten sessions of Parliament, no fewer than 147 original or amended railway bills, involving an expenditure of upwards of seventy millions of capital, and the construction of some thousand miles of railway, have received the sanction of the legislature; and have been, with very few exceptions, carried into execution throughout the country. And they have connected the principalities of the empire with each other, and the metropolis, at an expense so great, and within a time so brief, as to be without example in the history of commerce.

"The construction of the principal canals in Great Britain occupied about half a century, and cost about forty-five millions, a large portion of which was the return from capital previously expended. The principal railways were constructed within a period short of ten years; and, from first to last, at a cost of nearly ninety millions, of which almost the whole was expended before any considerable return had been received. The result of this unusual enterprise has shown, in a very striking manner, the extent to which an increased facility of traffic will increase the traffic itself, although the limits of that extent have not yet been ascertained. Meanwhile there exists an excellent indication of the general industry of the country, since a knowledge of the value of time is the sure attendant upon a state of commercial activity. Hitherto, indeed, this indication has been confined to England and America. The railways of the Continent, with a few exceptions, are not indications of the enterprise of the people, but only of the will of the sovereign or his government. English railways, like English charities and hospitals, are supported by the continued untiring energies of the people, and are perpetual evidences, the one of that resiliency in our commerce, and the other of that living spring of our moral affections, proclaimed in a manner not to be mistaken, and far beyond the authority of a mere government enactment."

The more closely we examine the circumstances of the success of the railway, the more complete will be our conviction that it was only arrived at by constant exertions and unwearied diligence. It was no phantom of genius bursting into bright existence at one effort; it was not the happy thought of a moment, but the accumulated experience of years, few, it is true, in comparison with the greatness of the result, but still sufficiently numerous to divest the railway of the character of an accidental discovery. Two centuries have not elapsed since steam was first applied as a moving power to machinery, and it is only within the last sixty years that its properties have been sufficiently understood, or skill in mechanical construction sufficiently advanced, to admit of its successful application to the purposes of conveyance or locomotion. Among machines of this

description, the marine engine was first brought into actual use. Steam-boats were launched upon the waters, both of the Old and New World, and a great traffic had sprung up along the coasts, and up the rivers of either hemisphere, before any successful attempt was made to extend similar facilities of motion over the interior country.

The attempts, however, if not successful, were numerous, and by no means without their end. Various persons, possessed of great mechanical ingenuity and sufficient funds, had for years spent both time and money in the endeavour to apply steam and its machinery to locomotion by land. Engines without number, some pushed along by oars and feet, others running with toothed wheels upon a rack, were brought forward, and either totally failed, or proved, by their extremely imperfect success, how great a difficulty remained to be overcome. At this conjuncture, the merchants of Liverpool and Manchester projected their great railway, at what was then considered to be an enormous cost. Upon this road they contemplated the employment of either horse or stationary power, at a speed of about ten miles an hour. The result surprised everybody, and no description of persons more than the proprietors of the railway. The greatness of the occasion brought more successful ability into the field, and the locomotive engine suddenly appeared on the day of trial, nearly in its present form, and moving at a speed not before contemplated. The truth seems to have been that what were called the Planet engines, then produced, were made with extreme care, and placed upon a better railway than had hitherto been constructed. To these causes, or almost wholly to the latter, may be attributed the unexpected performance of the engine.

The practicability of the railway system being thus established, certainly no system ever became so popular, and so suddenly and so widely popular. France is fast flinging these gigantic arms of communication over her noble country. Belgium exults in her web of railways, in which it expects to catch all the stray dollars and centimes of the Continent. The transit from Ostend to the Rhine is a very trifling affair. Germany has shaken off her sleep; her blacksmiths have lighted their Hercynian forges; and from the mountains of the Hartz to the Tyrol, huge men, with antediluvian visages and Cyclopean arms, are hammering at iron wedges, rails, and gear for "fire-horses." Prussia has laid down railways from her capital to France, to Poland, and to Austria. Russia is striving to concentrate her vast and scattered empire by a gigantic network of railways; and old Italy has admitted the innovation, even to the doors of the Vatican; one of the first acts of the new Pope (Pius IX.) having been to sanction the construction of railways in his dominions, which had been obstinately opposed by his predecessor.

Sydney Smyth has well observed,—"There are always a set of worthy and moderately-gifted men, who bawl out death and ruin upon every valuable change which the varying aspect of human affairs absolutely and imperiously requires." The politicians, who are puzzled to know whether the different countries invite invasion or purpose defence by their railway system, are of this class of alarmists. We regard the railway as the grand defensive against war. A clever writer, in *Blackwood's Magazine*, sagaciously observes: "The more mechanical dexterity, personal ingenuity, and natural expense that is required to make war, the more will success be out of the power of brute force, and the more in the power of intellectual superiority. Let the war come to a conflict of steam-engines, and all the barbarian rabble of the world, Turks and Tartars, Arabs and Indians, Africans and Chinese, must obviously be out of the question at once. They may massacre each other; but they must fly from the master of mechanics. Thus England, instead of feeling alarmed at the passion of foreigners for mechanism, should rejoice to see the passion spreading,—should encourage them to throw all

their powers into mechanical rivalry, and exult in every railway that shoots its serpent line along the hills and valleys of the Continent; and hail the smoke of every steam-engine that trails its murky line along its sky, as not merely an emblem, but an instrument of their own superiority. Mechanism, the great power of art, is as exhaustless as any of the great powers of Nature; for it is only the exhaustless vigour of intellect combining with and commanding the secrets of Nature. Ten thousand years might roll on, and every year see a new advance of every kingdom of Europe in invention; and England keeping ahead of them all, and, like one of her own engines, showing her speed by the sparks that lighten her road behind."

A claimant to the invention of the railway system has lately risen from the obscurity to which his want of success seems, unfortunately, to have doomed him. It appears that so early as 1816, a project then in contemplation for making a canal from Charleroi to the mining districts of Belgium, first suggested to one Mr. Thomas Gray the superior alternative of a railway, a proposal which, it is curious to observe, has lately received the sanction of the Belgian government, as "the Entre Sambre and Meuse Railway." From this period (1816), the idea of general railway communication took entire possession of Gray's mind; and he shortly afterwards published a volume of "Observations on a General Iron Railway, or Land Steam Conveyance, to supersede the necessity of Horses in all Public Vehicles." This publication was followed by several petitions from the author to the various ministers of state, from 1820 to 1823; yet, although the book went through five editions, the petitions were disregarded both by the government and the commercial and mercantile interests to which they were addressed. Gray's first recommendation was, to make the railway experiment between Liverpool and Manchester; which shows how well he appreciated, both the merits of his scheme, and the want of rapid communication between manufacturing and export towns. In his work, he minutely details the advantages derivable from railway transit for cheap supplies of fish, and other perishable produce, to the interior of the country—the regulation and acceleration of post-office carriage, by morning and evening mail-trains, so as to insure two deliveries and despatches in each day. Yet, poor Gray's book was ridiculed by a writer in the *Edinburgh Review*, and the author pronounced to be a madman, who ought to be shut up in Bedlam! The book, however, penetrated into Germany; and, not long since, a well-known German writer remarked of it as follows: "There was Mr. Gray, who wrote upon iron railways—how exact his prognostications of the immense advantages and the sure progress of his railway system! Twenty years ago, I read his book; and I often turn to it to see how truly his predictions have been verified, not only with regard to England, but to the whole of the civilized world." Gray's idea was a grand trunk system between all the large towns, and branches to the smaller places, which the best railway authorities have since asserted would have constituted by far the best system, had it been originally adopted: his plan shows locomotives, as now used, with six wheels, the central ones being toothed to work into racks, to ascend steep inclines; but this portion of the project has been perfected by Mr. George Stephenson, the great practical improver of the locomotive engine. Poor Gray is, however, left without any reward for his ingenuity; Mr. Thomas Wilson, of Haarlem, to whom he communicated his "Grand Trunk System" as early as 1816, has, however, lately placed Gray's claims before the public in such a light as, we trust, will insure the inventor's requital.

BORAX, AND THE BORACIC ACID LAGOONS OF TUSCANY.

Borax is a native saline compound of boracic acid and soda, found abundantly in Thibet, South America, and Italy. The crude product from Thibet was for a long time imported into Europe under the name of *tincal*, and was purified from some adhering fatty matters by a process which the Dutch and Venetians long kept secret. It appears, however, that this process consisted of little more than boiling the crude material in a weak solution of lime.

The chief demand for borax was for the formation of artificial imitations of the precious stones, and to facilitate the fusion of the precious metals. The word borax first occurs in the writings of Geber, an Arabian chemist of the tenth century. In 1702, Homberg, by distilling a mixture of borax and sulphate of iron, obtained a peculiar substance in small white shining plates, which he called *sedative* or *narcotic salt*; this was regarded as a remedy in continued fevers. It was afterwards found that this substance could be separated from borax by the mineral acids; that it gave a green colour to the flame of alcohol, and that borax contained the same alkaline substance that constitutes the basis of common salt. In 1752 it was shown that borax is composed of sedative salt and soda; the former substance having been found to possess acid properties was therefore called *boracic acid*. In 1807 Sir Humphry Davy exposed boracic acid to the action of the galvanic battery, and observed that a black substance was deposited on the negative wire, which he considered as the basis of this acid. In 1808, Guy Lussac and Thenard, by heating boracic acid in a copper tube along with potassium, decomposed it, and obtained the basis of boracic acid, to which the name of *boron* has been given.

Borax has a somewhat sweetish taste, and acts on vegetable colours like an alkali; it dissolves in twelve parts of cold and two of boiling water. It effervesces and becomes opaque in dry air, and appears luminous when rubbed in the dark. It melts at a heat a little above that of boiling water, parts with its water of crystallization, and forms into a porous mass called *calcined borax*. Dry borax acts upon metallic oxides at a high temperature in a remarkable manner, melting and uniting with them to form various coloured glasses. Oxide of chrome gives it an emerald green colour; oxide of cobalt, an intense blue; oxide of copper, a pale green; oxide of tin, opal; oxide of iron, bottle green and yellow; oxide of manganese, violet; oxide of nickel, pale emerald green. The white oxides impart no colour to it. In fusing metals, borax protects their surfaces from oxydation, and even dissolves and removes such oxides as are formed; so that it becomes an excellent flux indispensable to the goldsmith in soldering the precious metals, and to the brazier in soldering copper and iron. When mixed with shellac in the proportion of one part to five, borax renders that resinous substance soluble in water, and forms with it a species of varnish.

The limited supply of borax, and the high price consequent thereon, have caused the valuable properties of this useful substance to be less known and appreciated than they otherwise would have been. The attention which has lately been bestowed on the borax lagoons of Tuscany has, however, made the produce of these remarkable regions an article of equal importance to Great Britain as an import, and to Tuscany as an export. These lagoons extend over a surface of about thirty miles, and exhibit from a distance columns of vapour, rising from among the recesses of the mountains, more or less dense, according to the season of the year and the state of the weather.

"As you approach the lagoons," says Dr. Bowring, "the earth seems to pour out boiling water, as if from

volcanoes of various sizes, in a variety of soil, but principally of chalk and sand. The heat in the immediate adjacency is intolerable, and you are drenched by the vapour which impregnates the atmosphere with a strong and somewhat sulphurous smell. The whole scene is one of terrible violence and confusion—the noisy outbreak of the boiling element—the rugged and agitated surface—the volumes of vapour—the impregnated atmosphere—the rush of waters among bleak and solitary mountains.”—“The ground, which burns and shakes beneath your feet, is covered with beautiful crystallizations of sulphur and other minerals. Its character beneath the surface at Monte Cerbole is that of a black marl streaked with chalk, giving it at a short distance the appearance of variegated marble.”—“Formerly, the place was regarded by the peasants as the entrance to the lower regions, a superstition derived no doubt from very ancient times, for the principal of the lagoons and the neighbouring volcano still bear the name of Monte Cerboli (*Mons Cerberi*.) The peasantry never passed by the spot without terror, counting their beads, and praying for the protection of the Virgin.”

The borax lagoons, scattered over an extensive district, have become the property of M. Larderel,¹ through whose intelligent activity they have been brought to their present profitable action within a very few years. The process of manufacture is simple; the soffioni, or vapours, which burst forth from different parts of the mountain recesses, are found to produce boracic acid only when the vapours issue with fierce explosions. In these spots artificial lagoons are formed by the introduction of mountain streams. The hot vapour keeps the water boiling, and after impregnating it for about twenty-four hours, the contents of the most elevated lagoon are allowed to flow into a second lagoon, where a second impregnation takes place, and then to the third, and so on, till it reaches the lowest receptacle; and having thus passed through six or eight lagoons, it contains about one-half per cent of boracic acid. It is then transferred to the reservoirs, whence, after standing a few hours, it is conveyed to the evaporating pans, where the hot vapour concentrates the strength of the acid by passing under shallow leaden vessels from the boiling fountains above. There are from 10 to 20 pans, in each of which the concentration becomes greater at every descent till it passes to the crystallizing vessels, whence it is carried to the drying rooms, and in two or three hours it becomes ready to be packed for exportation.

Before the time of M. Larderel the lagoons had often been worked, but without success: charcoal had been employed as fuel to evaporate the liquor, but the expense of this fuel, and other charges incident thereon, left but little profit to the proprietors; so much so, that the most productive district was offered, so lately as the year 1818, at an annual ground-rent of 6*l.* 13*s.* 4*d.* But the immense increase in the value of the property arose from the simplest of all improvements, *viz.* the abandonment of the use of charcoal, and the application of the heat of the lagoons to the evaporation of their own waters. The process of subjecting the waters to a succession of impregnations before evaporating, is a valuable improvement, due to Signor Ciaschi, who worked the lagoons about the year 1816, and perished miserably in consequence of falling into one of the lagoons which he himself had excavated.

The importance to Tuscany of the manufacture of boracic acid had long been recognised, but the expense of procuring the acid had limited the supply, and still kept it at a high price. The improved processes, however, increased the production, and reduced the price, when its extensive applicability to manufacturing purposes soon increased the demand also. In about four years the quantity has been quadrupled, by superior modes of extraction, and by greater care employed in

the collection of the boracic vapour. In 1833, about 650,000 Tuscan pounds were obtained; in 1836, 2,500,000.

“But it appears to me,” says Dr. Bowring, “that the powers and riches of these extraordinary districts remain yet fully to be developed. They exhibit a great number of mighty steam-engines, furnished by nature at no cost, and applicable to the production of an infinite variety of objects. In the progress of time this vast machinery of heat and force will probably become the moving central-point of extensive manufacturing establishments. The steam, which has been so ingeniously applied to the concentration and evaporation of the boracic acid, will probably hereafter, instead of wasting itself in the air, be employed to move huge engines, which will be directed to the infinite variety of production, which engages the attention of labouring and intelligent artizans; and thus, in the course of time, there can be little doubt that these lagoons, which were fled from as objects of danger and terror, by uninstructed man, will gather round them a large and intelligent population, and become sources of prosperity to innumerable individuals, through countless generations.”

There are nine establishments for the manufacture of boracic acid, and the whole amount produced daily varies from 7,000 to 8,000 pounds troy. The produce does not appear susceptible of much extension, as the whole of the water is turned to account; but the state of the atmosphere has some effect on the result. In bright clear weather the vapours are less dense, but the depositions of boracic acid in the lagoons are greater. Increased vapours predict unfavourable weather, and the peasants regard the changes in these vapours as they would the fluctuations of a barometer, and regulate their agricultural labours accordingly.

The boracic acid was long supposed not to exist in the vapours; indeed, its quantity is so minute that we need not be surprised at its remaining so long undetected. In the lowest of the lagoons, after five, six, or more impregnations, the quantity of acid given out does not exceed one-half per cent.; thus, as Dr. Bowring shows, if the produce be estimated at 7,500 pounds per day, the quantity of saturated water daily discharged is 1,500,000 Tuscan pounds, or 500 tons English.

The lagoons are commonly excavated by the mountaineers of Lombardy, who emigrate into Tuscany during the winter season, when their native Apennines are covered with snow: they earn about one Tuscan lira per day. But the works are conducted, when in operation, by natives, who with their families dwell in houses near the evaporating pans. They wear a common uniform, and their health is generally good.

The manufacture of boracic acid has also greatly improved the district in general. The soil is better cultivated than ever, and new tracts have been brought under the labours of the husbandman. A rise of wages has accompanied this new demand for labour. “Before the boracic lakes were turned to profitable account, their fetid smell—their frightful appearance, agitating the earth around them by the ceaseless explosions of boiling water, and not less the terrors with which superstition invested them, made the lagoons themselves to be regarded as public nuisances, and gave to the surrounding country a character which alienated all attempts at improvement.

“Nor were the lagoons without real and positive dangers, for the loss of life was certain where man or beast had the misfortune to fall into any of those boiling baths. Cases frequently occurred in which cattle perished; and one chemist, of considerable eminence, met with a horrible death by being precipitated into one of the lagoons. Legs were not unfrequently lost by a false step into the smaller pits, where, before the foot could be withdrawn, the flesh would be separated from the bone.

“That these lagoons, now a source of immense revenue, should have remained for ages unproductive; that they should have been so frequently visited by scientific

(1) The Grand Duke of Tuscany has lately conferred on M. Larderel the title of Count de Pomerance.

men, to none of whom (for ages at least) did the thought occur, that they contained in them mines of wealth, is a curious phenomenon; nor is it less remarkable, that it was left for a man, whose name and occupation are wholly disassociable from science, to convert these fugitive vapours into substantial wealth."¹

MARY BEATRICE OF MODENA.²

THE time has happily gone by when it would have been held dangerous or disloyal to express sympathy for the fallen fortunes of the royal house of Stuart. The ungenerous spirit in which the historians of the last century, with very few exceptions, found it, perhaps, necessary to write the annals of the most interesting period of our history, is now rapidly disappearing. We have no longer occasion to feel that a reverential regard for the sacred claims of misfortune may be in any respect inconsistent with an earnest zeal for the preservation of our constitutional liberties. We may follow with respectful commiseration a disrowned king into his exile, without being chargeable with any desire to restore arbitrary power; and we may accord the due measure of respect to the conscientious adherence to a proscribed faith which lost him his crown, without incurring the suspicion that our affection for our own Church has suffered any diminution. The flame of party zeal, in connexion with this subject, is dying out for want of sustenance. There exist now no persons in the world, whose rights or interests are liable to be affected by the judgment which may be formed of the revolution of 1688; and juster and more moderate views of the subject have therefore come to prevail.

There can be no stronger proof of the blinding influence of political partizanship, than that the conduct of the daughters of James the Second to their father has been hitherto regarded with so much indulgence. While we have been weeping over the imaginary sorrows of Lear, and execrating the crimes of his unnatural offspring, we have been almost insensible to the real afflictions of James, and to the scarcely less unnatural ingratitude of his children. If Mary and Anne had not the energy and unscrupulous audacity, with which Shakspeare invests the characters of Regan and Goneril, it is not the less true, that their whole conduct shows them to have been equally devoid not only of the principle of filial duty, but even of the instinct of natural affection. After every possible allowance which can be made for the circumstances into the stream of which they had been cast, and which they probably had little power to control, there remains enough to make the place which they must occupy in history, a very unenviable one. If they could not have saved their father, they need not, at any rate, have lent themselves to his overthrow. The selfish inanity of their characters has long since made them the objects of something as near to contempt, as it is easy to feel towards princes—a feeling which the more impartial estimate of their career now generally formed, is rapidly converting into a more active one of strong moral repugnance.

"Ingratitude! thou marble-hearted fiend,
More hideous, when thou show'st thee in a child,
Than the sea monster."

It is right that it should be so. It cannot be but that the general indulgence, even commendation, with which

the conduct of those women to their father has been mentioned in history, must have had an unwholesome effect upon the moral sensibilities of the nation. We have little faith in the reality of that public virtue which pursues a political end, however desirable, by the sacrifice of the most graceful and indispensable of the natural affections. And still more, when we find that the object actually arrived at is personal aggrandizement,—while the affections sacrificed are the most sacred, and the most closely linked with whatever is good in our natures, which can hold a place in the human breast,—the evidence of purity of intention must be strong indeed, to overcome the shrinking of heart with which we contemplate such a moral anomaly. Even the stern justice of the elder Brutus is sufficiently revolting to our natural feelings; but the cold-blooded ambition of James's daughters fills us with disgust, unmitigated by anything lofty or imposing—anything greatly daring—in the means by which its end was attained. Can we say that their guilt was less than that which brought down the patriarch's prophetic curse upon his son, and consigned one whole family of the earth to servile debasement? When history shall, in after times, re-echo the dying words of Madame Roland, "O liberty! how many crimes are committed in thy name!" we fear that our own "glorious" revolution, in some of its incidents, will not be absent from its thoughts; that it will think of the daughters who, to gain a crown for themselves, "tied sharp tooth'd unkindness, like a vulture," to a father's heart, consigning him in sorrow and exile to that bitterest of all feelings that can afflict the heart of a man—the feeling

"How sharper than a serpent's tooth it is
To have a thankless child."

Our interest in the misfortunes of James becomes still warmer at discovering the influence which they seem to have exercised upon his character. Without entering into minute particulars, it is sufficiently clear, that, with some attractive points in his disposition, he was, in the days of his prosperity, too largely imbued with the prevailing vices of his rank and age. It was a time of general laxity and moral debasement, especially in the higher walks of life; and James shared more than enough in the taint with which the atmosphere he lived in was infected. His adversity seems, in truth, to have brought a healing balm with it. Though, like the toad, ugly and venomous, it wore "a precious jewel in its head," which, with a talismanic virtue, cleansed away the moral leprosy that clove to him. He became, no doubt a sadder, (who can wonder at that!)—certainly a wiser and a better man. The loss of his earthly crown seems to have set him, in right earnest, upon the search after what no man yet searched for in earnest without finding,—a heavenly one. His piety seems to have been fervent and sincere,—not a mere splanetic disgust with a world whose pomps and vanities had forsaken him,—but an enduring principle implanted within him, and bearing its appropriate fruits. The message of forgiveness which, with his dying breath, he sent to his undutiful daughter, and the injunction which, at the same time, he gave to his son, that if ever he came to his throne, he should not take vengeance upon his enemies, attest more strongly than any thing else can the reality of the change which his sufferings had wrought upon him.

It is not of James, however, that we are now to speak, but of his wife—of her who, though innocent of any share in his political misdoings, bore the full burden of his punishment; who having, with the not unnatural reluctance of an unsophisticated girl of fifteen, united herself to a middle-aged man—a reluctance little qualified by the knowledge that he was the heir-presumptive to a throne—so schooled her young affections, that, long before their union came to a close, her heart had become his as devotedly as if he had been from the first the object of her most passionate love; who, in the time of

(1) From Dr. Bowring's Report on the Statistics of Tuscany.

(2) *Lives of the Queens of England*, by Agnes Strickland. Vol. ix. containing the first part of the life of Mary Beatrice of Modena, Queen Consort of James II. London: Colburn, 1846.

his sorrow and suffering, became his comforter, his counsellor, his support; who, with a constancy of affection never surpassed in any sphere of life, upheld his feeble steps, as, under the weight of premature old age, he tottered to the grave, and with the soft hand of womanly tenderness smoothed his dying pillow, clinging to her desolate husband until she was forced away lest the poignancy of her grief should disturb his last moments. This pattern of a wife, of whom, though a British queen, so deep and envenomed has been the prejudice with which the character of every one connected with the unhappy Stuarts has been regarded, we have hitherto known little or nothing, save the vile and coarse calumny of which she has been the object, is the subject of this volume of Miss Strickland's *Lives of the Queens of England*.

There is something very peculiar in the view which we obtain of history in tracing the lives of Royal Consorts. The great outside world is never entirely shut out. The chariot of state is always to be seen,—the sound of its wheels is ever in our ears,—we feel that the events we are dealing with are at no time entirely disconnected from it, though sometimes joined by a thread so fine as to be nearly invisible,—that they often influence its course,—more frequently are borne irresistibly along with it; at the same time we are not *in* the busy whirl; we look down upon it, as it were, from some private casement, and its sound is softened and subdued, ere it reaches us, by the thick folds of domestic drapery which shut us in. We leave the beaten highway of history, with all its roughness and dust, and follow the same course along a smooth grassy path, thickly shaded by overhanging boughs from the glare of the noon-day sun, but opening up, every now and then, bright peeps into the world around, and never removing us altogether from the sight and sound of it.

The present biography, if not the most intrinsically interesting, is in one point of view the most valuable accession to our stores of historical information of those which Miss Strickland has yet given to the world. The subject of it, as she tells us, is one whose life has never before been written with any attempt at truthful delineation. Had she done no more than so sifted and arranged the materials already possessed by the world, as to bring out the truth from under the load of interested misrepresentation under which it lay concealed, she would have done much to deserve our thanks; but, in addition to that, her industry and research have brought before us a large amount of information which had been concealed from the investigations of all former historians. The materials of which she has made use, and the means by which she obtained access to them, are thus described by her: "The materials for the biography of the Consort of James II. are chiefly derived from the unpublished letters, journals, and documents, of the period. Many of these, and indeed the most important, are locked up in the secret archives of France; papers that are guarded with such extreme jealousy from the curiosity of foreigners, that nothing less than the powerful influence of M. Guizot himself could have procured access to those collections. Through the kindness and liberality of that accomplished statesman-historian, every facility for research and transcription was granted during my residence in Paris in the spring and summer of 1844. The result was fortunate beyond my most sanguine expectations, in the discovery of inedited letters, records, and documents, connected with the personal history of the beautiful and unfortunate princess whose memoir occupies the present volume of the '*Lives of the Queens of England*.' Not the least curious of these records is part of a MS. diary, kept, apparently, by one of the nuns of Chaillot, of the sayings and doings of the exiled queen, during her occasional retreats to that convent after the death of James II., full of characteristic traits and anecdotes. It is quaintly, but pleasantly written, though sometimes wearisome at times, from the frequent allusions to the devotional exercises, the fasts, and other observ-

ances practised by the sisters of Chaillot and their royal guest. It admits us, however, most fully within the grate, and puts us in possession of things that were never intended to be whispered beyond the walls of that little world. Much additional light is thrown on the personal history of the exiled royal family, by the incidents that have been there chronicled from the queen's own lips. The fidelity of the statements is verified by their strict agreement, in many instances, with other inedited documents, of the existence of which the sister of Chaillot could not have been aware. Besides these treasures, I was permitted to take transcripts of upwards of two hundred original autograph letters of this queen, being her confidential correspondence for the last thirty years of her life, with her friend Françoise Angellique Priolo, and others of the nuns of Chaillot. To this correspondence I am indebted for many touching pictures of the domestic life of the fallen queen and her children, during their residence in the chateau of St. Germain. It is impossible to read her unaffected descriptions of her feelings without emotion. Some of the letters have been literally steeped in the tears of the royal writer, especially those which she wrote after the battle of la Hogue, during the absence of King James, when she was in hourly expectation of the birth of her youngest child, and finally, in her last utter desolation."

We shall now give a few particulars of the life of Mary Beatrice, from Miss Strickland's narrative, which, we may observe, carries it down only to the death of James II., in September 1701.

She was a daughter of the illustrious house of Esté, immortalized by Tasso, Ariosto, and Dante. This family had long ruled over the united duchies of Ferrara and Modena; but, about a hundred years before the birth of Mary, the duchy of Ferrara had been seized by the pope, and annexed to the papal dominions, under the pretence that it was a fief of the papal empire; and the representative of the family was after that only known as Duke of Modena. The father of Mary Beatrice was Alphonso d'Esté, duke of Modena, son of Francisco the Great and Maria Farnese. Her mother, Laura Martinuzzi, was the daughter of Count Hieronimo Martinuzzi da Fano, a Roman nobleman of ancient family, and Margaret, sister of Cardinal Mazarine. She was the eldest child of her parents, and was born on the 5th of October, 1658. Her father, an able and accomplished prince, died while she was almost an infant, leaving her and a younger brother to the guardianship of their mother, and their uncle, prince Rinaldo d'Esté, afterwards Cardinal d'Esté. She was educated at home, under the care of a governess, until she was nine years old, after which she was sent to finish her education in a convent, where she imbibed a taste for a life of religious seclusion, which contributed greatly to her reluctance to unite herself to James, and was not without its influence upon the whole of her after life.

James's first wife, Ann Hyde, died in 1672, leaving two daughters. He seemed disposed a second time to seek for a wife among his brother's subjects, having actually given a written promise of marriage to Lady Bellasis, widow of Sir Henry Bellasis, a lady of invincible zeal for protestantism, and of unimpeachable character; but, the matter having come to the king his brother's ears, he interposed his authority to have it broken off, compelled Lady Bellasis to give up the promise, and engaged his brother in negotiations for marriage with a foreign princess.

The person employed to arrange matters for James's marriage was his friend the Earl of Peterborough, who has left an amusing account, from which Miss Strickland quotes pretty fully, of his adventures in the course of several negotiations, which, one after the other, proved abortive, until that with the subject of this notice was, after many difficulties, at last brought to a successful issue. It was not without much difficulty that, after every other obstacle was removed, the unwillingness of Mary Beatrice to renounce her long-cherished desire of

spending her days in a convent, for the sake of a union, however splendid, with a man whom she had never seen, and of whom she knew nothing but that he was twenty-five years older than herself, was overcome. She wept bitterly, and yielded at last only in obedience to the commands of her mother, whom she had never ventured to disobey. The marriage was solemnized on the 30th September, 1673, the Earl of Peterborough officiating as proxy for the royal bridegroom. Mary arrived in England on the 21st of November, and met her husband at Dover, whither he had gone to welcome her to her future home.

James was delighted with his young bride. Her first impressions of him were different. Miss Strickland says: "Mary Beatrice in after years acknowledged that she did not like her lord at first. What girl of fifteen ever did like a spouse five-and-twenty years her senior?" James had enough good sense to take no notice of the childish aversion which she could not conceal, and treated her with the utmost kindness and affection. Her aversion, it will be seen, was not very long-lived. They were married over again in person that night by the Bishop of Oxford.

Mary Beatrice was received with great favour by the king her brother-in-law, who continued to treat her with much kindness to the end of his life. She said of him in after years: "He was always kind to me, and was so truly amiable and good-natured that I loved him very much, even before I became attached to my lord the Duke of York." But she was, on her arrival, the object of a very different feeling on the part of the nation generally. We shall here have recourse to Miss Strickland's own words: "The reception of the youthful duchess, on her first appearance at Whitehall, was truly flattering, as she was treated with every mark of affection and distinction by their Majesties, and with much respect by the great ladies of the court and all the royal party; yet, observes Lord Peterborough, 'clouds hung heavy upon the brows of many others, who had a mind to punish what they could not prevent.' It was impossible for any thing to be more unpopular than the marriage of the heir presumptive to the crown with a Catholic princess. The disapprobation of parliament had been loudly, but fruitlessly, expressed. The ribald political rhymesters, who had already assailed James with a variety of disgusting lampoons on the subject of his Italian alliance, were preparing to aim their coarse shafts at his bride; but, when she appeared, her youth, her innocence, and surpassing loveliness, disarmed even their malignity; they found no point for attack. From others the young duchess received the most unbounded homage. King Charles ordered a silver medal to be struck in honour of his brother's marriage, in which half-length portraits of James and his bride appear, face to face, 'like Philip and Mary on a shilling.' The disparity in their age is strikingly apparent, for, though the royal admiral was still in the meridian pride of manhood, and reckoned at that time one of the finest men in his brother's court, his handsome but sternly-marked lineaments are in such strong contrast to the softness of contour, delicate features, and almost infantine expression of his youthful consort, that no one would take them for husband and wife. The dress of the young duchess is arranged with classical simplicity, and her hair negligently bound up with a fillet, over which the rich profusion of ringlets fall negligently, as if with the weight of their own luxuriance, on either side her face, and shade her graceful throat and bosom. As this princess was of that order of beauty to which the royal taste awarded the palm, and her natural charms were unmarred by vanity or affectation, she excited boundless admiration in the court of Charles II., where it was hoped that the purity of her manners and morals would have a restraining and beneficial effect."

Mary Beatrice had been accompanied to England by her mother, the Duchess of Modena, who left her in something more than a month. She felt the separa-

tion bitterly; but she was now beginning to become reconciled to the society of her husband, for whom she was gradually imbibing an affection which, as she herself said after she was a widow, "increased with every year that they lived together, and received no interruption to the end of his life." Her fondness for him became such, she said, "as to amount to an engrossing passion which interfered with her spiritual duties, for she thought more of pleasing him than of serving her God; and that it was sinful for any one to love an earthly creature as she had loved her husband, but that her fault brought its own punishment in the pain she suffered at discovering that she was not the exclusive object of his regard." This last allusion Miss Strickland thus explains:—"James had unhappily formed habits and connexions disgraceful to himself, and inimical to the peace of his youthful consort. His conduct with several of the married ladies of the court, and even with those in her own household, afforded great cause for scandal; and of course there were busy tongues, eager to whisper every story of the kind to his bride. If Mary Beatrice had been a few years older at the time of her marriage, she would have understood the value of her own charms, and, instead of assailing her faithless lord with tears and passionate reproaches, she would have endeavoured to win him from her rivals by the graceful arts of captivation, for which she was well qualified. James was proud of her beauty, and flattered by her jealousy; he treated her with unbounded indulgence, as she herself acknowledged; but there was so little difference in age between her and his eldest daughter, that he appears only to have regarded her as a full-grown child, or a plaything, till the moral dignity of her character became developed by the force of circumstances, and he learned to look up to her with that admiration and respect which her virtues were calculated to excite. This triumph was not easily or quickly won; many a heart-ache and many a trial had Mary Beatrice to endure before that day arrived."

Mary's first child, a daughter, was born on the 10th Jan. 1675. She had the child privately baptized a few hours after its birth, according to the rites of the Church of Rome; but Charles, when he was informed of it, disregarding her tears and expostulations, (for she was terrified at the thought of having been the means of incurring a sacrilege through the reiteration of the baptismal sacrament,) ordered the little princess to be borne with all due solemnity to the Chapel-royal, and had her christened there by a Protestant bishop, according to the rites of the Church of England. She was called Catharina Laura, out of compliment to the Queen and the Duchess of Modena. Her first baptism was kept a profound secret, and was only divulged by Mary Beatrice herself, many years after, to the Nuns of Chaillot. This child died at the age of ten months.

A second daughter was born on the 18th August, 1676, which only lived to be five years old.

Mary Beatrice was on the eve of her third confinement, when her husband's eldest daughter, Mary, was married to the Prince of Orange. She was present in the princess's bed-chamber, when this event—so fatal to the fortunes of herself, her husband, and her children—was solemnized. A jest of King Charles on the occasion is worth repeating. It would have been more pleasing, had it been less literally true—less suggestive of the existence even then of feelings and hopes, which were afterwards so signally displayed. He bade the Bishop of London "make haste with the ceremony, lest his sister should be delivered of a son in the meantime, and so spoil the marriage." Three days afterwards the boy whom his majesty had thus merrily anticipated was born. But he died of small pox when little more than a month old, to the great disappointment of the nation, and to the inexpressible grief of his parents, to whom his loss proved in every aspect of it an irreparable calamity.

Mary Beatrice continued always on very friendly

terms with James's daughters by his first wife. Before the Princess of Orange had been long married, reports reached England which suggested doubts of her happiness in her married state, and Mary Beatrice determined, with the permission of the king and her husband, to pay her a visit incognito, accompanied by the Princess Anne. The feelings which led to this visit are thus pleasingly described by Miss Strickland: "The unostentatious manner in which the duchess wished to make her visit to her step-daughter, the Princess of Orange, proves that it was simply for the satisfaction of seeing her, and giving her the comfort of her sister's society, unrestrained by any of the formal and fatiguing ceremonials which royal etiquette would have imposed upon all parties, if she had appeared in her own character. Considering the extreme youth of the three ladies, the affectionate terms on which they had always lived together, and the conjugal infelicity of the lately wedded Princess of Orange at that time, her sickness and dejection, it is more than probable that Mary Beatrice undertook this expedition with the Princess Anne, in consequence of some private communication from the pining invalid, expressive of her anxious desire to see them, and confide to them some of the trials which weighed so heavily on her heart in that uncongenial land of strangers."

The visit was a short, though apparently an agreeable one, and Mary Beatrice returned, after a few days' stay at the Hague, to find her lord vainly attempting to grapple with the fierce storm which had suddenly arisen in England, and which was got up for his destruction, known by the name of the Popish Plot.

POPULAR YEAR-BOOK.

October 17.—St. Ethelreda, who is commemorated on this day in the Kalendar of the Church of England, was the daughter of Anna and Heriswitha, King and Queen of East Anglia, and born at Exning, then the capital of that kingdom—now a little village in a detached part of Suffolk, that lies like an island in the eastern portion of Cambridgeshire. She early embraced a resolution of perpetual virginity. She was twice wedded; first to Tonbert, Prince of the Givvii, and some years after his decease, to Egfrid, King of Northumberland: but both her marriages were merely nominal. In process of time Egfrid became convinced that his union with Ethelreda was not for the happiness of either; and, in compliance with her earnest prayers and tears, he gave his reluctant consent to her taking the veil under his aunt, St. Ebbe, at Coldingham. She had not, however, long taken up her abode in that convent, when she received intelligence that the king was about to bring her back by force to his palace. The venerable Ebbe advised immediate flight; and, with two female companions, the Virgin Queen set forth on her pilgrimage. Crossing the Humber, she came to Wintringham, and remained for some time in a neighbouring village, which the historian calls Alfta. Hence, says the legend, she proceeded southward through Lincolnshire, till, weary with her journey, she sat down in a pleasant nook, and fell asleep. She had placed her pilgrim's staff at her head, and, on waking, found it had grown into a shady tree, and had protected her, during her repose, from the rays of the sun. At length she arrived in the Isle of Ely, which had been settled on her by her first husband; and here, gathering around her a band of devoted maidens, she laid the foundation of that Abbey which became afterwards so illustrious. She built a church for their devotions; the fame of the establishment spread far and wide; and, finally, in the year 673, she commenced the building of a monastery, upon which she spent all that she possessed. St. Wilfrid, on hearing of the progress that the new Abbey was making, hastened to Ely, and gave Abbatial con-

secration to St. Ethelreda. Henceforth her life was peace. She delighted in becoming the servant of all; preceding them in nothing but in the painful march, by which they sought to enter the heavenly kingdom. At length she was seized with the complaint that was to terminate her earthly existence. It was a painful swelling of the neck, and, she acknowledged, a just punishment for the pride she had formerly taken in wearing necklaces. On the twenty-third of June, 679, after having called the whole congregation about her, and received the Holy Eucharist, she went, says her biographer, "from the desert of this world, with angels for her companions, into the joys of that which is to come." On the seventeenth of October, in the same year, her remains were translated in the presence of St. Wilfrid and many others, from their temporary resting-place, to their more durable shrine in the church of St. Mary, which St. Ethelreda had herself built: and there, according to the Monkish historiana, they became illustrious by a long series of miracles.

St. Ethelreda's name by abbreviation became corrupted to Auldry, or Audry, by which latter she is still denominated in the Isle of Ely. As at the fair held at this place, much ordinary but showy lace was usually sold, St. Audry's lace soon was proverbial, and from that cause *taudry*, a corruption of St. Audry, has become a common expression to denote not only lace, but any other part of female apparel, which is more gaudy in appearance than remarkable for its real quality and value.

October 18.—Feast of St. Luke.

This apostle is supposed to have put off mortality about A.D. 70, in the eighty-fourth year of his age. His festival was first instituted A.D. 1130. It is celebrated by the Church of England.

OLD CUSTOMS.

Drake says in his "Eboracum" that St. Luke's day is known in York by the name of *whip-dog-day*, from a strange usage that school-boys have there of whipping all the dogs that are seen in the streets on that festival. This cruel practice is said with some probability to be in memory of the following circumstance. A priest who was celebrating Mass in one of the churches of York, unfortunately dropped the consecrated wafer, which was suddenly snatched up and swallowed by a dog. The animal was instantly killed, and a persecution inflicted upon the canine race throughout the city. The same writer remarks, "A fair is always kept in Micklegate, York, on St. Luke's day, for all sorts of small wares. It is commonly called *Dish-Fair*, from the great quantity of wooden dishes, ladles, &c. brought to it. There is an old custom used at this fair of bearing a wooden ladle in a sling on two stangs about it, carried by four sturdy labourers, and each labourer was formerly supported by another. This, without doubt, is a ridicule on the meanness of the wares brought to this fair, small benefit accruing to the labourers at it."

October 21, is the anniversary of the BATTLE OF TRAFALGAR, which was fought on this day, 1805, between the English and the combined fleets of France and Spain. In this dreadful engagement, which lasted four hours, twenty sail of the enemy were sunk or destroyed, and Admiral Villeneuve, the French commander-in-chief, and two Spanish admirals were made prisoners. The British force consisted of twenty-seven, and that of the enemy of thirty-three, sail of the line—eighteen of which were French and fifteen Spanish. The gallant Nelson was wounded about the middle of the action, and died nearly at its close.

October 25.—St. Crispin's Day.

The name of this saint has a place in the Church of England Kalendar. The Latins commemorate him in conjunction with St. Crispinian. These holy persons were brothers of noble family, and born at Rome, whence

(A.D. 808) they travelled to Soissons in France, to propagate the Christian faith; and because, like St. Paul, they would not be chargeable to others for their maintenance, they "worked with their hands in the night, making shoes." Success attended their missionary endeavours, but it was unhappily of but short duration. No sooner did the governor of the town ("the most implacable enemy to the Christian name,") hear of it than he summoned the saintly brethren to his tribunal. Butler relates that "they were victorious over this most inhuman judge, by the patience and constancy with which they bore the most cruel torments, and finished their course by the sword." "It is difficult," says Brady, "to account for the origin of the Kentish tradition, that they were buried near Lydd, which is, however, the popular belief of that neighbourhood; and a heap of stones on the beach, near a spot called STONE'S END, is to this day shown as the place of their interment." These saints, on account of the trade they had recourse to at Soissons, have been selected as the patrons of shoemaking.

In an old romance, a prince of the name of Crispin is represented as having exercised the above "art and mystery," and thence is supposed to be derived the expression of the *Gentle Craft*, as applied to it.

In the sixth century a great church was built, under the invocation of SS. Crispin and Crispinian, and their shrine was richly adorned. So popular, indeed, were they in mediæval times, that in France, as well as in this country, they were not only considered as the patrons of the shoemakers, but that two societies were established, bearing the titles of *Freres Cordonniers*—Brother Shoemakers—the one under the protection of St. Crispin, the other of his martyred brother; the produce of whose labours was paid into a common stock, to furnish necessaries for the support of the monks of each society, and the surplus appropriated to the benefit of the poor.

Hone remarks that, from the highest to the lowest, St. Crispin's is a day of "feasting and jollity" among the present race of shoemakers.

On this festival, A.D. 1415, the celebrated battle of Agincourt was fought between the English, under King Henry V., and the French, under the constable d'Albret. The French had a force which, if prudently conducted, was sufficient to trample down the English in the open field. Henry had not, if we may believe some writers, more than the tenth of the French king's numbers; and, besides this, his men were worn out with sickness, and in want of many necessaries. The French were led on by able generals, and plentifully supplied with provisions. The English archers, as at Cressy, let fly a shower of arrows, which did great execution. A quantity of rain had fallen; and the clayey nature of the soil greatly hindered and perplexed the French troops. The field was too small to allow them room; the English archers taking their battle-axes, and, assisted by the men-at-arms, fell in among them, and the rout was soon general. It was the greatest victory that the English ever gained in France. There were ten thousand slain, and fourteen thousand prisoners; among both of these were several noblemen, and others of great reputation. The English only lost few men, and the Duke of York. Henry returned to England by way of Dover, the crowd plunged into the waves to meet him, and the conqueror was carried in their arms from his vessel to the beach. The road to London exhibited one triumphal procession. The lords, commons, and clergy, the mayor, aldermen, and citizens, conducted him into the capital; tapestry, representing the deeds of his ancestors, lined the walls of the houses; pageants were erected in the streets; sweet wines ran in the conduits; bands of children, tastefully arranged, sang his praise; and the whole population seemed intoxicated with joy. Shakespeare has given a speech to Henry V., before this memorable engagement, that will mark the Festival of St. Crispin to the end of time.

"This day is called the Feast of Crispian.
He that outlives this day, and comes home safe,
Will stand a-tip-toe when this day is named,
And rouse him at the name of Crispian.
He that shall live this day, and see old age,
Will yearly, on the vigil, feast his friends,
And say, To-morrow is St. Crispian.
Then will he strip his sleeve, and show his scars.
Old men forget; yet shall not all forget,
But they'll remember with advantages,
What feats they did that day. Then shall our names,
Familiar in their mouth as household words,—
Harry the King, Bedford and Exeter,
Warwick and Talbot, Salisbury and Gloster,—
Be in their flowing cups freshly remembered.
This story shall the good man teach his son:
And Crispin Crispian shall ne'er go by
From this day to the ending of the world,
But we in it shall be remembered;
We few, we happy few, we band of brothers;
For he, to-day, that sheds his blood with me,
Shall be my brother; be he ne'er so vile,
This day shall gentle his condition;
And gentlemen in England, now a-bed,
Shall think themselves accursed, they were not here;
And hold their manhoods cheap, while any speaks
That fought with us upon St. Crispin's Day."

ISABELLA MORGAN; OR, RICH AND POOR.

It so happened, that Isabella Morgan, a girl of fourteen, although one of three daughters, was at this time her father's sole companion; and, delighted at all seasons to be with him, her pleasure in his society was still enhanced by a little feeling of pride that she was now really useful; and that on her punctuality and skill depended the comfort of his tea and breakfast, and that papa would be quite lonely without her all the evening. So impressed was she with her own responsibility for his amusement, or so eager to share all her thoughts and fancies with this kind and cheerful father, that he had seldom laid aside his pen or book for half a minute, before she would begin the recital of some morning's adventure, or open upon some astonishing subject with "Papa, I wonder whether . . . !" or, "Papa, don't you wonder why . . . !" But her doubts and embarrassments were seldom very important or perplexing: the wonderment was spoken the moment it arose in her mind, and, if capable of any rational solution at all, was soon quieted by her father's sagacious replies. Not so on this present evening: daylight had faded away, though candles and tea-time had not arrived. Mr. Morgan laid aside his pen, and drew near the small summer-fire by which his daughter was seated on a low footstool, expecting from her some merry remark or grave surmise, as an introduction to their usual chat; but she seemed really considering some great matter, as a full minute passed, and yet she spoke not.

Mr. Morgan therefore roused her by begging, when her reverie was over, that he might be favoured with knowing what opinion she had formed of men and manners.

"I was thinking of men, papa," she replied; "that is, of women, which is all the same, I suppose; and of their manners, too, or something more than manners. It has puzzled me very often lately; and I have tried not to think about it: but I went to Susan Parker's to-day, and talked to her and her sister, and it came to me again stronger than ever—I must tell you, and hear what you say about it;—but it is something so strange, it seems almost wicked:—Do you know, papa, I can't help thinking that the rich people are better than the poor?"

Mr. Morgan had had a harassing day of business; he had just finished all the unpleasant letters which he was to send by to-morrow's post, and he knew he must devote two or three hours before bed-time to sermon-

writing. He would therefore have been better pleased if his daughter's meditations had turned on her garden, or her pony, or her chickens; or even if she had desired to talk to him about her new straw bonnet, or on any other immaterial subject; for he had hoped to rest his mind as well as his eyes in this dim hour of twilight; and a little frivolous chat with those they love is the best refreshment to sensible hard-working men of busy habits. It is only those who lead idle lives, or whose daily employments bring with them no wear of intellect, who like, if they have any minds at all, to exercise them in serious discussion around their own fire-sides.

But Mr. Morgan saw that his daughter was deeply interested in the subject she had started; and he knew that often, when the young are eagerly seeking counsel or sympathy in their mental troubles, a cold rejoinder, or an ill-timed jest, will close up the open heart, which, half in pride, and half in shame, resolves to make no more unvalued confidences. He therefore kindly prepared to follow his daughter's lead: but, not knowing how far she meant to push her researches this evening, he merely said, "My dear Isabella, they *are*, and they *are not*: the rich are seldom hung or transported for their crimes, but you must be aware of the difference of their temptations. Among the rich, I suppose, you would include such as ourselves, who inhabit two parlours and a study, and keep a pony carriage;—you mean, in fact, all who are above want, and who hold a place in society?"

Yes; Isabella meant to pass amongst the rich,—her case otherwise would fall to the ground,—so she agreed to be numbered amongst the wealthy, and thus proceeded:—

"I know, papa, that the poor have great temptations which we never feel; particularly as to dishonesty, and poaching, and drunkenness, and all those sort of things; and they have not such good examples and instructions as we have from their childhood; so our principles ought, of course, to be much better than theirs; and I am sure much more must be expected from us in many ways. But that is not what I mean; it seems to me they have not the same feelings and affections that we have; and that is what puzzles me:—natural affection, surely, ought to be the same in all,—that cannot depend on education. Yet, since I have seen more of the poor lately, now I am the only one at home, it does seem to me that they don't love their parents, and brothers, and sisters, as we do: that they are always thinking first of themselves, and are not at all ashamed of it; and it comes into my head very often, that they cannot be born with the same feelings that we have, for our love comes so naturally; but then, again, it seems wicked to think we are really superior to the rest of our fellow-creatures because we are so fortunate as to be better off in the world. I wish I knew the truth!"

The tears that came into her eyes showed how seriously her mind was perplexed, and her father applied himself to satisfy her as well as he could:—

"There is nothing wicked in your feelings, my dear. The condition of the world, of ourselves, and our fellow-creatures, is a subject full of perplexities, daily and hourly increasing to a thoughtful disposition, which can only be solved in a spirit of faith and patience. The inequalities of our stations, when they first strike a young mind, appear an overwhelming difficulty. It is natural to feel, What am I, and what are my family and friends, that we should enjoy plenty and comfort, and leisure all day long to do what we please,—amusement when we are well, and attendance when we are sick,—while a much larger proportion of our fellow-creatures, by some of whom we are always surrounded, have none of these blessings in their full extent, and many are daily suffering from the want of all? But this view of the case is not exactly what you mean to bring before me now; though I dare say it is a thought that has often floated through your mind."

Isabella confessed that it had.

"You see," said her father kindly, "your difficulties

are not so very strange and shocking, since I can guess at some without your telling me. But now let me hear what you met with particularly to-day at Susan Parker's to distress you more. She is a good, respectable young woman, and a favourable sample of her own class. She seems recovering now, and is getting over the loss of her baby, I hope?"

"Oh, yes," said Isabella, rather angrily, "she gets over *that* very well! You know, papa, her baby and Eliza's were born just at the same time, five weeks ago; and the day after Maria went away to stay with her, I walked up to Susan Parker's about the gruel and the baby-clothes, and she was very well, she said; and I saw her and her baby; and her sister from Cobden was come to nurse her. I thought how comfortable they must be together, for Maria was so delighted to go to Eliza, and I know the last time they wanted it very much, if you would have consented; and they were so glad when you said Eliza might have her now. And Susan Parker has two other little children nearly the age of Eliza's; and, altogether, I thought it must be just as they were at Coldwell, only, of course, everything smaller and poorer: so I said to Susan Parker, 'How glad you must be that your father and mother can spare your sister to come to you now; I hope she will be able to stay a good while.' Mrs. Parker did not seem to think much of the pleasure of it, but she did say,—'Yes, 'tis a very good thing as I can have her; I could not get along without somebody; and she's very handy, and it comes cheaper than a regular woman; but I hope by next week I shall be able to do without her.' I thought she was quite ungracious; but her sister did not appear at all hurt, and said she hoped so too, for she seemed getting on quite nicely: and so, I thought again, it must be only their way of wishing each other well. Now you know, papa, a few days afterwards poor Susan caught cold, and was dangerously ill, and in the middle of it her baby died, and I did not see them again till this morning, when you sent me about the broth. She was very weak and poorly, and was sitting by the fire, with a blanket wrapped round her; and her sister was there too. I did not mean to say anything about the baby, but she inquired after Eliza's; and when I told her it was very well, she said, 'I'm glad of it; 'twould be a sad job, I dare say, for Mrs. Dawson to have lost it;' and then I said, I was very sorry for her, but I hoped she would not grieve much about it,—without quite thinking what I was saying; and it struck me directly I was very unfeeling to talk in that way, when the poor child had not been buried a week. But she said directly, 'No, miss, I don't grieve for it now—it seemed hard to part with it at first,—but the poor little baby is out of all its troubles, and, as my husband says, 'tis a folly to take on now,—for God will provide for it better than we could. 'Taint the same with us as 'tis with gentlefolks.' To be sure, she seemed ready to cry; so perhaps she did feel more than she acknowledged:—but, as to her sister Sally, she said, downright, that 'twas a blessed thing when the poor baby was taken, for it was so terrifying the last two nights, nobody could get a wink of sleep. Well, after this, I scarcely knew how to talk to them; they took everything so differently from what I expected; but I thought I must be right at last, when I said to Sally, 'How very fortunate it was that you were not gone before Susan was taken so much worse,—how sorry you would have been if you had left her too soon!' So Sally said directly, 'Yes, 'twas a very lucky thing for she, as the carrier could not take me the day before;—I don't know what she would have done, poor soul! I sat up with her three nights, and nobody to help me; but a neighbour, now and then, came in for an hour or so,—and then she was always wanting something or another! I've had no rest day nor night!—so many fancies to be sure! As soon as she'd got one thing, 'twern't right,—she must have something else! And one day she was not quite in her mind, and she kept calling out every minute to send for her hus-

'band;—she wanted *him*!' 'Lord bless you,' says I, 'Susan, do hold your tongue, and don't keep on so!—There's your poor husband's been up with you half the night, and now he's gone to his work, and who's to pay his wages if you sends for him home every minute!—I'm sure Farmer Curtis won't! And how are you to do without the money now, I should like to know—such an expense as 'tis with your illness day and night?' So I heartened her up, what with one thing and another, and she's much better now, you see, miss, and only wants good living to come round again; and I hopes I shall get home next week, for I'm a most worn out.' Well, just then, papa, she said she must go and see after the children in the lane, little troublesome things, or they'd be getting into mischief. So she ran out; and I felt glad she was gone, for I was quite disgusted with her; and I could not help observing to Susan that her sister seemed to want to get back very much; and Susan said she hoped, in another week, she would be able to do without her,—'twas a great expense to have anybody for five weeks; and when people sat up, and worked so hard, they must have something more than common. I do assure you, papa, she seemed to think of the tea and sugar her sister drank more than any thing else; and then she said that Sally wanted to get back, for she could not afford to pay her much besides her keep; and then I exclaimed, 'To be sure, you don't pay your own sister for nursing you!' And she looked as much surprised at me as I was at her; and said: 'Oh, yes! she could not expect Sally to come for nothing; but 'twasn't much;' and then Sally came in again, thumping one of the children, which was roaring with all its might; and I felt so shocked with them both for their selfishness and hardheartedness that I came away directly. Now, papa, how could I help comparing them with my own two sisters, who are just in the same situation? Maria would think nothing a hardship, I am sure, if Eliza were ill like Susan Parker; and they are so delighted to be together, I am afraid Maria will scarcely like to come home again. I never used to think there was any goodness in being fond of one's own family: I supposed it was all natural,—but it does not seem so with the poor people!—What can make the great difference, papa, which you must plainly see there is between us? Now only read, once more, part of Maria's last letter."

It began with the interesting details of Mrs. Dawson's convalescence, and thus went on:—"I am so delighted to be with dear Eliza, who says I am most useful to her, that I can never thank you enough for letting me come; and we both hope you will consent to my staying a fortnight longer. We spend our time so happily!—I am a great deal in her room, reading to her; and I nurse the baby very often; and when I am down stairs I have the two elder children, for their own nurse is gone home ill, and Eliza does not like them trusted entirely to Lucy, though she is very steady; and they are so good, they are no trouble. And I go to her school once or twice a-week; and I have been very busy in the green-house with the gardener; and I order the dinner, and keep the accounts. But, with all this, I have found time for riding; and I have been out most days with Mr. Dawson, on the nicest pony: and he shows me a beautiful country, and I have made some sketches near home; and now Eliza and I both go out in the open carriage, which we enjoy very much. We have not had any company, of course, only some of Mr. Dawson's family for a day or two; and when his sisters were here we had a great deal of music together. Eliza desires me to tell you she has had the toothache these last few days, and so she thinks she is entitled to keep me till it is gone: as you promised not to recall me till she was quite well again."

Mr. Morgan laid down the letter, and Isabella exclaimed—

"There, papa! don't you see the difference that I mean between my sisters and those two women in the lane?"

"I do see a great difference between them," replied her father, "greater, I think, than you yourself perceive; but, as you have been all day in an investigating mood, how has it escaped your penetration, that the difference of their situations is so entire as scarcely to afford any room for comparison between them? Both are staying from home, I grant you, with a married sister, but all the other circumstances of the case are so totally opposite, that I cannot imagine them to have one feeling in common."

"It seems they have not," replied Isabella; "but really, papa, I don't think the two cases can be so very different. I know Susan Parker and her sister have not the same luxuries that my sisters are enjoying, and they cannot spend their time in the same way; they have no carriage and no green-house, and they can't read such interesting books as we do; but then, their own occupations, I suppose, are the same interest to them as ours are to ourselves; and I don't understand why the pleasure of being together again ought not to be as great in every rank of life. Then, I was always told, that what we have never been accustomed to, we don't miss; and I have never pitied the poor for not having a carriage, and servants, and other comfortable things, any more than I have thought of pitying ourselves because we have not a lady's-maid and a housekeeper, as many people have."

"Nor would I wish you," rejoined her father, "to expend your pity on either case. Those who have never enjoyed luxuries cannot, certainly, feel the want of them as much as others who lose them. The same may be said with respect to what we call common comforts, of which the cottagers have, at all times, a very scanty allowance; but there are privations and hardships which must be felt alike by all who are made of flesh and blood: and, under these trials, I grant you that the patience and temper of the poor generally give way; and their good offices, in a lingering illness, lose much of their value, in our eyes, by the ungracious manner in which they are often tendered: but these trials never fall with their full weight on the rich, as we have agreed to call ourselves; and we can claim no merit for carrying our small burdens more gracefully than they drag along their heavy load. Sally told me nearly every thing that you heard with so much displeasure; and allowing for a *brusquerie* of manner, I thought it all very reasonable, and was pleased with her as a sensible active young woman; but, at your age, perhaps, I should have felt as you do. Her mother takes in washing, and the two women support themselves and the father entirely by it. Now Sally is the main-stay, for the mother has bad health; and, whilst she is away, they must hire a woman twice a-week to help. Mrs. Mills works very hard to get on with that; and both the daughters agreed she could not stand it long. Susan Parker only pays her sister as much as they are obliged to give the washerwoman, that they may not lose every way. I am sure you will be glad to hear that she makes no profit from her nursing. Now what was Sally doing when you were there?"

"She was hard at work washing; and I have always seen her busy about something."

"Just consider, my dear Isabella, what sort of a visit hers has been. She has sat up, night after night; and, at the best, has slept with her sister, and had her rest constantly broken by the sick woman, or the poor baby. Who do you think has dressed and looked after the other children,—mended their clothes and their father's,—got through their washing, cooked their victuals, and attended besides to the whims and fancies of a poor half-delirious creature! She seems to have soothed her in a rough way, to be sure; but what time had she for the gentle humouring and management with which one lady might wait upon another? Besides all this, think of the constant attention to economy that is necessary—not to waste a spoonful of tea or a handful of coals—"

feeling, most likely, feverish and poorly herself, wanting better food than common, and knowing that her brother-in-law could hardly afford to keep her at all. Surely it is no disgrace to the poor girl, that she is quite tired out, and anxious to get away! Now, as you insist on comparing them, let us consider what Maria has been doing at the same time."

"You will say, I know," interrupted Isabella, "that Eliza has not required the same nursing as Susan Parker, and so the case is different; but indeed, papa, I am sure Maria would have nursed her day and night if she had been very ill, and she would never have named her own fatigue, especially before Eliza; but she would not even have thought of it herself."

"I trust and believe she would not," replied Mr. Morgan; "but our school of good manners is much stricter than theirs; such an outbreak of impatience as Sally Mills's, from one lady to another, would be contrary to the habits and modes of proceeding which we have been trained to observe, and would therefore be felt by the invalid as an intentional cruelty. But it is not so with them: they are given to plain speaking, and accustomed to get and to take hard blows from each other; you did not think yourself that Susan seemed to feel her sister was unkind?"

"No; I can't say that I did; and that provoked me again,—I thought she should have felt it."

Mr. Morgan smiled, and warned his daughter not to go to the cottage any more, or she would certainly set the sisters quarrelling in good earnest, whilst trying to teach them high notions of benevolence and fine feeling.

"But I cannot let you off," he continued, "about Maria. What have been her fatigues and privations? Perhaps she has sometimes been sitting in Eliza's room, when she would have preferred a walk, whilst the day was fine; but I am quite at a loss what greater inconvenience to surmise for her. Can you help me to think of any?"

Isabella was silent.

"Even if dear Eliza had been seriously ill, and had required her constant care, the trial would have fallen very far short of Sally Mills's. There would have been nurses to assist, servants to wait on the children, medical advice at all hours, and no thought of economy in anything. But, as it is, what has Maria's visit been but one of uninterrupted pleasure—as I hoped it would be when she went? She has had leisure for reading, drawing, and music; and, when away from Eliza, a most agreeable companion in your brother-in-law, who always spoils you both. She is the sister, and the guest, and so made more of than she can be at home. Besides, Mr. Dawson's establishment commands luxuries and elegancies which we cannot afford; and there is something in all that."

"Oh, papa, papa!" cried Isabella, almost in tears, "you don't think we care more about Eliza because she is richer? It is not for their horses, and carriages, and green-house, that we like to go there! We should love them just as much if they were a great deal poorer than ourselves;—indeed, papa, you don't think very well of your own daughters!"

"My dear," said her father, "you mistake me. I think I have three very good girls, and I am truly thankful for the blessing. It is you who do not keep close to your own subject: we are comparing the two sisters, on your suggestion: I tell you I should never have thought of it,—but since you bring them before me for judgment, I must declare that it is most unjust to condemn Sally because she does not act and speak like Maria. If your sister were to stay at Coldwell on the same terms for a twelvemonth, what would she have done that would equal Sally's exertions in her sister's cottage for one fortnight?"

Isabella had no reply ready for this searching question. She felt driven from the high ground whence she had been so anxious gracefully to descend, and the sensation was different. She was not sorry, though, to have

the feelings of her poorer friends thus vindicated, and placed more on an equality with her own; and she was most vexed with herself for having thought a whole morning on the subject without having struck out what appeared now the plain truths of the case; but she still answered evasively, and in rather a mournful tone:—

"Then I suppose, papa, you think, that, if ever we were really tried with great fatigue, and anxiety, and poverty, as I know ladies sometimes come to be, we should lose our tempers, and get as snappish and impatient as Sally Mills?"

"No," said her father; "I should still hope better things of you. You are very young, my dear; but I see no reason to suppose that your character will be inferior to your sisters'; and of them I can say that their duties have not invariably been pleasant ones, for I have known their patience and temper tried at different times fully as much as is common at their age, and in their station of life; and I have had the happiness of seeing that, on the whole, they stood the trials well."

"I believe that those who show a conscientious regard to their duties in smaller matters, whatever they may be,—for they cannot always be pleasant,—will not be found wanting if the time of strong temptation or trouble should arrive. I have generally seen this to be the case; and most painful would it be to me to imagine my own daughters would prove an exception. But I wish to impress on you that we cannot be sure of ourselves; we cannot even be sure of those we love best, under circumstances of trial which have never yet been experienced. How Maria would act, if she and Eliza were suddenly reduced to a state at all resembling Susan Parker and her sister, we cannot therefore tell; and I hope we shall never know. But those who have been differently brought up from their birth have, by nature I would say, if it were not a contradiction, but have at least acquired from second nature, a courteousness of manner and a self-restraint quite unknown to the lower ranks. Part of what displeased you in these two women was, I grant, human selfishness undisguised by civility; but the greatest part was only a bluntness of speech, neither intended nor taken as offence."

"Has my explanation satisfied you, my dear Isabella, that we are not on all points so much better than our poorer fellow-creatures?"

Isabella declared that it had:—and so, relieved from the feeling of great moral superiority, which had been distressing her for some hours, she cheerfully began making tea, and the discourse wandered, as usual, into different channels.

M. C.

ACCOUNT OF A JEWISH WEDDING.

WITH pleasure I acquiesced in the proposal of an American lady, to accompany her on a wedding visit to the family of a fair "Jessica," the daughter of a Bagdat merchant in the fort. Leaving our residence for this purpose together, we threaded the crowded and narrow ways of a portion of the populous bazaars, until then unknown to me; and, as the palkees neared each other, and I caught occasional glimpses of my veiled companion, her gorgeous tiara, and flashing jewels, the strange locality, and the novelty of the expedition, brought the inimitable tales of the Arabian Nights strongly to remembrance; and I almost imagined myself attending the splendid wife of Haroun al Raschid, through her ancient city of Tabriz. Arrived at our destination, we were introduced into a large upper apartment, where several turbaned infants lay sleeping on Arab mats, attended by Jewish women, having small chowries to protect their repose.

After a short detention, a distant door opened, and the bride, with her mother and sisters, gave us a most courteous welcome. As the appearance and attire of the

younger women nearly resembled each other, I shall content myself with attempting to describe the person of the lady, for whom our visit was most particularly intended.

The bride was certainly not more than fourteen years of age; yet, notwithstanding her extreme youth, there was no lack of feminine expression, in her fair and placid countenance. Her eyes were hazel, and her soft features differed from the common Jewish physiognomy, which, however handsome in youth, frequently acquires harsh distinctiveness at a maturer age. It is customary for the Jewish women to marry at an early period; and the elder sister of the bride, a girl about sixteen, was, I found, the mother of two of the sleeping infants, who had first attracted my attention.

The costume of the fair Jewess brought to my remembrance, yet, "with a difference," Mr. Lane's admirable sketch of that adopted by the dancing girls of Cairo.¹ It consisted of a fine white muslin under-dress, plaited in exquisitely small folds from the throat to the waist, and falling to the embroidered yellow slippers, shrouding her pretty feet. A satin tunic of Tyrian purple, sloped away on the bosom, was clasped at the waist by a single stud, the sleeves falling loose and open from the middle of the arm, fringed with a double row of gold buttons. A shawl, of the finest loom of Cashmere, encircled the waist; and costly ornaments, worn after the usual manner, encumbered, where they could not adorn. To complete the costume, a small red velvet cap fitted closely to the head, bound round the brows with a scarf of most vivid hues, and a handkerchief depending from it at the back, passed loosely under the chin; a very *trying* arrangement, even to the most lovely face. With due exception to this single portion of the attire, all was tasteful and well arranged, flowing and antique; fashion in the East is not a mutable goddess; consequently, its form was probably the same with that in which the fair Esther, the advocate of her people's rights, appeared before Hegai, in the regal palace of Shushan.

According to an eminently disfiguring custom among the Jewish ladies, the hair of all is parted in long crisped locks upon the forehead, and stained an orange tawny colour by the use of henna. At the back, its raven and glossy tint remains, where it is plaited in long ends, each suspending a golden coin. Observing the curiosity with which I noticed the several articles of their dress, the young Jewesses proposed that I should proceed to the dressing room, to amuse myself with an inspection of their wardrobe.

The apartment was surrounded with japanned and curiously inlaid cabinets, filled with rich tunics, and various "raiment of needlework," with "vestures of gold, wrought about with divers colours." The chud-ders,² or envelopes, destined to be worn in public, were all of fine white cotton, ingeniously embroidered, to allow the wearer full liberty of observation through the interstices of the delicately wrought flowers which composed it. With the exception of the Malà, or talisman, the necklaces, head-ornaments, bracelets, and bangles, were chiefly composed of small coins, suspended by ornamental chains. The largest adopted for this purpose was the zechin, but many were extremely minute, with a superscription differing from any I had before seen.

Three eastern languages appeared equally familiar to all the members of this family. Some jocose traveller in a continental diligence, has recorded his surprise at hearing the children of the villages speak such admirable French. A Haileybury student, groaning over the roots of the most difficult and copious language in the world, would have been similarly struck to find grammatical Arabic lisped from the mouths of babes; and Persian, soft harmonious Persian, flowing sweetly from

a girlish voice, and sounding as if it should be "writ on satin." With myself they chatted in the harsher Hindostanee, a language fit only to be spoken to a slave, being full of authority and command, brief and uncourteous. I am now, however, speaking somewhat ungratefully of the means by which I acquired a great deal of interesting information from my amiable companions, on the manners of their people. The bride, more particularly, gave me a distinct account of the ceremonies observed at her late marriage, which to me were quite novel. It appears that a youth desiring to form a union with one of the fair daughters of his tribe, consults his mother on the occasion, who, deciding on the maiden she prefers among her acquaintance, refers to the parents for their consent. This obtained, she formally invites her female friends to accompany her to the nomination of her son's betrothed. The intended bride, being duly acquainted with the time of the expected visit, is found seated on a rich cushion, closely veiled, her hands and feet dyed with henna, and surrounded by a group of Jewish maidens. The mother of her suitor, after a fitting conversation, presents her with a costly ring, as the act of betrothment; the women then join in singing the praises of the bride, and engage in mirth and festivity until the morrow. When the period arrives for the celebration of the marriage, a curtain is drawn across the principal apartment in the house of the bride's father, on one side of which the lady is seated, with her female relations and friends, and, on the other, the bridegroom, with the priest of the synagogue, and the male relatives of both families. A rabbi then fills a cup with wine, and drops into it metals of three kinds, copper, silver, and gold. The bridegroom, after drinking a portion of it, returns the cup to the priest; it is then carried to the bride, who, after draining the contents, throws the vessel upon the ground. When the bride, at the conclusion of this ceremony, is about to quit the apartment, a goat is slain at the threshold, and the nuptial party step over it in rotation; as the bride herself passes, a cake of unleavened bread is broken over her head, and the fragments divided among the relatives. Nuptial festivities are continued for seven days; and on the eighth a feast is given, to which the priest, relatives, and friends are generally invited. At its conclusion, every guest offers a trifling gift of money or jewels to the rabbi, who, as he accepts each, repeats aloud the name of the donor, which is received with a general cheer. An epithalamium is then sung, and the marriage is complete.—*Mrs. Postans.*

Portry.

In Original Poetry, the Name, real or assumed, of the Author, is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

DESCRIPTION OF A SUMMER'S EVE.¹

Down the sultry arc of day
The burning wheels have urged their way;
And eve along the western skies
Sheds her intermingling dyes.
Down the deep, the miry lane,
Creaking comes the empty wain;
And driver on the shaft-horse sits,
Whistling now and then by fits;
And oft with his accustomed call
Urging on the sluggish Ball.
The barn is still, the master's gone,
And thrasher puts his jacket on;
While Dick, upon the ladder tall,
Nails the dead kite to the wall.
Here comes shepherd Jack at last,
He has penned the sheepcote fast;

(1) See a spirited drawing in this author's intelligent and interesting work on the "Modern Egyptians."

(2) Chudder, literally a sheet.

(1) See Engraving, p. 385.

For 'twas but two nights before,
A lamb was eaten on the moor.
His empty wallet Rover carries,
Nor for Jack, when near home, tarries.
With lolling tongue he runs to try
If the horse-trough be not dry.
The milk is settled in the pans,
And supper messes in the cans;
In the hovel carts are wheeled,
And both the colts are drove a-field;
The horses are all bedded up,
And the ewe is with the tup.
The snare for Mister Fox is set,
The leaven laid, the thatching wet;
And Bess has slinked away to talk
With Roger, in the Holly-walk.
Now on the settle all but Bess,
Are set to eat their supper mess;
And little Tom and roguish Kate
Are swinging on the meadow gate.
Now they chat on various things,
Of taxes, ministers, and kings;
Or else tell all the village news—
How madam did the squire refuse;
How parson on his tithes was bent,
And landlord oft distrained for rent.
Thus do they talk, till in the sky
The pale-eyed moon is mounted high.
And from the ale-house drunken Ned
Has reeled—then hasten all to bed.
The mistress sees that lazy Kate,
The happing-coal on kitchen grate
Has laid—while master goes throughout,
Sees shutters fast, the mastiff out,
The candles safe, the hearths all clear,
And nought from thieves or fire to fear.
Then both to bed together creep,
And join the general troop of sleep.

II. K. White.

CHILDHOOD'S SORROW.¹

On! childhood's woe is bitter;
It ever makes me grieve
To mark the pale lip quiver,
The little bosom heave;
But cruel is the chiding,
When tears unbidden rush,
The tyranny that sealeth
The fountain in its gush.

It is a sight for pity,
That tearless, choking grief,
When sobs are inly struggling,
That may not find relief.
Alas! when age forgetteth
The pangs of early years,
And striveth to debar them
The privilege of tears.

Ye may forbid the murmur,
Nor yet for crying spare;
But chide ye not their weeping,
Whose lot it is to bear.
Those tears that flow so quickly
Shall prove an April shower,
That passeth soon, and leaveth
No stain upon the flower.
Woe worth the worldly wisdom,
That, in its iron mood,
Would teach the young heart hardness,
And deem such hardness good!
The stoic's stern enduring
Is no lesson of our God;
He would not have His children
Despise the chastening rod.

Miscellaneous.

"I have here made only a nosegay of culled flowers, and have brought nothing of my own, but the string that ties them."—*Montaigne*.

THE austere lectures which he (Lord Ellenborough) sometimes read flippant pedantry or hopeless imbecility, are often remembered and quoted with malicious glee, for they possess a character of quaint and grave sarcasm peculiar to the man. An eminent conveyancer, who prided himself on having answered thirty thousand cases, came express from the Court of Chancery to the King's Bench to argue a question of real property. Taking for granted, rather too rashly, that common lawyers are little more acquainted with the Digest of Cruise than with the laws of China, he commenced his erudite harangue by observing "that an estate in fee-simple was the highest estate known to the law of England." "Stay, stay!" interrupted the Chief Justice, with consummate gravity, "let me write that down." He wrote, and read slowly and deliberately the note which he had taken of this A. B. C. axiom—"An estate in fee-simple is the highest estate known to the law of England.—The Court, sir, is indebted to you for the information." There was only one person present who did not perceive the irony, and that was the learned counsel who incurred it. But though impervious to irony, it was impossible even for his self-love to avoid understanding the home-thrust lunged by the judge at the conclusion of his harangue. He had exhausted the year-books and all the mysteries of real property law, in a sleepy oration which effectually cleared the court. Insensible alike to the grim repose of the Bench and the yawning impatience of the ushers, when, at the close of some parenthetical and apparently interminable sentences, the clock struck four, and the judges started to their feet, he appealed to know when it would be their *pleasure* to hear the remainder of his argument. "Mr. P." rejoined the chief, "we are bound to hear you, and shall do so on Friday, but *pleasure* has been long out of the question."—*Townsend's Lives of Eminent Judges*.

It is a fearful mistake to believe, that, because our wishes are not accomplished, they can do no harm.—*Gertrude*.

A MAN finds in the productions of Nature an inexhaustible stock of material upon which he can employ himself, without any temptations to envy or malevolence; and has always a certain prospect of discovering new reasons for adoring the Sovereign Author of the universe.—*Dr. Johnson*.

Young minds cannot be too strongly impressed with the simple wonders of creation by which they are surrounded. In the race of life they may be passed by, the occupation of existence may not admit attention to them, or the unceasing cares of the world may smother early attainments, but they can never be injurious: they will give a bias to a reasoning mind, and tend, in some after thoughtful sobered hour, to comfort and to soothe.—*Knapp*.

OCTOBER 24, 1846.

[PRICE 1½d.]

The Bruce's Heart.

It was Lord James of Douglas
Set sail across the brine,
With a warrior band, to seek the land
Of holy Palestine.
Stately and gay was his bold array,
With plume and pennon streaming,
With the sounding horn at break of day,
With clustered lances gleaming.

Beneath his vest a silver case,
At a string of silk and gold,
For ever lay, by night and day,
Upon his bosom bold.
That casket none must hope to win
By force or fraudulent art,
For priceless was the wealth within—
It held THE BRUCE'S heart!

Lord James hath landed in fair Castile,—
Where, waiting by the sea,
Alphonso of Spain, with a glittering train,
Hath welcomed him royally :
But woe was in that lovely land;
For, from Granada's towers,
Dark Osmyn's fierce and ruthless hand
Ravaged its myrtle bowers.

The Douglas gazed on the leafy shore,
He gazed on the ocean blue,
And the swarthy light in his eye grew bright,
And his gleaming sword he drew :
"Wert thou at my side, my king," he cried,
"Thy voice's well-known sounds
Would bid me aid these Christian knights
To chase these Paynim hounds!"

Lord Douglas looked on the crescent proud,
 And his Christian heart beat high :
 " Charge, countrymen ! " he shouted loud ;
 " For God and Scotland, I ! "
 Oh, never did eagle on its prey
 Dart with a feller swoop,
 Than bounded the angry Scots that day
 On the Saracen's startled troop !

Like hunted tigers o'er the plain
 The Moors are flying fast—
 Like huntsmen true the Scots pursue,
 With shout and clarion blast :
 But track the tiger to his lair,
 And the tiger turns to spring—
 Brave hearts, beware ; for still despair
 Is a fierce and fearful thing !

The Moors have wheeled on that fatal field,
 They gather and they stand,
 And the wild long yell of " Allah hu ! "
 Is heard on every hand ;
 They are circling about their daring foes
 In a grim and narrowing bound,
 As the walls of a burning jungle close
 The awe-struck traveller round.

The foremost there fell brave St. Clair.—
 That saw the Douglas bold,
 And did unloose the heart of Bruce
 From its string of silk and gold ;
 He hurled it through the serried spears,
 And his lifted voice rang high—
 " Pass to the front, as thou wert wont !
 I follow thee or die ! "

The day hath closed on fair Castile,
 The sinking sun gleams red
 On shattered plumes and broken steel,
 And piles of gallant dead ;
 In the centre of that bloody field
 Lord Douglas lay in death,—
 Above him was his own good shield,
 And the Bruce's heart beneath !

No tears for him ! In Honour's light,
 As he had lived, he fell.
 Good night, thou dauntless soul, good night,
 For sure thou sleepest well !
 Full hearts and reverent hands had those
 Who bare thee on thy bier
 Back to the place of thy repose—
 Thy Scotland, famed and dear !

A valiant knight the casket bore :
 And, for that honoured part,
 His scutcheon wore for evermore
 A padlock and a heart.
 They buried the Douglas in St. Bride ;
 And the heart of Bruce they laid
 In Melrose' stately aisles, beside
 The altar's sacred shade.

Not mine, with hand profane, to trace
 Grey Melrose towers around,—
 There is a presence in the place,
 Making it holy ground.
 Strewing their snows on that fair spot,
 May countless years succeed,
 But they sever not the name of Scott
 From Melrose and from Tweed ! ¹

(1) From *Lays and Ballads of English History*, &c. Burns. 1846.

THE KITCHEN OF THE REFORM CLUB-HOUSE, PALL-MALL.

MANY of our readers will, doubtless, remember the superb palace-like mansion which occupies nearly a central position on " the sweet shady side of Pall-Mall." This patrician pile is " the proper house and home " of the Reform Club ; and most magnificently are they here lodged ; the architect of the edifice (Mr. Barry,) having worked out his design in the true spirit of the Association itself. " It is," says a competent critic, " the most palace-like structure in our metropolis ; not so much on account of its size, or its pretension with respect to decoration, as for the grandeur and gusto with which it is treated throughout, and for the diversified simplicity which stamps it, and which is utterly free from any of that littleness, poverty, meanness, and coldness, which, by those who do not understand what simplicity is, are generally mistaken for it. Nor is our admiration likely to be decreased by the information, that the cost of this spacious, complicated, and solidly-built edifice was but 50,000*l.*, or two-thirds of the sum expended on the

little and unfinished-looking marble arch in front of Buckingham Palace ! "

The interior is as palatial in character as the exterior. We do not, however, propose to detail its decorative perfection ; and must even be content with a single reference to its sumptuous Italian hall, with its Ionic and Corinthian colonnades, its marbled floors and walls, and its roof richly dight with cut glass, through which the sun streams upon the gorgeous beauty within. All this highly-wrought splendour, we say, we must leave with a word of commendation, and descend into the *souterrain*, or kitchen-floor, there to inspect a truly wonderful specimen of " concentration," which, according to Dr. Johnson, " produces much convenience ; " and such we may witness in the arrangement and working of the Kitchen of the Reform Club, invented by M. Soyer.

And, first, let us say a few words as to the kitchens of our ancestors. They were vast and gloomy apart-

ments; in some cases they had fire-places without chimneys, with a stone conical roof, with a turret at top to let out the steam and smoke: some, however, had vents below the eaves, to let out the steam, the improvement of some Soyer of other days. Such was the kitchen of the monastery. The hospitality of the age, too, demanded that the kitchen of the castle should be of corresponding vastness. At Raby, near Durham the oven has been converted into a wine-cellar, and there is a gallery round the whole apartment. We may form some idea of the economy of these kitchens by the precept, "Waste not, want not," being commonly written upon their walls, to exhort the cooks to care and economy. Before the invention of jacks, poor boys were hired to turn the spits; and an old writer says, "they licked the dripping-pan, and grew to be huge, lusty knaves." Bellows-blowers were also officers in the king's kitchen, whose duty it was to see that soup, when on the fire, was neither burnt nor smoked.

We have no wish to detract from the fame of the old English kitchen, or the characteristic luxuries that smoked before their huge fires, or upon their massive tables: that they were in accordance with the domestic convenience of their age, we readily allow; but, with our various improved systems of the interior arrangement of dwellings, it was not likely that such improvements would long be confined to the upper apartments. Still this advance upon "the wisdom of our ancestors" has never been so completely accomplished as in the Club kitchen we are about to describe, from our own inspection, and by the aid of the recently published *System of Cookery* by M. Soyer, the *chef de cuisine* at the Reform Club.

The Kitchen Department, we should premise, comprises two kitchens, pantries, sculleries, larders, &c.; in fact, every accommodation requisite for the culinary department of so extensive an establishment, exclusive of two stories of wine cellars beneath the hall.

The first apartment we enter is the *Boucherie*, in which all joints are trimmed for cooking: here are the requisite blocks, tables, hooks, and scales; and the walls are faced with thick slates, six feet high, which are much recommended for coolness and cleanliness.

In a line with this apartment is the *Principal Larder for Meat and Game*. In the centre is a table for provisions which are ready for dressing; on each side is a slate-topped dresser, with ice-drawers beneath, running on castors; they are lined with lead, and in them are kept jellies, ice-creams, &c.; and chops, steaks, *aspics*, *entrées*, &c. upon zinc plates; and beneath are deeper drawers for pickling. At the end of one of the dressers is a slate well for soaking hams, and a slab for opening oysters. Here, also, is a large nest of slate boxes, for vegetables and herbs, each having a sliding front of wood, to facilitate cleaning; and from the ceiling is suspended, by fixed iron rods, an oblong frame, on which is hung meat, game, &c.

To the right is the *Cold Meat and Game Larder*, in which is a meat safe, constructed on a new principle, for keeping cold meat, and by which flies are always excluded. The doors, by a simple contrivance, open and shut as it were by themselves, by means of a cord and weight, which draws them, like a sash upon pulleys, in a groove of iron plates, through which are fixed two pins, six inches apart; on pushing open the door, the pin is raised underneath to stop it, and, by a retrograde motion of the elbow when taking out a dish, the said pin drops, and the door shuts of itself; and this is so quickly done that there is hardly time for a fly to get in; besides which, the wires are very close, though there is always a good current of air through them. The meat safe is four feet high, six feet wide, and three feet deep, with two shelves inside; under it, between

the bottom and the floor, is a shelf for jars, basins, &c. On the opposite side of the larder is a slate dresser, with a skirting throughout, seven inches high; above are two shelves for preserves, bottles, and jars.

To the left is the *Pantry and Confectionary Room*, fitted with a marble slab (two feet nine inches long, by three feet wide) on a level with the window; beneath the slab are ice-drawers, for butter and eggs, forcemeat, salad, sauces, &c. On the right is a marble mortar, with a long-handled pestle passing through a ring fixed in the wall; and on the left is a flour-bin covered. Here, too, are dressers for dishing up the second course, and depositing pastry and confectionery, under which are hot and cold drawers, lined with tin, and having a steam-pipe passing behind, which slightly warms them; these drawers are for keeping either moist or dry whatever may require to be so kept. Above each dresser are closets. In this, as well as in the other three rooms, a proper coolness is preserved, absolutely necessary for the making of pastry, and keeping it when made.

Parallel with the above room in the plan, is *M. Soyer's Room*, fitted with a closet for superior preserves, and all kinds of new light kitchen utensils, and opening into the *Passage* opposite the principal kitchen door. In this passage is a white marble slab, inclined, and bordered with slate, for keeping fresh and cool all the fish brought in for use; and at the upper extremity of the sloping slab is a horizontal shower-pipe, supplied with iced water from a cistern above. On the opposite side is a shelf divided by numbers, indicating the hour when dishes are to be cooked. Upon the same line is a dresser, on which are set to cool sauces and stock before they are put into the second larder. At the end of the passage, and above the kitchen door, is a square *ventilating screen*; this is a simple frame, with two cross-pieces covered with canvas, and fixed horizontally above the doorway, with hinges, and it is worked up and down by cords and pulleys fixed in the ceiling; this simple contrivance drawing away the heat from the kitchen into the passage, and introducing cold air in its place. In the *Passage*, at a right angle with the above, is a lift, worked by steam, to hoist coals to the sleeping-rooms; and a gas-meter, for the supply of the gas-stoves in the principal kitchen.

The *Roasting Kitchen* is thus reached; and on entering it you see, in a direct line, the vegetable kitchen and the scullery. We can only detail the principal fittings, the entire arrangement being only intelligible by aid of a ground-plan. Among the fittings is a low cast-iron French stove, for boiling large joints, and making stock which has been previously boiled on a quick fire, and removed there to simmer gently. In the centre is a grate, one foot square, for charcoal. Contiguous to it is another cast-iron stove, or hot-plate, the waste fire of which heats the small oven for *gratin*, *saufles*, &c. At the end, on a line with the fireplace, is the steam-closet, six feet high, four feet and a half wide, and two feet deep, forming three shelves, with the bottom, to keep the dishes very hot, as well as the roasts; near it is the large roasting fire-place. The grate is five feet wide and three feet high, and very shallow, giving a great heat at a comparatively small expense; a boiler is at the back, which holds one hundred gallons of water, always hot, and amply sufficient for all kitchen purposes. The salamander is also easily and quickly heated at the same fire, without interfering with the roasts, having a place formed in the front of the grate purposely for its reception. In front of the roasting fire-place is a closet-screen, to keep all oints very warm.

Lower down is a large cast-iron oven for pastry, with grated shelves. Joining the oven is a French stove, with one grating, to boil delicate vegetables. Above, in the thickness of the wall, is a cistern, to keep the large boiler behind the roasting fire-grate constantly supplied with water. Opposite is a sash window, by which roasts and vegetables for the coffee-room are

handed to the waiters; beneath the window is a closet for plates and dishes, the top of which is of cast-iron and warmed by steam; thus dishes are removed from one hot place to another until they reach their destination.

The *Vegetable Kitchen* is approached from the roasting kitchen by an arch. On the left, upon a wide shelf, are three steam-boilers, two of them square, to cook potatoes, and the other for steaming puddings, &c.; the square ones might be taken as models—they are one foot five inches square, and one foot high, divided into four parts, forming four distinct compartments in one. The round boiler is fifteen inches in diameter. The front of the shelf has a groove under the top of the steamers, to let out the water produced by the steam, which runs into the sink; a draining-board is next to the steamers, where vegetables are deposited after they are washed. Next is the vegetable sink, with two taps for hot and cold water. There are also other two sinks, on the right of which is a delivery-window, with a closet beneath, serving as a dresser, from which clean plates and dishes are sent to the coffee-room. Beyond this kitchen is

The *Scouring Scullery*, in which is the steam-boiler, eight feet three inches long, six feet wide, and five feet high, in brickwork. By this are heated large closets, *bains maries*, plates for delivery-windows and tables; large coppers are also thus supplied with steam for cooking, as well as for dressing-rooms, baths, and closets in various parts of the house.

These three rooms, each for a different purpose, are *en suite*; they are well lighted and very cool.

We pass the *Butler's Pantry and Office*, the fire-proof iron *Plate-closet*, and the *Passage*, where is a *lift*, by which dinners are conveyed to the coffee-rooms either by steam or by hand.

The *Principal Kitchen* occupies the centre of the plan, and is entered by three doors, two from the passage, and one from the *Roasting Kitchen*. In the middle of the principal kitchen is a twelve-sided elm table, so that several persons may work at once without interfering with each other. Underneath the edge are boards for straining sauces, *purées*, &c., drawers, and moveable copper buckets, with water and sponge for cleaning the tables after the cutting of poultry, game, or fish. Passing through the table, and supporting the ceiling, are two columns, round which, at a convenient height, are copper cases, lined with tin, in ten compartments, each of which contains every ingredient, and chopped herbs of the seasons, for flavouring dishes, such as salt, pepper, spices, sweet herbs, crumbs and rasping of bread, eggs, chopped onions, &c.; the other contains various sauces for fish dressed in the English style. These cases turn at will on castors fixed underneath the round column, so that, without moving from your place, you can get every ingredient you may require; the diameters of the columns are one foot; and the cases for ingredients project over three inches and a half. As columns are not always wanted to support the ceiling of a kitchen, the cases might easily be introduced on the table, supported by a stand, turning in the same way as, and similar in shape to, a lamp.

In the middle of the table is a cast-iron steam closet, with two sliding doors on each side, and a shelf inside for keeping delicate *entrées* perfectly good for several hours, by means of two different degrees of heat. Above, five inches distant from the top, is a grated iron shelf, all round upon which are placed middle-sized and small stewpans, supported at each corner by little balusters. The whole contrivance of this table is very convenient. M. Soyer sensibly observes, that "too large a table is as bad as too large a kitchen, in which much time is lost in the cleaning, and more in running about for articles required for use."

To the right hand of the table is a roasting fire-place, principally for game and poultry, on a plan entirely new: the size is seven feet wide and five feet six inches

high, the bars are perpendicular and vertical, opening at one end, and supported upon castors, which allows the cleaning of it with ease, and affords access for repairing the boiler without pulling down any of the works around it; at the back of the stove in front of the boiler are thick Welsh lumps, by which hot water can be obtained twenty-four hours after the fire is put out.

On the left, in the thickness of the wall, is a small cistern, to supply the boiler with water as it is drawn out hot on the right hand side. A screen closet is placed before this fire.

Within an elliptic recess is fixed a dresser, used for silver dishes, &c, previous to a large dinner: underneath are four drawers for small kitchen utensils, and above the dresser three shelves for tinned iron saucepans; in the front of the shelves are suspended covers of various sizes, and large preserve-pans.

In another recess is fixed a low cast-iron charcoal-stove for boiling large fish; when not in use for that purpose it is covered with a thick board, elevated one foot above, being supported upon four strong feet in wood, thus forming a dresser upon which to deposit any article previous to its being dressed at the broiling or fish stoves; on each side are tin drainers for kitchen spoons, &c. Facing the fire-place is a large cast-iron stove, heated with coals, twelve feet five inches long, and two feet ten inches wide, divided into five parts, two of them are used for broiling steaks, *cotelettes*, &c, and the others to broil and fry fish. On a compass brass rod, and moveable, is fixed a fire-screen obliquely at the end, to prevent the heat injuring the eyes; and at the same time acting as a reflector in the interior of saucepans on the stove, if required. At the extremity of the stove is a *bain marie*, principally for keeping fish-sauces hot.

Next is a cast-iron steam-closet, wherein are deposited all the fish, dressed, and waiting to be taken up. Near it is another closet, warmed also by steam, with sliding doors for china dishes and covers; the top, which is on a level with the delivery window, is of cast iron, and heated by the same means. Thus, every dish, from the moment it is dressed to the time of serving, is removed from one hot place to another.

In the corner next to the delivery window is the desk and seat for the clerk of the kitchen. All the orders are sent from the dining-room by a wooden pipe of communication, and after each dinner is served, the bill is sent up in the same way. Every dish is called for by the clerk at the hour ordered. On his left are three voice conductors, with bells communicating to all parts of the club where culinary services are required. Turning to the left is the large and principal French stove, beginning with a *bain-marie*, warmed by steam, with two taps for hot and cold water. This *bain-marie* is for soups and sauces especially prepared for the coffee-room. Further on are the stoves where *entrées*, soups, &c. are prepared; there is a grate for a charcoal fire in the centre, with one of M. Soyer's new gas stoves upon each side; each stove is divided into five compartments, each having a separate pipe and brass cock, with a separate main pipe to each stove, thus supplying sufficient gas to burn the whole five compartments at once, or only one, by not turning the gas into any of the other compartments; or, if all burning at once, the flame may be regulated to any height, by means of the brass cocks. By this means you obtain the same heat as from charcoal the moment it is lit: it is a fire that never requires making up; is free from carbonic acid, which is so pernicious; and creates neither dust nor smell, (except the gas should neglectfully be not properly turned off;) and is quite free from smoke. With the aid of his new octagonal trivet, M. Soyer can place nine stewpans over the gas, without the fear of upsetting either; some only simmering and others boiling at the same time. The gas stoves also tend to greater economy, as they are not lit till the moment wanted, then only the quantity required

and may be put out the moment they are done with. The maker is Mr. Ricketts.

Further on, at the end of the stoves, and parallel with the *bain-marie*, is another stove, with two taps for hot and cold water, used for keeping sauces hot. There are in all three different *bain-maries*, one for fish sauce, one for the coffee-room, and one for the private dinner-room. Next is a slate sink, with two taps for hot and cold water, used for washing various kitchen utensils used at the charcoal stoves. Above the sink, hot plate, and *bain-marie*, is an iron rack, with hooks to hang large *sauté-pans*. Near it is a hot plate, heated by steam, upon which are placed dishes prepared for dinners; from thence they are removed to the house-dinner-lift, which is drawn up either by steam or hand machine.

Lastly, to each of the sinks, throughout the kitchen, is attached a trap-ball, made of copper, six inches long and ten in circumference: it screws to the sink, and is pierced with holes, for the passage of water, and to prevent anything else passing down. The plug is attached to a rod and chain; by pulling the latter the plug is removed. By this simple contrivance all offensive effluvia from drains are kept out; and it has been so successful, as to be now frequent in noblemen's and club-house kitchens.

We have thus described the principal peculiarities of M. Soyer's kitchen arrangement, which has now been worked, and very successfully, for six years. We have more than once inspected the plan, and can attest "the saving of time, comfort, regularity, and cleanliness," which these improvements secure. Their publication will, we are persuaded, lead to great "reform" in kitchen economy of time, money, and space; and where the whole plan be not adopted, certain implements and apparatus may be copied with great advantage. Although they are invariably constructed upon scientific principles, they are so far from complicated as to be intelligible for working by any kitchen-maid. Perhaps, of all the contrivances, the gas-stove is the most simple, yet most ingenious: gas, we know, has long been recommended by the stove makers for roasting; but M. Soyer uses it for a different and far more advantageous purpose—the application of heat with the nicest modifications; in this case making flame entirely subservient.

With such improvements, the kitchen need no longer be a scene of turmoil and waste, heat and confusion; but may now be a picture of almost unerring precision, of self-regulating supply and consumption. All this is the result of years applied to the study of what may be termed "domestic science," and of real skill; to borrow the motto of the Royal Institution,

"ILLUSTRANS COMMODA VITÆ."

MARY BEATRICE OF MODENA.¹

THE popular ferment excited by that wretched imposture, the Popish Plot, directed such a flood of suspicion and odium against James, that soon after his wife's return from her visit to the Princess of Orange at the Hague, the king, though very reluctant, found it necessary to require his removal from the country for a time. He accordingly took his departure, with his duchess, for Brussels on the 4th of March, 1679, where he remained, with the exception of a flying visit to England, occasioned by a rumour of the king's serious illness, until he was recalled by the king in October following, and directed to repair to Scotland.

The arrival of the duke and duchess of York in the ancient kingdom of his ancestors was hailed with much satisfaction by all ranks of people. "Scotland," Miss Strickland remarks, "having suffered for upwards of seventy years from the evils of absenteeism, naturally

looked with hope to the increase of national prosperity which the establishment of a vice-regal court was likely to cause. James came, however, in a strictly private capacity on this his first visit to the land of his fathers, and he wisely resolved to avoid exciting the jealousy of his watchful foes in his brother's Privy Council, by any assumption of state beyond that to which his birth entitled him.—The presence of the heir of the crown, and the prudent and conciliating conduct of himself and his consort, had a most beneficial effect in Scotland, and did more towards calming the effervescence of the conflicting parties there than if an army had been sent over the border by king Charles. The duke of York came, however, strictly in a private capacity, and in reality as a banished man."

In the beginning of the next year, the king intimated to his Council, that, thinking it but fair that his brother, whose rights were threatened to be assailed at the meeting of parliament, should be present to defend himself, it was his intention immediately to recall him. He did so accordingly, and James and Mary Beatrice returned to London by the end of February.

In noticing a remarkable instance of attention on the part of James towards his wife at this time, Miss Strickland remarks: "The virtues and conjugal devotion of this princess were gradually winning a greater empire over the heart of James than had been gained by her beauty in its early bloom, when she came to England as his bride. It was not till she had been his wife six years that James appears to have been fully sensible of the value of the prize he had drawn in the matrimonial lottery, and that she was possessed of qualifications more worthy of admiration than those external graces which had been celebrated by the most distinguished poets of the age. Mary Beatrice endeavoured to keep up an interest for her husband with the gay world, by giving brilliant balls and entertainments, and appearing often in public. The irreproachable purity of her life, and her amiable conduct as a step-mother, entitled her to universal respect; and, notwithstanding her religion, she stood too high in public opinion for any one to mix her name up with the Popish Plot accusations, although Colman, one of its earliest victims, had been her secretary."

The restless hostility of James's enemies made it necessary for his royal brother to order his removal a second time from his court. He softened the harshness of the step in this instance, however, as far as possible, by appointing him his representative in Scotland, where his reception and that of his duchess was warmly enthusiastic. While attempts were making in England to exclude him from the throne, "he and his fair and faithful consort endeavoured, not unsuccessfully, to conciliate the regards of those with whom their present lot was cast. A brilliant court was kept at Holyrood, to which resorted the principal nobility and gentry of the land; and Mary Beatrice soon succeeded, by her gracious and prudent deportment, in winning the hearts of the generous aristocracy of Scotland. If her religion were unpopular, the purity of her mind and manners was unimpeachable. Young, beautiful, innocent, and desirous of pleasing, cold indeed must have been the hearts that could have hardened themselves against her gentle influence; and it is certain that the interest she excited at that period in Scotland operated long in favour both of her husband and her son, and was even felt to the third generation."

Of James's administration of affairs in Scotland, Miss Strickland speaks in terms of high commendation. She says—"James and his duchess arrived in Edinburgh in perilous times, and in the midst of the sanguinary executions that followed an insurrection, in which great outrages had been committed on the lives and properties of the episcopalian party. The duke did his utmost to calm the jarring elements which were ready to break out with fresh tumult. The Council, breathing blood, were for going to the rigour of the law.

(1) Concluded from page 394.

James offered pardon to the condemned on the easy terms of crying, 'God save the king.' The Council talked of death and tortures; his royal highness recommended mad-houses and hard labour or banishment; and his suggestions proved more efficacious than the barbarous proceedings of Lauderdale and his colleagues. He succeeded in a great measure in tranquillising Scotland. He gained the esteem and respect of the gentry, and he won the affections of the people by his gracious acknowledgment of the marks of respect they paid him. If he had governed England half as wisely for himself as he did Scotland for his brother, or observed the same moderation in regard to his religion, after he became king, which he did when duke of York, history would have told a different tale of the close of his career."

While in Scotland Mary Beatrice narrowly escaped being killed by a fall from her horse. Fortunately the accident took place on a sandy plain. Had it been otherwise she would have been killed, for her riding-dress became entangled with some part of the saddle, and she was dragged a considerable distance with her face on the sand, and received several kicks from the frightened horse before she could be extricated. James wrote so alarming an account of this accident to her mother, the duchess of Modena, that she exacted from her a promise, very much to his satisfaction, never to mount a horse again. Mary Beatrice was passionately fond of riding; but James disliked it as a dangerous and improper exercise for women.

Of the manner in which James gained the regard of the people of Scotland, and the feelings of which he became the object (not universally, for there was a considerable party of more hostile sentiments, but very generally,) Miss Strickland thus speaks: "While in Scotland James applied himself zealously to business; and, with his usual regard for economy, detected and put a stop to many of the peculations and abuses of the duke of Lauderdale's creatures, whereby he incurred the ill-will of that corrupt statesman and his duchess, and many of their connexions. He bestowed his attention on the maritime and commercial interests of Scotland, all of which were materially improved during his residence in that nation. He made several progresses to visit the principal towns and all the ancient palaces of Scotland. The greatest marks of respect were paid to him at Glasgow, Linlithgow, and Stirling, and, whatever county he entered, he was met on the boundary by the principal nobility and gentry of the shire, and was attended by them as if he had been the Sovereign; but the irrefragable proof of the affection with which James was then regarded in Scotland, is the Act of Parliament which declared his rights, as the heir of the crown nearest in blood, to be immutable; and that neither difference in religion nor any future Act of Parliament could alter or divert the said rights of succession and lineal descent of the crown from the nearest heir."—A proof of affection, by the way, probably as sincere at the time as such things generally are, but not very faithfully acted up to when the time of trial came, since we do not find that William III. had any very serious difficulties to contend with in getting himself declared king of Scotland as well as of England.

In the beginning of the year 1682 Mary Beatrice gave promise of again becoming a mother. Her only child who had survived the period of infancy, the princess Isabella, had died during the previous year. The news of her pregnancy were received with great joy by the Scots, who were desirous that the royal babe should be born among them, fondly anticipating that it would be a boy and their future sovereign. But king Charles had determined that she should lie in in London, and accordingly her husband and she left Scotland on the 12th of May; and, on their arrival in England, they took up their abode again in St. James's palace.

Her last child having been a boy, the feelings of her

husband fondly anticipated that this would be a boy also. It is especially worthy of remark that the absurd story of a fictitious pregnancy and a spurious child was held in readiness to be set abroad by the enemies of the duke of York's succession, to meet the contingency of the child being a boy. Rumours of a plot to deprive the protestant heiress of her right of succession by such an imposition were industriously circulated; and the very natural circumstance of Mary Beatrice desiring the presence of her mother during her hour of danger, was represented as a plan to facilitate the introducing a popish boy to supplant the true heir to the crown, the duchess of Modena having, it was intended to be said, brought a boy with her from Holland for the purpose. The intended calumny proved unnecessary in this instance, for the child was a girl, and the charge was therefore suffered to die away; but the circumstance is important, as showing the value which is to be attached to the charge which was afterwards brought against Mary Beatrice and her husband, and as entirely destroying whatever presumption in support of the truth of that charge might have been drawn from the fact of its being made. This child only lived eight weeks.

No important event in the personal history of Mary Beatrice occurred between the death of this princess, and the accession of her husband to the throne. "It is certain," says Miss Strickland, "that she never interfered in political intrigues when duchess of York, and for that reason her name is a blank in public history, during the first twelve years of her residence in England."

Charles II. died on the 6th of February, 1685, and James and his queen were crowned with great splendour in Easter week following. In the days of her exile and sorrowful widowhood, Mary Beatrice declared that she had never taken any pleasure in the envied name of a queen, yet she sometimes spoke of the glories of her coronation, and descanted with true feminine delight on the magnificence of the regalia that had been prepared for her. "My dress and royal mantle," said she, "were covered with precious stones, and it took all the jewels that all the goldsmiths of London could procure to decorate my crown; of all these nothing was lost except one small diamond, worth about forty shillings." She told the nuns of Chaillot "that no coronation of any preceding king of England had been so well conducted, and that all the arrangements had been made under the especial superintendence of king James, who ordered a book to be made of it."

We cannot here follow the course of public events, nor detail the particulars of that unhappy policy which ultimately cost James his crown. We must confine our notices to those particulars which relate especially to the queen. The birth of her son took place in June 1688. The atrocious calumny which was raised against the king and queen on this subject, with all its offensive details, makes it necessary, in justice to the queen's character, for her biographer to enter more fully than can be very pleasing to general readers, into the particulars of the evidence by which the fact of her having really given birth to a son is established. But it is unnecessary to notice them here. No person now believes a story so absurd—so improbable—that nothing but the utmost blindness of faction could have given it currency for a day. Sir James Mackintosh, no friend to the memory of James, says, "The charge respecting a spurious heir was one of the most flagrant wrongs ever done to a sovereign or a father. The son of James II. was perhaps the only prince in Europe of whose blood there could be no rational doubt, considering the verification of his birth, and the unimpeachable life of his mother."

The circumstances connected with the invasion of the Prince of Orange and the flight of James can only be hinted at here. William's success on landing was by no means such as need have discouraged James from boldly encountering him. "A little of the energy and

promptitude," says Miss Strickland, "that had distinguished the early days of James duke of York, would probably have enabled king James to maintain his throne; but the season of knightly enterprise was over with him. He had begun life too early, and, like most persons who have been compelled by circumstances to exert the courage and self-possession of men in the tender years of childhood, James appears to have suffered a premature decay of those faculties that were precociously forced into action. At seventeen, James Stuart would have met the crisis triumphantly; at fifty-seven it overpowered him."

There can be little doubt that the extraordinary prostration of all his energies, under which James seems to have suffered at this momentous crisis, was in a great measure attributable to the utter desolation of feeling occasioned by finding his children ranged against him. Miss Strickland says, "Lady Ogleshorpe, who held an office in the royal household, told Sir John Kerosby in confidence, that the king was so deeply affected when the princess Anne went away, that it disordered his understanding, a melancholy elucidation of his subsequent conduct, which cannot be explained on any rational principle." He was tortured by anxiety for the safety of his son, whose life he believed to be especially aimed at; and he gave immediate orders of the most pressing kind for his being secretly conveyed to France. Next he was filled with terror for the safety of his queen, and he determined that she should go also. She at first refused, assuring him that she could bear to be separated from her children with patience, but not from himself, and that she was determined to share his fortunes, whatever they might be. But, on being assured by him that it was his intention to follow her, she made no further opposition.

We shall tell the interesting story of the queen's flight with her son in Miss Strickland's own words:—"The interest excited in France by the progress of this strange historic drama inspired the celebrated Count de Lauzun, and his friend St. Victor, with the romantic determination of crossing the channel to offer their services to the distressed king and queen of England, at this dark epoch of their fortunes, when they appeared abandoned by all the world. Lauzun was the husband of James's maternal cousin, Mademoiselle de Montpensier, and had paid the penalty of ten years' imprisonment in the Bastille, for marrying a princess of the blood royal without the consent of Louis XIV. St. Victor was a gentleman of Avignon, perhaps the son of the brave lieutenant St. Victor, whose life King James had saved, when Duke of York, by his personal valour, at the battle of Dunkirk, thirty years before, an idea calculated to add no slight interest to the following pages.

"The services of these knights errant were accepted by James as frankly as they were offered. He determined to confide to them the perilous office of conveying his queen and infant son to France; and they engaged in the enterprise in a spirit worthy of the age of chivalry. A contemporary narrative in the *Archives du Royaume de France*, evidently written by St. Victor, supplies many additional particulars connected with that eventful page of the personal history of Mary Beatrice and her son.

"On the 2d of December," says this gentleman, "a valet de chambre of the king, named Labadie, husband to the queen's nurse, called me, by his majesty's order, and made me a sign that the king was in the cabinet of the queen's chamber. On entering I found him alone, and he did me the honour to say that he had a secret to communicate to me. I asked if any other persons had knowledge of it? He replied, Yes; but I should be satisfied when I knew who they were. He then named the queen and M. the Count of Lauzun. I bowed my head in token of my entire submission to his orders. Then he said to me, 'I design to make the queen pass the sea next Tuesday; that day Turinie (the husband of the queen's lady, Pellegrina Turinie,) will be on

guard. The Prince of Wales will pass with her from Portsmouth. You must come here this evening, with Count de Lauzun, to arrange the plan.' I obeyed implicitly; and at eleven o'clock returned with Count Lauzun. I found the king alone. He proposed several expedients, and different modes of executing his design; but the plan I suggested alone coincided with the ideas of his majesty.' This plan was pretty nearly the same that was ultimately adopted.——December 9th was appointed for the departure of the queen and prince. It was a Sunday, but no Sabbath stillness hallowed it in the turbulent metropolis. The morning was ushered in with tumults, and burning of Catholic chapels and houses. Tidings of evil import arrived from all parts of the kingdom. When the evening approached, the queen implored her husband to permit her to remain and share his perils; he replied that it was his intention to follow her in four-and-twenty hours; and that it was necessary, for the sake of their child, that she should precede him. To avoid suspicion, their majesties retired to bed, as usual, at ten o'clock. About an hour after they rose, and the queen commenced her preparations for her sorrowful journey. About midnight, St. Victor, dressed in the coarse habit of a seaman, and armed, ascended by a secret staircase to the apartment of the king, bringing with him some part of the disguise which he had caused to be prepared for the queen, and told the king all was ready for their majesties' departure. 'I then,' pursues he, 'retired into another room, where the Count de Lauzun and I waited till the queen was ready. Her majesty had, meantime, confided her secret to Lady Strickland, the lady of the bed-chamber who was in waiting that night. As soon as the queen was attired we entered the chamber. The Count de Lauzun and I had secured some of the jewels on our persons in case of accidents, although their majesties were at first opposed to it; but their generous hearts were only occupied in cares for the safety and comfort of their royal infant. At two o'clock we descended by another stair, answering to that from the king's cabinet, leading to the apartment of Madame Labadie, where the prince had been carried secretly some time before. There all the persons assembled who were to attend on the queen and the prince, namely, the Count de Lauzun, the two nurses, and myself.'

"The King, turning to Lauzun, said with deep emotion, 'I confide my queen and son to your care; all must be hazarded to convey them with the utmost speed to France.' Lauzun, after expressing his high sense of the honour that was conferred on him, presented his hand to the queen to lead her away. She turned a parting look on the king—an eloquent but mute farewell; and followed by the two nurses, with her sleeping infant, crossed the great gallery in silence, stole down the back-stairs, preceded by St. Victor, who had the keys, and passing through a postern door into the Privy-gardens, quitted Whitehall for ever."

After narrating how they passed the sentinels, and arrived at the place where a boat was waiting to carry them from Westminster to Lambeth, Miss Strickland proceeds, "the night was wet and stormy," and "so dark," continues St. Victor, "that when we got into the boat we could not see each other, though we were closely seated, for the boat was very small." Thus, with literally, "only one frail plank between her and eternity," did the queen of Great Britain cross the swollen waters of the Thames, with her tender infant of six months old in her arms, with no better attendance than his nurses, no other escort than the Count de Lauzun, and the writer of this narrative.

"Our passage," says the conductor of the enterprise, "was rendered very difficult and dangerous by the violence of the wind, and the heavy and incessant rain." On reaching the opposite bank of the Thames it was found that the coach which had been engaged was still at the inn. While it was being sent for, her majesty withdrew herself and her little company under the

walls of the old church at Lambeth, without any other shelter from the wind and bitter cold, or any other consolation than that the rain had ceased." "On this spot," Miss Strickland continues, "which has been rendered a site of historic interest by this affecting incident, the beautiful and unfortunate consort of the last of our Stuart kings remained standing, with her infant son fondly clasped to her bosom, during the agonizing interval of suspense, caused by the delay of the coach, dreading every moment he would awake and betray them by his cries. Her apprehension was unfounded. He had slept sweetly, while they had carried him in the dead of night from his palace nursery to the water side; neither wind nor rain had disturbed him; he had felt none of the perils or difficulties of the stormy passage, and he continued wrapt in the same profound repose during this anxious pause, alike unconscious of his own reverse of fortune and his mother's woe."¹

Mary Beatrice is said to have looked back with streaming eyes towards the royal home where her beloved consort remained, lonely and surrounded with perils; and that she vainly endeavoured to trace out the lights of Whitehall among those that were reflected from the opposite shore, along the "dark-rolling river." What her thoughts must have been during this period of anxious and comfortless delay, may be imagined without difficulty.

From this place the queen was brought in safety to Gravesend, where she embarked on board a yacht which had been provided for her, and the accommodation in which was of the most miserable description. She arrived at Calais on the 11th December, and was received with the most cordial sympathy and consideration by the King of France.

James's proceedings in England, in the meantime, are matter of history, on which we cannot at present dwell. He very speedily joined his queen in France, where a residence was assigned to them at the palace of St. Germain. The court of the exiled king and queen was arranged by Louis on the model of his own; they found all proper officers of state, gentlemen ushers, and guards ready to receive them. But the French state officers were quickly superseded by the noble English, Scotch, and Irish emigrants who followed the fortunes of their king. "The fidelity of the queen's household," says Miss Strickland, "was remarkable. It is an interesting fact, that almost all her attendants applied to the Prince of Orange for passports to follow her into France. William granted the passes, but outlawed all who used them, and confiscated their property." The King of France allowed James and his queen 50,000 francs per month, for the support of their household. They objected at first to the largeness of the sum; but found it, in the end, insufficient to enable them to extend adequate relief to the necessities of their impoverished followers.

When James left her for his unsuccessful Irish campaign, Mary Beatrice devoted herself to constant prayers on his behalf. She spent much time at the convent of Chaillot, which had been founded by her husband's mother, Henrietta Maria, where she formed a spiritual friendship with the Superior and several of the nuns. "Very precious to the wounded spirit of the fallen queen of England were the sympathy and reverence which they received from the nuns of Chaillot in the days of her adversity, and the friendship that was commenced between her and some of the ladies of that community was only dissolved by death. She found it necessary, however, for the sake of her husband's interest, to gratify the King of France by appearing at some of the splendid fetes and entertainments which he devised for her amusement. His attentions to her were so marked as to excite some jealousy

in the breast of Madame de Maintenon; but there was no ground for such a feeling. Louis's regard for Mary Beatrice was a sentiment, not a passion; a sentiment which, in its refinement and generosity, forms one of the redeeming traits of his character. He treated her, it is true, with the homage which is always paid to a beautiful and intellectual woman in France; but it was her conjugal tenderness that excited his respect. "She was always a queen in her prosperity," said he, "but in her adversity she is an angel."

The successive disappointments occasioned by the failure of James's Irish expedition, and the defeat of his fleet at La Hogue, were met by both king and queen with the most patient resignation, arising, in the case of James, probably from broken and blunted energies, which were alike incapable of being stimulated either to vigorous action or to keen emotion, and perhaps from a despairing persuasion that he was a doomed man, with whom nothing would prosper; but, in the case of Mary Beatrice, beyond all doubt, from her having learned, like her scriptural namesake, to choose that better part which could not be taken from her. Her confidential letters to her friends at Chaillot, now first brought to light by Miss Strickland, express in every line the struggle of a mind of earnest and simple character to discipline its feelings into entire submission to the will of Heaven. The mind of James also, for a considerable time before his death, had, there can be little doubt, been brought to a like Christian temper.

The sufferings of the exiled king had brought upon him a premature old age, and a constitutional tendency to apoplexy had repeatedly placed his life in danger on the occurrence of any agitating event. During the last year of his life, he was reduced to a state of extreme feebleness, and it is scarcely possible to conceive a picture of more affecting interest, than that of his queen at this period, watching over and tending him with so much affectionate solicitude. His death was accompanied by many circumstances of most affecting interest, rarely to be found collected around the dying beds of monarchs, when surrendering their breath surrounded by all the circumstances of pomp and royalty. We have already alluded to his message to his daughter Anne, and to his dying injunction to his son. The former was delivered by Mary Beatrice in a letter which, in its "stern sincerity," as Miss Strickland calls it, would have cut to the heart a woman of less apathetic feelings than Anne.

With the death of James, Miss Strickland's interesting narrative closes, to be taken up in another volume, for which the public will, no doubt, be very impatient. No one can have read this volume attentively and candidly, whatever his political prepossessions may have been, and whatever his feelings may still be, regarding the events which led to the removal of the direct line of the Stuarts from the throne, without having imbibed the highest respect for the character of Mary Beatrice, as displayed in very trying circumstances, or, however he may differ in form of religious belief, without feeling a sincere veneration for her fervent piety, and her habitual resignation to the will of Heaven.

HALLOWEEN OBSERVANCES.

THE night of this holiday is, perhaps, more remarkable than any other, both on account of the extraordinary opinions popularly entertained concerning it, and the peculiar observances by which it has been, and is, so widely and uniformly distinguished. These notions and customs are obviously of Pagan origin, for there is nothing in the next day's festival to have given rise to them. The leading idea respecting Allhallow Even, or Halloween, says an illustrator of old English festivals, is, that it is the time, of all others, when supernatural influences prevail. It is the night

(1) The classical reader will not fail to remark the close resemblance between Miss Strickland's language in this passage, and the beautiful fragment of Simonides's Ode on the exposure of Danae with her sleeping infant to the dangers of a stormy sea.

set apart for a universal walking abroad and bustling about of spirits, and all sorts of beings not of this world; the night of sure divination; a time when the ideal takes the upper hand of the real everywhere. "This general character of the night," he adds, "escapes the notice of writers on our popular antiquities; but we know it to be that which rests in the rustic mind of Scotland." Burns says, it "is thought to be a night when witches, devils, and other mischief-making beings, are all abroad on their baneful midnight errands." Perhaps the opinion of the activity of the "Prince of the power of the air" and his agents at this time, may have been suggested by the frequency of storms about Allhallow Even. Historians have remarked how often this season has been distinguished by its tempests. In the 18th year of Henry I. Allhallow Day was attended with a fearful storm, "at which," we are told, "the people were marvellously amazed." On Allsouls Day, in the year in which Richard I. was taken prisoner in Germany, "the north-west side of the element appeared on fire," a little before sunrise. It was on Allhallow night, about midnight, that Cavendish was called up at Assher, to let in Sir John Russel and a troop of horse-men, who were come with comfortable tidings to Cardinal Wolsey of the king's returning favour, when he tells us it rained all that night most vehemently; so that, after Sir John had delivered his message from the king, and given the ring, he remarked, in conclusion, "And, Sir, I have had the sorest journey, for so little a way, that ever I had to my remembrance."

An author in 1728 observes, "This is the last day of October, and the birth of this packet is partly owing to the affair of *this night*. I am alone; but the servants having demanded apples, ale, and nuts, I took the opportunity of running back my own annals of Allhallows Eve; for you are to know, my lord, that I have been a mere adept, a most famous artist, both in the college and country, on occasion of this anile chimerical solemnity." Apples and nuts have been immemorially connected with the vigil of All Saints, and are everywhere in requisition upon it. There is a general custom, on this eve, of catching at the former of these fruits. A stick is suspended horizontally from the ceiling, an apple is fixed to one end of it, and a lighted candle to the other. This being made to twirl rapidly, the merry-makers (their hands being tied behind their backs,) successively leap up and snatch at the apple with their mouths, "when the probability is, that the candle comes round before they are aware," and searces or greases their faces. This amusement, says Brand, may be called playing at something like the ancient English game of quintain, which is now almost totally forgotten, but of which there is the following description in Stow's Survey of London:—"I have seen a quintain set up on Cornhill, by the Leaden-hall, where the attendants on the lords of merrydisports have run, and made great pastime, for he that hit not the end of the quintain was of all men laughed to scorn; and he that hit it full, if he rid not the faster, had a sound blow in his neck with a bag full of sand hanging on the other end." Another common merry usage peculiar to this festival, is that of diving for apples, set afloat in a tub of water placed on the floor: Boys and girls take their turn of attempting to catch one of these with their teeth, a feat which cannot be accomplished without many previous failures and beduckings. "In North Wales," says Owen, "they sup on this even upon parsnips, nuts, and apples, and catch at an apple suspended by a string with the mouth alone, and the same by an apple in a tub of water." Apples also are employed in one of the spells appertaining to this mysterious eve. "Take a candle," directs an authority in such matters, "and go alone to a looking-glass, eat an apple before it; and some traditions say, you should comb your hair all the time: the face of your conjugal companion to be will be seen in the glass as if peeping over your shoulder."

In the north of England the night of this vigil is

called NUT-CRACK NIGHT. Goldsmith, in his "Vicar of Wakefield," relates of a farmer's family that they "religiously cracked nuts on Allhallow Eve." Nuts, at this season, are made the means of divination in matrimonial affairs. We learn from Burns that in Scotland "burning the nuts is a favourite charm. They name the lad and lass to each particular nut, as they lay them in the fire; and accordingly as they burn quietly together, or start from beside one another, the course and issue of the courtship will be." Brand relates that "it is a custom in Ireland, when the young women would know if their lovers are faithful, to put three nuts upon the bars of the grates, naming the nuts after the lovers. If a nut cracks or jumps, the lover will prove unfaithful; if it begin to blaze or burn, he has a regard for the person making the trial. If the nuts named after the girl and her lover burn together, they will be married." A writer in the "Gentleman's Magazine" for May, 1784, says he has often met with lamb's wool in Ireland, where it is a constant ingredient at a merry-making on Holy Eve, or the evening before All Saints' Day; and it is made there by bruising roasted apples and mixing them with ale, or sometimes with milk. Formerly, when the superior ranks were not too refined for these periodical meetings of jollity, white wine was frequently substituted for ale. To lamb's-wool, apples and nuts are added as a necessary part of the entertainment, and the young folks amuse themselves with *burning nuts in pairs* on the bar of the grate, or among the warm embers, to which they give their name and that of their lovers, or those of their friends who are supposed to have such attachments; and from the manner of their burning and duration of the flames, &c. draw such inferences respecting the constancy or strength of their passions as usually promote mirth and good humour. This "sacrifice of nuts" on Allhallows Eve is also practised in England, and is thus prettily described by the poet Gay.

"Two hazel nuts I threw into the flame,
And to each nut I gave a sweetheart's name:
This with the loudest bounce me sore amazed,
That in a flame of brightest colour blazed;
As blazed the nut, so may thy passion grow,
For 'twas thy nut that did so brightly glow!"

In the rural districts of Scotland the first ceremony of Halloween is the pulling of plants of kail, or cabbage stalks in the garden. The youths and maidens go out hand in hand, with their eyes shut, and pull the first stalk they meet with. They then return to the fireside to examine their prizes. According as the stalk is found big or little, straight or crooked, so is the future husband or wife of the person who pulled it to be. The quantity of *yird*, or earth, clinging to the root is supposed to denote the amount of fortune or dowry; and the taste of the *castoc*, or pith, the natural temper and disposition. Lastly, the stems, or, to give them their ordinary appellation, the *runts*, are placed one after another over the door, and the christian names of the individuals who chance thereafter to enter, "are held in the same succession to indicate those of the persons whom the parties are to marry." The latter part of this observance nearly resembles an English one with peascods, described by Gay.

"As peascods once I plucked, I chanced to see
One that was closely filled with three times three;
Which, when I cropped, I safely home conveyed,
And o'er the door the spell in secret laid;
The latch moved up, when who should first come in,
But, in his proper person—Lubberkin!"

Another popular species of vaticination practised in the North on this Eve, is that of the Three Dishes. Two of these are respectively filled with pure and foul water, and one is empty. They are ranged on the hearth, when the parties, blindfolded, approach in succession, and dip their left hands into one. If they dip into the

clean water, they are to marry a virgin; if into the dirty water, a widow; if in the empty dish, they are not to marry at all. This is repeated thrice; and the arrangement of the dishes is altered each time. A charm sometimes tried in Scotland on Halloween, is called the *blue clew*. "Whoever would, with success," says Burns, "try this spell, must strictly observe these directions: steal out, all alone, to the kiln, and, darkling, throw into the pot a clew of blue yarn; wind it in a new clew off the old one; and, towards the latter end, something will hold the thread; demand, 'wha hauds? i. e. who holds?' and answer will be returned from the kiln-pot, by naming the christian and surname of your future spouse." Young Scotchwomen, on this night, also seek to pry into futurity by pulling stalks of corn. "They go to the barn yard, and pull, each, at three several times, a stalk of oats. If the third stalk wants the top-pickle, that is, the grain at the top, the party in question will come to the marriage-bed anything but a maid."

In an Appendix to Pennant's Tour, several other Scottish customs of divination attendant on the Vigil of All Saints are enumerated. The first is, sowing hempseed, which is by no means peculiar to Scotland. A second is, "to win three wechts o' naething." The wecht is the instrument used in winnowing corn. "This charm must be performed unperceived and alone. You go to the barn and open both doors, taking them off the hinges, if possible: for there is danger that the *being*, about to appear, may shut the doors and do you some mischief. Then take a wecht, and go through all the attitudes of letting down corn against the wind. Repeat it three times; and the third time the apparition will pass through the barn, in at the windy door, and out at the other, having both the figure in question, and the appearance or retinue marking the employment or station of life." A third is, "to fathom the stack three times," that is, "take an opportunity of going unnoticed to a barley stack, and fathom it thrice round. The last fathom of the last time you will catch in your arms the appearance of your future conjugal yoke-fellow." A fourth, "to dip your left shirt sleeve in a burn where three lairds' lands meet." "You go out, one or more, for this is a social spell, to a south-runingspring or rivulet, where 'three lairds' lands meet,' and dip your left shirt sleeve. Go to bed in sight of a fire, and hang your wet sleeve before it to dry. Lie awake; and some time near midnight, an apparition, having the exact figure of the future spouse, will come and turn the sleeve, as if to dry the other side of it."

"Among the many superstitious rites of Halloween," says the author of "Traditions of Edinburgh," "*knotting the garter* holds a distinguished place. It is performed by young females, as a divination to discover their future partners in life. The left leg garter is taken, and three knots are tied on it. During the time of knotting, the person must not speak to any one, otherwise the charm will prove abortive. She repeats the following rhyme upon tying each knot:—

This knot, this knot, this knot I knit,
To see the thing I ne'er saw yet—
To see my love in his array,
And what he walks in every day;
And what his occupation be,
This night I in my sleep may see.
And if my love be clad in green,
His love for me is well seen;
And if my love is clad in gray,
His love for me is far away;
And if my love be clad in blue,
His love for me is very true.

After all the knots are tied, she puts the garter below her pillow, and sleeps on it; and it is believed that her future husband will appear to her in a dream, in his usual dress and appearance. The colour of his clothes will denote whether the marriage is to prove fortunate or not."

Such of the above ceremonies as have nothing *terrific*

about them, everywhere enter into the Halloween merry-makings in Scotland. Even amongst the middle classes in the larger cities of that kingdom, young persons, we are informed, meet on this even to duck for apples, burn nuts, and dip into the Three Dishes. The charms to which a supernatural appearance is supposed to belong, are now perhaps scarcely anywhere practised, on account of their disinal character.

In Ireland, some of these spells are had recourse to, together with others of a like nature, on Allhallow Eve. "Every house," says one of Brand's authorities, "abounds in the best viands they can afford; apples and nuts are devoured in abundance; the nutshells are burnt, and from the ashes many strange things are foretold: cabbages are torn up by the roots; hemp-seed is sown by the maidens, and they believe that if they look back they will see the apparition of the man intended for their future spouse: they hang a smock before the fire on the close of the feast, and sit up all night concealed in a corner of the room, convinced that his apparition will come down the chimney and turn the smock: they throw a ball of yarn out of the window, and wind it on a reel within, convinced that if they repeat the *Pater Noster* backwards, and look at the ball of yarn without, they will then also see his *sith* or apparition. These, and many other superstitious ceremonies, the remains of Druidism, are observed on this holiday."

There are other observances peculiar to the 31st of October, of a more local nature than most of those which we have mentioned, and possibly of remoter antiquity. For example, in Lower Perthshire, on the border of the Highlands, the people "set up bonfires in every village on All Saints' Eve. When the bonfire is consumed, the ashes are carefully collected into the form of a circle. There is a stone put in near the circumference, for every person of the several families interested in the bonfire; and whatever stone is moved out of its place, or injured before next morning, the person represented by that stone is devoted or *jei*, and is supposed not to live twelve months from that day." In the same district, on the evening of the last day of October, O. S., heath, broom, and dressings of flax are tied upon a pole. This faggot is then kindled. One takes it upon his shoulders, and, running, bears it round the village. A crowd attend. When the first faggot is burnt out, a second is bound to the pole, and kindled in the same manner as before. Numbers of these blazing faggots are often carried about together; and when the night happens to be dark, they form a splendid illumination. At Buchan, we are told, various magic ceremonies were formerly celebrated on All Saints' Eve, to counteract the influence of witches and demons, and to prognosticate to the young their success or disappointment in the matrimonial lottery. These being devoutly finished, the Hallow-fire was lighted, and guarded by the male part of the family. Societies were formed, either by pique or humour, to scatter certain fires, and the attack and defence were often conducted with art and fury.

Pennant records that in North Wales there is a custom upon the above Vigil, "of making a great fire called *Coel Coeth*, when every family about an hour in the night makes a great bonfire in the most conspicuous place near the house, and when the fire is almost extinguished, every one throws a white stone into the ashes, having first marked it; then having said their prayers turning round the fire, they go to bed. In the morning, as soon as they are up, they come to search out the stones, and, if any one of them is found wanting, they have a notion that the person who threw it in will die before he sees another All Saints' Eve." The resemblance between this usage and one of the customs in Perthshire, above related, is surprising. Another author remarks: "The autumnal fire is still kindled in North Wales, being on the eve of the first day of November, and is attended by many ceremonies, such as running through the fire and smoke, each casting a stone into

the fire, and all running off at the conclusion to escape from the black short-tailed sow."

At Ripon, Yorkshire, on this even, "the good women make a cake for every one of the family." A similar custom is practised in Warwickshire.

In Ireland, the peasants assemble with sticks and clubs, and go from house to house "collecting money, cheese, &c., repeating verses in honour of the solemnity, demanding preparations for the festival of St. Columb Kill, desiring them to lay aside *the fatted calf*, and to bring forth *the black sheep*. The women are employed in making the griddle cake and caudles; these last are sent from house to house in the vicinity, and are lighted up on the next day, before which they pray, or are supposed to pray for the departed soul of the donor."

Martin, in his description of the Western Islands, written at the end of the seventeenth century, speaking of the Isle of Lewis, says: "The inhabitants of this island had an ancient custom to sacrifice to a sea-god, called Shony, at Hallow-tide, in the manner following: the inhabitants round the island came to the church of St. Mulvay, having each man his provision along with him: every family furnished a peck of malt, and this was brewed into ale: one of their number was picked out to wade into the sea up to the middle, and carrying a cup of ale in his hand, standing still in that posture, cried out with a loud voice, saying, 'Shony, I give you this cup of ale, hoping that you'll be so kind as to send us plenty of sea-ware for enriching our ground the ensuing year:' and so threw the cup of ale into the sea. This was performed in the night time. At his return to land they all went to church, where there was a candle burning upon the altar; and then, standing silent for a little time, one of them gave a signal, at which the candle was put out, and immediately all of them went to the fields, and spent the remainder of the night in dancing and singing." Brand, in his account of Orkney, says of the inhabitants, "When the beasts, as oxen, sheep, horses, &c. are sick, they sprinkle them with a water made up by them, which they call *forespoken water*, wherewith likewise they sprinkle their boats when they succeed and prosper not in their fishing. And especially on Hallow Eves they used to sain [bless] or sign their boats, and put a cross of tar upon them, which my informer hath often seen."

ROADSIDE SKETCHES OF GERMANY AND THE GERMANS.

No. IV.

THE only town of any consequence on the road is Darmstadt, the capital of Hesse Darmstadt, one of those pleasing little German principalities, which a foxhunter would ride across in a day, without thinking he had enjoyed a particularly long run. These pasteboard kingdoms are much more numerous in the north, than in the south of Germany, and were far more startling from their numbers, the smallness of their size, and the magnitude of their pretensions, before the year 1815, when Metternich, who is a terrible swallower-up of independencies, caused the greater number of them to be mashed up into larger states, on the obverse principle to that on which moons are cut up into stars. I cannot help thinking, however, that it was a pity not to let one or two of the minutest of these monarchies remain—those, for instance, regarding which the stories are told of the Grand army, consisting of four men, all of whom held the rank at least of colonels, and who acted either as footmen or officers, as occasion required. There is a tradition, too, of a representation made to one of the sovereigns by his steward, that it was necessary to burn tallow candles in the palace, as the royal tradespeople would not give credit any longer

for wax. One or two of these funny little states really should have been left, just to give one an idea of the way in which grown-up people play at being kings and queens.—One privilege, however, the dethroned princes retained, by special treaty—that of being still considered of royal blood—or that they might marry the queen of any country, who should be found green enough to accept one of them as a husband. It was on the strength of this privilege, I understand, that a great many of these gentlemen, who had scarcely enough to pay their passage-money, came over to England, when our gracious mistress was understood to be on the look-out for a consort. One can quite imagine the enormous size of the flea which they would carry back in their ears, when they returned home to their small beer and sour-kraut, on her decision being made public. Hesse Darmstadt, however, is one of the best of the minute principalities still remaining, and its capital would be a respectable enough town, were it not that it is a great deal too large for its importance, and the number of its inhabitants; so that it always reminds one of the story of the snail, which was so proud of its magnificent abode in a lobster-shell, but was unfortunately frozen to death, in consequence of the enormous size of its residence. The great lion here, is the preserve of wild boars for the duke's hunting—but the wild boars are unfortunately all so tame as to come to be fed, and, on particular occasions, when the duke wishes to be extremely bold, and to slay the boar himself, the tusks are carefully sawed off beforehand. At these times the royalty of the principal huntsman must of course give an uncommon interest to the scene, though, but for the ludicrousness of it, I should think the whole of the hunting must be as tame, and as great a bore, as any one of the animals chased.

The route from Darmstadt lies along the Bergstrasse, or mountain road, a district of country deservedly celebrated throughout Germany for picturesque beauty. I do not mean to say that it deserves all the commendations which you will hear lavished upon it by the Germans themselves; for, in this instance, as in many others, their ideas of excellence are considerably exaggerated; and this need not be any great wonder to us, since, while our own little island overflows with every variety of natural beauty, the mid basin of Europe, as I suppose the geologists would call it, being a pretty undeviating plain, necessarily presents but few spots boasting the attractions of hill and dale, into which our poor little Britain has at some time or other been swelled and scratched; and without hill and dale, it is, I apprehend, well nigh impossible to have any great amount of picturesque beauty. In regard to the Bergstrasse, however, the Germans, whether they overpraise its charms or not, have good reason for their commendations. I am not sure that I do not prefer it to the Rhine itself, and it is in fact a portion of the Rhineland that you pass through, only, as the valley here widens out to an immense extent, and the road runs along the foot of the hills, instead of by the side of the river, it is but now and then that one catches a glimpse of the course of the stream. But the mountains here are, or seem to be, much more lofty than those lower down the river—they rise at once from the highway, now in sharp precipitous acclivities, and now in gently swelling downs. The lower heights are covered with vineyards, or with the richest, and most beautiful verdure, while the loftier summits are crowned by dark groves of fir, which run down the more sterile portions of the hills, their sombre colour contrasting exquisitely with the bright green around. Then, when you turn to the right, peering through the trees which border the roadside, before you lies stretched the broad fertile valley, rich in corn and grain of every kind and every hue; whilst far in the distance rise the blue hills of France. It is a glorious scene, especially if you view it on one of those bright sunny days, when all nature seems basking in the balmy warmth, and the only unpleasant

accompaniment to one's enjoyment is the dust, which flies about in all directions, filling one's eyes, and getting up one's nostrils, so that one feels as if continually taking huge pinches of digh-dried Lundyfoot, without however experiencing the agreeably titillating affection which that precious mixture produces. It struck me as somewhat curious, to see the immense quantities of fruit with which the apple-trees, which border the whole road, were laden, and all, apparently, in no danger. Recalling some reminiscences of more youthful days, I could not help thinking what a catch they would have been for some friends I could have named; and undoubtedly, if these apples are untouched, and if the robbing of orchards by school-boys be a crime, (which I have always considered, to say the least, very doubtful,) the youth of Germany must be imbued with a far higher tone of morality than their compeers of England, or cannot be endowed with that bump of acquisitiveness which makes surreptitious appropriation so dear to the British boy; or finally, which I suspect is the real reason after all, the apples must be uncommonly bad eating.

But if the spirit and principle of Rob Roy—

"That he should take who has the power,
And he should keep who can,"

exists no longer here, even so far as apples are concerned, it flourished to a splendid extent in former times, as is evidenced by the innumerable snug cosy-looking castles, now unhappily in ruins, which are perched on every convenient crag along the whole Bergstrasse; these were all the residences of those fine old hard-fisted, rough-riding, deep drinking, savage, and yet jovial cut-throats, the robber-knights of Germany. And a glorious life they must have had of it in such a region. With such a rich expanse of country around them, France and Germany lying equally exposed to their attack, and the valley, which they looked down upon, the general highway for traffic, they must have had opportunity for extensive practice in the way of their profession; and then at home after a successful foray, how many a jovial rouse must they have had in their little robber-nests, as the Germans call them; in perfect security too, surrounded by precipices and defiles, where a handful of men could foil thousands! No need, either, to trouble themselves with long carriage for their wine, when every hill-side for miles was covered with vineyards. Gentle thieves they were, and chivalrous robbers, and, upon my soul, considering the character of the age in which they flourished, I do not wonder that their mode of life should have had such charms for them, that they should have required the exertions of the whole empire to reduce them. I could not help thinking of old Amergot Marcell's address to his former companions (who, though he was but a Frenchman, had all the spirit of a German robber-knight) as given by Froissart—"To pillage and to rob," he said, "was, all things considered, a good life—Ah, sirs, there is no sport or glory in this world among men of war, but to use such life as we have done in time past. What a joy it was to us when we rode forth at adventure, and sometimes found by the way a rich prior or merchant, or a route of mules laden with Brussels cloth, or with furs coming from the fairs, or with spicery ware from Bruges, from Damascus, from Alexandria. Whatever we met, all was ours, or else ransomed at our pleasure. Then for living, the peasants daily brought to our castle, wheat, flour, ready-baked bread, forage for our horses, good wines, beeves and fat sheep, pullets and wild fowl. We were furnished as though we had been kings. When we rode forth, the whole country trembled for fear—all was ours going and coming. By my faith, this was a fair and good life!" There spoke the good old spirit; in those days it was worth while being a robber and even being robbed; but now, one has one's handkerchief stolen by a rascally pickpocket coming out of the theatre; the rescue is made, not by mounted men-at-arms, but by a policeman in a blue coat with white

letters; and the accused, instead of defying his accuser to single combat in the name of his lady and his patron saint, appears in the dock at the Old Bailey, and is packed off to Botany Bay, with as little consideration as if he were an ox being sent to Smithfield, instead of a lineal descendant of Robin Hood and Goetz von Berlichingen.

Lovely as the Bergstrasse is, the finest part of it undoubtedly is the termination, when you come in view of Heidelberg, one of the most beautifully situated towns in Germany. Running down at right angles to the basin of the Rhine is the valley of the Neckar, and, as you emerge from the Bergstrasse, Heidelberg stands facing you on the opposite side of the river, with its magnificent, though ruined, castle, and its wood-crowned hills rising behind.

Heidelberg, so far as I know, is celebrated for three things: its university, its castle, and its gigantic tun. Its college is the oldest in Germany, with the exception of that of Prague, and is generally considered the most thoroughly German in all its customs and habits. Here in their greatest purity are to be found all those usages of Burschenschaft, the duelling, the drinking, the wearing of antique costumes, the renouncing and burning of Foxes, about which so much has been written of late. It has always been a matter of astonishment to me, that the reading public of England should have been able to stomach the vast quantity of trash which has issued from the press with regard to the usages and laws of the German students. Grave and ponderous volumes have appeared on the subject, giving as serious and minute an account of them as if the constitution of a country had been under consideration, instead of the follies of some idle young fellows, who prefer drinking and playing the fool to study. What is the object of all this? Are the Burschen customs held up for our imitation? I can hardly suppose so; and yet these usages must be either good and worthy of imitation, or else a system of egregious silliness. Take, for instance, the highly honoured custom of duelling. Can any thing be conceived more absurd than the code of honour laid down by the students, as regulating their combats. What more preposterous idea can be presented to the rational mind than that of a couple of young lads just come from school, first assailing each other with epithets of contempt, gradually rising in the scale of contumely, like Touchstone's rules for giving the lie, and then determining to fight the matter out, not with their fists, as might be predicated of reasoning beings at their age and in their station, but with pointless broadswords. Well, they are padded all over for the combat, so that no serious injury may be sustained—the face being the only real object of attack. To it they go, and after half-an-hour's flourishing, one of them gets a slash across the cheek, which does him no real harm, but leaves an unpleasant looking scar ever afterwards. Then all is made up again; the two combatants consider themselves heroes, whilst all the time they have not encountered as much danger as if they had been engaged in a bout of single stick, and the wounded man is as proud of his flowing blood, as if it were the proof of his warlike daring, instead of being, as it is, a proof that he has acted like a donkey. If I were rector of the University, I would soon put a stop to all this folly, on the same principle that Gustavus Adolphus adopted, when he suppressed duelling in his army, by ordering that the combatants should always fight till one was slain, and that the other should then suffer on the scaffold. I would give the two young heroes a stout cudgel each, and make them belabour each other, till the one was fairly done for, and the victor should then receive a good birching—that would soon put an end to the romance of the thing, I suspect.

In fact, the students themselves are now beginning to be ashamed of all this humbug, and the more sensible among them are trying to put a stop to it. Societies are in several places formed, composed of those who

declare themselves adverse to the principle of duelling, and who object to the drinking of more than a stated allowance of beer at a sitting. Ridicule has also been drawn in as an auxiliary, and I should think a most potent one; for, as the greater part of the excesses of the German students are the offspring of vanity, there can be no better means of assailing them than by showing their folly. Various squibs have been published on the subject, one of the best and most celebrated of which is the "Jobsiad," an heroic poem, in three parts; and, as it is a pretty good specimen of German humour, which is a very different and much more ponderous article than English humour, I shall hereafter attempt to give some account of this book.

NATURAL HISTORY OF BIRDS.—No. VIII.

NESTS OF BIRDS.

WE conclude, for the present, our series of papers on the Natural History of Birds by a few observations on Nests; purposing, however, to resume the subject at a future period, and to introduce to our readers' acquaintance some of the other families of the feathered world.

A consideration of the dwellings which the different animals located on the earth form for themselves is by no means one of the least interesting departments of Natural History; and the dwellings of birds in particular offer to our notice examples both beautiful and diversified of that faculty we call instinct, which will always, we fear, be to us an incomprehensible problem. "A nest," says the learned lexicographer, Dr. Johnson, is "the bed formed by the bird for incubation and feeding her young." He might have added that it is a piece of workmanship at once elegant, and peculiarly fitted for its intended purpose; symmetrical, and calculated for some degree of duration. Though begun, as we must suppose, under the command of a blind necessity, yet a subtle foresight seems to regulate its construction. The work is continued by an enthusiasm which never fails, by an industry which drives the mind to reflect on faculties, wonderful in their aim and operation, which seem quite inexplicable.

Each species of bird constructs an abode differing in form, adaptation, and situation, from that of any other. Birds of prey reside on the summit of high rocks, or on the pinnacle of an old tower. Their dwellings are fortified by enormous pieces of wood, which nature has given them the power of carrying through the air. Their muscular strength is so great that the transportation of weighty substances is attended with little difficulty. A habitation of this kind when once finished, it may be at the expense of much time and trouble, serves for a long line of descendants from the first builders, for it is seldom that these abodes are deserted until decay has altogether unfitted them for the required purpose; and they are so firmly constructed that many revolutions of the seasons must take place before they are utterly uninhabitable. Birds of prey are the only members of the feathered creation which take upon themselves to erect nests of this enduring kind; for the greater number of birds are content with dwellings of a less substantial nature: on the branch of a tree, against the side of a house, on the turf, or amongst the reeds. Some make use of bits of straw, small sticks, moss, down, cotton, or a hundred little things picked up here and there with great pains, and arranged in order in the selected locality. Their claws and beak are the only instruments used in combining and knitting together the matters which form the nest. Other species hang their nests from flexible branches which are put in motion by every wind. Others collect gravel and leaves which they cement by means of their saliva, and thus form a piece of masonry, impenetrable both by air and moisture. This nest, thus

marvellously fashioned, is usually placed in the angles of a chimney or a rock. Within, it is just as curiously constructed; a partition is devised by which the male is separated from the young ones. Here he nestles, looks abroad like a sentinel for enemies, and then sleeps in his own little apartment when the time for rest comes. Surely in works like these there is food for admiration! To complete a work of this kind, think of the pains required: what persevering industry—what exhaustless patience!

Some birds establish themselves on the ground between hillocks of earth which protect them from the wind, and from an overflow of water. These nests are, perhaps, not so carefully wrought as other kinds; yet here ingenuity is displayed in weaving twigs and down into a protecting entrenchment. Other species content themselves with digging a hole in the sand, and there depositing their eggs, which they leave the sun to hatch during the day, but to which they return at night.

We cannot be expected to give any regular description of nests in this place; but it may be amusing to mention some of the most interesting specimens of bird architecture; and we will begin with the nest of the Long-tailed Titmouse. This bird is not much larger than the wren; its head, neck, and breast are white; the rest of its body is chiefly black; its tail, from which it derives its distinctive appellation, is very long and wedge shaped. Pennant, after remarking that the young are in the habit of following their parents for the whole winter, says that, "from the slimmness of their bodies and great length of tail, they appear, while flying, like so many darts cutting the air." Its nest is closed over, both above and below; only one little circular opening at the side is left, serving for door and window. It is made completely round; and as the cold might enter by the orifice, the bird makes use of door curtains similar to those which some of our rooms possess; the entrance to its habitation being furnished with a hanging of flexible and transparent feathers. Thus it is protected from rain, and from the gaze of casual passers by. Through this it goes out and comes back just as it pleases, without causing the least disarrangement. This is not all; the titmouse is so small a bird that it has much to fear from foes of many kinds; and, therefore, to conceal the place of its abode it has recourse to a subterfuge. It fixes its nest to the trunk of a tree, and then covers it up with such parasitical plants as grow on the bark, so as not in the least to disturb the natural appearance. Sometimes the nest is placed in the centre of a thick bush, and so firmly is it seated that if we desire to procure it, no ordinary method of dislodgement will do, it must be cut out. The nest is made by the female, who is occupied two or three weeks in building it. There is another member of the tit tribe which takes still greater precautions. It is one that builds in watery places, and it stands in danger of being attacked by reptiles. Accordingly, it suspends its nest from a flexible branch over the water. The entrance to the nest is formed by a sort of pipe, through which it would be impossible for a snake to penetrate. Another kind of titmouse adds to its nest a little cell, in which the male and female rest after tending their young. The birds are very small, delicate, and weak; yet the nest they build is very large: indeed, wonderfully so, when the diminutive size of the architect is considered. The labour is begun in the middle of winter, and is not completed until spring. The hatching is a long process, twenty-two being the customary number of eggs; and the female takes all the trouble of sitting on them to herself.

The reed warbler, so named from the places it frequents, is also endowed with a wonderfully adaptive instinct. To escape the dangers of the element over which it hatches its young, it builds at once a house and a boat. The nest is slightly attached to the reeds, and is coated with a gummy substance, which effectually precludes the water from entering, in case the nest

should slip down, or the water should rise. We have seen a nest of the tailor bird so artfully constructed, that to view its interior it was necessary to unrip the stitches and cut off the tightly drawn knots. Several leaves had been brought together, and their edges connected by means of cotton or fibrous plants. There you had the thread; but can you guess the needle? It was no other than the beak, an instrument admirably adapted for the purpose by its strength and sharpness.

As examples of exquisite art we might adduce the nests of the thrush, the witwall, and, above all, of the grossbeaks, who erect an immense dwelling-place, to contain five or six hundred inhabitants, all living together on good terms. A great number of these birds form a building society, and unite their efforts to erect a little town of nests. Having selected a large tree proper for the purpose, they first construct a roof woven out of large plants, close enough to be rain proof. This labour ended they distribute the interior space amongst the members of this bird-partnership, and the nests are attached side by side to the roof, all being of the same size. Each bird has generally his private entrance; but sometimes it happens that one door gives access to two or three nests. Each nest is about three inches in diameter, and is made of plants, but of a less coarse kind than those used for the roof; they are equally securely fastened together, and within there is a lining of down.

As the population increases, new nests are placed upon the old ones; and some of these latter are left by their occupants, and converted into a public pathway, conducting to the new dwellings. The traveller Vaillant brought one of these little towns in an entire state to Europe, roof as well as nests. It contained three hundred and twenty cells; now, if one pair occupied each nest, the whole would comprise a population of six hundred and forty birds. It would form an interesting employment to trace the domestic life of any one pair of birds for a year. We cannot, however, see the labourers at their work, and we must remain in ignorance of what we would most like to know. It is probable that the nests are deserted when the young broods have taken wing, until the females return to deposit their eggs again. One is at a loss to guess how these associations are constituted at first, and how they are reformed when once dissolved.

The fauvelte of St. Domingo builds a nest that cannot but fix the attention of the most careless observer. Put together with an industry that passes description, we find it composed of dry herbs, leaf-fibres, and flexible roots, which are woven, with great art, into a substance shaped like a ball, compact, and not to be penetrated by the wet. It is hermetically closed at the top, and all round, except an opening at the bottom, so that the bird has to ascend in order to get into its nest. One particular part, divided from the rest by a partition, is reserved for the brood. It is ornamented with lichen, and made very comfortable with a lining of silky down. The adroitness with which the fauvelte defends its young from their many enemies, and conceals the cradle where they commence a life full of uncertainties to them as well to beings higher in the scale of creation, should not be without its meed of applause. A cane, short, and fluctuating between two trees above water, is taken possession of, and the prudent mother fastens her nest to it by a band, at the same time strong and pliant. The wind may shake this aerial habitation, and beat it to and fro, but it is completely protected against the invasion of rats and such like vermin. But, should a bird of prey, more formidably adapted for rapine, approach the little dwelling, its attention is diverted by the male or the female, hopping as if wounded, only a short distance in advance of the enemy, until the danger is removed from the neighbourhood.

We shall close this imperfect sketch of an interesting part of natural history with an account of a nest which is equally important in the annals of gastronomy as of

zoology. We allude to the nests of Tonquin, which form no trivial article of commerce in the Chinese and Indian seas. These nests rank as a delicate tit-bit in the Dutch *cuisine*. This strange article of diet is the work of a species of *Hirundo*; it is not composed, as some have stated, of fish and other animal matter, but of macerated seaweed. A plant of the Indian seas, containing a large quantity of sugar, has been recognised in the nest. When the bird has bruised it, it is placed in cup-like layers, and then receives the eggs. These nests are principally sought for in caverns along the coast of the islands which separate the Pacific and the Indian oceans, such as Flores, Timor, Amboyna, Tahiti and the Marquesas. To reach these caverns scooped by the sea it is often necessary to descend some hundreds of feet from the top, and to overhang a deep abyss for the space of an hour, whilst the adventurers step cautiously downwards, holding on as well as they can by the vegetation on the face of the rock. The entrance being attained, and flambeaus lighted, they proceed to search for nests. They are chiefly found in the clefts and crevices, where no little precaution is required. The darkness in these depths is never dissipated except by artificial light, and nothing is heard except the roar of the neighbouring ocean. A steady head and a sure foot are required to escalate the damp and slipping rocks—one false step would be followed by certain destruction. Accidents, however, do not happen very often. Sometimes, however, in the midst of the silence with which the gathering is conducted, a sudden cry is heard, a torch is extinguished, and a portion of rock rolls down the precipice with a noise like thunder, echoed and reechoed through all the chambers of the vast cavern. The affrighted labourers then know that they have lost a comrade. The nests most sought after are those picked up in the wettest places, and those which have been most recently constructed. They are whiter, cleaner, and more transparent than the others. The gathering takes place twice a year, and if care be taken not to injure the rocks at the first taking, the number on the second occasion is pretty nearly equal to that on the first. Before they are sold to the Chinese they are carefully dried, in which process the sun is not allowed to approach them, lest their colour and quality should be deteriorated. They are then sorted and packed up in wooden boxes. A considerable quantity of these nests is destined for the table of the court; the Chinese declare that nothing can be more nourishing or delicious than this article of diet. Perhaps, however, its only recommendation is the high price, which flatters the vanity of the rich, who can alone afford to be purchasers. A favourite dish with Chinese epicures is a soup made of these edible nests. They are reduced into very thin filaments; the mess is transparent as isinglass, and resembles vermicelli, having little or no taste. The annual quantity of nests imported into China is calculated to be about 242,000 pounds weight, and taking the average price per pound to be 2*l.* sterling, there is an expenditure by the growers of tea in the purchase of birds' nest of nearly half a million of money a year. The traffic is monopolised by the sovereigns of the respective islands where the nests are found, who derive a considerable revenue from it: and the possession of the fortunate localities has not unfrequently been furiously contested. We can easily conceive that so valuable a merchandise will excite the passion of cupidity amongst the uneducated natives of those parts. Indeed, buccancers and pirates often make a descent upon the caverns which are least difficult of access, and not only carry off the nests, but injure the rocks, so that the annual supply is afterwards seriously diminished. But in places where there is a pretty strong government, or where the caves are not easily got at, the revenue never varies very much. Thus the caverns of Goenong Gootoe, in Java, yield about 7000 lbs. of nests annually, which sell in the Batavian market for about 139,000 Spanish dollars. The expenses

of drying, packing, and exportation, do not amount to more than ten or eleven per cent.

We must now pause; and yet nothing has been said of the care lavished by the feathered creation on their tender offspring—of the instruction warbled in their own sweet language; their lessons in the art of flying; nor, when danger impends, of the tact and boldness, activity and devotion, they display. These matters touch upon the question of instinct, so incomprehensible, so inexplicable.

POPULAR YEAR-BOOK.

October 28.—Feast of *St. Simon and Jude*.

THESE eminent apostles are justly commemorated by the Church on this day, as appears to have been the usage from the year 1091, when their festival was first instituted. There is every reason to conclude that they were brothers; and the Latins assert that they preached the apostolical mystery in Persia, where they suffered martyrdom by crucifixion, A.D. 74. "It has excited some surprise," remarks Brady, "that only one day should have been devoted by the Church to the commemoration of both these apostles; but it may naturally be accounted for, by the circumstances of their common origin from the same parents, their union in the ministry, and from their having both fallen victims to idolatrous persecution at the same period."

This feast was formerly considered as rainy as St. Swithin's. A character in the "Roaring Girl," one of Reed's old plays, says, "As well as I know 'twill rain upon Simon and Jude's Day;" and afterwards, "Now a continual Simon and Jude's rain beat all your feathers as flat as pancakes." Hollinshed relates, that, on the eve of this day, in 1536, when a battle was to have been fought between the troops of Henry VIII. and the insurgents in Yorkshire, there fell so great a rain, that it could not take place. In the Runie Kalendar, the festival of SS. Simon and Jude is marked by a ship, on account of their having been fishermen.

October 31.—Allhallow Ebrn.

This is the vigil of the Feast of All Saints. It is called in Scotland HALLOWEEN. In former times it closed the festivity of the harvest, and was the last joyful feast of the ecclesiastical year.

Biographical Sketches of Eminent Painters.

CARAVAGGIO.

THIS remarkable painter's real name was Michael Angelo Amerigi, but he is more generally known by that of Caravaggio, a surname given to him from a village in the Milanese territory, where he was born in the year 1569. It is probable, also, that he was thus designated to distinguish him, in after times, from his renowned namesake, Michael Angelo Buonaroti, who died five years before the birth of Caravaggio, at the advanced age of eighty-nine years and eleven months, as stated in the life of that painter.

Caravaggio was originally a labourer, and, being employed in carrying the materials used by artists for works in fresco, he became ambitious to be a painter himself; and with this view he devoted his nights to the study of design.

He was gifted with considerable talent, but wanted taste. He sought to astonish rather than

to please, and was celebrated for the bold and extravagant opposition of his lights and shadows. At one period he studied the graceful style of Giorgione, whose works Titian so much admired, and so successfully imitated. Caravaggio's best productions are said to be those which he painted after Giorgione's manner; but he soon abandoned it, and established a style of his own, in which energy and truth are more conspicuous than variety and refinement. Nature was his model for every object which he introduced into his compositions, but he imitated indiscriminately the beauties and defects of his models, and does not appear to have had any fixed idea of grace or grandeur. It is said that he always painted in a room where the light descended from above.

Notwithstanding the undignified character which he gave to his productions, the mellowness of his pencil, the boldness of his design, and the excellence of his colouring, drew after him a number of imitators, among whom were his contemporaries, Domenichino and Guido. They soon perceived, however, that Caravaggio's manner wanted variety; the lights being the same in all sorts of subjects, and his design, though striking, deficient in point of taste. Yet many of his pictures are very fine, and admirably finished.

Caravaggio's first works consisted of fruit and flowers, but afterwards he painted historical pieces and portraits. In the latter, and in his night-pieces, the colouring is so good, and the lights so well distributed, that a surprising effect is produced.

In the church of St. Martin, at Naples, there is a picture by Caravaggio, representing the denial of St. Peter, with half-length figures as large as life. The head of the apostle is extremely fine, with a great deal of expression; and the whole composition is justly admired for the excellence of the colouring and the correctness of the design.

Subjects of a tragical nature seem to have been most suited to the genius of Caravaggio, and to this taste his irascible temper probably contributed.

His animosity towards Giuseppino and Guido is well known. Meeting the former one day in a street of Rome, Caravaggio insulted him in the grossest manner, drew his sword, and killed a young man who came to the assistance of Giuseppino. In consequence of this crime, Caravaggio was obliged to take refuge in a neighbouring state, until a pardon was obtained for him; but scarcely was he at liberty to return to Rome, than he challenged Giuseppino to fight a duel, which the latter declined, on the ground that, being a knight of the order of St. Michael, he could not put himself on a level with any one whose rank was not equal to his own.

This refusal exasperated Caravaggio, who hastened to Malta, and, having complied with the usual probationary rules, he was admitted into the order of Knights of Malta.

Having thus attained his object, he made preparations to quit the island, when again his quarrelsome disposition involved him in trouble. He insulted one of the chiefs of the order into which he had been just received, and was immediately seized and thrown into prison, whence he attempted to escape, but was pursued by the guard, fired at, wounded, and again imprisoned. He contrived, however, to perforate the walls of his dun-

geon, succeeded in making his escape, and embarking in a felucca reached the shores of Italy; but no sooner had he landed than he was surrounded by a guard, and arrested as a pirate.

The error was soon discovered; but, in the confusion occasioned by his resistance, he lost the little property he possessed.

This accumulation of misfortunes plunged the unhappy Caravaggio into a state of despondency. He wandered for some time about the country, in the greatest distress, and at length, being attacked by a violent fever, he with much difficulty reached Porto-Ercole, where he died in 1609, in his fortieth year.

Portry.

[In Original Poetry, the Name, real or assumed, of the Author, is printed in Small Capitals under the title; in Selections, it is printed in Italics at the end.]

OUR MOTHER CHURCH.

BY S. M.

THOUGH thou art lowly now,
Pale and discrowned,
Laying thy holy brow
Faint, on the ground,—
Traitors deceiving thee,
Scorners surrounding,
False teachers grieving thee,
Feeble hearts leaving thee,
Cruel hands wounding ;—
Though the storm hover
Frowning and dark ;—
Though the wave cover
The walls of thine ark,
And Hope's sweet dove for thee
Bring not one leaf ;—
Mother, our love for thee
Grows with thy grief !
What if her word may be
Void of command !
What if the sword we see
Drop from her hand !
Shall we not fear her ?
Dare we forget her ?
Cling we the nearer !
Love we the better !
Let our thoughts only paint
What she has been ;
Meek as a lonely Saint,
Crowned as a Queen !
Where she lies dumbly,
Gather we humbly
Kneeling, and say,
" Powerless and lowly,
Speak—whisper only—
We will obey !"
No idle sigh for her !
Ye who would die for her,
Nerve ye to live for her ;
Suffer and strive for her ;
Pray for her tearfully ;
Hope for her fearfully ;
Let your tears rain on her,
Till each soul stain on her
Pass from the sight,
And there remain on her
Robes of pure white !
By the dews of thy morning,
Holy and soft,—

By words of sweet warning
Uttered so oft,—
By accents adoring,
Daily which rise,
Where spires, upsoaring,
Pierce the deep skies,—
By Him whose mission
Gave, not in vain,
The awful commission,
" Romit and retain !"—
By the life which thou livest,
Ev'n now in thy shame,—
By the Food which thou givest
We dare not to name,—
By the gifts that are in thee,
Power, Faith, and Purity,—
Seek we to win thee
From sloth and obscurity ;
Answer our loyalty,
Waiting and weeping !
Put on thy royalty !
Rise from thy sleeping !
Take thine old place again
Where stars are bright,
And from God's face again
Drink deathless light !
Rise, and subdue to thee
All, as of old,
Those that were true to thee,
Those that were cold ;
Children, who pained thee,
Rebels, who took thee,
Foes, who disdained thee,
Friends—who forsook thee !
Yes, all shall gaze on thee,
Showering their praise on thee,
As those pure rays on thee
Visibly shine ;
Earth, now no home for thee,
Then shall become for thee,
One mighty shrine,
One vast community,
Known by its Unity
Truly divine !
Call ye this vanity,
Work never done,
Which poor humanity
Mars, ere begun ?
Nay, no despair for us !
Think on Christ's prayer for us,
" LET THEM BE ONE !"
Ear to the thunder dull,
Sense-blinded eye—
—God still is wonderful,
Christ yet is nigh !

N.B. The Second Volume of this Periodical is now ready ; covers for binding, with table of contents, may be ordered of any Book-seller.
